Appendix

Address by Dr. Jose A. Mora, Secretary General of the Organization of American States, Delivered at the Pan American Union, on Tuesday, April 19, 1960

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. McCORMACK. Mr. Speaker, due to cultural influences and geographical position, as well as other basic influences, the peoples and governments of the Western Hemisphere have a strong community of interest with each other. Instead of creating and extending tensions and areas of disagreement, to obtain to a maximum extent what that "community of interest" calls for, leadership and efforts in all of the countries of the Western Hemisphere should be directed toward extending areas of agreement, thereby lessening tensions and reducing areas of disagreement or misunderstand-

The views of dedicated leaders of all of our countries in the Western Hemisphere are important in this respect.

On April 19, 1960, at the Pan American Union, Dr. Jose A. Mora, Secretary General of the Organization of American States, delivered a splendid address.

The address of Dr. Mora was deep, profound, penetrating, frank, and above all, constructive.

It should be as widely read and considered as possible, particularly by those in positions of leadership and responsibility in the various countries of the Western Hemisphere.

In my remarks, I include the splendid address delivered by Dr. Mora:

Address by Dr. Jose A. Mora, Secretary Gen-ERAL OF THE ORGANIZATION OF AMERICAN STATES, DELIVERED AT THE PAN AMERICAN UNION ON TUESDAY, APRIL 19, 1960

When Mrs. Mora prevailed upon me to address this study group made up of wives of leading officials in Washington—the ladies of the Cabinet, wives of Supreme Court Justices, Latin American Ambassadors, and Members of the Senate and House of Representatives—I confess that I accepted because I felt it my duty to contribute in some measure to the success of so noble an effort. Your desire to inform yourselves concerning relations among the American Republics, more particularly between Latin America and the United States, corresponds to a real need today. Once we have learned where the causes of friction or contention lie, we can then seek the means of eliminating misunderstanding and advance together toward the achievement of our common goal—the realization of the abiding ideals of the Pan American movement.

Relations between Latin America and the United States have become critical of late.

They have provoked discussion and aroused profound political interest in all of the Republics. At the same time, American much confusion has been created in their regard.

Speaking of this topic to so distinguished and well-informed group, I am reminded of a story concerning a lady who wished to know more about economics. She decided to hear a discussion by a panel of experts. Returning home after listening to the experts for a good 2 hours, she said to her husband: "I was all confused in my thoughts before I went to that meeting. Now I'm still confused, but I feel better about it; I'm confused on a much higher plane."

I am sure that this will not be the case today. In the first place, you are women of intelligence; and, in the second place, I am no expert. (I may say, however, that a large part of my job consists in keeping experts busy.) All I shall attempt to do is to bring out a few facts, to identify certain factors-political, social, or economic-which can have an adverse effect on good rela-tions, and to indicate possible steps which might be taken to bring about better understanding.

The rapid changes now taking place in Latin America are in large part a reflection of ideological and social struggles occurring all over the globe. As a result of the two World Wars, the formerly slow evolutionary processes of history have been speeded up to a dizzy pace. The Americas today are greatly different from what they were when the first measures were taken for the creation of our regional organization and, in-deed, as late as the time of the First World

A recent study reports:

"The transformation [in Latin America] of the economy from rural and agricultural to urban and industrial was the fundamental cause of the rising social disturbance. The absorbing force of manufacturing activity, in cities such as Buenos Aires, São Paulo, Santiago, Rio de Janeiro, Montevideo, and Mexico City, sucked in labor from the countryside, swallowed up the bulk of the postwar immigrants, and created conditions and opportunities which stimulated the growth of the middle class and labor groups. All this led to even larger concentrations of populations in metropolitan areas.

This concentration in urban areas has brought about, in many countries, a decline in agricultural production and in the food supply of the population. The Latin American economies depend primarily on the production and export of raw materials. decd, such exports represent as much as 90 percent of the total. They are the principal source of revenue for the governments; they determine the countries' capacity for importing, and for meeting the service charges on foreign loans and investments. In a majority of Latin American countries, one or two basic products account for 75 percent or more of the total exports. Fortyfive percent of Latin America's exports go to the United States, where they represent 30 percent of the total imports. Unfortunately for Latin America, the prices of these basic products have not kept pace with the increased prices of manufactured goods.

Meanwhile, the annual rate of population growth in Latin America has risen from 1.3 percent in 1930 to 2.5 percent in 1959, and it is expected to reach 2.7 percent in 1975.

Thus although the gross product of Latin America is increasing at a steady rate, a rapidly rising population and relatively lower prices for exports have kept the per capita income stationary.

Meeting the needs and desires of a population whose growth is so spectacular that it is often referred to as an explosion is a matter of urgent necessity for the Latin America nations. Anything which can be done to speed up their development will, however, be of benefit to the United States as well. Some 30 or 40 cents of every dollar invested in Latin America go for capital goods, which must be imported. Thus every measure which tends to raise the rate of investment is reflected in an increased demand for imports. Here then is an opportunity for the United States to aid in developing a market of exceptional importance for its foreign trade.

Direct private investments by U.S. citizens and enterprises in Latin American have risen from less than \$3 billion at the end of 1945 to more than \$9 billion in 1959. Indeed, they now account for more than onethird of U.S. private investments abroad-more than have been placed in any other region of the world. Trade between the United States and Latin America has Trade between the undergone a similar expansion. It stands now at an annual volume of \$7 to \$8 billion, an amount exceeded only by U.S. trade with Western Europe.

The figures I have just cited show clearly that Latin America has reached a level of economic maturity greatly surpassing that of many other similarly large geographical areas. Like Canada and Western Europe, Latin America has shown itself capable of meeting through its own efforts a large part of its needs in dollars and foreign currencies.

Despite these striking figures, people continue to ask whether the United States is really interested in expanding Latin American development. As I see it, even if there were not many other reasons—politics, security, historic friendship, and regional solidarity-the United States, with its recognized ability in economic and financial matters, would be strongly inclined to strengthen what is perhaps its best foreign market. Differences of opinion may arise over the choice of the best methods for achieving this objective, but there is no argument as to the objective itself. Definite progress has been made, moreover, in developing and carrying out a policy of economic cooperation.

On returning from his recent goodwill tour, President Eisenhower said of Latin America: "Indeed, no other area of the world is of more vital significance to our future." Due importance should be attached to this statement, for it is doubtful whether so strong and sweeping a declaration had ever been made before by a President of the United States.

The Assistant Secretary of State for Inter-American Affairs, Mr. Roy R. Rubottom, Jr., recently wrote:

"The economic policy of the United States of America vis-a-vis the other American republics reflects two fundamental objectives: (1) To foster close economic relations on the bases of mutual benefit and the greatest possible freedom of private enterprise, and (2) to encourage the sound economic development and progress of Latin America in the best interest of its inhabitants. This policy implies a continuing expansion of trade with, and direct private investment in, Latin America. It also implies substantial governmental cooperation. The plain truth is that the problems of the United States of America's neighbors must be considered as the problems of the United States, too."

It is understandable, considering its tra-ditional economic and political philosophy, that the United States should stress "the greatest possible freedom of private enterprise." One should take due note, however, of Mr. Rubottom's qualification: "[This policy| also implies substantial governmental cooperation." The way is opened thereby to an understanding with those Latin American nations that insist upon some degree of acceptance of their own traditional system of government centralization of, and State participation in, economic development. It also implies recognition of Latin America's need of capital from public sources, to permit the long-term planning required for accelerated development, with due consideration for loans for projects of social interest and for public works which pay off heavily, but only in the long run.

The United States has recently changed some of its former points of view. Thus, it has given strong support to the establishment of the Inter-American Development Bank, so long desired by Latin America. Again, although the country is essentially a consumer of basic products, it took an important part in the work of the Inter-American Coffee Study Group and, thanks to its active collaboration, the International Coffee Agreement could be signed in September 1959. the terms of that agreement the principal coffee producers of Africa as well as of Latin America cooperate to regulate the marketing of coffee, controlling sales so as to minimize price fluctuations, which formerly had been violent in the coffee trade. An improvement in the economies of Latin America will naturally come about upon the stabilization of coffee prices. The significance of this for the United States lies in the fact that 10 percent of its total exports go to the 14 coffee-exporting countries of the Western Hemisphere.

The United States is also taking greater interest in similar measures with regard to other basic products, such as lead and zinc. The countries of our hemisphere here affected are Bolivia, Mexico, and Peru, also Canada. It is to be hoped that, within an established policy for the consideration of commodity problems on a case-by-case basis, attention can be given to situations arising in regard to such important Latin American products as petroleum, copper, tin, cotton, wool, wheat, bananas, cacao, sugar, et cetera.

A drop of a few cents in the price of any of these products can have tremendous repercussions in the Latin American economy. In some cases, it is sufficient to cancel all that has been received in the way of foreign loans—loans which must, moreover, be repaid in dollars coming from the sale of those basic products.

In view of the great importance of commodity problems, it has been advised that they be accorded highest priority in inter-American economic discussions, along with matters of economic development and financial and commercial policy. Similarly, recommendations have been made for abondonment of the view that stabilization agreements are suitable only in exceptional cases.

The question is often raised in the United States as to whether Latin America wishes some sort of Marshall plan for that area. The Latin American government have declared repeatedly that their desire is not to receive direct aid, but to promote their trade and to assure themselves of foreign markets where they can sell their products regularly and without great fluctuations in prices. With regard to the capital required for development, the desire is for long-term loans at low rates of interest, with provisions for

special operations involving the use of local currencies.

All this, however, is not enough. It is obvious that neither free trade nor financial assistance from outside will assure the evergrowing foreign-exchange income needed for a satisfactory rate of development in Latin America. If the countries of that area—producers of one or two commodities. dependent on uncertain foreign markets-are to be saved from the crises into which they are recurringly plunged, they must of necessity undertake plans for industrialization. By diversifying their production they will be able to create inter-Latin-American markets and meet the needs of their growing population. Latin America must strive for economic unity, through the establishment of a common market or free-trade zones. To this matter I shall return.

I wish to emphasize that Latin America desires to assume full responsibility for the development of its peoples, using all its resources to the full extent of its possibilities. Thus when the United States enters upon programs of cooperation, it can do so with the assurance that it is helping people who are helping themselves. Take, for instance, the case of the Inter-American Development Bank, with its capital of \$1 billion. This sum which adds substantially to the means of financing Latin American development, is 40 percent U.S. capital, but 60 percent capital supplied by the Latin American nations themselves. In this joint effort Latin America is making the greater contribution, despite the financial difficulties in which nearly all the member states from that region now find themselves.

Another evidence of Latin America's determination to advance under its power is provided by movements toward economic integration among the various countries. Seven Latin American nations this year took the forward step of establishing a broad freetrade zone. By joining the so-called southern cone of Argentina, Brazil, Chile, Paraguay, Peru, and Uruguay, Mexico opened the way for the later transformation of this system into a common market embracing the whole of Latin America. In Central America, El Salvador, Guatemala, and Honduras went further still, entering into a treaty aimed at establishing a customs union of the three countries within a few years. They will doubtless soon be joined by Costa Rica and Nicaragua. The United States has viewed these two movements with sympathetic in-The Government has declared officially "that it was prepared to assist financially in the establishment of solvent industhrough appropriate agencies, under suitable conditions, with a view to promoting regional markets through public and private investments.

If we are asked whether there is a master plan for the development of Latin America, the answer is "Yes." It is not, however—nor has there ever been any suggestion that it should be-a master plan in which all responsibility falls upon the United States. It is a master plan for whose execution all the American Republics are responsible. It states a common responsibility for combating poverty, sickness, and illiteracy. It represents a conviction that these are not inevitable evils. It voices the determination of the men of today to do away with the indignity of poverty. It is a joint plan, now being carried out by the Organization of American States, in part through its regular economic, social, cultural, and technical training programs, and in part through the so-called Operation Pan America. The aim of Operation Pan America, as a distinguished Brazilian statesman recently wrote, is to bring to the fore the problem of economic underdevelopment. It recognizes that the responsibility for dealing with the problem is a collective one; and it calls attention to the menace that, if a solution is not soon provided, the tensions and pressures generated by the economic inequalities now existing among the American nations might destroy the political solidarity of the hemisphere.

In 70 years of active existence, the Pan American movement has succeeded in creating an order of law and peace to govern relations among the American Republics. This order, based on the principle of nonintervention, has evolved precepts of international law which are applied and respected as nowhere else on the face of the earth. In all cases which recourse has been had to our system for the maintenance of peace and for collective security-either through the application of the Inter-American Treaty of Reciprocal Assistance or by appeal to the Bogotá Charter, the constitution of the Organization of American States-the conflicts have been resolved, the threatened aggression or intervention has been avoided. American countries are setting a good example in turning to the International Court of Justice when occasion warrants. This has recently been the case with Argentina and Chile and with Honduras and Nicaragua, as it had earlier been with Colombia and Peru.

Well-nigh perfect machinery has been devised for dealing with problems of international law: it has but to be set in motion when the occasion arises. But there are also problems of human welfare, economic conflicts, the growing pains of an America in social ferment. These cry out for attention. If nonintervention is the fundamental principle of peaceful, friendly relations among the American nations, in promoting the welfare and economic development of their peoples the fundamental principle must be positive action and effective cooperation. Organization of American States, with all its organs and agencies, stands ever ready to serve as the instrument of that collective operation.

The American community is made up of interdependent states, constantly exposed to influences from one another. The rapidity of modern communications permit men to travel from one country to another in a matter of hours, or even minutes. The press, radio, television, and newsreels know no frontiers; through them we are brought into daily contact with the problems of our neighbors and of the entire world.

The Latin American peoples will not walt much longer. The problems of their economic and social development in this day and age cannot be coped with by traditional methods, within the terms of an evolutionary process that is measured in centuries. There has come about, in the underdeveloped areas, a reaction that has been described as "the revolution of rising expectations."

A plan for successful economic development must take into consideration: natural resources, capital know-how, manpower, and a will to, and human aptitude for, change. Social scientists are generally agreed, as regards the Latin American nations, that the overwhelming reality of the area today, and in the foreseeable future, is the social revolution. The entire region is in the throes of a painful process of fundamental social, economic, and political transformation.

This is for Latin America the moment of a great awakening, with broad horizons and new dimensions. It is imperative that we make of our hemisphere—already a major area of expansion for the peoples of Europe—one of the principal centers of power of Western civilization.

In any examination of methods for coordinating plans for the hemisphere's development, it is readily apparent that participation by the OAS must be a paramount factor for success. There is general agreement as to the advantages of multilateral cooperation. Political suspicions within a given country as to the purpose of aid programs are less likely to be aroused when the assistance comes through an international agency than when it is provided directly by a single great power. The role of the Organization of American States is, therefore, obvious.

At the meeting of the Presidents of the American Republics at Panama City in 1956, the Chief Executives called for a more dynamic effort by the OAS. They expressed the desire to make of it a more effective instrument of cooperative action, especially in fields affecting the welfare of the individual. A special Inter-American Committee of Presidential Representatives was set up to seek practical suggestions which the Organization might appropriately adopt in its work in the economic, financial, social, and technical fields.

As a result of the recommendations which were offered, the OAS has expanded its programs for the introduction of better methods in agricultural production, for the promotion of industrialization, social welfare, education, technical cooperation, and the training of personnel. It has initiated new activities in the fields of science development and the peaceful applications of nuclear energy. As regards public health, great impulse was given to the campaign to cradicate malarth completely from our hemisphere, Remember that the removal of a disease is equivalent to the extension of a frontier or to the discovery of a new land.

In the last analysis, any plan for promoting higher standards of living is resolved into a matter of education. Under the program of technical cooperation of the OAS, Whose first decade of operation we observe this year, more than 5,000 persons have received training or engaged in research in centers established throughout the hemisphere. These centers cover such fields as economic and financial statistics, housing and planning, rural education, the improvement of agriculture and rural life, the evaluation of natural resources, the combat against foot-and-mouth disease, the control of zoonoses, the planning and administration of social welfare programs, problems of iron and steel production in Latin America, business administration, and applied social sciences, not to mention still others.

The fellowship program of the OAS is a further example of positive action which has been taken through our organization. One hundred and seventy fellowships were awarded in the first year of operation, and the number is being gradually increased, and is now approaching 500 annually. Grants are made to teachers and professionally qualified students for advanced study and training and for research. This year the OAS will begin a similar program for the interchange of professors among the universities of the Americas.

One of the characteristics of these programs is that, not only are professors and students brought to the United States from Latin America, or vice versa, but there is also an active interchangs among the Latin American institutions of learning. The results have exceeded our expectations. Letters and other expressions of support have poured in from teachers and students alike. The governments have acknowledged that, in mobilizing the human resources of the hemisphere for the development of the whole area, we are effectively achieving one of the main purposes of the inter-American system. Indeed, we may say that these programs give a new interpretation to the pan-American movement.

Without reducing technical and scientific exchange, more emphasis should be given to exchange in the humanities—in philosophy, letters, the arts, the social sciences, journalism, public administration, and democratic and labor-group leadership. One of the fun-

damental conditions for successful social development lies in respect for the original culture of the peoples undergoing change and in the avoidance of any attempt to warp their tendencies. Thus, in addition to economists, specialists are required who can reinforce the cultural and spiritual heritage of the peoples. In consequence, the Pan American Union does not confine itself merely to programs for the eradication of illiteracy, for the extension of education at all levels, and for the exchange of scholars. It also sponsors exhibits by rising painters and sculptors and concerts by promising young musicians, in an effort to bring wider attention to the new artistic values of the Americas.

An increase in contacts between persons in the United States and Latin America holding similar responsible positions in business, educational, and civic institutions has been highly recommended. Similar recommendations have been made for the Boy and Girl Scouts and for student organizations. A broadened program of this type would perhaps serve to correct some of the serious misunderstandings which have provoked increasingly adverse reaction of late on both sides. Most of the prejudices which embitter relations between Latin America and the United States have their root in a lack of good human communications.

A measure which I feel personally could contribute much to better understanding would be the translation into our several languages—English, Spanish, Portuguese, and French—of certain key works of analysis and interpretation of the situations facing the nations of the Americas today and the solutions proposed for their various problems. The observations and counsels of our wisest scholars and statesmen should be made readily available to all.

I am not one to underestimate the power of a woman, least of all when I have before me a group whose members must often be called upon to provide inspiration and advice to those who shape the policies of the United States. I say therefore with confidence that you personally can make an excellent contribution to better mutual understanding among the peoples of the Americas, both here and in the countries south of the Rio Grande. When you travel in the latter, you can do much to present a clearer picture of what your own country really is like. In this regard, allow me to offer a word of advice: Do not lay all your emphasis on material comforts—on the production of automobiles, frigidaires, and television sets. Seek, rather, to bring out the cultural values of the United States and its political philosophy-a philosophy which stresses the supreme importance of the individual, and the idea that it is the people who run the Government and not the Government that runs

I would conclude my remarks today by expressing my deep confidence in our common destiny.

The United States is known for its philosophy of optimism as an attitude toward the future. It has been called a national characteristic, and perhaps it finds justification in the country's historical experience. It cannot, however, be considered peculiar to the United States. It is an attitude in which all the peoples of the New World participate. In times such as these, we should not allow optimism to lull us into complacency, trusting that history will, of its own accord, and without effort on our part, bless the Americas with still greater wonders. We must work, united, in a common endeavor. There are authentic democratic leaders in Latin America today, men of extraordinary capability, to whom, however, we must lend a helping hand in the titanic efforts they are making. We are currently witnessing a great advance in strengthening popular govern-ment in our hemisphere. The voice of the

people is drawing closer. The voice is loud, and rude, but it is sincere. The only problem is to direct the desires and aspirations which that voice expresses into orderly channels, so that the effective exercise of democracy and due respect for human rights may be achieved, under law; for all.

If we wish to serve the supreme interests of our hemisphere, we must strive to see opportunities, not obstacles, in the challenges

which we face in this hour.

West Virginia's Coal Resources—A Tremendous Power Potential for New Industry

EXTENSION OF REMARKS

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1960

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement by the senior Senator from Minnesota [Mr. Humphrey] entitled, "West Virginia's Coal Resources—A Tremendous Power Potential for New Industry."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

In my extensive travels throughout the State of West Virginia in the past several days, I have been deeply moved and troubled by the desperate economic conditions which are to be found there.

It is not a pleasant experience to see thousands upon thousands of able workers without jobs, to see families without adequate food and clothing, to see abandoned houses and factories. Yet, this is the situation and we must face up to it. The Federal Government has an obligation to come forth with programs designed to aid in the growth and development of West Virginia's economy. Its people are doing all that they can to improve the economy, but they cannot do it alone.

Today I wish to discuss one particular program which the Federal Government should give top priority to. Namely, the finding of ways to make greater use of coal, West Virginia's greatest natural resource.

West Virginia is by all odds the most important coal producing State in the country, accounting for 30 percent of the total production excluding anthracite. As such, it has shared in the depressed condition of the coal industry during the past decade. Output in both West Virginia and the inclustry as a whole was down by about one-third in 1958 from the peak year 1947. The State has been hit especially hard, however, by the fact that coal mining is its most important industry.

West Virginia does not lack reserves. According to official Government figures, the recoverable reserves remaining are more than eight times the total of all the coal the State has produced to date. The important task, then, to aid West Virginia's recovery from the depressed condition of its major industry is to find or create new markets for its coal.

Of particular interest to West Viriginia are the technological advances which have taken place in long-distance transmission of electricity. Shipment of coal by wire is now technically and economically possible.

Traditionally, the cost of transmitting electricity over high voltage powerlines more than 200 to 250 miles has been greater than the cost of transporting coal. As a result, electric power for large consuming centers has been generated near those centers, and the coal has been brought to them. the growth of demand, however, large blocks of power are now required at the big consuming centers, and the combination of this large-scale demand and recent advances in the art of electricity transmission at extra high voltages has created exciting new opportunities. Sweden and the Soviet Union have demonstrated that it is technically feasible to transmit power 500 miles and more at voltages of 500,000 volts and higher. Both countries have ambitious programs for still higher voltages and longer distances. At extra high voltages and with large blocks of power, the cost of long-distance transmission falls below the cost of coal transport over the same distance.

Heretofore, the economics of power and coal transport have meant that West Virginia was too far from main consuming centers to allow power to be generated in its coalfields and transmitted to those centers. This is no longer the case. In fact, West Virginia is ideally located to become the site of power stations situated at the mine mouth and supplying power to many of our great industrial and urban centers.

Half of the American people live within 500 miles of the State. Four out of the five largest cities are within the same area.

The opportunity to aid West Virginia's depressed coal industry is evident, but large obstacles are in the way. Existing power systems are not set up to take advantage of this situation, and legal and administrative difficulties must be cleared away. The solu-tion to West Virginia's problem is clear, however: There must be a concerted Government program to encourage the location of industry in West Virginia to take advantage of "mine-mouth" power, and to assist the development of "mine-mouth" power stations whose electricity will be sent to major consuming centers in the eastern half of America. This would not be a program involving large expenditures of public funds. What is needed is leadership, encouragement and stimulation for private enterprise to take advantage of cost-saving opportunities. This is a way to get West Virginia's coal industry back on its feet so that it again becomes a source of strength in the economic life of the State. It is a bold program that puts to work our country's technological prowess.

There is a need for close Federal-State and private industry cooperation because the market for West Virginia power will lie in the huge metropolitan areas from the Mississippi River to the Atlantic Ocean. This means Federal leadership in the joint effort because the program involves interstate cooperation, Federal Power Commission rate structures and probably partial Federal fi-

nancing.

The distinguished chairman of the Committee on Interior and Insular Affairs, Mr. Murray, has introduced a resolution, S. Res. 71, calling for a study of the electrical power supply situation of the United States with the view in mind of recommending legislative proposals to assure development and organization of bulk power supply to enable our country to maintain an expanding economy, higher standards of living, and the strengthening of our position in the world.

This is an excellent and timely resolution and I hope that it will be approved in this session. And I would hope that if such a congressional study is undertaken that this subject of the transmission of electrical power by way of high-voltage transmission lines directly from the coalfields will be fully explored, and recommendations for

legislation to encourage its development set forth.

The development of huge, new, low-cost energy resources in West Virginia, can be the single greatest attraction to new industries in many parts of the State. The paper and chemical industries which consume large quantities of electrical energy and use coal, water and forest products as basic raw materials could not resist the powerfully attractive combination of inducements which would mean more jobs.

Brotherhood in Action—A Significant Occasion

EXTENSION OF REMARKS

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. HALPERN. Mr. Speaker, in my district during Brotherhood Week a distinctive occasion in human relations took place. It truly reflected democracy in action. Its effect is so inspiring and its meaning so significant, especially at this time when the subject of human rights is of such deep concern to the whole world, that I call it to the attention of all the American people through the forum of this House of Representatives.

I refer to a gathering of peoples of all faiths and races, the aged and the young, homemakers, professional people, labor and management, in the true spirit of brotherhood, at a meeting of the Brotherhood Council of Eastern Queens, New York, on February 25, for the presentation of the council's annual Community Brotherhood Award.

This outstanding organization, of which Mr. Melvin Gerard, a distinguished community leader, is president, is composed of groups comprising a cross section of races, religions, and civic functions. It has dedicated its activities to the furtherance of programs designed to promote greater understanding among peoples—programs of brotherhood.

One of the council's fine activities is the presentation each year of its Community Brotherhood Award to a citizen who has demonstrated through his actions his dedication to the community and to the precepts of brotherhood. This year's occasion marked the fifth annual presentation of the award.

I was privileged to address the ceremony—quoting in part some of my remarks made that same day in this House—and to make the presentation to Mr. Albert Greenblatt, pioneering civic worker and attorney of Floral Park, who has devoted the greater portion of his time to community activities and to providing legal assistance to individuals and groups regardless of race, religion, or creed.

This inspiring meeting can proudly stand as a model for other communities in America. Because it exemplifies the very essence of our democratic beliefs, I would like to describe the occasion in the permanent Record of this Congress.

The event was held in the auditorium of Junior High School 172 and, in spite of inclement weather, more than 300 people turned out to participate.

Although the announcement of Mr. Greenblatt as the winner of the Community Award was the highlight of the occasion, the impressive gathering also included the dramatic presentation of awards to 18 public school children who had been selected as the winners of the B'nai B'rith brotherhood poster contest.

These awards were presented by Mrs. Shirley Brody, chairman of the Anti-Defamation League branch of the independence chapter of B'nai B'rith and corresponding secretary of the Brother-hood Council. Mrs. Brody, incidentally, is an indefatigable worker for good causes and has done much to promote the objectives of the council. She presented the awards to:

Laurie Maloff and Carol Glaser, from Public School 18; Philip Davis and Stephen Karafiol, from Public School 33; Ronald Fromkin and Mark Nerenberg, from Public School 115; Simon Winnik and Donna Schatz, from Junior High School 172; Myra Handelman and Nancy Rudd, from Public School 85; Eugene Giardina and Elissa Lowenstein, from Public School 191; Steve Fromkes and Dominick Durante, from Public School 133; Elleen Burton and Kenneth Fisher, from St. Gregory's; and Veronica Bond and Richard Ohlinger, from St. Paul's.

Throughout the evening the Hillside Junior High School Glee Club, directed by Herman Schuckman and Lillian LeBarbara, gave numerous musical selections. It was literally thrilling to listen to their exceptional harmony and talent. The Human Relations Drama Workshop of Andrew Jackson High School presented a playlet entitled "The Third Defendant." It was magnificently performed, and the entire cast and its direction calls for the highest commendation.

The big moment of the evening was, of course, the naming of Mr. Greenblatt as this year's winner of the fifth annual Community Award. He succeeds four other outstanding advocates of human rights and civic conscious residents of Eastern Queens, all previous recipients of the award—Mr. Herman Dunsay, Pastor Paul Lorimer, Mr. Melvin Gerard, and Mrs. Bess Smith. I was truly privileged to be the one to announce the selection of Mr. Greenblatt and to present him with the plaque.

Mr. Greenblatt was well deserving of the honor. He is a leading civic worker in Floral Park, N.Y., president of the Lost Community Civic Association, and past commander of the Stein-Goldie Jewish War Veterans Post 552 in which he is still very active. He has also donated continually of his time and efforts for many years in providing legal counsel and support to the many religious organizations and good causes in the community. He is the legislative chairman of the PTA of Junior High School 172 and is a member of its executive board. He is associated with the Eastern Queens Youth Clubs which sponsor summer dances for teenagers. Added to this

are his countless other activities and contributions to community betterment and the ideals of brotherhood.

I would be remiss if I did not cite the names of the runners-up for the award. My one regret is that there were not 10 awards to be given that night, for surely each of the 10 nominees were richly deserving of the honor. Each, in his or her own way, has contributed greatly to every concept and principle upon which the selection was based. These most praiseworthy individuals were Mrs. Sylvia Bachner, Mrs. Shirley Brody, Mrs. Jaye Celano, Mr. Alexander M. Fix, Mr. Martin Hande, Mrs. Henrietta Henschel, Mr. Bernard Krueger, Mrs. Sue Noreika, and Mrs. Adeline Rubin.

The selection of the winner was made by three impartial judges on the basis of community service as expressed by activities in local groups in behalf of community betterment and for the promotion of the ideals of brotherhood, through word and deed, in the interreligious and inter-racial field on a local level. The judges were Mrs. Harold Prucha, librarian of the Glen Oaks Library; Mr. Nils Mathisen, manager of the Glen Oaks branch of Manufacturers Trust Co.; and Mr. David Allison, editor of the popular community newspaper, the Glen Oaks News.

The impressive ceremonies were under the chairmanship of Mr. Paul Denn, the highly respected principal of Martin Van Buren High School. His comments, along with those of Mel Gerard, contributed greatly to the occasion as did the highly significant speech made by Hon. Louis Wallach, the distinguished New York State assemblyman from the 10th district of Queens, who is honorary chairman of the Brotherhood Council of Eastern Queens. Also most meaningful to the event was the participation of Pastor Daniel Pierotti, of St. Paul's Lutheran Church, and Rabbi Meyer Bilitsky, who delivered the invocation and the benediction respectively.

Mr. Speaker, this inspiring action can broudly stand as a model for other communities in America. It exemplifies the very essence of our beliefs and ideals in free government. It is, as I said earlier, truly democracy in action.

Problems of Domestic Shipping Industry

EXTENSION OF REMARKS

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record excerpts from a speech made in San Francisco by Mr. Randolph Sevier, president of the Matson Navigation Co., outlining some of the problems facing the domestic shipping industry in the nonsubsidized field, and their possible solution. This segment of the industry has its obstacles which it is trying to overcome but which

Congress may have to give more serious attention to-in the near future. Mr. Sevier's remarks are a definite contribution to the subject.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

HIGHLIGHTS OF SPEECH BY MR. RANDOLPH SEVIEZ, PRESIDENT OF MATSON NAVIGATION Co.

Fortunately, there is a growing recognition among Government and maritime leaders of the problem of the nonsubsidized domestic operators. Recent studies, aimed at revising the U.S. transportation policy and programs, discussed the need for Federal assistance in replacement and rehabilitation programs of domestic shipping companies. The accomplishment of this, however, will require a high degree of cooperation and understanding between the industry and Government. * *

Government. * * *

In 1959 Matson retained as profit from combined shipping operations only one and a half cents of every revenue dollar. This earning ratio will have to be improved in the years ahead for the company to stay in business and replace vessels of the Matson fleet. When the time comes for replacement decisions, it may be necessary to call upon the Federal Government for assistance. * *

Now over 70 percent of Matson Navigation stock is held in Hawaii. For the new State, this ownership pattern is reassurance of responsible transportation from a predominantly island-owned and oriented company whose principals themselves have a major stake in the State's economy. * * *

Matson, as a citizen of Hawaii for more than 75 years, has never sought acclaim for its contributions to the economic growth of the islands. But, I do not believe Hawaii could have reached its high state of development without the dependable and specially adapted shipping services of an ocean carrier, attached—sentimentally and financially—to the islands. * * *

A lively atmosphere of boom pervades the islands. The prevailing predictions indicate a future of great vitality. To quote from one recent report: "Hawaii has now reached a point of maturity, with a broad economic base and the prospect for continuing growth. It is making itself an increasingly important part of the country's economy." For Matson this means the opportunity to continue to grow with the new State and to provide day-in and day-out dependable transportation tailored to the specific requirements of the economy. * * *

Matson may find new competitors springing up in the future as other steamship companies find the lure to the islands irresistible. Under present law, Matson opposes entry into the Hawaii domestic trade of any subsidized, tax-aided carrier in direct competition with our unsubsidized service. We could not do otherwise. * *

Being the principal carrier in Hawaii service imposes a stern obligation on the company. It must put forth maximum effort to assure each individual freight customer of the best service and attention. These are musts for a major carrier in a domestic steamship route. They become difficult, if not impossible, to provide without losing money when the major carrier is forced to compete with operators out only for the more lucrative and easily accessible cargoes. * * *

Matson's ability to earn a sultable profit under the obligations and requirements of the Hawalian economy will depend on many other factors. Probably the most important will be the latitude we achieve in making fundamental changes in operating methods which are a product of progress. The advances made in adapting Hawali's cargo to the container system of movement, and adapting the system to the cargo, must con-

tinue at an accelerated pace. And they must be sustained under a labor-management atmosphere that recognizes the benefits for each that are possible through automation ashore and afloat. * *

The container operation is one of the outstanding products of Matson's accelerated research program, now entering its fourth year. All elements of the program—size of containers, methods of handling ashore and afloat, and so on—were arrived at only after thorough basic research into the complexities of the Hawaii trade of today and tomorrow. In the decade of the 1960's there will be even greater reliance on modern research methods for keeping pace with the Hawaiian economy. * *

The question might also be asked: Can an insular tourist industry afford to be without passenger liner service—to break so sharply with the past—in the competitive years ahead? We say the answer is an emphatic "No." Part of the answer lies in closer working relations with various airlines so that the air-sea travel packages, which offer such a desirable variety to the vacationer, will become even more popular. * *

For the Country's Welfare

EXTENSION OF REMARKS

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. TABER. Mr. Speaker, pursuant to the consent granted to me on Monday, May 2, 1960, I submit the following article by Walter F. Wilcox, which appeared in the Cornell Alumni News of April 15 last:

FOR THE COUNTRY'S WELFARE

EDITOR: In 1931, when I retired from my professorship at Cornell, Senator Vandenberg wrote to President Farrand about what he called "from the standpoint of the country's constitutional fundamentals, the outstanding achievement for many years." That was the passage of an act providing for automatic apportionment after each future census. After the 1920 census, Congress had failed to apportion Representatives and might do so again. The Senator wrote to Farrand to acknowledge what he called my "indispensible cooperation with him in this work."

I have asked for space in your columns because I hope that the work, which first the Senator's death and now my weakness have endangered, will appeal to others. Senator Vandenberg's outstanding achievement is illustrated by the sharp angle in the diagram below at the year 1910. [Not printed in RECORD.]

If the policy of increasing the size of the House after each census to a point at which no State would lose a seat, a policy which had been followed for 50 years 1860-1910, or the alternative policy, tried after 1920, of having no apportionment at all, had been continued, and one or the other hung like a cloud over the country's future, our Federal system of government would have been in grave danger.

The present situation is this: No significant change has occurred in the size of the House since 1910, but after each census since then 11 seats have been transferred from the group of slowly growing to that of rapidly growing States. An amendment which has been before the House Committee on the Judiclary for many years would reduce the size of the House by 10 members

after each future census. If it were adopted, it would affect only the slowly growing States; they would then lose about 21 seats after each future census, 11 as now by transfer and 10 outright.

Some 40 years ago, when the House de-bated the subject of its growing size, 15 leading Representatives expressed their opinions. Thirteen of the fifteen wanted it smaller and one who had been in Congress for 40 years said, "I began when there were 325 Members of this body, and the disad-vantages in the transaction of business now (it was then one-third larger than it had been) as compared with then are beyond my powers to describe."

With the size of the House stabilized, the average decennial increase in the population of a congressional district has been about 44,000. If its size should fall by 10 after each future census, the average increase in that population would be 49,000, one-tenth more than now, a difference which would probably be imperceptible to the average Congressman.

The real change needed is in us. Too many ask, "How can we get help from our Congressman?"; too few ask, "Can we help our Congressman to do his job in any better way than by letting him alone?"

WALTER F. WILLCOX.

Union County, N.J., Residents Assist in Polaris Submarine Training

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, May 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the defense effort of this Nation calls for many skills from many persons. Our know-how is often put to work in many little known, complex efforts.

In the Elizabeth (N.J.) Daily Journal of April 18, reporter John Spinale describes the pride felt by those residents of Union County who are working on the fleet ballistics training facility which will be used to train Navy technicians for Polaris-firing submarines. The article gives us greater understanding of the major preparations which must be made for our new weapons of peace.

Mr. President, I ask unanimous con-sent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

COUNTY RESIDENTS AID POLARIS TRAINING-EMPLOYEES AT CURTIS-WRIGHT PLANT CON-TRIBUTE TO MULTI-MILLION-DOLLAR FACILITY THAT SIMULATES SUBMARINE LAUNCHING CONDITIONS

(By John Spinale)

Many Union County residents are working on one of the most costly training aids in military history for sallors who will deliver the Sunday punch of missile-carrying sub-marines if it's ever needed.

They are among the 500 employees producing the "fleet balistics training facility" at the electronics division of the Curtis-Wright Corp. in Carlstadt.

The mammoth device is an exact reproduction of the deadly Polaris missile and the section of the submarine from which it is fired.

NEED BY POLARIS CREWS

The multi-million-dollar facility is a must for the trigger men who will roam the seas in such nuclear-powered, Polaris-firing submarines as the Patrick Henry and George Washington.

The project began about a year ago. More than 250 engineers and a like number of production workers and clerks have been on the job as many as three shifts a day every day of the week.

The first section of the device was shipped this week to the Submarine Training School in New London, Conn.

In the shipment were two inner and outer firing tubes, two missiles and the submarine's launching section.

SUB WOULD CARRY 16

Although a Polaris sub would carry 16 of the missiles, only two have been made for training purposes. To know a couple is to know them all.

The weapons and tubes, almost three stories high and about 6 feet in diameter, and the launching section are made of metals similar to those used in the real things.

A complex firing mechanism and a monitor for instructors will be finished in a few

When the device is completed, the sailors won't know the difference between the simulated setup and an at-sea operation.

OPERATE IN CLOSE QUARTERS

They will move about in close quarters; they will learn to set the all-important guidance package; they will develop the knowhow of handling doors weighing hundreds of pounds without losing fingers or time.

They will become familiar with but most respectful of one of the free world's top weapons. For them, it will all seem real. Only the water will be missing.

"This is one of the most sophisticated and most complete training devices that has to this day been developed," said Anthony H. Lamb of 66 King Street, Hillside, chief engineer of the Electronics Division.

COST EXCEEDS MILLION

"It's worth over a million dollars, not including the new building in which it will be located."

Is it necessary to spend so much money on a training device?

His answer: Can too much be spent to train a fighting man who might be expected to walk up to a nuclear missile and send it on its way?

He points out that sailors firing the missiles will not be in block houses hundreds of yards from the firing pads.

He stresses that finger slips can lose shipsubmarines—and adds that training aids are an abolute necessity whether for million dollar missiles or \$10 hand grenades.

HUMAN ERROR BLAMED

The engineer says a "significant" centage of military equipment that comes off production lines is lost through human error.

This rate of loss cannot be tolerated with The training aid will help Polaris missiles. to determine which applicants will make the grade as crew members.

A major advantage of the facility is its ready availability in all kinds of weather for the training of large numbers of men. It will also simulate almost every trouble imagin-

The monitor, which would not be part of a real submarine, will enable instructors to judge the reaction of the sailors to given situations and score every man by every move he makes.

POINT OUT ERRORS

Instructors using the monitor will be able to "freeze" all operations at any time to no time for this during war," Mr. Lamb said.

Psychologists will also have an opportunity to study reactions of the crews during train-

ing in the realistic device.

Physical and psychological phases of the training will get equal attention as the Navy searches for the best all-around missile men through the expensive weeding-out facility.

Union County (N.J.) Educational Finance Problem

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. BAILEY. Mr. Speaker, I am in receipt of a letter from Mrs. W. H. Baumer, legislative chairman, Union County Council, PTA, Westfield, N.J., which appraises so realistically the problem of financing local education that I desire to invite it to the attention of all my colleagues.

Union County, by no stretch of the imagination, could be considered an area of economic depression. When we know what the problem is in such an area, I do not see how we can reject a proposal for a modest school construction program such as is contained in H.R. 10128. I hope this bill will be considered within the very near future.

I include Mrs. Baumer's letter as a part of my remarks:

WESTFIELD, N.J., April 21, 1960. The Honorable Cleveland M. Bailey, The House of Representatives, Washington, D.C.

DEAR SIR: As legislative chairman for the Union County PTA's in New Jersey, I am writing you to urge passage of as generous a Federal aid program for education as your committee thinks feasible.

In company with the rest of the State and the country at large, the 21 communities of Union County are fighting a constant battle to keep abreast of rising school costs. Perpupil cost has risen from \$250 in 1950 to \$450 in this school year. The result has been double sessions in most of the towns and mounting unrest with school budgets.

In Westfield, the homeowner's tax is \$9 per \$100 of evaluation. Of this \$9, \$6 goes for school costs. This is not an unusual percentage. The homeowner needs relief, which the New Jersey Congress of Parent Teacher Associations is trying to alleviate in two ways. We are backing a Statewide broad-based tax, and also urging Federal support for education.

We were gratified at the passage of the Federal school-support bill by the Senate on February 4, 1960 and hope that the House will see fit to pass a similar bill.

We thank you for your continued interest in Federal aid to education and hope that our support will help to facilitate passage of equitable legislation.

Sincerely yours,

ALICE B. BAUMER, Legislative Chairman, Union County Council, PTA. "Jobs for the Handicapped—Passports to Dignity"

EXTENSION OF REMARKS

HON. HOWARD W. CANNON

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1960

Mr. CANNON. Mr. President, the President's Committee on Employment of the Physically Handicaped will meet in Washington on May 5 in their annual meeting

It is with great pride that I call to the attention of this body the fine essay written by Miss Gail Marie Chadwell, of Reno High School in Reno, Nev., entitled "Jobs for the Handicapped—Passports to Dignity." The essay was awarded first prize by a panel of judges appointed by President Eisenhower.

With great originality, impact, and clarity of expression, Miss Chadwell has forcefully presented the cause of the physically handicapped, which has been so greatly neglected in this country. I am sure that Members of this body, Mr. President, will be interested in reading this essay, and I ask unanimous consent to have the essay printed in full in the RECORD

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

JOBS FOR THE HANDICAPPED—PASSPORTS TO

(By Gall Marie Chadwell)

"In these demanding times, the labor force of our Nation is our most precious asset. Working shoulder to shoulder, the handicapped can add spirit and power to America as we seek to promote the strength of the whole free world." With these words President Dwight D. Eisenhower urged the American people to extend to the handicapped that equality of opportunity which Americans believe to be the inherent right of all individuals. Although the handicapped may be limited in physical capacities, they are not disabled in mind and spirit. Their capabilities can add power to our Nation.

Because, as our President indicates, the times are demanding and because we must safeguard our basic rights, we must both utilize the potential of all individuals and extend to them the equality of opportunity which we so esteem as Americans. Specialized areas of labor can utilize the skills of the handicapped. Given the opportunity to prove their worth, the handicapped can acquire their rightful status in our society. From a sense of security and belief in his own worth the handicapped individual acquires the dignity which is his sicht.

quires the dignity which is his right.

Because the population is growing rapidly and because the lifespan of human beings is longer, the number of handicapped individuals is growing proportionately. Therefore, the problem of finding jobs for the handicapped looms larger. However, this problem exists only because the handicapped are thought by some to be incapable or inferior. It is often forgotten that the ability of a person constitutes his potential for

employment rather than his disability. Employers are often afraid to hire the handicapped because they believe that the impaired workers are prone to injury and will therefore boost insurance rates. Surveys show that the safety records of the handicapped equal or exceed those of the non-handicapped. Many States have "second injury" funds which protect the employer from having to pay total disability compensation for injuries to impaired workers. Furthermore, tests and research have repeatedly disproved the idea that the handicapped are not good workers.

Today many tax-supported rehabilitation-centers exist throughout the United States. At these centers the disabled individual is given therapeutic aid and psychological support. He is offered psychotherapy so that he may regain his perspective and reestablish himself in society. A guidance counselor gives him advice and helps him find the type of work for which he is best suited. Having been given excellent training in his specialized field, he is thoroughly trained in a trade which permits him to compete with able-bodied workers.

When he is prepared both physically and vocationally to make himself self-supporting, he must have a job. His next step is to utilize his training and prove that his work is equal to that of an able-bodied worker. Too many times he is not given this opportunity to prove himself. Prospective employers fail to realize that it is not logical to differentiate between the handicapped and the nonhandicapped. Every individual is handicapped to some degree in some field or another; he may be entirely untrained in or incapable of carrying out certain tasks whether they be physical or mental tasks. In order to ascertain that which a person can do best, an individual's personality. education, experience, interest, and motivation must be matched to the requirements of a particular job. The handicapped individual is not asking for sympathy, pity, or charity. He is asking only for the opportunity to prove that he is capable of fulfilling the essential jobs. He prefers to be hired on his merits and asks for the opportunity to sell himself on the basis of his ability. employer need not hire a person because he is handicapped; he is obligated to hire the best qualified person without favoritism or discrimination; and frequently that person may be handicapped, but in a way which does not affect the job at hand.

After the prejudice of the employer is overcome and the handicapped individual is given the opportunity to prove himself, the disabled worker usually has no trouble proving that his work is equal to that of an able-bodied person. In the complex world of industry, in the burgeoning field of science myriad jobs exist. With training the handicapped can fill some of those jobs.

Because of increased incentive in trying to prove their worth and ability, the handi-capped are frequently better workers than the able bodied. Some employers have found that the handicapped are better workers than they were before they were injured. Statistics from a recent survey published in "Hire the Handicapped," a pamphlet prepared by the President's Committee on Employment of the Physically Handicapped, show that handicapped employees revealed greater capacity for training and adjusted more readily to jobs than did other employees. Their attendance and safety records were superior; employee turnover was lessened. These facts are corroborated by many other statistics. For exemple, the December 7, 1959 issue of Business Week presents a joint survey compiled by the Labor Department and the Veterans' Administration showing that the production rate of the handicapped is slightly higher

than that of unimpaired workers. Furthermore, the handicapped have proved to be morale builders as well as pace setters.

What the handicapped are capable of doing is attested to by a thriving business in Albertson, Long Island, known as Abilities Inc., founded by Henry Viscardi, Jr., who is physically handicapped. Its employees are recruited from those who are handicapped. Although the business was started as late as 1952, today it is a million-dollar concern with 421 employees. Its purpose is to train, give employment to, and transfer to private industry skilled employees who have previously been regarded as disabled. The work of Abilities Inc. proves that dignity can be restored to the handicapped individual and that he can lead a normal and productive life.

The mitigation of the increasing problem of finding jobs for and restoring dignity to the handleapped must begin in the community. Each citizen must rid himself of his prejudices against the handleapped and accept him on a par with the nonhandleapped. Employers can contribute to the program of aiding the handleapped by hiring such individuals whenever possible. They should remember that the handleapped do not want sympathy, pity, or charity but opportunity. Citizens may be of service in aiding the handleapped by helping them to rehabilitate themselves. Providing help for the handleapped may be a passport to dignity not only for the handleapped, but for the citizens aiding them.

"Give me the man with determination, for he is a doer. No physical handicap will deter a man who believes he can learn to do a job safely and well and is determined to prove it." said Philip D. Reed of the General Electric Co.² Men like Mr. Reed possess dignity which stems from sensitivity to the problems of others. By helping the handicapped to restore their dignity, we as Americans are but reiterating our belief in the intrinsic worth of the individual, our belief that every individual must have the freedom to develop to the ultimate his potential for securing life, liberty, and the pursuit of happiness. As we practice real democracy, we help to secure our democracy. Thus we enhance the inherent dignity of man.

²Philip D. Reed, "Hire the Handicapped," ed. President's Committee on Employment of the Physically Handicapped (Washington, D.C., 1958), p. 4.

Welcome Archbishop Damiano

EXTENSION OF REMARKS

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. CAHILL. Mr. Speaker, I am delighted to bring to the attention of this Congress a very happy event for the people of the First Congressional District of New Jersey. Archbishop Celestine J. Damiano will be installed tomorrow as the third bishop of the diocese of Camden. Having lived in the First District of New Jersey since boyhood, I have observed the diocese very closely since its founding in 1938. I can recall very vividly the 4th of May 1938, when the late and beloved Bartholomew J. Eustace was installed as the first bishop of Camden. I was also present

Dwight D. Eisenhower, "Hire the Handi-capped," ed. President's Committee on Employment of the Physically Handicapped (Washington, D.C., 1953), p. 3.

when the beloved and recently departed Justin J. McCarthy, the second bishop of Camden, was installed as the chief shepherd. It was my good fortune to know both Bishop Eustace and Bishop Mc-Carthy personally and I can, therefore, attest to their holiness, devotion to duty, and inspirational leadership. All of the people residing within the territory of the Camden diocese, regardless of religious beliefs, felt a personal loss at the death of these devout leaders and saintly priests.

Today, however, the people are joyful because we have been signally honored by Pope John XXIII in having an archbishop as our spiritual leader in the person of Celestine J. Damiano, D.D. A native of Buffalo, N.Y., Archbishop Damiano comes to us from South Africa where he served with distinction as the apostolic delegate to South Africa. Rich in experience as the personal representative of the holy father, he will bring new blessings on the people of the Camden diocese. I am sure I speak for all of the people of the First District of New Jersey when I say: "Welcome, Arch-bishop Damiano. May God grant you many fruitful years in his vineyard."

I am also happy at this time to insert in the Congressional Record an editorial which appeared in the April 29, 1960, issue of the outstanding newspaper of the Camden diocese, the Catholic Star-Herald, which is ably and forcefully edited by the Right Reverend Joseph B. McIntvre:

WELCOME, ARCHBISHOP CELESTINE J. DAMIANO

Pope John XXIII has appointed to the diocese of Camden His Excellency, Arch-bishop Celestine J. Damiano, who will be solemnly installed as the third ordinary of the diocese on Tuesday, May 3, 1960.

His Excellency comes to a diocese that received its firsh bishop on May 4, 1938, in the person at Bishop Bartholomew J. Eustace. In the records of the Church of God on earth as measured by time, our new archbishop-bishop begins his reign over a diocese that is not yet silvered with years. Less than 22 years ago the newly created diocese of Camden enjoyed a Catholic population of 105,246; today it boasts a conservative Catholic enumeration of 232,065 souls. In the wake of the phenomenal development of New Jersey the parishes of Camden diocese have multiplied from a modest sta-tistic or 49 parishes to the present figure of 89 parishes with resident priests.

His Excellency succeeds Bishop Justin J. McCarthy, second bishop, who was fated to be chief shepherd of the church at Camden only 2 years and 9 months. During a tenure of episcopal office interrupted sudden and saddening death to his flock, the second bishop of Camden carried for-ward the work of his predecessor and left behind him the enduring monument of new spiritual and material heights to which the young diocese ascended under his leadership.

And now the youthful diocese of Camden welcomes most heartily Archbishop Celestine J. Damiano as its third bishop and father in God. A native son of Buffalo diocese, but well acquainted with the church universal after 7 years spent as apostolic delegate to South Africa, His Excellency takes over the spiritual and temporal destiny of Camden spiritual and temporal destiny of Camden diocese. Rich in experience as the personal representative of the Holy Father on the continent of Africa, sometimes designated the Church of the Future, Archbishop Damiano comes to bless and inspire the Church of God in Delaware Valley, U.S.A.

In his unique treatise on Sacerdos et

Pontifex, the beloved author-bishop, Francis

Clement Kelley, uses a very commonplace but realistic symbolism to portray the ideal bishop of a diocese which will doubtlessly be realized in the person and gifts of Archbishop Damiano, third bishop of Camden. We should like to draw from this fountain of wisdom and grace which the aging and venerable Bishop Kelley has created out of the exceedingly rich storehouse of personal knowledge and memories:

"There are those who, as human mirrors, reflect God more faithfully than others, for the human mirrors can be brightened and their power of reflection intensified. are the saints, benedictions to us because from them we can catch glimpses of God that we may not get from our own mirrors, so often are ours clouded by sin and human imperfections. The saints are inspirations, not only as examples, but as the most effective doers of the divine will and of the divine truth. They never cease to give us glimpses of the glory of God. Who are these saints? In truth and fact, they are the only realists. * * * They have lived on earth in every century since the coming of Christ into the world. They are those who knew and taught others to know.

Who should be the greatest among the saints? In what rank and place in life should be found the overwhelming majority of them? Surely in ordained and consecrated leaders: priests and bishops."

Then in his concluding sentences concerning the symbolic likeness of the ideal bishop as the mirror of the great high priest, Bishop Kelley gives the world a poetic description of the bishop of his flock:

"You are the heart of Christ, His beating heart

That drives its love through every flowing vein.

You are the mind of Christ that shoots its light

Through all the world and back to Him again.

You are the mirror that reflects the might That won our battle with a sword of pain."

The 20th century application of Saint Paul's exhortation to be "all things to all imposes ever new and grave burdens upon the bishop of the youngest or the oldest dlocese. For this reason the bishop can never receive enough help or helpers from priests to laity. His labor envisages not only his own flock but all those who are not yet of his fold. Like the artist he paints the tree on the canvas of his own soul deeprooted in the soil of love with branches thrust upwards towards the heavens.

May the years and the tasks of Archbishop Damiano be abundantly blessed. May his priests and people of Camden diocese stand gallantly grouped about their chief pastor and bishop of their souls. May his life and that of the church of Camden entrusted to his care flow on quietly under the sunlight of God's love and grace until a happy tomorrow in eternity where His Excellency, their Shepherd, may joyfully claim them for His sheep again. Welcome, Archbishop Damiano, a thousand times welcome to your new diocese of Camden.

Old-Age Assurance

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, May 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the expression of concern about the problems of our aging and aged in this Nation is expressed in many ways throughout the United States. As

the debate about several major issues continues, it is reassuring to realize that major efforts are now underway to understand the problems and to do something about them.

One such effort is housing for the aged. In many communities local officials, often with State and Federal help, are putting local plans into effect to meet local needs. An editorial in the Jersey Journal of April 22 expressed this newspaper's interest in several such projects now under way in Hudson County. It was a pleasure to see the editorial and to receive its progress reports on the work now underway there.

I ask unanimous consent that the article be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD AGE ASSURANCE

Tenants are scheduled to start moving tomorrow into Guttenberg's first housing project containing apartments for the aged. Centennial Towers, the name of the project, has 76 apartments, 36 of them designed for senior citizens. Nor is this the only project of its kind in the town or in the county.

Bids are scheduled to be received by Gut-

tenberg before summer for another 36-unit project to be built next to Centennial Towers. In Hoboken, Harrison Gardens is approxi-

mately halfway to completion.

Jersey City has learned that Federal approval of its plans for a 282-apartment development is imminent.

And West New York, which led every community in the State in housing for the aged. has its Sunshine Gardens, tenanted last summer; will receive bids next month for a 36-unit project, and is seeking Federal approval for still another development of 100 apartments.

It is good to see Hudson County municipalities progressing in this area. The role of the senior citizen is not an easy one; he needs a home which he can call his own and the availability of easy association with his contemporaries. These things are provided by such housing projects.

Lumber Grademarking

EXTENSION OF REMARKS

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960 Mr. BECKWORTH. Mr. Speaker, I

wish to include in the Congressional RECORD a letter written to me by one of the fine, experienced and successful lumbermen of the congressional district I have the honor to represent. I feel homeowners and prospective homeowners will be interested in the observations made by Mr. Gordon Darnell, of Carthage, Tex. Also I include a letter written to me by Mr. C. F. Warden, of the Federal Housing Administration.

DARNELL LUMBER CO., Carthage, Tex., April 18, 1960. Hon. LINDLEY BECKWORTH,

Washington, D.C.

DEAR CONGRESSMAN: At the recent annual meeting of the Southern Pine Association, I had the pleasure of hearing an address by Mr. Julian Zimmerman, Commissioner of the Federal Housing Administration, during which he explained the new lumber grademarking requirement that became effective April 1.

He frankly stated that this move, intended to protect the homeowner, was running

into some opposition.

Now, I'm just a small mill operator myself and make as good a product as any mill in Texas. My lumber is grademarked, and I know that every small mill can meet the FHA requirement if he wants to. But there are some who either don't understand the FHA requirement, or who are not too concerned with giving the homeowner a square deal. Every mill operator, regardless of size, can easily meet the FHA requirement, and in 99 cases out of 100, the honest producer Won't charge a cent more for grademarked lumber of the same quality as unmarked

I think Mr. Zimmerman is an able and courageous Government official, and we certainly hope that the constructive ruling which requires framing lumber to be grademarked will not be permitted to be dis-turbed by attacks that cannot be supported.

Thank goodness for a Commissioner like Mr. Zimmerman, and I surely hope you will let your colleagues in Congress know how

The home buyer is entitled to the protection of the new FHA requirement. Let's give it to him.

Yours very truly,

GORDON DARNELL.

DIRECTOR, FHA. Houston, Tex., April 26, 1960. Hon. LINDLEY BECKWORTH,

Member of Congress, House of Representatives,

Washington, D.C.
DEAR CONGRESSMAN BECKWORTH: Thank from the Darnell Lumber Co., of Carthage, While Carthage is not technically in the territory of this insuring office, I will take the liberty of giving you the information that you probably want. Enclosed is Underwriting Letter No. 1777 which is the rule change Mr. Darnell refers to. I have underlined the item which I think is pertinent to your inquiry.

If you should want specific FHA information from the FHA insuring office covering Carthage, I am sure that Mr. Ellis Charles, our director in Dallas, will be glad to accommodate.

For the information of Mr. Charles, I am sending a copy of your letter and my reply; and in the event he feels it necessary to supplement, I am sure he will do so.

We are most pleased as I am sure you are, too, to have a compliment once in awhile, because you and we seem to receive some of the other kind of letters now and then. Sincerely yours,

C. F. WARDEN,

Acting Director.

Newark's Youth Week

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, May 2, 1960

Mr. WILLIAMS of New Jersey. President, the city of Newark, N.J., is about to begin its 40th annual Youth Week celebration. Citizens of that city

are planning and working together for two purposes: to express their interest in youth, and to help the youngsters of their community to express themselves in many ways.

The intensity of interest by the youth and their seniors is expressed well, I believe, in an article which appeared in the May 1 edition of the Newark Sunday News magazine section. I believe that the programs outlined in the article may be of interest to other communities which already have, or are planning to have, similar youth weeks.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWARK'S YOUTH WEEK

Newark's 40th annual Youth Week celebration begins Saturday. It is sponsored by the city and the Civic Clubs Council in cooperation with the Newark Board of Education.

From a small school hobby show in 1920, Youth Week has grown to an extensive program in which hospitals, banks, public utility installations, department stores and insurance companies as well as other agencies and businesses cooperate.

"We not only show the youngsters we are interested in what they are doing, we give them an opportunity to see what adults are doing," Bruce Friedman, general chairman

of Youth Week, said.

Youngsters from high schools are taken to plants according to their interests-potential engineers go to Bell Telephone Co., aspiring nurses and doctors head for Martland. lumbus, St. Barnabas, Beth Israel or Presbysterian Hospitals, and those interested in retailing food will be welcomed at several supermarkets.

Other hosts to young Newarkers during the week will include Kresge-Newark, Linde's, Prudential Insurance Co., United Airlines, American Airlines, Eastern Airlines, General Mills, Howard Savings, National Newark & Essex Bank, Newark State Teachers College, and the Port of New Authority.

This year, students also will have the opportunity to get behind the scenes at the Newark Public Library.

The municipal career men of Newark have volunteered to show 20 boys government in action. Each boy will work beside a man in the morning. Then the career men will hold a luncheon in the boys' honor and follow the event by allowing the students to attend a regular meeting.

The 24 companies participating will assign the youngsters to jobs, serve them lunch in the cafeterias with the regular em-ployees and generally show them "just what it's all about."

The chairman of the Youth Week job visitation committee, Mrs. Alice Ruotolo, said very often the management is so impressed with the abilities of youth that the youngsters are offered jobs on the spot.

"And just as important," she said, "students often find out the job they originally had in mind is not what they want at all.

She gave the example of girls who wanted to be nurses and found, when they visited hospitals, they couldn't stand the smell of ether and felt faint at the sight of blood.

And there are boys who believe they want desk jobs only to find sitting all day is not for them.

"Job visitation may save youngsters time and heartbreak," Mrs. Ruotolo said, "but it may also prove to them that what they dreamed of doing is exactly what the job entails."

Job visitation, though one of the most important phases of Youth Week, is by no means all of it.

The first 2 days are spent in synagogues and churches. Services stress youth, value, and responsibilities.

Monday, Music Day, is under the direction of Dr. William M. Weiss. The sound of music, produced by elementary, junior and senior high school's bands and ensembles, will be heard day and evening.

On Tuesday, Dr. Edward F. Kennelly, su-perintendent of schools, will direct the citizenship awards. Citations will be given to outstanding students and guests of honor at the annual fellowship luncheon.

Wednesday will see the hobbies and art work displayed in schools, playgrounds, and agencies. A safety poster exhibit will be shown in the city hall rotunda.

Thursday, with Mrs. Ruotolo directing, will be job visitation day, although visits will be made on other days throughout the week.

Friday will be recreation day under the chairmanship of Joseph A. Liddy of the board of education. Picnics and games will be held on Newark playgrounds, as well as excursions to the Orange Mountains.

Each day, safety will be emphasized. Students will go from school to school speaking on the subject. William O'Toole of the board of education is chairman of the committee.

The budget is relatively small, \$1,500, but the lack of funds is made up in hard work

and enthusiasm.

Mayor Leo P. Carlin is honorary general chairman and the councilmen are honorary committee chairmen. Samuel B. Finkelstein, city personnel officer, is in charge of finance; Louis A. Carnarelli is coordinator and Mrs. Stephanie P. Koplin of the recreation de-partment of the Newark Board of Education, is the secretary who is responsible for tying all the many loose ends together. George R. Sweet, Jr., of Sweet Advertising, Linden, is assistant general chairman and director of publicity.

Anthony M. Surano, president of the Civic Clubs Council and vice president of Carteret Savings & Loan Association, sums up the efforts of all the persons who work for months to make Youth Week a success:

"Newark wants to demonstrate once again that youth is our most important asset, and the time expended in working with youth of our city is rewarding and gratifying."

Watershed Project of the Year 1960

EXTENSION OF REMARKS OF SE

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. TRIMBLE. Mr. Speaker, Arkansas was honored on April 19 when the Six Mile Creek watershed project in the district which I am honored to represent received the award as the 1960 Watershed Project of the Year.

My heartiest congratulations go to the people of Logan and Franklin Counties and to the Soil Conservation Service at the local, State, and National levels. The conservation of our soil is one of the great challenges of this day and of the future.

I would like to insert as a part of my remarks for the consideration of my colleagues the press release concerning the 1950 Watershed Project of the Year

Award, a narrative summary of progress on the project, copy of an editorial from the Arkansas Gazette, excerpts from a clipping from the Arkansas Democrat, and an editorial by C. F. Byrns from the Southwest American of Fort Smith, Ark.:

ARKANSAS WATERSHED PROJECT WINS NATIONAL AWARD

The 1960 watershed project of the year award was conferred tonight on the Six-Mile Creek Watershed project in Arkansas' Logan and Franklin Counties at the annual banquet of the Seventh National Watershed Congress.

The award was given to representatives of the Magazine and Franklin County Soil Conservation Districts for their "high degree of initiative and decision in advancing the

project over a period of 8 years."

Other factors which were cited as influencing the award committee's decision were the "interest and participation of the community's agencies and organizations, both public and private * * * because the project has demonstrably inspired the imagination and confidence of the people of the watershed and as a result its purposes have progressively expanded to include municipal, industrial, recreational, and agricul-tural water supplies as well as flood prevention and watershed conservation * cause the land treatment throughout the 164,000 acres of the watershed together with 24 reservoirs of the project, have, with eminent success, met the test of torrential rainstorms and either eliminated or minimized flooding * * * because the additional supplies of water and the major reduction in flood hazards throughout the watershed have been directly and substantially responsible for improving the economy and living standards of the entire area * * * and fi-nally, because the accomplishments in Six-Mile Creek Watershed are of such quality and effectiveness that the watershed has become a demonstration and an inspiration to the people of other watersheds in other parts of the Nation."

The "Watershed Project of the Year" award is conferred by the more than 25 national agricultural, business, industrial, conservation and civic organizations (see reverse side) that join in staging the annual National Watershed Congress. The purpose of the public meeting is to provide a forum for the exchange of ideas and information on ways of advancing the small watershed

development program.

That program relies on local, State and Federal participation to control water flow and halt soil erosion in upstream tributary areas where more than one-half the annual flood damage occurs. It is administered nationally by the U.S. Soil Conservation Service.

NARRATIVE SUMMARY OF PROGRESS, SIX MILE CREEK WATERSHED PROTECTION PROJECT

The project in brief: Authorized October 1, 1953. Essentially complete in fiscal year 1959. Area—164,000 acres (90 percent privately owned, 10 percent National Forest). Sponsors—Franklin County Soil Conservation District and Magazine Soil Conservation District. Estimated total cost \$3 million. (\$1,548,014, Federal and \$1,395,502, non-Federal.) Principal problems—Floodwater and sediment damage to agricultural land. Land ownership and use—10 percent tenant operated; 200,00 acres of cropland, 110,000 acres of grassland (53,000 acres of tame pasture and 57,000 acres of rangeland), 34,000 acres of woodland.

Progress in land treatment: Land treatment estimated to cost \$1,300,000, was planned for the 20,000 acres of cropland, 34,000 acres of woodland, and 110,000 acres of grassland. Of the 1,111 farmers in the project, some 1,063 have signed cooperative

agreements with the two sponsoring soil conservation districts. One thousand and thirty-eight of these landowners have basic conservation plans. It is estimated farm that 95 percent of the planned land treatment measures are applied. Seventeen thousand acres of cover crops have been planted on cultivated land and 109 miles of terraces have been constructed. Some 47,000 acres of permanent pasture have been established and 62,000 acres of rangeland is being managed to improve and protect the native grass cover. Land treatment was given high priority by all agencies and groups working with farmers, including Agricultural Conservation Stabilization Service, Farmers Home Administration, Agricultural Extension Service and Soil Conservation Service.

Progress in structural measures: Twenty four floodwater retarding structures and 28 miles of channel improvement work have been completed. These measures have a benefit ratio of \$1.51 to \$1. Three com-munities are planning to augment municipal water supplies by obtaining water from structures 6, 7, 8, and 14. These towns are Bonneville, Charleston, and Ratcliff. Two new industries have located in the area, and the final decision to establish in the locality was contingent on adequate water supplies. These are the Ace Comb plant at Booneville and Seam Prufe plant at Ratcliff. The town of Charleston plans to increase the storage in site 14 at a cost of \$25,000 to more than double the present municipally-owned water supply.

Progress in obtaining easements and rights-of-way: Easements and rights-of-way valued at some \$75,000 were acquired by the sponsoring local organizations from 250 landowners. Construction of two retarding structures is being delayed because one landowner on each site has refused to sign an easement. The easements covering 28 miles of channel rights-of-way have been obtained. Local sponsors are still hopeful of obtaining clearance on the remaining two

structures.

Cooperation of local groups to assist the sponsors to obtain easements has been excellent. A great deal of local effort went into this phase of the project activity

cellent. A great deal of local elloft went into this phase of the project activity. Effectiveness of project proved: In a special storm report by Soil Conservation Service following a heavy rainstorm in April 1957, it is reported that the works of improvement installed at that time (structural measures 90 percent complete) reduced the flood damage by 50 percent. Had a complete program been installed and in operation at the time of this storm, the reduction in damage would have been an estimated 77 percent. Clyde Hiatt, Chairman of the Franklin County Soil Conservation District Board of Supervisors, one of the local sponsors, stated that "after a period of extreme and continued rainfall, the greatest since 1902, the Six Mile Creek Project performed Henry Gray, according to expectations." a landowner in the lower floodplain, experienced some flooding for less than 24 hours following the April 1957 storm referred to above. He indicated that this was the only time that Six Mile Creek overflowed his land. Gray stated that had the Six Mile Project been in operation his farm would have been flooded at least 12 times during the spring of 1957, when the Arkansas River remained continuously at floodstage some 55 days.

[From the Arkansas Gazette, Apr. 23, 1960]
"Six Mile" Example Worthy of
EMULATION

The selection of Six Mile Creek in Franklin and Logan Counties as the "Watershed Project of the year" represents considerably more than attaching an impressive title to a coordinated system of conservation efforts. The National Watershed Congress studied reports on all similar projects in the United

States before it decided that the Arkansas conservation effort came nearest to measuring up to these requirements:

1. The extent of participation of all agencies and groups within the watershed such as the soil conservation districts, county and municipal governments, business and other organizations.

2. The adequacy of the project in meeting the conservation and utilization needs of the

watershed.

The status of the project—meaning the degree to which the installations were serving their intended purposes.

In order to understand the purposes of the project it is necessary to know something of the objectives set out in the Watershed Protection and Flood Prevention Act (Public

Law 566 of the 83d Cong.)

This law provides for a complete conservation plan in the selected watershed. Logically, the work must begin at the tops of the hills where the tiny fingers of the streams reach for their first trickle of water. The hills are to be terraced or protected by cover crops to prevent the first hint of erosion or rapid runoff.

Ponds trap the water in the small valleys and lakes with automatic drawdown outlets delay the potential flood in the larger streams. Little knowledge of engineering is required to understand that if this thorough treatment were applied to a watershed all the way from the source to the mouth the flood problem would be solved and natural resources would be preserved for present and future use. The rule would apply to the largest rivers as well as to the streams in

the Six-Mile Creek class.

Some idea of what this could mean, both agriculturally and industrially can be seen in the results already obtained in the two counties. Two industries that are of major importance to the area—a comb factory at Bonneville and a hosiery plant at Ratcliff—were induced to move into the watershed only because of the availability of water from the lakes. Other towns obtain water for their normal needs from the impoundments. Agricultural benefits include protection of the flatiands from flooding, soil conservation on the hills, and adequate water for livestock. Recreational facilities, improved habitat for wildlife and other fringe assets make the project even more attractive.

Auditors of Six-Mile Creek have estimated that the ratio of benefits to costs in the project is \$1.51 in assets to each \$1 spent. Unfortunately, few of our other public undertakings show such favorable returns.

COOPERATION WAS KEYNOTE OF SIX-MILE CREEK WORK

(By C. F. Byrns)

The Six-Mile Creek watershed project in Franklin and Logan Counties in Arkansas was declared the outstanding project of the year at the annual convention of the National Watershed Congress at a dinner in Washington Tuesday night.

That is an achievement worthy of highest honors. The Franklin County Soil Conservation District, Magazine Soil Conservation District, and Federal Soil Conservation Service pioneered in this relatively new effort to harness floodwaters, protect land and add to the water supplies in watersheds tributary to larger streams.

The Six-Mile project was one of about 60 pilot tests under conditions determined by Congress. Arkansas was scheduled in the original bill to have one of the projects. The Six-Mile Creek area was chosen in late 1953 and construction work began in early 1954. Twenty-four reservoirs have been completed and are in service.

The cooperation of many people was essential to the project. It was no easy task.

Landowners were required to provide rightof-way, to comply with the broad soil con-servation measures approved by the Federal Soil Conservation Service, to assume responsibility for changes in roads, utility lines, and other factors, all adding up to a total contribution by the landowners roughly equal to half the total cost. Responsibility for these agreements was in the hands of the locally operated soil conservation districts.

The value of this project has been fully demonstrated by events since the work started. Flash floods which had formerly ravaged much of the bottom land in the Six Mile and Hurricane Creek areas were brought under control. Lands which had laid idle for years because of the danger of destruction of any crops planted in the flood areas became usable. Even the continuing floods of 1957 were tamed by the completed reservoirs.

The apparent success of the project led to an intensive study by the U.S. Geological Survey staff in Arkansas. The findings have been used as a pattern for many other such

projects in the Nation.

Changes in the law have been made since the original act, to make easier the development of watershed projects. Requests for approval of such projects have far exceeded the available funds in Arkansas and elsewhere. The Arkansas project, now heading the parade on the national scale, and other pilot tests have caught the imagination of landowners all over the Nation.

Watershed protection is one of the many phases of flood control and water conserva tion. There is no real conflict between the Soil Conservation Service program on the small watersheds and the Corps of Engineers and reclamation organizations on the major streams. Each needs the other, and the critics have virtually faded away.

Conservation of water and land protection in big or little areas are essential to the Nation's future. Arkansas can be proud that its own people have won top honors

in this important program.

BANKER SUPPORTS WATERSHED

Clyde Hiatt, Charleston banker and rancher who accepted the award for the Six-Mile Creek watershed supporters in Franklin County, is sold on soil conserva-tion work. Active both in his local district as chairman of the Franklin County Board of Supervisors and in the State as secretary-treasurer of the Arkansas Assoclation of Soil Conservation Districts, Hiatt travels hundreds of miles each year to take part in soil and water conservation meetings.

Hiatt supervises many conservation practices on his C-Bar ranch near Charleston, where he raises commercial Hereford cattle on a 4,500-acre spread. The Republican was born 5 miles north of Charleston on a

40-acre farm.

Hiatt has been bank director for 37 years and has built the American State Bank into a leading one serving Franklin, Sebas-

tian, and Logan Countles.

Hlatt is a member of the board of directors for the Franklin-Logan County Industrial Development Corp., which helps draw industry to the area.

[From the Arkansas Democrat, Apr. 20, 1960] CORLEY SEES CHISMVILLE GROW MODERN

Jack Corley of Chismville one of the local persons to be present for the Six-Mile Creck award in Washington, is of pioncer stock. His father, Bob, helped settle Corley community and the post office was named for Corley is a member of the Magazine Soil Conservation District and recognizes the value of land protection and soil improvement to supply the Nation's needed foods.

Now in semiretirement at the farm, com-monly known as Nubbin' Ridge in the com-

munity, Corley has a 430-acre grass farm, about half of which is in the soil bank program. Corley sees a future for the area as more oil and gas exploration is being done in Logan County and is hopeful of running one those gas wells on his farm.

He attended school in Walnut Grove and Booneville and taught school 12 years. He was a road overseer with the highway department 6 years, and helped build Government roads on Mount Magazine and Cove Lake areas.

When Corley helped with 1940 census there were few modern homes in the area and their farmhouse was the only one in the community with a bath tub; today, over 50 percent of the homes are as modern as city homes.

National Business Leaders Organize Export Drive

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 2, 1960

Mr. WILEY. Mr. President, during a brief lifetime, our free enterprise system has made unique progress in developing an agricultural-industrial production capacity—the greatest in the

Today, our farms and factories are fully capable not only of fulfilling the needs of our citizens for peacetime purposes and defense but also of serving a far wider consumer area around the globe.

Overall, the advancements under this free system have been tremendous-establishing for our people the greatest strides of economic progress and highest standard of living in history.

At the same time, however, problems are emerging for which we need dramatic, creative solutions.

The technological advancements, for example-both in farming and in manufacturing-have enabled our system to produce far more than can be consumed at home.

Consequently, we face the challenge of finding new markets for this tremendous output of products-if we are to maintain high levels of employment and of economic activity.

We realize, of course, that there is a tremendous market in other lands around the globe-both for food, as well as machinery, equipment, and a wide variety of other materials turned out by the U.S. economy.

What is the market?

Today, a great many people, esti-mated at almost one-half of the nearly 3 billion people in the world, exist on inadequate diets. At the same time, the economies-industrially and agriculturally, as well as in general standards of living-of many countries have a long way to go in terms of increasing economic activities as well as providing better standards of living for their people.

Less developed areas of the world, of of course, cannot handle the same products utilized by the more advanced U.S. economy. Rather, it is going to require a realistic appraisal of the potential market, as well as the need for adaption of commodities, to take full advantage of the opportunities.

For the economic health of farms, business, industry, labor, and others, as well as the Nation itself-now experiencing a decline in exports-however, a realistic effort must be made to expand exports.

To meet the great challenge in this field, the business leaders of the Nation are organizing to expand our export program.

In addition, the Department of Commerce, as well as the Department of State and other Federal departments, and agencies, are providing leadership in promoting more world markets for U.S. products. The efforts-both of leaders in private enterprise and Government-I believe, represent a commendable, constructive effort to brighten the outlook and promote a better. stronger economy.

Recently, the Foreign Commerce Weekly published an informative article reflecting progress in this field.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

NATIONAL BUSINESS LEADERS ORGANIZE EXPORT DRIVE

The national export expansion program recelved new impetus when a group of outstanding business executives met with President Eisenhower, assured him of their support, and later held morning and afternoon sessions with Government officials at the Commerce Department to initiate plans for organizing private industry to increase export sales. Emphasis will be placed on ways to interest management of companies that have not been active in the foreign market.

The group are members of the new Export Expansion Committee appointed by Commerce Secretary Mueller on March 31 to organize a sustained effort by private industry to promote the American export trade expansion program, initiated last month by the President.

Leonard F. McCollum, Houston, Tex., chairman of the committee and president of the Continental Oil Co., said after last week's meeting:

"Businessmen welcome the fact that it is now U.S. Government policy to promote export trade and that the President in his recent message to the Congress initiated a national program to increase such sales.

"The postwar era is over and an entirely new pattern is beginning in world trade. Continuing peace, growing interest in American products, and oversea prosperity are creating new opportunities for American companies to sell more goods abroad.

"The committee initiated steps to organize 33 regional groups of representative business leaders in local communities to enlist the support of business organizations and individual businessmen in alerting the business community to these new opportunities and to the need for export expansion to offset deficits in the U.S. balance of payments."

ORGANIZATIONAL PLANS LAID

Initial organization activities will be centered in the Commerce Department's 33 field offices and a central headquarters will be maintained for the Committee in the Commerce Department Building in Washington. Paul H. Brent, Director, Business Relations

Division, Bureau of Foreign Commerce, has been appointed Executive Secretary of the new Export Expansion Committee of business executives. Communications should be addressed to him: Export Expansion Committee, Room 5527, U.S. Department of Commerce, Washington, D.C.

In addition to Chairman McCollum, members of the Committee are: Vice Chairman Morehead Patterson, New York, N.Y., chairman of the American Machine and Foundry Co.; Rudolph F. Bannow, Bridgeport, Conn., president of the National Association of Manufacturers; Donald K. David, Osterville, Mass., vice chairman of the Ford Foundation; and Arthur H. Motley, Larchmont, N.Y., president-elect of the Chamber of Commerce of the United States.

Secretary Mueller, in announcing the appointment of the Committee, said its membership includes executives with wide experience in world trade, international affairs, industrial production, small business, distribution, publishing, education, and civic

organization leadership.

Chairman McCollum currently serves as a Vice Chairman of the Business Advisory Council for the Department of Commerce and as Chairman of its Committee on International Trade and Commerce. Rudolph Bannow is a founder and president of Bridgeport Machines, Inc. Donald David is Chairman of the Board of Trustees of the Committee for Economic Development, and was formerly dean of the Harvard Graduate School of Business Administration. Arthur Motley is publisher of Parade magazine and was formerly Chairman of the National Distribution Council of the Department of Commerce. Morehead Patterson is a member of the Advisory Committee of the Foreign Commerce Study Group of the Senate Interstate and Foreign Commerce Committee.

PRESIDENT EXPLAINS PURPOSES

The President in his message of March 17 identified the purpose of the Committee and its functions as follows:

"Government promotion, however, can be effective only to the extent that it stimulates and encourages private business effort to expand sales abroad. Government can help enlarge export opportunities, but it is American business that must supply and sell the goods that world markets demand.

"To this end I have asked the Secretary of Commerce in cooperation with other Department heads to enlist the efforts of the business community. Consultations have already been held in connection with the preparation of this program.

"In addition, a group of business leaders will be asked to organize an export drive by business, to enlist the active support of existing national and local business groups, to discover the sectors in which better results can be obtained, to assist and encourage businessmen newly entering the export field, to strengthen contacts with business groups abroad, and to develop as organization structure adequate to these purposes."

RESTRICTIONS BEING REMOVED

At the initial committee meeting it was reported that a number of American firms previously active in exporting had withdrawn in recent years because their efforts had been handicapped by foreign discriminations, red tape, and other restrictions. Others, hearing about these barriers, had not attempted to enter the export field. But the picture is now changing and fresh opportunities are opening for everseas trade, especially for smaller business firms manufacturing exclusive goods, so-called innovational products, and luxuries.

Secretary Mueller and other Government officials pointed out that with the assistance of the General Agreement on Tariffs and Trade and the International Monetary Fund, much progress already has been made in

getting rid of restrictions adversely affecting our exports.

In 1959, Secretary Mueller said, our allies removed many barriers against dollar imports. Additional restraints were eliminated in the first quarter of this year. He said he anticipates a considerable easing of discrimination against dollar imports by the first of next year. "We are working for the removal of all discriminatory restrictions," he explained.

INDUSTRY ADVICE OBTAINED

The Commerce Department is now holding meetings every week with representatives of specific industry segments seeking their advice on measures Government might take to accelerate exports and their views on what particular trade restrictions handicap their sales. Forty such meetings are planned for the year. The Department intends to use the facts and arguments presented at these Commerce conferences to advocate further favorable response when U.S. representatives meet on GATT negotiations later this year.

"Business singlehanded would never be able to convince foreign governments to lower the bars," said Secretary Mueller. "But today the administration is using all of its many means of persuasion to convince our friends to let their own people purchase more American goods to increase their own standard of living."

AGENCIES TO EXPAND SERVICES

The cooperation of business in the export expansion drive is supported by a series of coordinated measures by the executive branch—especially the Departments of State and Commerce and the Export-Import Bank—to improve and expand Government services to private industry.

Representatives of Government agencies are explaining the new trade drive at business conventions and other meetings and through publications and Commerce Department field offices. Simultaneously and overseas the State Department and the U.S. Information Service are describing the program and its objectives, including the promotion of vigorous economic growth both at home and abroad.

Various private oragnizations, trade associations, and similar groups in the United States with an interest in world trade also are holding special meetings or are using portions of convention programs to discuss exports and explain the new Government-business partnership in export promotion, frequently emphasizing that more sales abroad make more business and more jobs at home.

Among Government officials at the all-day sessions of the Committee were: Under Secretary of Commerce Philip A. Ray, Assistant Secretary of State Thomas Mann, and Acting Assistant Secretary of Commerce for International Affairs Bradley Fisk.

The Export Expansion Committee will meet in Washington with Government officials later this month for a prograss report on organized efforts.

On Behalf of Syngman Rhee

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by William S. White, putting recent events in Korea in perspective, and recalling the eternal debt the people of Korea and of all free people owe to President Syngman Rhee for the heroic service he has rendered in fighting the greatest enemy freemen have ever faced worldwide:

[From the Evening Star, Apr. 29, 1960] Some Thoughts on Behalf of Rhee

The Old Man of Korea has gone out of office in heartbroken disgrace. The world's most exclusive club is shrunken yet a little more as Syngman Rhee passes from its membership. This is the Association of Indestructible Elder Statesmen.

Chancellor Konrad Adenauer of Germany, who is 84, leads the surviving band of those who, past 70, still carry crushing responsibilities. With him are Prime Minister Ben-Gurion of Israel (74) and Prime Minister Nehru of India (70 plus some months).

At 85, Mr. Rhee has ceased to be President of the Republic of Korea. And so has come to its close a career of 65 years as a public

man.

Much has been written that this aged symbol of Korea's long struggle for independence had overstayed his time. It is said, no doubt rightly, that he permitted police brutality, and worse, to stain his regime. It is said, no doubt justly, that a farce of "democracy" was being made in his country. So it is said that he had to go, and the United States was wholly justified in helping to push him out.

There is no quarrel with this reasoning—so far as it goes. To the world Korea is our creation and thus our responsibility. For Korea's sake (and for the sake of collective security everywhere) was shed the blood of so many of our people in a bitter war a

decade ago.

Perhaps it is possible, however, without defending corruption and antidemocratism, to raise reservations about this episode. Is the U.S. Government as ready to act to maintain the future integrity of Korea from Communist penetration as it was ready to oust bad old Mr. Rhee?

Is our righteous decision to overturn one regime—which was at any rate a determined regime—matched by equal determination to insist on a fair and strong successor regime? And having acted against Rhee on standards that are valid enough—that he had become a right-wing despot—are we ready for one other action?

Are we ready to apply these same standards to the left-wing despot in another country in which there is an undeniably close and historic U.S. responsibility? Will we now help to oust the Communist-backed dictator in Cuba, Fidel Castro, as we helped to oust the supposedly pro-Fascist dictator in Korea, Syngman Rhee?

Or is there a double standard here? The Eisenhower administration has no difficulty in justifying a naked intervention in Korea, call it what we will. But that administration finds enormous difficulty in even thinking about intervening in any way, naked or polite, in Cuba. After all, other Latin American nations might not like it. And the Organization of American States would "forbid" it anyhow.

A nation which wants to act can find the fine print oddly hard to read. A nation which does not want to act can find the fine fine print compelling, indeed.

So this one columnist is not quite able to join the almost universal and unqualified satisfaction that we have succeeded in casting out old Syngman Rhee in his 86th year and sending him off to end his life in the House of the Pear Blossoms in Scoul. It has been a famous victory. But one columnist, not denying the evils connected with the old man, also does not forget the past heroism of that old man against imperialist communism.

This much, anyhow, history must grant him. How much does history owe to Castro,

Whose victims in Cuba are quite as dead as Rhee's victims in Korea? How much of the free world's struggle against inperialist communism has Fidel Castro ever borne?

What Socialized Medicine Means

EXTENSION OF REMARKS OF

HON, THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. CURTIS of Missouri. Mr. Speaker. under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include "History of Socialized Medicine in Great Britain":

HISTORY OF SOCIALIZED MEDICINE IN GREAT BRITAIN

The foundations for socialized medicine in Great Britain were laid down on a limited basis with partial Government plans dating back as far as 1911.

Then on July 5, 1948, the National Health Service Act of 1946 went into effect in Eng-

land, Scotland, and Wales.

The act provided free medical, hospital, and dental care, free drugs, and other appliances. It covered inpatient and outpatient services as well as supplementary services such as midwifery, maternity and child welfare, health visiting, home nursing, domestic help where needed on health grounds, vaccination, and immunization against diseases, additional special care and after care in cases of illness, ambulance service, blood transfusion and laboratory service and a host of other things.

The national health service was part of Britain's social security system. for weekly contributions of over \$1 per person and slightly more from the person's employer. British leaders predicted that with these funds, free medical and health care could be given to everyone for £170 mil-

lion (about \$476 million) annually. In Britain the first full year NHS was in Operation (1949-50) the health service cost £440 million or \$1,230 million—nearly triple the estimate of the men who originally sold the idea to the people. Of this total, Patients paid only £5 million, another £28 million coming from social security deductions. The Government had to pick up the tab on the rest.

What has happened to the cost of NHS 10 years later? A recent issue of the London Sunday Express points out that, "No less an authority that Lord Beveridge had predicted that there would be no increase in

the cost before 1965."

In 1958 the NHS bill cost £705 millionan increase from the original £170 million estimated for its yearly operation. The "free" service was costing each British famlly £50 a year (\$140 a year), compared with about half that sum the first year.

British Chancellor of Exchequer, Derick Heathcoat Amory, told the House of Com-mons in 1958 that the "free health service, whatever it may be doing for the health of Britons, is leaving the Treasury gasping." In 1959 the cost was estimated at £740 million (\$2 billion), about five times the original estimate.

One out of every 100 Britishers (400,000) is employed by the Ministry of Health—two and a half clerks for every doctor in the British Isles. In the United States a Governmented-operated medical system would on that basis call for additional employment of 1,740,000 clerks, and it would call for a Washington office building that would make

the Pentagon look like an anthill next to a mountain by comparison.

Patients are hospitalized in Britain three times longer than in the United States. The average length of hospitalization for an American patient is 5 or 7 days. In 2,400 hospitals of England and Wales in 1953 the average stay was 20 days.

Hospital construction ceased with the initiation of the National Health Service. Limited funds have been used for the renovation of existing structures. Some new hospital building is finally underway. But there is a waiting list for admissions to hospitals of perhaps half a million persons.

Lecture on the Relations Between Panama and the United States Delivered by His Excellency the Chargé d'Affaires of Panama, Dr. Arturo Morgan-Morales, at Catholic University, Washington, D.C., March 13, 1960

EXTENSION OF REMARKS

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. HERLONG. Mr. Speaker, the American tradition of fair play suggests that both sides of a question be presented by reputable authorities. Then, in the light of the principles and facts elucidated, it should be possible to draw the right conclusions. It is in this spirit, without the slightest partisan bias, that the following exposition is brought to the attention of my distinguished colleagues: LECTURE ON THE RELATIONS BETWEEN PANAMA

AND THE UNITED STATES DELIVERED BY HIS EXCELLENCY THE CHARGÉ D'AFFAIRES OF PANAMA, DR. ARTURO MORGAN-MORALES, AT CATHOLIC UNIVERSITY, WASHINGTON, D.C., MARCH 13, 1960

I have been asked to speak to you this afternoon on the relationship between Panama and the United States, as seen from some of its fundamental aspects. We all know that the subject with which we deal today has recently been the object of some publicity. Therefore, those who have invited me consider it of interest that I speak broadly about this problem, which has deep roots in the historic past, and which as a whole is little known and sometimes mis-The construction of the Panunderstood. ama Canal is one of the most outstanding achievements of the 20th century, and one of the most brilliant and vigorous expressions of the North American genius. Every national of this great country should feel extremely proud of belonging to a State which has been able to accomplish a work of such magnitude.

Insofar as the construction of the canal, all the glory belongs to the United States; but one must not forget that this could not have been realized without significant legal complications, if the country across which the two great oceans were connected had not rendered positive cooperation. This cooperation has its legal roots in the treaties signed between Panama and the United States, among which the treaty of November 18, 1903, known as the Hay-Bunau Varilla Treaty, is one of the most renowned in the history of international law.

During the last months it has been repeatedly claimed, in the United States, that

the Hay-Bunau Varilla Treaty granted to this country absolute sovereignty over the Canal Zone. Panama, however, rejects such an assertion. Inasmuch as this old diplomatic controversy has reemerged to public view, we are going to review it summarily; and with this in mind, we shall first study the problem of the sovereignty in the Canal Zone, which will then enable us to clarify the juridical status of said territory; and to conclude, we shall make reference to some of the present problems.

PART I. THE PROBLEM OF THE SOVEREIGNTY OF THE CANAL ZONE

According to recent assertions in the U.S. Congress, the Panama Canal Zone is "a constitutionally acquired territory of the United the sovereignty of the United States" and States over the Canal Zone is absolute. Panama categorically rejects this thesis.

Inssmuch as such an assertion implies that the Panama Canal Zone territory is part of the territory of the United States of America, it is necessary above all to look for any deed which grants to the United States title over the Canal Zone.

The first significant document in this connection is the act of June 28, 1902, known as the Spooner Act, by which the President of the United States was authorized to acquire from the Republic of Colombia perpetual control of a strip of land across the Isthmus of Panama for the purpose of constructing, maintaining, and protecting a sea-way canal between the Atlantic and the Pacific.

As a result of the Spooner Act the United States and Colombia negotiated a treaty known as the Hay-Herran Convention of January 22, 1903. The U.S. Senate ratified this convention on May 17, 1903. Article IV

states:

"The rights and privileges conceded to the United States by the terms of this convention shall not affect the sovereignty of Republic of Colombia over the territory within whose limits such rights and privileges are to be exercised. The Government of the United States fully recognizes this sovereignty and disclaims any intention to minimize it in any manner or to increase its own territory at the expense of Columbia or of any of the sister republics of Central and South America; it desires, on the contrary, to strengthen the power of the republics on this continent and to promote, develop, and preserve their prosperity and independence."

It is certainly not here that we find a grant of sovereignty over the Canal Zone to the United States. On the contrary, the, convention contains the solemn promise that not only did the United States not intend to acquire sovereignty over the Canal Zone, but that furthermore it did not intend ever to acquire it or to increase its own territory at the expense of another American republic.

The Hay-Herran Convention, however, was not ratified by the Colombian Senate. resulted in the secession of Panama from Colombia, and the recognition of the new Republic of Panama by the United States and the other countries of the world.

Based on the Spooner Act, and having in mind the solemn promise concerning sovereignty which I have quoted, a new treaty was negotiated with the Republic of Panama for the same purpose as the Hay-Herran Treaty.

In the preamble of the new treaty it is stated that "the United States of America and the Republic of Panama being desirous to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans, and the Congress of the United States of America having passed an act approved June 28, 1902, in furtherance of that object, by which the President of the United States is authorized to acquire within a reasonable time the control of the necessary territory of the Republic of Colombia, and the sovereignty of such territory being actually vested in the Republic of Panama, the high contracting parties have resolved for that purpose to conclude a convention."

The preamble, therefore, states clearly that the sovereignty of the old Colombian territory, as of November 18, 1903, was vested in the Republic of Panama.

Now then, what was the object of the new convention? Was it to purchase a territory like Louisiana or Alaska? Certainly not. The object was to grant a concession for an international public service; and if the contracting parties had not been sovereign states this would have been accomplished by a simple administrative contract rather than by treaty.

In order to be able to support the thesis that the Panama Canal Zone "is a constitutionally acquired territory of the United States where the sovereignty of the United States is absolute" one would expect to find in the text of the convention some provision similar to the one contained in the treaty for the cession of Louisiana, where it is said that "the first consul of the French Republic desiring to give to the United States a strong proof of his friendship doth hereby cede to the said United States in the name of the French Republic forever and in full sovereignty the said territory with all its rights and appurtenances as fully and in the same manner as they have been acquired by the French Republic."

Or, in the same line of thought, a provision similar to the one found in the convention ceding Alaska, according to which "His Majesty the Emperor of all the Russias agrees to cede to the United States, by this convention, immediately upon the exchange of the ratification thereof, all the territory and dominion now possessed by his said majesty on this continent of America and in the adjacent islands."

No such provision, and nothing even remotely resembling it, is to be found in the Hay-Bunau Varilla Treaty. This convention has 25 articles, by which the Republic of Panama granted a series of concessions similar to, although greater than, the concessions made by the treaty with Colombia. The similarity is logical, since both conventions had the same object: to grant to the United States a concession for the operation of a public service of maritime transportation, a service of public utility.

It is also interesting to observe that if any of the 25 articles of the new treaty granted to the United States the alleged absolute to the United States the alleged absolute sovereignty over the Canal Zone, then many of those 25 articles would make no sense. Logically, it would have needed only a simple provision like the ones I have quoted in the cases of Alaska and Louisiana, and there would have been no further argument. On the contrary, the Hay-Bunau Varilla Treaty takes pains to define specifically the rights which are granted. For example, there is no doubt that under the Spooner Act, and for the purpose of the canal concession, the United States was granted the use, occupation and control of the Canal Zone. The United States therefore has full right to operate and maintain the Panama Canal; but that right at the same time constitutes only reason for its presence in the Isthmus of Panama.

Article III of the Hay-Bunau Varilla Treaty has caused the greatest confusion. This article grants to the United States the exercise of all severeign rights it would possess and would exercise if it were sovereign of the Canal Zone territory to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights. This article is the basis for those who claim that the United States is absolute sovereign of the Canal Zone. However, from merely a cursory reading of the article it can be seen that Panama grants to the United States the exercise of the rights "it would possess if it

were sovereign." Right there is the admission by the United States that it is not sovereign. Panama, on the other hand, excludes herself entirely from exercising sovereign rights. Since this is the point that has led to so many errors, it becomes indispensable to explain a little more thoroughly what was granted by Panama: the exercise of sovereign rights. We must differentiate between the ownership of rights, and the grant of permission to exercise rights owned by another. The owner of a share of stock in a corporation may give a proxy to someone else to exercise the voting of that stock, without in any way relinquishing his ownership.

In international law we also find cases where the enjoyment of certain rights belongs to one country while the exercise of those rights, for various reasons, has been entrusted to another nation. So, for instance, in 1878 Turkey granted the exercise of sovereign rights over the territory of Bosnia and Herzegovina to the Emperor of Austria-Hungary. In that same year Turkey also granted to Great Britain the exercise of sovereign right over the Island of Cyprus but in both cases, Turkey retained the ownership of those sovereign rights.

In 1898 China granted to Great Britain the exercise of sovereign rights in Wei Hal Wei only while Russia occupied the peninsula of Port Arthur. But China continued enjoying sovereign right.

In 1898 China also granted to Germany the exercise of sovereign rights over the Port of Kia-Chau for 99 years. Thus, it is very important to emphasize that article III of the Hay-Bunau Varilla Treaty grants to the United States only the exercise of sovereign rights, but not the rights themselves.

With the above in mind, we come to the second part of our conference, which is to establish the juridical status of the Canal

PART II-JURIDICAL STATUS OF THE CANAL ZONE

In a preliminary way, we can say that in the Canal Zone, Panama possesses the enjoyment of sovereign rights but that the exercise of those sovereign rights has been entrusted to the United States to insure the efficient operation of the public service offered by the seaway canal.

Panama is, therefore, the titular of her sovereignty, or as is more commonly said, Panama has titular sovereignty. The United States has the exercise of the sovereign rights that belong to Panama, just like Great Britain and Germany, at other times, exercised rights that belonged to Turkey or to China. It should be realized here that I am making this explanation in general terms in order to facilitate the understanding of such a complicated matter. And, as we shall see later, Panama has not entrusted to the United States the exercise of all sovereign rights in the Canal Zone. This can be verified by examining other articles of the treaty of 1903. As a matter of fact, the very general concession of the exercise of sovereign rights provided in the above mentioned article III is strongly limited by other articles of the convention. In other words, if article III is taken out of context, and more importance is attached to it than to the other articles of the treaty, very erroneous conclusions can be reached; however, even article III, carefully read, gives no sovereignty to the United States, but confers permission to exercise Panama's sovereignty. And when one examines the treaty as a whole one can easily see that Panama did not grant to the United States the full exercise of sovereignty. For example, article XIII of the treaty permits the United States to import into the Canal Zone, free of Panamanian duties, articles necessary and convenient for the construction and operation of the Canal, as well as provisions, medicines, clothing, supplies, and other articles necessary and convenient for

the employees of the canal and for their families. As can be clearly seen, only merchandise which can be classified as "necessary and convenient" may be introduced into the Canal Zone free of Panamanian duties. Therefore Panama retains the exercise of her sovereign fiscal right to impose taxes on merchandise imported into the Canal Zone not classified as "necessary and convenient."

Another example: Article VI deals with the property rights of Panamanian citizens in the Canal Zone and provides that any damage caused by reason of the canal concession must be appraised by a joint commission appointed by the two countries. Now then, if the United States obtained absolute sovereignty over the Canal Zone, how can the establishment of the joint Panamanian-American Commission be explained? It is logical then to maintain that Panama did not grant the full exercise of jurisdictional sovereignty.

The same article provides that the grants contained in the treaty must not interfere with the right of Panamanian citizens to travel over the public roads passing through the Canal Zone, provided that said right does not interrupt the proper administration of the public service. How can this precept be explained if the United States were absolute sovereign? Panama retained the exercise of her right of transit through the Canal Zone and thus the United States does not have the faculty to prevent Panamanian citizens from traveling through that territory.

It is also interesting to observe the reason for article X. We have seen that Panama did not grant to the United States the full exercise of powers of taxation and thus it was necessary to specify that Panama would not impose taxes on the canal, the railroad, tugboats, and other vessels used in the operation of the canal, storehouses, workshops, offices, quarters for laborers, factories, warehouses, wharves, machinery and other works appertaining to the canal, and also that there would not be imposed contributions or charges of a personal character upon the employees of the canal. The fact that such a clause was included in the treaty is clear proof that if it had not been included. Panama would have had the right to impose the taxes that were exempted.

It would take a long time to enumerate all the clauses of the treaty; for this reason I invite you to read its 25 articles. One point, however, is of capital importance; namely, that all and each one of the articles of the convention refer solely and exclusively to the concession of a public service of maritime transportation; in other words, to the construction, maintenance, operation, sanitation or protection of the Panama Canal. Those who find some difficulty in understanding some of the parts of the convention should remember this common denominator which embodies the single and only object of the convention: the construction and the efficient operation of a canal; not the cession or lease of territory.

For this reason the United States could not, like the Emperor of Russia with Alaska or like the first French consul with Louisiana, sell the Canal Zone territory. Neither could it use the Canal Zone for any other purpose than the operation of a canal; and neither could it internationalize the canal without the consent of the titular sovereign.

And thus we arrive at the conclusion of the second part of our lecture, namely that in the Canal Zone Panama maintains the enjoyment of sovereign rights and the exercise of those sovereign rights which she did not specifically grant the United States, and that the United States possesses the exercise of only those sovereign rights necessary for the efficient operation, maintenance, and protection of the canal.

PART III

Finally we come to the third part of this address concerning some of the recent inci-

dents in the relations between Panama and the United States.

I have already explained in detail the basis upon which the U.S. Department of State, and even the President of this great country, have declared on several recent occasions that Panama has titular sovereignty over the Canal Zone. Unfortunately they have been severely and unjustly criticized for this. Notwithstanding what titular sovereignty means: Namely that the United States exercises Panamanian rights in the Canal Zone and Panama possesses the enjoyment of her inherent sovereign rights, it has been said in the U.S. House of Representatives that the assertion on the part of the State Department that Panama possesses titular sovereignty of the Canal Zone has introduced a new element into the Panama-United States relations, and that in making this assertion distinguished officials of the State Department have acted "stupidly." This accusation could not be more unjust. The expression "titular sovereignty" is an old one. It appears in numerous documents of the period during which the United States superseded a French company in the construction of the canal. For instance, William H. Taft, then Secretary of War of the United States, in a declaration made before the Committee on Interoceanic Canals of the U.S. Senate, on April 18, 1960, stated that article III of the Hay-Bunau Varilla Treaty does not confer sovereignty directly upon the United States but gives to the United States the powers which it would have if it were sovereign. This leads to the obvious deduc-tion that the titular sovereignty rests with the Republic of Panama. He then added:

"The truth is that while we have all the attributes of sovereignty necessary in the construction, maintenance, and protection of the canal, the very form in which these attributes are conferred in the treaty seems to preserve the titular sovereignty over the Canal Zone in the Republic of Panama.

Similar phrases appear in various pro-nouncements made by President Theodore Roosevelt, by the first Governor of the Canal Zone, Maj. Gen. George E. Davis, by General

Goethals, and others.

Later, the fact that Panama is the territorial sovereign of the Canal Zone and that the United States exercises in this territory Panamanian rights and especially jurisdictional rights, was confirmed in the general treaty celebrated between Panama and the United States on March 2, 1936. Article I states:

"In view of the official and formal opening of the Panama Canal on July 12, 1920. the Republic of Panama and the United States of America declare that the provisions of the Convention of November 18, 1903, contemplates the use, occupation, and control by the United States of America of the Canal Zone and of the additional lands and waters under the jurisdiction of the United States of America for the purposes of the efficient maintenance, operation, san-Itation, and protection of the canal and of

its auxiliary works."

And if this express delineation of the nature of the international agreement providing for the concession of a public service is still not found to be sufficiently clear to indicate that titular sovereignty is vested in Panama, paragraph 6 of article III of the Same treaty of 1936 determines that the Canal Zone is "a territory of the Republic of Panama under the jurisdiction of the United States." Thus we see that public treaties proclaim that the Canal Zone territory is Panamanian but that in this territory the United States exercises rights which, Were it not for the existence of the canal Concessions, would be exercised by the territorial sovereign.

Further to substantiate this thesis there have been decisions by United States courts, handed down even before the treaty of 1936 came into existence. On January 6, 1920, for example, in the case known as the Luckenbach Steamship Co. v. U.S., the Supreme Court of the United States, through an opinion handed down by ex-President Taft, then Chief Justice, declared that Canal Zone ports are foreign ports. Now then, if the Supreme Court of the United States has declared that Canal Zone ports are foreign ports, logically it must be deduced that they belong to the territorial state, that is Panama. Even the Supreme Court, therefore, does not admit the United States sovereignty over the Canal Zone. (U.S. 280, U.S. 173.) Also in this connection the Court of Appeals of Illinois, in the case of Macomber and Whyte Co. v. United Fruit Co., resolved that the Canal Zone must be considered as foreign territory for the purposes of the Bill of Lading Act. (Ref. Court of Appeals of Illinois, vol. 225, p. 286 (1922).) The Attor-ney General of the United States has also pronounced judgment to this effect.

Thus, when we see that treaties, President Eisenhower, officials of the State De-partment, the Attorney General, and even the Supreme Court of the United States admit the titualr sovereignty of Panama over the Canal Zone, the commotion roused in certain circles of this great country due to the petition formulated by Panama that its be flown jointly with the American flag in the Canal Zone, causes great surprise. In this connection it is interesting to review a little history. As is well known, the secession of Panama from Colombia caused great enthusiasm and the inhabitants of the territory which is known today as the Canal Zone adorned their residences with the new Panamanian flag, which was also flown from public buildings. American authorities that arrived in Panama after the celebration of the 1903 convention did not feel that they had a right either to remove the Panamanian flag or to raise the United States flag. In this connection, on March 30, 1906, an interesting dialogue took place before the Committee on Interoceanic Canals of the United States Senate, between Maj. Gen. George W. Davis, a member of the Isthmian Canal Commission and first Governor of the Canal Zone, and Senator Morgan, which I am going to quote

"Senator Morgan. You consider the flag of the United States as being entirely at

home in the Zone?

"General Davis. Yes, I consider it is en-tirely at home there, but whether or not technically we have a right to fly the flag of the United States in the Zone—I say technically-it seems to me might be questionable.

"Senator Morgan. Have you ever raised

"General Davis. No, and it never will be raised, I think; but since titular sovereignty resides in Panama, I think that proposition has been stated many times.'

As can be readily seen, this is another case where the expression titular sovereignty was used. However, the interesting thing to observe is that in 1906 it was the American flag which had never been raised in the Canal Zone because the first Governor considered that the United States right to raise it might be questionable. Furthermore. Governor Davis thought that it would never be raised there. Then one fine day this was done; the Government of Panama did not protest, and today we find that certain circles are opposed to the raising of the flag of the country to which the territory belongs. However, I am fully convinced that justice will be done to my country in this sense. We have seen, however summarily, that the problems arising from the Panama-United States relations are highly technical and little known in large segments of public opinion; but the experts agree with us in this case and that is the most important thing.

One thing is clear. The friendships between the peoples of our two Republics are so strong, and have endured so long, that no meer legal technicality is apt to upset them. We may be confident that both countries, through the actions of their responsible leaders, are dedicated to just ettlements of such disputes, and that the Panama-United States kinship will continue undisturbed.

Diamond Jubilee of St. Joseph's Benevolent Aid Society, Lawrence, Mass.

> EXTENSION OF REMARKS OF

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my remarks to the St. Joseph's Benevolent Aid Society at Lawrence, Mass., on the occasion of its diamond jubilee, May 1, 1960:

Greetings, to help those who are in need, and to be kind to the unfortunate, is to live the great Christian virtue of charity.

That is what the members of St. Joseph's Benevolent Aid Society have been doing for 60 years.

As one of the oldest parish organizations in our community, it has given the members of the congregation an opportunity to do good in fulfillment of the inspired teachings of the Catholic Church.

The charter members brought their faith with them from Poland which embraced Christianity as early as year 966. Even though Poland has been separated from the free world by the Iron Curtain and by the Communist puppers who rule the country against the will of the people, her faith grows stronger through persecution.

It is a happy coincidence that your diamond jubilee takes place only 2 days before May 3, which is the anniversary of Poland's

Constitution Day.

For the past 20 years the Congress of the United States has observed this day with special tributes and for a twofold purpose: (1) To remind the Polish people that Americans have not forgotten their pledge to help Poland restore her freedom and independence, and to facilitate her return to the western family of nations; and (2) in order to review and place in proper perspective Poland's contribution in the development of Western civilization and culture.

These observances have a beneficial impact on the hopes and aspirations of the Polish people who, through no fault of their own, have been forced to endure Soviet tyranny and to live in a twilight zone between the darkness of spiritual and physical oppression from the East, and, as yet, the steadily flickering rays of encouragement and moral and economic aid from the West.

Over 7 million Americans of Polish origin. including a large group in Greater Lawrence, remind us of the generous contributions made by Polish freedom fighters to the winning of American independence.

There are strong ties between the people of Poland and the people of the United States, based upon our mutual respect for the dignity of man.

It is a spirit that is exemplified by St. Joseph's Benevolent Society of Holy Trinity

Through 60 years of service you have earned the gratitude of those you have helped, and the respect of the entire community.

And you have done this through voluntary cooperation, that reflects credit upon yourselves, your church, your Polish heritage, and your American citizenship.

In honor of this occasion it is my pleasure to present to you a flag that has flown over our Nation's Capitol at Washington, D.C.

I know that you will cherish it, for what it means to all Americans, and for the hope it symbolizes to the captive nations who look forward to the day of their liberation, when all persons everywhere will be free to express the God-given spirit of benevolence that characterizes the members of St. Joseph's Society.

A diamond jubilee is a very special event to celebrate, and to remember. The program

Opening remarks: Richard M. Plonowski,

past president.
Our national anthem: Assembly.

"Boze, Cos Polske": Assembly.

Memorial program: Direction of Benjamin

Remarks: Anthony Turkosz, vice presi-

Award of past presidents' medals by John Pelczar, past president, to Richard M. Plon-

owski and Augustyn Stopyra.

Reading of messages: Secretary Julian
Michaelwicz and Treasurer John Serwatka.

Michaelwicz and Treasurer John Serwatka. Invocation: Rev. Stephen Musielak, O.F.M., Conv., pastor and spiritual director. Dinner.

Toastmaster: Stanley J. Dziadosz. Introduction of guests at head table.

Presentation of 50-star flag: Congressman Thomas J. Lane.

Remarks: Massachusetts Executive Councillor Augustus G. Means.

Remarks: Massachusetts Senator William

X. Wall. Remarks: District Attorney John P. S.

Remarks: District Attorney John P. S. Burke.
Principal speaker: Rev. Stephen Musielak,

O.F.M., Conv.

Introduction of souvenir program book: Chairman Stanley Maciejewski.

Closing remarks: Toastmaster Stanley J.

Our national anthem and "Boze, Cos Polske."

Panama Canal: 1950 DAR Resolution

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. FLOOD. Mr. Speaker, it was my privilege on April 18, 1960, to address the national defense meeting of the National Society, Daughters of the American Revolution on the subject, "Panama Canal: Key Target of the Fourth Front," which address was quoted in a statement to the House on April 19 by Representative Francis E. Walter of Pennsylvania. Subsequently, this splendid organization passed a reso-

CONTROL OF PANAMA CANAL—NATIONAL SO-CIETY, DAUGHTERS OF THE AMERICAN REVO-LUTION, 69TH CONTINENTAL CONGRESS

lution on control of the Panama Canal

which I quote:

Whereas the United States in 1903 acquired full sovereignty by grant in perpetuity of the Canal Zone from Panama; and

Whereas the Thomson-Urritia Treaty between the United States and Colombia aimed, through a generous compensation to Colombia, to restore the friendship between that country and the United States which had been threatened by the loss of territory and revenue occasioned by the secession of Panama from Colombia, and defined the rights of the United States and Colombia respecting the Panama Canal; and

Whereas forcing the abandonment of the Panama Canal, and accomplishing the internationalization is a Communist tactical ob-

ective; and

Whereas retention of sovereignty and control of the Panama Canal Zone is a vital necessity to the defense of the United States:

Resolved, That the National Society.

Resolved, That the National Society, Daughters of the American Revolution, urges that the United States refuse to permit the flag of Panama to be flown in the Panama Canal Zone; and

Resolved, That the National Society, Daughters of the American Revolution, urges the President and the Senate of the United States to refuse to enter into any treaty or make any executive agreement with Panama whereby this country would lose its sovereignty and control over the Canal Zone and the Panama Canal.

Milk Fight Advances

EXTENSION OF REMARKS

HON, FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. MARSHALL. Mr. Speaker, the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce is performing a real public service in its hearings on the National Milk Sanitation Act.

An editorial in the St. Paul Dispatch of April 27, 1960, takes note of the fact that for the first time a representative of the executive branch has testified in support of the bill. We hope that this is evidence of progress in the fight against the artificial barriers which discriminate against our quality milk products in interstate commerce.

The editorial rightly pays tribute to our colleague, Lester Johnson, the author of the bill. He is recognized as the able and conscientious friend of dairy farmers and the dairy industry. His tireless effort in behalf of the bill is another example of his genuine interest in the welfare of the American farmer and his concern over the need for quality products for the American consumer.

The editorial follows:

MILK FIGHT ADVANCES

Just 10 years ago, in May of 1950, these newspapers began systematically publicking the need to abolish a maze of capricious State and local sanitary barriers against the free movement interstate of wholesome dairy products.

On Tuesday for the first time, an official of the U.S. executive branch formally supported such legislation. In a House Commerce Subcommittee hearing, Assistant Surgeon General David E. Price, of the Department of Health, Education, and Welfare, endorsed the Lester Johnson bill. It would permit the sale everywhere of milk and cream meeting uniformly high Federal standards of health and safety.

This official backing by the U.S. department that is primarily responsible for public health and welfare represents a great gain

for this measure. It would be a mistake, however, to jump to conclusions that final victory is now in sight or will be easy. Strongly entrenched behind their milk walls and skillfully represented in Congress are local milk monopolies like that of Washington, D.C., which profit from exclusion of competition of Midwest milk and cream.

But it would be a still worse mistake for Midwest dairying to do anything but press ahead with renewed vigor in its fight. The Johnson measure has the backing, without regard to party, of 20 House Members and 4 U.S. Senators, and of the Minnesota and Wisconsin State governments.

Lately it has gained support of the statewide consumers organization in Connecticut. It is backed by the General Federation of Women's Clubs. Its uniform sanitary milk code was developed by the U.S. Public Health Service. Most Midwest States are already voluntary adherents of that uniform code.

The pattern of guaranteed freedom of commerce under Federal inspection of meat has established itself through more than half a century of service to meat consumers and producers in this country. On Tuesday a Pioneer Press editorial on extension of that pattern to wholesome poultry products was read into the hearing record by Representative Johnson. It showed the immense free movement of U.S.-inspected poultry from the South and East into Midwest city markets. Representative Johnson rightly said that all Midwest dalrying asks is an equal deal with the poultry and meat industries from the U.S. Congress.

Whether it takes another year or another decade, the fight for Federal guarantees of freedom of commerce in wholesome milk and cream must go on to victory. The principles of fairness and justice under law, the best interests of producers and consumers, and the advancing techniques in sanitary production and transportation of milk unitedly demand it.

Kaplan Student Is Louisiana's Homemaker of Tomorrow

EXTENSION OF REMARKS

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WILLIS. Mr. Speaker, it gives me much pleasure to call attention to the State honors won in Louisiana by a young lady from my congressional district, Miss Vivian Couvillon, of Kaplan.

Miss Couvillon was among the winners from the various States who were in Washington for the final events of the 1960 Homemakers of Tomorrow Search, climaxed by an American dinner table banquet at the Statler-Hilton Hotel. Each received a \$1,500 scholarship plus an all-expense trip to Washington, New York, and Williamsburg, Va.

More than 370,000 senior girls in high schools across the Nation took an examination on "Homemaking Knowledge and Attitudes." The contest, sponsored by General Mills, is designed to further the prestige and dignity of the American home and to stimulate interest in the art of homemaking. Another purpose is to emphasize the outstanding contributions being made by high school teachers throughout the United States.

Louisiana's homemaker of tomorrow is the daughter of Mr. and Mrs. Roy Couvillon of Kaplan. Her father is a school principal and her mother a homemaker—both very much interested in the welfare of children. Their daugh-ter's broad knowledge as demonstrated in attaining top honors in Louisiana in the nationwide competition emphasizes the culmination of teachings she has had in home, church, and school.

Mrs. W. E. Douglas, homemaking teacher of Kaplan High School, accompanied Miss Couvillon on her trip to the Nation's Capital and to New York and

Williamsburg.

Senator Lyndon Johnson "Keeps the Store"

EXTENSION OF REMARKS

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. CASEY. Mr. Speaker, we Texans are extremely proud of our senior Senator, the Honorable Lyndon B. Johnson, not only in the way he has represented our great State, but in the manner he has fulfilled his tremendous responsibility as majority leader of the Senate.

One of the many reasons we are proud of him is that no matter what his personal political ambitions may be, he has recognized that his first responsibility is to the people of Texas as their Senator, and to the people of this Nation as their majority leader. That he has discharged this responsibility—and is continuing to do so-is a matter of record. It is gratifying to me that the Houston Post, in its editorial of April 25, commended Senator JOHNSON for placing whatever personal amibtions he may have secondary to this great responsibility as majority leader: SENATOR LYNDON JOHNSON "KEEPS THE STORE"

In his Houston press conference Thursday Senator Lyndon B. Johnson, of Texas, used an expression which in a way is the key to his situation. Asked about his unwillingness to be an announced presidential candidate, he replied that he felt honored at having his name mentioned, but that "somebody must keep the store."

In old times, "keeping the store" meant re maining in the emporium, particularly while everyone else connected with it was out gallivanting, to slice and sell the customers rattrap cheese, crackers from the barrel, and side meat from the butcher's hook. Senator JOHNSON, the Senate majority leader, gives the expression a modern meaning. And he is

a particularly appropriate person to do so. Answering another newsman's question, as to whether he would be receptive to the bresidential nomination, he said, "I now have a job to do in the Senate, and I will attempt to do it the best I can." In that declaration LYNDON was not just whistling Dixle. He is known and acknowledged to be the hardest Working Member of the U.S. Schate, in season and out. When the Senate sits day and night, he works from the floor day and night. Often the author of a bill will absent himself, entrusting its management to Senator Johnson. That is a true example of "keeping the store." Besides, he must work between Senate sessions, getting bills in shape

for action, conferring with colleagues, planning strategy. That is the majority leader's business. It has been said that Senator Johnson maintains five different offices, manned with members of his staff, in all of which he has daily work to do.

Whatever his intention or hopes may be with reference to the presidential race, as long as Lyndon Johnson is majority leader of the Senate, there will be someone to "keep the store."

Grazing Fee Study Initiated

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include extracts from a report of the Comptroller General and portions of an exchange of correspondence from which there has been generated an interdepartmental study of inconsistencies in grazing fees on Federal lands.

I appreciate the cooperation of the Departments of Agriculture and the Interior in undertaking the study as proposed by the Comptroller General.

It is my hope that through this study unjustifiable inconsistencies can be removed and the grazing administration of Federal lands can be strengthened. The extracts and letters follow:

EXTRACTS FROM REPORT TO THE CONGRESS BY THE COMPTROLLER GENERAL, SEPTEMBER 1959 ON REVIEW OF ACTIVITIES IN NORTHERN RE-GION (REGION 1), ROCKY MOUNTAIN REGION (REGION 2), CALIFORNIA REGION (REGION 5), FOREST SERVICE, DEPARTMENT OF AGRI-CULTURE, SEPTEMBER 1958.

In our report to the Congress dated June 7, 1957, on the audit of the Forest Service for 1955-56, we recommended that the Service reexamine its policies and practices with the objective of obtaining fair compensation for the use of its lands. This matter was also included in our January 1959 report to the Committee on Appropriations, House of Representatives, on significant findings developed during the course of audits and other examinations. It is repeated in this report because as yet there are no firm plans for

revising grazing fees.

In our fiscal year 1958 audits, we found that Forest Service grazing fees were still greatly below fees charged on comparable State and private lands. There is also a wide variation in charges made by the Federal land managing agencies for grazing on Government range land.

Forest Service and Department of Agriculture officials believe that comparable rates among all Federal land managing agencies are desirable and that any fee study undertaken by the Service should be made simultaneously and on a coordinated basis with studies conducted by other Federal agencies. In letters dated February 10 and April 24, 1958, in response to Bureau of the Budget Bulletin No. 58-3 concerning user charges for certain Government services, the Department stated that there is currently a wide variation in charges made by Federal agencies for grazing privileges on similar range land, that present inconsistent practices should be made uniform, and that joint action within the executive branch is needed. To advise the Congress and obtain its support, the Department suggested that the Bureau of the Budget initiate a joint resolution endorsing cooperative study by the Departments of Defense, Interior, and Agri-However, in its reply dated July ' 25, 1958, the Bureau of the Budget took the view that the agencies concerned should work out mutually agreeable procedures. In a letter dated August 25, 1958, to the Budget Director from the Under Secretary of Agriculture, the Department again suggested that prior congressional concurrence in the form of a Joint Congressional Resolution might be desirable for the executive branch study.

As of July 1, 1959, no further action has been taken on the matter by either the Department of Agriculture or the Bureau of

the Budget.

To eliminate present inconsistencies in charges for grazing on Government lands managed by different Federal agencies, and to obtain fair compensation for use of these lands, we recommend that a joint study be undertaken with the objective of arriving at a uniform basis for establishing grazing fees. We believe that the study will not be undertaken without congressional sanction.

> COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, Washington, D.C., March 4, 1960.

Hon. FRED A. SEATON,

Secretary of the Interior, Department of the

Interior, Washington, D.C.
DEAR MR. SECRETARY: This refers to Under Sccretary Elmer F. Bennett's letter of February 4 in which it is stated that the Department of the Interior would be pleased to cooperate in a joint study directed toward the objection of eliminating certain inconsistencies between Federal agencies with respect to grazing fees.

You have already been provided with a copy of a letter dated November 25 from the Department of Agriculture in which it is stated that that Department believes that practices among Federal agencies should be made uniform and that any adjustments in grazing fees should be based on a joint study by the Federal Departments (Agriculture, Defense, and Interior).

In view of the conclusion of both Departments that this study would be bene-ficial, I would suggest that the study be initiated and carried out at the earliest convenience of the Departments concerned. At the completion of the study a copy of the resulting report should be furnished to the committee and at that time consideration will be given to the possibility of printing it as a congressional document.

Please advise me from time to time on the progress of the study.

Sincerely yours,

WAYNE N. ASPINALL,

Chairman.

U.S. DEPARTMENT OF THE INTERIOR. OFFICE OF THE SECRETARY, Washington, D.C., April 25, 1960.

Hon. WAYNE N. ASPINALL,

Chairman, Committee on Interior and Insular Affairs, House of Representatives,

Washington, D.C.

DEAR MR. ASPINALL: Your letter of March 4 suggests that a joint study directed toward the objective of eliminating certain inconsistencies between Federal agencies with respect to grazing fees be initiated and carried out at the earliest convenience of the Departments concerned. This Department is currently engaged in informal discussions with the Departments of Agriculture and Defense designed to initiate such a study. We will keep you advised from time to

time relative to its progress and upon completion of the study furnish your committee with a copy of the results.

Sincerely yours, ELMER F. BENNETT, Under Secretary of the Interior.

Justice for My Children

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include an article by Francis J. Brown, doctor of philosophy, professor of economics, DePaul University, Chicago, Ill., wherein he protests the violation of the civil right of religious freedom for his children in H.R. 10128; Justice for My Children—How Long Will.

CONGRESS TREAT MY CHILDREN AS SECOND-CLASS CITIZENS?

(By Francis J. Brown)

Margaret Rose Brown is a bright young scholar of 7 years, an American citizen born of American citizens and, as such, entitled under the Constitution of the United States to the equal protection of the laws; but as yet Congress, in its numerous proposals for Federal aid to education for children of ages 5 to 17, apparently has nothing to offer her or her brothers and sisters, for they belong to a family that prefers private education through religious conviction.

Typical of congressional legislation for this age group is the widely advertised Murray-Metcalf bill which proposes to make Federal grants for construction and teachers' salaries but only to the elementary and secondary public schools. In this and similar bills no provision is made either for private schools or for those children who attend them through religious conviction.

Recently a few unsuccessful attempts have been made both in the Senate and in the House of Representatives to amend the basic legislation to provide long-term construction loans to private schools at low interest rates. Perhaps the leaders of the private school systems accept such loan arrangements as at least something in a cold cruel world, but as the spokesman for my children I regard them as public symbols of discrimination.

In this article I shall explore some of the implications for my family of the Federal education legislation. But before proceeding, I want to caution, first, that this is to be a case not for or against Federal aid but only for freedom and equality; and secondly, that I speak only for my children as American citizens, and not for any school system or church.

In this matter it is most important to distinguish the rights of churches and those of individuals. Whatever may be the rights of their church in our society, my children are guaranteed by the Constitution the free exercise of their religion as a personal civil right. To deprive them of general Federal funds when they exercise this right through religious education is to impose upon them a civil disability of the very type that the first amendment was intended to outlaw.

Many argue that religious education does not come under the protection of the civil right of religious freedom. But in this sphere of human conduct, people of one religion or of none tread on dangerous ground in attempting to determine the content of someone else's conscience. In dealing with my family, the Congress of the United States must reckon with the fact that we have considered religious education essential to our religion for the past 1,500 years.

People say that it is not true to claim that the Federal Government has nothing to offer to our children; they maintain that we can freely choose to send them to the public schools and thus have them enjoy not only the educational benefits provided by the State but also any that might issue from the Federal Government.

My reply is that an offer to bestow Government benefits only on condition of accepting conditions unacceptable to one's conscience does not present a true choice. Such a proposition has always been, is now, and will always be a religious test. This is so in Moscow; it is so in Madrid; it is so in Chicago, Ill.

We are told that we have the religious freedom to build our own schools. This is, admittedly, better than being compelled to attend a State school and, if unaccompanied by any penalty or loss, is most pleasing. But the State governments and the current Federal proposals say in effect, "Choose the government schools or forfeit all public educational benefits." Is this liberty? Is this true religious freedom?

Yes, we have the privilege of developing our own schools, but what are we supposed to use for money after having paid the increasingly heavy taxes for the education of other people's children? Currently on the State and local level my wife and I are paying taxes of approximately \$400 a year, and now the Federal Government wants to add to the burden. The loose talk about privileges in this matter glosses over the fact that our family may through economic pressure eventually be forced, as so many others have been, to abandon our cherished dream of religious education for our children. What kind of religious freedom exists when a family is effectively denied even a reasonable economic opportunity to pursue its conscience?

In this connection it should be noted that Margaret Rose and all other children of ages 5 to 17 who attend private schools are counted in the determining of the size of the Federal grants to be given to the public schools. I submit that it is bad enough to deprive my children of their share but to count them in for a share that is then assigned to other children is doubly discriminatory.

In a recent Senate debate on Federal ald, Senator Lausche, of Ohio, called the attention of his colleagues to this glaring inequity—but he was quickly voted down. One of those who spoke against him was Senator McNamara, of Michigan, who dismissed Senator Lausche's protest with the statement that the Office of Education had always done things this way. Apparently Senator McNamara believes that if something is done one way long enough it somehow or other becomes the right thing to do.

Some people seem to think that repeated invitations to send our children to the public schools constitute a sufficient answer to our pleas for justice. In view of the fact that my family has persisted in building private schools for over 100 years in Illinois, one might expect that the community and State of Illinois and the Federal Government as well would realize that we are quite serious about this matter and that we are by no means appeased by invitations that we have rejected for a century.

The Federal bills seek constitutional justification in a national interest in public schools, but they fail to explain why the Nation has no interest in my children. Our oldest boy, Frankie, has an excellent mind and an inclination to science and might well prove to be a valuable asset in the service of his country, but he, too, is presently outside the pale of the proposed program. Does Congress appreciate that such a position hurts not only Frankie but also the national effort? May a parent who believes in religious education be excused a bitter complaint in seeing that, as this Nation girds for survival against the forces of atheistic

communism, an atheist or Communist who prefers the public system stands to gain more from the proposed education bills than this parent's children?

It would seem to be in the national interest to have a vigorous private school system competing alertly with the public schools and producing that diversity of thought that has been such a bulwark of our democracy, but with the increasing State and Federal taxes the private schools may eventually collapse economically, leaving the public schools with an educational monopoly. Is this in the national interest? Has Congress thought of the possibility that it may be playing into the hands of forces that would be delighted to spend the private system out of existence?

My most strenuous objections to the proposed Federal bills is that they would incorporate into Federal law the discriminations, religious tests and second-class citizenship under which Margaret Rose and Frankle presently labor on the State and local level.

The history of the public schools differs whether told by the majority which decided things or the minority which had to adjust to the majority decision. And when in the 19th century the dominant groups established the public school system and determined the use of all public educational benefits without regard to the conscience of our family, we protested—but being in a minority our pleas for justice were brushed aside. But we still protest.

In recent years our protests have taken on new intensity as the public school has in many areas become a center of all types of social, medical and athletic services having little connection with its original educational purposes. Thus, for example, it now embraces a transportation system, medical examinations and elaborate athletic programs leading up to exhaustive tournaments for State titles, and its equipment includes swimming pools, gymnasiums and football stadiums seating thousands of people. Does this society expect me to go on paying for this proliferation of activity while my children are sitting in classrooms with 50 other pupils?

A community that thus spends the education tax dollar or that uses it lavishly for all kinds of educational frills while their neighbors who believe in religious education are struggling under unsatisfactory conditions or else being forced to abandon their ideals should not be allowed the illusion that it is practicing religious freedom.

Before discussing some practical approaches to this problem, I would like to indicate one or two more objections to my position. Some object to paying taxes that might in any way end up in some connection, even the most remote, with religious education; but they fail to explain why I must pay for a secular education repugnant to my conscience.

And then there are the objections arising out of fear and dislike of my church. Here I would like to remind America that, after enduring centuries of religious persecution, the people from whom I have sprung have established a model system of religious education for all faiths. My family needs no lessons in the love and preservation of religious liberty, least of all from people who are still subjecting my children to religious tests for such a simple thing as a safe ride to school.

Actually, if my family were to inconvenience the conscience of others as ours is being hindered in the American educational world, our conduct would be trumpeted as another example of our intolerance; but when the dominant groups of this society impose such conditions on my childrentheir conduct is heralded as a shining example of religious freedom.

And if I complain, then I am thought by many to be somehow or other unpatriotic or ungrateful; and were I to be a candidate for the presidency, some spokesman would undoubtedly spell out my unworthiness to his flock. Truly America has a long way to go in search for religious freedom when the effort of a father to free his children of long-endured religious tests is considered by many to border on subversion.

Many people assure me that even if Congress has the best of intentions, nothing really can be done for my children. But I am unconvinced. There are, it is true, current difficulties in giving money to religious institutions, but I ask nothing for any church.

I ask only for justice and equality for my children, and certainly nothing in the Constitution or in any decision of the Supreme Court prohibits Congress from giving an educational grant to them on equal terms with any other young American citizen.

There was nothing therein to prevent some 36,000 excellent young men and women from using their individual Federal grants under the G.I. Bill of Rights to study for the ministry in the Protestant seminaries of America, or to hinder millions of other citizens from studying in the colleges and universities of all leading religious groups. What is there now to block a grant to my five?

Even at the present time the National Defense Education Act of 1958 makes available on the college and university level all kinds of individual and institutional loans and grants without regard to the religious affiliation of students or schools. This should demonstrate that the unwillingness to do anything for my children at the elementary and secondary level stems not so much from constitutional difficulties as from other factors. Some of these arise from sheer misunderstandings and from the hue and cry set up by secularists who would sterilize our society of all religious values; some from the uncertainties of the representative of the private schools; some from the fact that the Parents of the private school children have not made known their desires to their Congressmen; some from the efforts of those Who would "democratically" force all children into a Government system of education; and some from the National Education Association.

In analyzing the fact that the Federal-aid-to-education bills make grants available only to the public-school system we need not go too far before we encounter the guiding hand of the National Education Association, the Washington lobbyist for the public schools. In its drive to obtain all Federal-education benefits at the elementary and secondary level this group has sponsored and promoted only that legislation that funnels all funds into established State public school patterns.

But there is no reason why a Congress willing to recognize the American principle that all schoolchildren are entitled to the equal Protection of the laws could not establish a program of grants to individuals that would allow them to bring their grant to the school of their choice as was done under the G.I. Bill of Rights. And on the State level as well there are many things that a society sensitive to the consciences of its members might promote. Thus, for example, many of the Welfare services such as bus transportation can be removed from the "education package" and made available to all. Similarly, Programs can be worked out for individual grants for the nonreligious aspects of educa-

Progress in these matters shall not always be easy. Things have gone on for many decades with too little understanding and too much bitter feeling. Some fear that the public system might be splintered and damaged by a system of individual grants, but others fear that the tremendous advantages of competition and wholesome diversity might be crushed by an educational leviathan. Other peoples have tackled these and other problems with notable success. Certainly there is every reason to expect that America can solve the thorny educational problems that presently confront her.

Some people think that the conflict in

some people think that the connect in the area of education is fundamentally religious. It is true that at one time this was probably so, and perhaps still is to some extent today, but we must not overlook the fact that with the increasing secularization of the public school system, many of the representatives of the dominant religious groups are having serious misgivings about the course of events. It would seem to be a safe bet that in the years to come the representatives of all the leading religious groups will draw closer together to make common cause for the preservation of religious education.

In view of my criticisms in this article some may think that I am opposed to the public school system. Indeed not, for I actually think that historically it has been one of the great educational ideas in the history of mankind. I certainly wish it success and am willing to pay a fair share of taxes for its continued support; but I also happen to believe that my children should have the right to choose a type of education in accordance with their conscience without suffering the loss of their fair share of the general educational funds.

Perhaps the simplest but yet most amazing discovery that my wife and I have made in our discussion of the problems of Federal aid is the absolute necessity of our assuming direct responsibility for the protection of the civil rights of religious freedom and education of our children. We deeply appreciate the devotion of those private-school leaders and teachers whose sacrifices have made possible the religious education so close to our hearts, but we believe that such people must of necessity evaluate Federal education primarily from the standpoint of their institutions and only secondarily from the standpoint of the civil rights of the children who attend them.

Recently there has arisen in St. Louis, Mo., a nonsectarian association, the Citizens for Educational Freedom, which is an organization composed primarily of parents who have finally grasped the necessity of exercising their citizenship in the preservation of the rights of their children to a free choice in education.

Inspired by the motto "A Fair Share for Every Child," CEF proposes a tuition-certificate plan through which the individual student is free to bring his share of the general educational fund to the school of his choice. CEF pursues its ideals with an ardor and intelligence that augurs well for its future. Its members write and talk to friends, strangers, neighbors, and lawmakers; they also vote. In a word, they do all those things that an active citizenry should do in the pursuit of a legitimate goal.

But before justice and equality will be obtained in this matter of the education tax dollar, many more parents must take up the struggle. For only through the efforts of many will it be possible to establish the conditions under which the children of America can grow up as first-class citizens with all rights respected, including that most important one—free choice of education without penalty,

The Monitor, the Official Newspaper of the Catholic Diocese of Trenton, N.J., Advises Its Readers, in a Significant Editorial, That if a Catholic Cast His Ballot for a Candidate Because He Was a Catholic and Passed Over a Non-Catholic Who, in His Estimation, Would Make a Better President, He Would Be Guilty of Sin

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the official newspaper of the Catholic diocese of Trenton, N.J., the Monitor, has some extremely pertinent things to say to its readers and the members of the Catholic diocese there. This advice is sound, and it is timely and of interest to Catholics and Protestants alike throughout the United States.

I include this excellent editorial here for the information of the Members of this House:

> [From the Monitor, Apr. 15, 1960] Our Moral Obligation in Voting

If non-Catholics assume that Catholic citizens of the United States are morally free to give their political support to a Catholic candidate for public office exclusively on the basis of the faith he professes they are wrong.

And if Catholic voters hold and act on such a belief they are not only wrong but are in danger of committing sin. In politics, as well as in business and professional life, in private employment, and personal conduct, conscience intervenes. And its dictates cannot be ignored.

Catholics naturally would find gratification and pride in the election of a member of their faith to the Presidency of the United States. The same emotion would be experienced by the members of any other denomination under similar circumstances. As a matter of conscience, as well as of patriotism and loyalty, the welfare of their country must be their first consideration when they go to the polls on election day.

The moral obligation of a Catholic citizen in casting his vote for the Presidency, or any other public office, is presented in unequivocal terms by Father Francis J. Connell, C.Ss.R., former dean of the School of Sacred Theology of the Catholic University of America, writing in the American Ecclesiastical Review.

"If a Catholic cast his ballot for a candidate because he was a Catholic and passed over a non-Catholic who, in his estimation, would make a better President, he would be guilty of sin," says the eminent theologian.

Catholics have nothing to gain for their church or for their personal interests by the election of one of their faith to the Presidency. They have never suffered from prejudice or intolerance in the White House. The tradition has been one of fairness and justice and the church has flourished over the years with a proper respect for its rights and the rights of its people.

Catholics could not expect any improvement under the administration of a Catholic President. In fact, as Father Connell emphasizes, "It might be detrimental to the church or to Catholics to have a Catholic President, because almost any national misfortune or calamity that would occur would be ascribed to his religion by many non-Catholics, however free from responsibility he might be."

If Catholics cannot in conscience give their support to a Catholic candidate for reasons of religion alone, neither can they accept with complacency, any denial of their full rights as citizens, including the right to aspire to any office in the land, including the

Presidency.

There is nothing in his faith that should prevent a Catholic from being a good President. And there is nothing in the Nation's Constitution or in the principles of justice that disqualifies him from holding this office. A Catholic, in short, cannot be supported for office or denied office simply because he is a Catholic.

The High Cost of Drugs

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a letter that I have sent to the Honorable Patrick A. Tompkins, commissioner, Department of Public Welfare of the Commonwealth of Massachusetts, in which letter I sought certain information. In my remarks I include a most interesting and amazing reply that I have received from Commissioner Tompkins, showing that a sharp increase to recipients of old-age assistance in Massachusetts on fair trade prices established by manufacturers for medication and drugs prescribed by physicians over a 3-year period.

If this charging of unreasonable prices for fair trade medicine or drugs for which a physician's prescription exists in Massachusetts to the extent that it does, certainly, a similar condition probably exists in other States of the Union, and the proper official of such States should make a special survey and in-

vestigation.

Furthermore, if such a situation exists among recipients of old-age assistance, to what extent does it exist among persons not receiving old-age assistance. As Commissioner Tompkins said in his letter:

I have officially concluded that these markups generally are unconscionable and indefensible, not only as related to public welfare recipients, but also as related to the general sick public who, in absolute fact, have no choice when medication is prescribed for a sick relative. They must purchase the unknown prescription at the price charged by the druggist.

The letters follow:

Congress of the United States, Washington, D.C., March 26, 1960. Patrick A. Tompkins,

Commissioner, Department of Public Welfare,

Boston, Mass.

DEAR COMMISSIONER: You will remember a few years ago, after consultations you had with me, I introduced a bill to permit Federal grants and aids for all public welfare vendor medical care payments. I will appreciate it if you will advise me as to the result of the passage of that bill insofar as Massachusetts is concerned, and the result outside of Massachusetts of which you have knowledge.

During our talk you mentioned to me, as I remember it, that charges were being made for medicine on prescription where the person or patient was charged a higher amount than where they could purchase the same medicine at the fair trade prices and where a prescription was not essentially necessary. At that time you told me the passage of the bill that I introduced, would enable you to make a thorough survey of this situation particularly in relation to Massachusetts and the facts (1) in relation to extra charges and (2) the saving the same might bring to the Commonwealth in connection with the payments made by the Commonwealth for persons receiving public assistance.

If you have made any study of the latter, I will appreciate it if you will convey to me such information you have on same.

With kind regards, I am,

Sincerely yours,

JOHN W. McConmack.

THE COMMONWEALTH
OF MASSACHUSETTS,
DEPARTMENT OF PUBLIC WELFARE,
Eoston, April 8, 1960.

The Honorable John W. McCormack, House of Representatives, Office of the Majority Leader, U.S. Congress, Washington, D.C.

My Dear Congressman: I regret the delay in responding to your letter of March 26, 1960, seeking information as to the efficacy of the operation of the public assistance titles of the Federal Security Act with particular reference to the vendor medical care payments which were made possible by the successful enactment of legislation which you so graciously introduced at my request in 1957 and 1958.

The immediate result was to permit the Massachusetts public welfare system to introduce, effective October 1, 1958, a universal mandatory vendor payment system for all medical services. This also made possible, of course, the kind of cost research and medical social research that the Federal Government's sponsored legislation of 1956 not only prevented but militated against in a very positive manner. There should hopefully never be a return to special matching formulas for vendor medical care payments because of the unfair discrimination financially and in terms of long-range planning and medical research that results in those States which have, in fact, by policy established a comprehensive and adequate medical service program.

For example, because of our long concern over the mounting cost of medication and drugs prescribed by physicians over a 3-year period in old-age assistance, this department conducted a massive cost study of all prescriptions paid for in the 12 largest municipalities of the State during the month of May 1959. It should be noted that only by the enactment of your medical care public welfare bill was it possible to initiate and conduct such a study in the first place. The general data secured from this study of drugs for old-age assistance has reflected the following specific information:

- 1. The average cost per month for drugs for each old-age assistance recipient rose from \$3.48 per case in January 1957 to \$5.16 per case in December 1959—over a 40-percent increase
- 2. For the same strength quantity prescriptions, different and extremely disparate prices were paid for over 40 percent of all such prescriptions. (This pattern even prevalled on numerous occasions with respect

to the same patient purchasing the same drugs in the same drugstore.)

3. Of the 250 most frequently prescribed drugs, 70 percent had fair-trade prices established by manufacturers. Despite this fair-trade price, 45 percent of all prescriptions for such fair-traded drugs were paid for at prices from moderately to excessively higher than the established fair-trade prices.

4. Of the 50 most frequently prescribed drugs and the 20 most expensive prescribed drugs, the price paid to the drugstore consistently exceeded 100 percent of the wholesale cost, and, with some rare exceptions, ranged upward to 300 percent markup over wholesale cost to the druggist.

I have officially concluded that these markups generally are unconscionable and indefensible, not only as related to public welfare recipients, but also as related to the general sick public who, in absolute fact, have no choice when medication is prescribed for a sick relative. They must purchase an unknown prescription at the price charged by the druggist.

Lastly, we have discovered that unfortunately many prescriptions are written for such normal over-the-counter purchases as aspirin and aspirin derivatives, such as Bufferin and Empirin compound; antacids, such as Maalox and Milk of Magnesia; and the price markups for small quantities, because of the fact that a prescription was written, ranged fantastically into the thousands of percent.

This department has presented to a committee of the Massachusetts Pharmaceutical Association a more modest and, in our judgment, reasonable price schedule which is basically predicated on the principle that under no circumstances do we pay more than the established fair-trade prices for fair-traded drugs, plus for non-fair-traded drugs a 50-percent markup over wholesale costs with a small breakage fee for broken packages of either capsules or liquids.

May I additionally point out that there is no way presently of determining whether a fair-trade price for retail sales of drugs is, in fact, a fair price, as the price is established by the manufacturer and his profit over his cost in his sale to the retailer is, of course, unknown.

Since this study of drug prices is probably the most massive and detailed such study in any public welfare department covering as it did 1,634 different drugs and 30,000 prescriptions, we are hopeful of constructive results representing high-quality service to sick recipients of public welfare and substantial dollar savings to the municipalities of the Commonwealth and the Commonwealth itself.

Very truly yours,

PATRICK A. TOMPKINS, Commissioner.

STATEMENT OF COMMISSIONER TOMPKINS ON STUDY OF INCIDENCE, PRICE MARKUPS, AND GENERAL TREND OF DRUG PRICES PURCHASED BY OLD-AGE ASSISTANCE RECIPIENTS

Because of the widespread concern over the continued rise in the cost of drugs per case and the percentage of assistance dollar allocated to drugs, the Department under took a massive study of all prescriptions paid for on behalf of old-age assistance recipients in the following 12 communities for the month of May 1959: Boston, Brookline, Everett, Somerville, Brockton, Quincy, Fall River, Haverhill, Worcester, Fitchburg, Springfield, and Holyoko.

On the four programs of public assistance for which the State department of public welfare exercises by statute some responsibility, 1,500,000 original prescriptions are being authorized by attending physicians. Many of these prescriptions, particularly for the chronically ill or long-term illness case, are subject to automatic and authorized re-

fill. The total payment to retail pharmacists for drugs for public assistance recipients has been running at an annual rate of \$5,900,000 to over \$6 million annually. Approximately \$4,400,000 of this amount is spent for prescription drugs for old-age assistance recipients; the remaining \$1,500,000 to \$1,600,000 is spent on recipients of disability assistance, aid to dependent children, and general assistance. Because of the tremendous expense in old-age assistance, this category of public assistance was selected for a specific study.

The sample of these 12 communities represented 25 percent of the caseload of the State for 1 month; 29,916 prescriptions paid for in the month of May 1959 were analyzed; 93 percent of all the prescriptions paid for were for drugs prepared for by the manufacturer and requiring no further compounding by the retail pharmacist; 2 percent of these prescriptions were for supplies; 5 percent of the prescriptions were for drugs which had to be compounded by the druggist.

On 1634 different drugs prescribed, 205

On 1634 different drugs prescribed, 205 drugs represented 67 percent of the prescriptions studied, and the 50 most frequently prescribed drugs represented 40 percent of

all prescriptions studied.

The attached material indicates item by item the major findings and the price plan that has been presented and will be distributed to the cities and towns of the Commonwealth for payment of drugs prescribed in the future.

FINDINGS OF DRUG STUDY

1. The average cost per old-age assistance recipient for a month for drugs has risen from \$3.48 per case in January 1957 to \$5.16 per case in December 1959.

2. For the same strength quantity prescriptions, different and extremely disparate prices were paid for 40 percent or more of all such prescriptions. (This pattern even occurred on numerous occasions with respect to the same patient purchasing drugs in the same drugstore.)

3. On the 50 most frequently purchased drugs and the 20 most expensive drugs, the price paid to the druggist consistently exceeded 100 percent over the cost of wholesale and, with some few exceptions, ranged upwards to 300 percent markup over wholesale.

A small group of drugs—namely, the aspirin and barbiturate derivatives and digitalis—reflected price markups over wholesale that ranged into the thousands of percent.

4. Of the 200 most frequently prescribed drugs, 70 percent were fair-traded-price drugs. Of these, 45 percent of the prescriptions on such fair-traded-price drugs were paid for at prices from moderately to excessively higher than the fair-trade price.

CONCLUSION

The continuing rise in the average cost per case for drugs in 3 years, the fact that on 40 percent of the prescriptions on the same quantity strength dispensed were paid for in 40 percent of the cases at unexplainable different and disparate prices, the fact that in 45 percent of all fair-traded drugs higher than fair-trade price was charged and paid, the further fact that in only 5 percent of all the prescriptions studied were the drugs compounded by the retail pharmacist, and the further fact that unusual and unjustiflable price markups were charged in the most frequently dispensed prescriptions (fairtraded or otherwise), is a clear mandate to the Commonwealth to establish a reasonable and uniform price formula for all drugs authorized for and purchased by recipients of public aid. The following price formula is presented and will be developed in chart form and distributed to all local boards of Dublic welfare for purposes of auditing for payment of drug bills to retail pharmacists:

for at the fair-traded drugs are to be paid

(b) The minimum payment for prescription is 50 cents.

(c) On all prescribed drugs which cost the druggist \$5 or less the price markup over cost to be paid to the druggist will be 50 percent.

(d) On all prescribed drugs which cost the druggist from \$5.01 to \$10 the price markup to be paid to the druggist will be one-third.

(e) On all prescribed drugs which cost the druggist in excess of \$10 the price markup to be paid will be 25 percent.

(f) Since only 5 percent of all the drugs purchased were compounded, no professional fee will be paid.

(g) Since the volume of repetitive business in the same quantity strength drugs is so massive, there will be no special allowance for broken packages.

PATRICK A. TOMPKINS, Commissioner.

Dr. Virgil Hancher Honored for 20 Years' Service as President of the State University of Iowa

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. SCHWENGEL. Mr. Speaker, on April 20, Dr. Virgil Hancher, president of the State University of Iowa, was honored by the Alumni Association of the university for his 20 years of service as president of this renowned institution.

Those who gathered to pay tribute heard President Hancher, who has headed the university for a longer period than any other man, described as an "educational statesman" by Arthur S. Adams, president of the American Council on Education.

Others speakers included two men who were college classmates and later served on the university's governing board when it was known as the State board of education. They are W. Earl Hall, managing editor of the Mason City Globe-Gazette, and Dwight G. Rider, Fort Dodge attorney.

Another part of the tribute was formal presentation to the university of a portrait of President Hancher, painted by William F. Draper, of New York. The portrait, a gift of the SUI Alumni Association, will hang in the memorial union until June when it will be moved to the board room in Old Capitol where portraits of S.U.I. presidents are located.

In paying tribute to Dr. Hancher, Judge Rider said that he and Mr. Hancher both were law students at the university but their contacts at that time were not very close because Hancher was a campus leader while he was only a student.

Mr. Rider said that later when Hancher became SUI president—

I thought that all college presidents did was to make specches and meet prospective football players at the airport.

I found out different—

He said-

when the time comes for Dr. Hancher's retirement we can all say, "There was a man—we will not see his likes again."

An educational statesman-

Said Mr. Adams-

is not simply versed in the principles of art and government of an educational institution nor is he simply one who shows unusual wisdom in treating or directing public matters.

Over and beyond these two estimable qualities is the rigid discipline he imposes upon himself to push forward with zeal the high and broad objectives he sees so clearly. He is a man who thinks straight, who feels deeply, who reasons carefully and who acts courageously even in the face of great obstacles.

Virgil Hancher is such a man. He is known nationally and internationally as an educator of discerning judgment, of enduring patience, and of effective action.

Another tribute came in a letter from Henry Cabot Lodge, U.S. Ambassador to the United Nations, who said that President Hancher gained friendship for the United States when he served recently as a delegate to the world organization.

In responding, President Hancher thanked the speaker for the deserved or

undeserved tribute.

He expressed the hope that "the spirit of excellence will so pervade this university in the years to come that it will continue to be a source of strength for the students, the community, the State, the Nation, and men of good will everywhere."

A tribute from the alumni association declared that few universities today reflect more widely the cumulative administrative impact of one man than does the State University of Iowa.

The program for the occasion noted that President Hancher has awarded 33,400 of some 79,300 degrees granted by the university in the past 102 years. He has named all but one of the university's 13 incumbent deans.

President Hancher has achieved an economy and efficiency in the operations of a complex institution of higher learning that has caused distinguished heads of other universities to ask how it could be done, the program stated. It cited his skill in inspiring interdepartmental cooperation as one explanation of how he has been able to accomplish much with comparatively modest sums available.

"Where dollars lacked, determination and desire have helped to obviate some of the need for them. What one department could not have accomplished alone, two or three or a half dozen have accomplished in partnership," the program continued.

Breaking away from a longtime semidetachment of the university from the world of other Iowans, the university under President Hancher has been woven more directly into the fabric of the State's own changing life, becoming more surely the architect of its spirit and outlook, the program explained.

"Such areas as the bureau of business and economic research, the bureau of labor and management, the institute of public affairs, and the school of social work are oriented strongly to the Iowa scene," it pointed out, also citing

the development of broad programs in university and alumni relations, the first such formalized programs in the university's history.

Not only has President Hancher strengthened immeasureably the resident faculty and staff, but he has demonstrated the ability to stimulate their productivity, the tribute pointed out.

Recounting some of the major problems which President Hancher has faced in his 20 years at Iowa, the program recalled the great variations in enrollments for which plans had to be made during and after World War II. It also pointed out that money for building and improvements has not only been "hard to come by" in these years, but "it was a constant race with time to turn it into bricks and mortar fast enough to preserve something resembling the value of the original allocation."

Loren Hickerson, executive director of the alumni association, presided at the dinner. The invocation was offered by Prof. Emeritus M. Willard Lampe, former director of the school of religion, " and the portrait was presented by S. David Peshkin, of Des Moines, president of the alumni association.

In recounting the highlights of this tribute to Dr. Hancher, I have quoted liberally from a news story appearing in the Iowa City (Iowa) Press Citizen.

In further recognition of Dr. Hancher's great contributions, not only to the University of Iowa and the thousands of students and faculty members with whom he has come in contact, but to the entire field of college administration as well, I would like to call attention to an editorial which appeared in the Iowa City (Iowa) Press Citizen on Thursday, April 21. The editorial follows:

HANCHER: SYMBOL OF IOWA

"For almost 20 years, Virgil Hancher has symbolized the University of Iowa. He has been at once the chief architect of its contemporary spirit, and a bright and constant reflection of its spirit in the world. During much of that time, the university's affairs were marked and marred by wars and violence abroad, and by regional dissonances and frustrations at home in Iowa. These were fractious years in the university's life, and throughout their course, Virgil Hancher has given the university a continuum of integrity, devotion, and faith.

"Of itself, the president's service in the cause of Iowa and her people has been rich and abundant. It continues, and the values of it will last into the distant future. But not in Iowa alone; for the president of the University of Iowa is known and highly respected in every corner of the world of learning. In the course of his distinguished service in American higher education, he has joined the select company of the leading educational statesmen of his time."

Thus begins a stirring and all-encompassing tribute to President and Mrs. Hancher contained in the program for the University of Iowa alumni association's dinner held Wednesday evening honoring President Hancher. The occasion marked his 20 years as president of the University of Iowa.

President Hancher's tenure, the longest any university president has so far served, covers the most significant years of the university's 102-year growth and development. There may have been greater shortterm strides in some years before 1941, but certainly there never have been any greater university accomplishments or developments in a similar two-decade period that would have had to include more than one university administration.

President Hancher now has brought the university to the threshold of what is sure to be another era of great expansion, an era during which he continues to serve the institution. That the university stands ready to meet its grave new challenge is a solid tribute itself to the administration of President Hancher over these important developing years.

It is especially fitting that President Hancher's distinguished service to the university and the State of Iowa be recognized at this time, the 20-year milestone, with the grateful appreciation of university alumni and associates.

The Issue in Housing

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WIDNALL. Mr. Speaker, the editorial "The 'Issue' in Housing" published in the Washington Post, May 2, 1960, should be read by all who voted last week for the so-called emergency homeownership bill. It points up clearly and supports the arguments used by the Republican minority when it vigorously opposed the bill and labeled it fiscally irresponsible and a bill no one seemed to really want. The editorial follows:

THE ISSUE IN HOUSING

There is certainly a potential housing issue to be developed in this and future election campaigns. But the bill passed by the House on a party-line vote won't do the job even if it reaches the White House and is vetoed, as expected. All that the superficial and partisan proceedings in the House demonstrated is that neither supporters nor opponents of the pending legislation seem to have any very clear notion of what this country's housing problems are.

The problem is to provide decent, safe and sanitary housing for the millions who still live in slums. The problem is to provide decent housing for minority groups. The problem is to provide something better than the typical suburban crackerboxes for lower middle-income families. The problem is to accelerate the eradications of slum housing. The problem is to help cities discipline and harness their forces of growth so cas to preserve existing good housing and facilitate the provision of more livable and economical new neighborhoods for all in-

The bill passed last week would do none of these things. It would merely pump \$1 billion of Treasury funds into the conventional mortgage market; and under circumstances that are quite conceivable for the year ahead, this might or might not represent a net addition to housing finance. At best, a tiny portion of the private housing starts expected this year would be slightly facilitated with easier money. The need for this kind of help at this time is far from clear, although we think the Federal National Mortgage Association ought to have standby authority of this kind to help ward off any new recession.

But at most, this is a peripheral matter which cetrainly doesn't pose the great issue that its Democratic sponsors are trying to raise. For that, they must dig deeper. The Hinge of Our Heritage

EXTENSION OF REMARKS

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. PIRNIE. Mr. Speaker, yesterday, my good friend, Dr. Harold Blake Walker of Evanston, Ill., occupied the pulpit of the National Presbyterian Church. He did so under a program recommended by the General Assembly of the Presbyterian Church of the U.S.A. calling for presenting annually a representative preacher of the church in the pulpit of the National Presbyterian Church for the purpose of proclaiming the principles of the reformed faith as a strengthening and sustaining force in American democracy. The series was inaugurated in 1950 and Dr. Walker became the 11th outstanding preacher to be so recognized.

The naming of Dr. Walker as "The National Church Preacher of 1960" is a well merited honor.

Dr. Walker has ben pastor of the First Presbyterian Church, Evanston, Ill., since 1947. The national church preacher for 1960 completed his undergraduate work at the University of Denver, and received his master's degree from Boston University before graduating from McCormick Theological Seminary, Chicago. Prior to coming to Evanston he had pastorates in Chicago, Utica, and Oklahoma City. Dr. Walker has received honorary doctor of divinity degrees from Emporia College, Kans., Hamilton College, N.Y., and the University of Denver. Lake Forest College, Ill., conferred the degree of doctor of humanities on him in 1959. He received the Freedom Foundation Sermon Prize in 1950 and 1956, and was the recipient of the Distinguished Citizenship Award of Denver, Colo., in 1958.

Dr. Walker is president of the board of directors of McCormick Theological Seminary, where he is a lecturer in homiletics. He was a member of the Board of Foreign Missions of the Presbyterian Church, U.S.A. from 1944 to 1958, and for a time served as its vice president. In the United Presbyterian Church, U.S.A., he is a member of the Commission on Ecumenical Mission and Relations, and the Commission on Consolidations.

Dr. Walker is the author of "Upper Room on Main Street" and "Power to Manage Yourself" among others. His latest book is "Venture of Faith, a Guide to Marriage and the Home," of which Mary Alice Walker, his wife, is coauthor. He is a contributor to the "Pulpit Digest," "Christian Century Pulpit," as well as a daily columnist for a Chicago newspaper.

His sermon on this important occasion has such timely significance for all concerned with the survival of our free society that I insert its text in the Congressional Record, confident that it will inspire us with deeper devotion and

greater personal responsibility. In stressing our role as the hinge of our heritage, Dr. Walker asserted that the same moral and spiritual values which gave rise to our freedom and strength are required for their preservation. In effect, he calls upon us to be faithful to our trust and in our time "to do something worthy of being remembered;

THE HINGE OF OUR HERITAGE

(By the Reverend Harold Blake Walker, D.D., L.H.D.)

"Therefore, if any man is in Christ, he is a new creation"—II Corinthians 5:17.

We who occupy the stage of contemporary history are the hinge on which our heritage swings. The free society we cherish is ours by the courtesy of our ancestors, but the future of freedom is in our hands. Xenophon eoncisely summarized the difficulty of Preserving liberty, or any of the ultimate values of human experience. He noted that Cyrus, having captured Babylon, spoke of the necessity for continuing in valor. The conqueror remarked that "to have been once brave men is not sufficient; it is harder to hold what you have than to gain it."

Arnold Toynbee sounded the same note When he remarked, "It would seem that the more civilized we become, the more incapable of maintaining civilization we are." Quite possibly our human achievements have obscured the spiritual and moral values without which our triumphs become tragedy. We have won our way to greatness as a nation of influence and power. Our standard of living is unrivaled in the world. Nevertheless, We need to remember there is no ultimate greatness without goodness. "Shall not the nation tremble for this?" Amos asked after reciting the sins of his people. Then came the challenge, "Seek good and not evil, and God will be with you." The words come ringing across the ages as a summons to moral and spiritual greatness in our era.

The Protestant reformers, grappling with the issues of freedom, were haunted by the moral incompetence of individuals. Like Plato in the golden fifth century they sus-Pected that a democratic order gives the individual more freedom than he can manage. They knew nothing of psychoanalysis, and Freud had yet to discover the "id," but they were aware of something in man needing to be overcome in the interests of order and civilization. The simple injunction to "Seek good and not evil," left the major problem untouched. A small boy put his finger on the primary issue when he asked: "How do You make yourself do what you ought to do?" It was clear to John Calvin that civiliza-

It was clear to John Calvin that civilization depended on men and women who could make themselves do what they ought to do. A better world required men and women of moral competence to manage it. I was startled recently when I read what appeared on the surface to be a confirmation of Calvin's view from an unexpected source. Hans Bjerkholt, secretary of the Ostfold Trades Council and cofounder of the Norwegian Communist Party, put it this way: "The Problem of a new type of man remains a Problem on the agenda of the Soviet Union. At conferences in Russia," he went on, "It was always the theme, 'How can we create new men?' No system, however good it may be, ever will bring peace and freedom if we do not find a new type of man."

The Communists, however, are far removed from Calvin. They seem to want a type of man who is pliable, who can be managed by propaganda and persuaded to accept the judgments of the party without question. The reformers, on the other hand, war,ted men and women of independent integrity and dynamic courage, dedicated to Jesus Christ. The Soviet system requires beople who can be managed; a free society

needs people who are capable of managing themselves.

The ultimate question facing our free society is: Are we able to make ourselves do what we ought to do? There are times, of course, when it is not easy to know precisely what we should do, but as James Breasted noted, the primary difficulty is that we do not do as well as we know, and we are troubled. An anonymous letter to the tax bureau at Albany, N.Y., suggested as much. The writer confessed he had cheated on his income tax for 3 successive years, and he was so bothered by his conscience he couldn't sleep. His letter concluded, "I enclose \$50. If I still can't sleep, I'll send the balance."

The Reformers were acutely aware of the moral inadequacies of human nature. They found hope, however, in the transforming power of Jesus Christ. Paul summarized their hope when he wrote, "If a man is in Christ, he is a new creation." They knew such a man would be not the product of ethical effort, but rather the consequence of spiritual rehabilitation. Moral competence, they were aware, is our response to the love of God in Jesus Christ.

If Paul and the Reformers are right and there is something in us capable of responding to the seeking love of God revealed in Christ, then there is hope we may be able to do what we ought to do. We may be able to manage ourselves in a free society in the interests of social order and peace. hope lies as the Reformers made plain, not in what we can do for ourselves, but rather in what God can make of us if-and the if is crucial-if we respond to the love of God. "If a man be in Christ, he is a new creation," the "id," made manageable, mastered by the new focus of the self's devotion and loyalty. Survival of a free society then becomes more than a possibility. It becomes a probability.

11

Curiously, "the new type of man" is not really free. As Paul said, he is a "bond slave of Christ." That is to say, he is free except for something in himself. Hosea fashioned the truth in a poetic symbol when he wrote concerning Israel and in the name of God: "I led them with chords of compassion, with the bands of love." As Christians we are free except for "the bands of love" that constrain us. We are free within the limits of our own faithfulness and obedience to what Carl Sandburg called, "* * * lights beyond the prison of the five senses," and to "* * * keepsakes lasting beyond hunger and death."

In faithfulness we are not free to betray the spirit or the mind of Christ. The "love of Christ constrains us" to be true both to ourselves and to Him. There is a suggestion of what I mean in the comment of a traveling salesman whose son inquired, "Dad, how did you stay straight spending so many nights in the rundown hotels of mining towns?" The answer was simple and it was eloquent, "I loved your mother, son." And, of course, the salesman's love was his response to the love of his wife for him. His freedom was limited only by his faithfulness.

The moral fibers that sustain the fabric of a free society are the bequest of faithful men and women. Theirs is something more than "liberty in law," it is liberty constrained by love responding to the love of God in Christ. It is freedom in faithfulness that requires no law and no coercion. It is willing obedience to the highest laws inspired by loyalty to the Son of God.

The fatigues of freedom that threaten us are the consequence of the erosion of our faithfulness in a world of moral indifference. We never are able completely to escape the siren voices of the world around us, voices that challenge our faithfulness. Robert Hutchins wryly observes that we are constantly beset by "the huge army of the

world's desires," urged "to buy things from one another that we do not want at prices we cannot pay on terms we cannot meet because of advertising we do not believe." Our cultivated wants constantly threaten our ethical faithfulness.

Barnard Shaw paints a vivid portrait of the fatigues of freedom in his play "Heartbreak House." Its setting is the England of the era between 1913 and 1916, when World War I was devouring the energy of the nation. One episode sums up Shaw's protest against the apathy and the futility of British society. Captain Shotover comes to the point with asperity. He compares England to a ship: "The captain is in his bunk, drinking bottled ditchwater; and the crew is gambling in the forecastle," he says. "She will strike and sink and split. Do you think the laws of God will be suspended in favor of England because you were born in it?"

when the captain's son-in-law inquires, "What am I to do?" the old man answers scornfully: "Do? Nothing simpler. Learn your business as an Englishman * * navigation."

Learning to navigate with faithfulness through the moral ambiguities of modern society requires spiritual discipline. Our wisdom and our courage are dependent on keeping spiritually fit. Paderewski could not navigate the intricacies of great music without incessant dedication to his Muse. "If I do not practice for 1 day, I know it," he said. "If I do not practice 2 days, the critics know it, and if I do not practice for 3 days, everybody knows it." His freedom to make great music hinged on his faithfulness to his art.

So the Reformers knew that faithfulness is contingent on the disciplines that keep us in Christ. As Stanley Jones remarked, "I find myself better or worse as I pray more or less." And Luther sensed that his fidelity depended on his fellowship with the Highest in what he and Calvin knew to be "the only rule of faith and life." Love and loyalty that inspire faithfulness require steadfast cultivation lest they lose their power to hold us steady in our freedom. "If a man be in Christ, he is a new creation." Sometimes "it is harder to hold what you have than to gain it."

m

Freedom in faithfulness inevitably involves responsibility. Indeed, our heritage hinges on men and women who accept responsibility for renewal of the creative powers that are in mortal combat with the forces of sterility and decay. The Calvin memorial in Geneva, Switzerland, with the figures of the great Reformers carved in stone, is a reminder that those who gave us the Protestant Reformation were men who believed faith works. They did not believe we are saved by works, but their lives testify to the fact they exercised responsibility and toiled to make their faith effective in society.

The report of the World Council of Churches meeting in Evanston noted wisely that it is the duty of the church to develop a responsible society, a society where freedom is the freedom of men who acknowledge responsibility. As a priesthood of all believers, we are also a priesthood of responsible citizens.

There is trouble afoot when we retreat from responsibility. Consider the measured words of Nehru, India's great leader. He notes that through days of struggle for freedom there were extremists who sought to turn India into a bloody battlefield. They threatened the security of the nation and nearly turned it down the Communist road of violent revolution. And, says Nehru, "Frightened by this new development, the moderate elements dropped out and sought safety in seclusion." The moderates, whose sanity and integrity were the hope of India,

joined in a massive retreat from responsi-

bility.

"The debacle of freedom," says Paul Scherer, "is the debacle of a faith that has been leaning back in its chair with its feet on the table." The time has come for us to take our feet off the table in the knowledge that a free society will stand or fall, depending on the possibility of maintaining the faith and justifying it by works. We have been chosen for greatness in the 20th century, not to be pampered, but rather to shoulder double responsibility.

The Reformation spirit suggests one aspect of our responsibility falls in the area of thinking. Luther and Calvin took Jesus seriously when He said, "You shall love the Lord your God with " * * all your mind." It is easier, I dare say, to love God with our hearts than it is to grapple intelligently with public issues with neither prejudice nor partisanship, seeking the will of God. Conrad Henry Moehlman put the mood of the Reformers in his lines:

"Let me die thinking. Let me fare forth still with an open mind.

Fresh secrets to unfold, new secrets to find, My soul undimmed, alert, no questions

blinking: Let me die thinking."

Apart from clarity of thinking the "Whiffenpoof Song" describes our plight. "We're poor little lambs who have lost our way."

Faith works in dedicated thinking and in courageous action. It justifies itself in responsible integrity meeting the issues of life and society. Ignorance and irresponsibility are luxuries a free people cannot afford.

IV

One thing more needs to be said, namely, that if we are to be the hinge on which our heritage swlngs into the generations yet to be, we are constrained to speak the truth in love and in loyalty to conscience under God. The reformers never were pliable conformists. They conformed neither to the political nor the ecclesiastical patterns accepted in their time, but rather explored new avenues of hope and promise.

If we are free in faithfulness we do not easily conform either to the dubious customs of contemporary society or to public policies that appear to us to threaten the common good. The "new creation" in Christ is not easily coerced by what everybody says or believes or does. He is God's man. He may seem at times to be like "Mary, Mary, quite contrary," but he is not merely stubborn. He is out of step because, as Henry Thoreau observed, "He hears a different drummer."

The prophets of Israel were quite contrary, challenging the policies of kings and courts with the thunder of "Thus saith the Lord." With all the eloquence at their command they summoned the people to repentance, and their leaders to spiritual obedience. They were by no means disloyal in dissent. On the contrary, they stand now as towering figures who glorified the nation they criticized, and who honored their faith in God with costly political and moral responsibility.

The freedom to dissent in faithfulness is a priceless element in our Protestant heritage. "If liberty is to be saved," Amiel wrote in his journal, "it will not be by the doubters, the men of science, or the materialists; it will be by religious conviction, by the faith of individuals who believe that God wills man to be free but also pure; it will be by the seekers after holiness, by those old-fashioned, pious persons who speak of immortality and eternal life, and prefer the soul to the whole world; it will be by the enfranchised children of the ancient faith of the human race."

If any man is in Christ, he is a new creation, one of the enfranchised children of the ancient fatth of the human race, dedicated in faithfulness to responsibility for the kingdom of God.

Israel's 12th Anniversary

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mrs. GRIFFITHS. Mr. Speaker, 12 years ago the United States acquired a new ally and friend when the Republic of Israel was established. The people of Israel won their freedom by overcoming almost insurmountable obstacles. As Americans we can be proud that our sympathy, encouragement, and support contributed to the fulfillment of her destiny. However, Israel is still an infant in the family of nations; she will continue to need our encouragement and support until such things as boycotts and blockades are past history. The following editorial by Mr. Philip Slomovitz, editor of the Detroit Jewish News, points out clearly that the freedom Israel has won can be lost. This we cannot allow to happen to a government that is one after our own hearts; a government pledged to freedom. to equality of opportunity for all, and to respect for the dignity of the individual:

ISRAEL'S ANNIVERSARY: OBSTACLES DUE TO

Israel's anniversary is always a great day. It is a day to accept literally the words of the Psalmist that "this is the day created by the Lord, let us rejoice in it."

Yet it also is a day for stocktaking. Nothing could be more detrimental to Israel than overconfidence. It would be sheer folly to assume that all is glorious, that Israel is secure, that the world accepts the reality of the State's reemergence.

The fact is that there still are elements who begrudge Israel its existence, that there are many who would gladly destroy the small state.

Perhaps the worst enemy facing Israel is the ignorance about it in many ranks and the misinformation and lies that are being spread by her enemies.

An interview with Nasser that was broadcast widely last Sunday on a TV program was the best indication of the deceptions that are being perpetrated. Men who purportedly are acquainted with the situation in the Middle East permitted themselves to ask questions that enabled the Egyptian dictator to propagate hatred of Israel unchallenged. His lies were so apparent that it was appalling to witness American correspondents serving as tools in a scheme of hate spreading.

While we often are deceived into believing that all is honey, there are poisons in many spheres. The press is misled too frequently. Deceptions are the order of the day. Israel is constantly compelled to be on guard. Even the amazing gestures of sympathy to Israel by the maritime unions may peter out into a vacuum.

And so, as we rejoice on Israel's 12th anniversary, we also are forced to admonish the celebrants: Remain on guard, do not become too complacent and never weaken in the de-

fense of Israel. The dangers have not yet passed. Be vigilant, lest a great and sacred idea that emerged with Israel's independence—the end to Jewish homelessness—should again be endangered.

Bureaucracy

EXTENSION OF REMARKS

HON, JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the Record. I ask permission to include my newsletter of April 14 to my constituents on bureaucracy.

WASHINGTON REPORT

(By Your Congressman James B. UTT)

Hearings have commenced on several bills relating to the District of Columbia involving home rule, and including the milder approach of granting the residents of the District the right to vote for President and Vice President and have a nonvoting Delegate in Congress.

The battle cry used by the early colonies in the War of Independence, "Taxation without representation is tyranny," is the current slogan of the District citizens. The old bromide comes to mind that if you think taxation without representation is tyranny, just look at the tyranny we have with representation. Actually, the citizens of the District of Columbia have more appellate representation than the average citizen in America, with the exception of voting rights. A citizen here can appeal for redress to the District Commissioners and from there to the House District Committee and the Senate District Committee and to the courts.

The tyranny which we have in this country even with representation is startling. The average citizen will tell you that we have a government of laws administered by elective officers and therefore it is a government of, for, and by the people. This is what it should be, but let's examine the facts.

There is more administrative law on the books governing our citizens than there is statutory law enacted by Congress. This administrative law has the force and effect of statutory law, and while it is supposed to be within the purview of the statute authorizing it, there is no assurance that it will be-As a result, every bureau, board, and commission in Washington writes a set of regulations according to its own interpretation of the Federal statute, places those regula-tions in the Federal Register, and that be-comes the administrative law which governs you. We are rapidly coming to a point where a complete change of your federally elected officers, including both Houses of Congress and the White House, can mean little change in policy. You are governed by people for whom you have never voted, for whom you never will vote, whom you have never seen, and whom you cannot recall by your vote-They are entrenched in the boards, bureaus, and commissions, even at the policy level-For example, you may think that the Secretary of Labor sets the policy of his Department, but I know that much of the policy of that Department is set by civil service employees who have been with the Department for 20 years, and they have no intention, now or ever, of recommending to the Secretary of Labor any policy which does not fit their personal philosophy of government. and you cannot remove them or replace them by your ballot.

That same situation exists in the State Department, and in fact in every bureau, board, and commission. This is a form of invisible government and can lead to the

most oppressive type of tyranny.

Congress must assume a great deal of the blame for constantly delegating powers and duties which rightly belong to Congress. These delegations of power generally take place under a temporary emergency situa-tion, and once delegated they are never returned. We are currently being asked to delegate to the Executive, which in this case actually means the State Department, the authority to allocate sugar quotas to other countries than Cuba, should the State Department see fit to do so. Of course, the temporary emergency is Fidel Castro, but I know that once that authority is delegated it will never return to Congress. Congress generally delegates these powers without sufficient guidelines and limitations so that it is impossible to determine whether the administrative law which follows falls within the intent of Congress

What we need are 250 Representatives and 51 Senators who will pledge themselves to recapture most of these powers and duties, thereby returning the Government of the United States to its people.

VISITORS

We were happy to welcome the following recent visitors: Mr. Peter Atherton, Mr. George H. Frazier and Miss Gall Frazier, Miss Helen M. Johnson, Mr. James H. Kindel, Jr., with his two sons, Bob and Bill Kindel, Santa Ana; Mrs. Robert J. Hitt, Orange; Mrs. John Barbour, La Mess; Mr. and Mrs. W. G. Paul, Jr., Yorba Linda; Mr. William Sample, Jr., San Diego; Mr. George Osborne, Fullerton, and Mr. Ray E. Badger, Rancho Santa Fe.

National Defense Education Act

EXTENSION OF REMARKS

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 28, 1960

Mr. MACDONALD. Mr. Speaker, I have introduced today a bill which would amend the National Defense Education Act in order to give added incentive and educational opportunity to those young men and women in this country who plan to serve the Federal Government as members of the U.S. Foreign Service and related agencies.

The National Defense Education Act Serves the worthwhile purpose of helping to meet the needs of our country in this Deriod of international tension. The act presently provides for the expansion of educational facilities and scholarship assistance in the sciences and teacher training.

The state of international tension demands these expanded facilities and the resulting means to secure a greater number of qualified scientists and teachers. But the same international tension certainly demands the expansion and continued development of a qualified personnel to conduct our foreign relations. These needs can be met by the existing private educational institutions in the field of international relations and through our encouragement and support for those institutions.

I am pleased to represent the district of one of the foremost institutions in this field—the world famous Fletcher School of Law and Diplomacy, a graduate school in international affairs at Tufts University in Medford, Mass. The Fletcher School has for 26 years provided the State Department, and other Government departments and agencies with highly qualified graduates who today ably help to conduct our foreign relations.

The bill I have introduced today would amend title IV of the National Defense Education Act. Title IV presently provides for scholarship assistance to graduate students who are pursuing a graduate course of study leading toward a teaching career. The amendment I have introduced would provide for scholarship assistance to graduate students who are pursuing a course of study leading toward enrollment in our Foreign Service.

The provisions of my bill encourage those highly capable students who have decided on a career in the foreign relations agencies after having concentrated in other fields on the undergraduate level. Through aid and encouragement to the present private educational institutions in this field the need which is so apparent for qualified personnel to formulate and execute our foreign policy can and will be met. It is, therefore, my hope that this bill will soon be enacted into law.

H.R. 10932

EXTENSION OF REMARKS

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WOLF. Mr. Speaker, in connection with my bill (H.R. 10932) which is pending in the Interstate and Foreign Commerce Committee which would make it impossible for a natural gas pipeline company to make one rate increase effective while it still has a prior rate increase application pending before the Federal Power Commission, I wish to insert into the Congressional Record a copy of communications which have been made available to me by the director of the public utilities department of the California Farm Bureau Federation, pointing out the millions of dollars which California consumers are paying annually because of rates which have been imposed before they have been approved by the Federal Power Commission. Similar situations exist all over the United States.

It is time that Congress found out exactly why the Federal Power Commission is several years behind in its regulatory duties, and to insure that corrective steps are taken.

The two communications follow:

CALIFORNIA FARM BUREAU FEDERATION, Berkeley, Calif., April 28, 1960, Hon. Leonaed G. Wolf,

House Office Building, Washington, D.C.

DEAR CONGRESSMAN WOLF: In response to
my letter of April 18 to President Rozzoni, a

copy of which is enclosed, President Rozzoni addressed a letter to each California Congressman and the American Farm Bureau Federation under date of April 28, as per enclosed copy.

Yours truly,
California Farm Bureau Federation,
Public Utilities Department,
J. J. Deuel, Director.

California Farm Bureau Federation, Berkeley, Calif., April 18, 1960. Mr. Louis A. Rozzoni,

President, California Farm Bureau Federation, Berkeley, Calif.

DEAR MR. ROZZONI: We want to call your attention to a situation that merits some serious consideration because of its effect on many farm bureau members in California, both directly and indirectly. It concerns this department very much on account of its effect on the work we are responsible for, but it does not come directly within the scope of the work this department is expected to do.

We refer to the complete failure on the part of the Federal Power Commission to give proper attention within reasonable time to applications for rate increases which are filed with it by natural gas pipeline companies, and which are not heard or decided within the full statutory period for which the increases can be suspended pending review by the Commission.

While the unfavorable results that concern us so much are due to complete failure to act on the part of the Federal Power Commission, some of the blame could logically rest with present legislation and some court decisions which, taken together with the attitude of the Commission, creates an impossible situation that Congress should take immediate action to remedy, since that is the only source from which proper relief can come.

There are at least two bills, H.R. 10932 by Congressman Leonard G. Wolf and H.R. 10309 by Congressman Lawrence Brock and a resolution, House Resolution 474 by Congressman Ken Hechler, now pending in the House of Representatives. The subject is so important and affects the cost of living of so many people that it merits prompt action and most vigorous support.

This letter is not intended to support a particular piece of legislation but to alert you, through you, the American Farm Bureau Federation and California Representatives in Congress, of a very serious situation, the dollar effect of which is substantial here in California. It is not only important to domestic consumers of gas for fuel but electric companies, fertilizer manufacturers, and industrial plants generally, and not only applies here in California but in many other States.

We will now present the problem as it affects the work of this department. At the present time more than 70 percent of all the natural gas used in California is delivered to the main gas distributing companies by a gas transmission system owned by the El Paso Natural Gas Co. which operates under the jurisdiction of the Federal Power Commission. The present volume now imported exceeds 2 billion cubic feet per day and the El Paso Co. is the only source of supply available to meet more than 70 percent of California consumer demand for natural gas fuel.

Under the Federal Natural Gas Act, if a gas pipeline company files an application for a rate increase, during the first 30 days the Federal Power Commission can suspend the increase for a total of 6 months, but if the Commission does not hear the case during that time the increase automatically goes into effect subject to refund if the Commission later decides some part of the increase was not justified.

Since under present Federal law a gas supply company can put a gas rate increase into effect 6 months after it applies, if the Federal Power Commission has final action upon its request for higher rates, and since the Commission is several years behind with its regulatory duties, California gas consumers are now paying in their regular monthly gas bill three rate increases that total \$73 million annually, based on the present volume of use. They are also faced with another application filed in February that will become effective August 24, 1960, and will increase the California consumers' cost \$20 million more.

One rate increase that became effective in April 1955 and has not yet finally been adjudicated is now costing this State \$24 million annually. Another effective January 1958, \$21 million, and one effective August 1959, \$28 million. No date for trial of the last two increases has even been considered yet, and the \$20 million increase due in August will raise the total annual amount to \$93 million. That kind of regulation offers no consideration of the public interest.

These increases first apply against the three California gas distributing companies— Southern California Gas Co., Southern Counties Gas Co., and Pacific Gas & Electric Co.—but because the California Public Utilities Commission, in the public interest, keeps the return, California utilities are permitted to earn very close to the average cost of money. Whenever a utility experiences some unusual increase in cost our commission has to increase retail rates as an offset against the increase in the price paid by the distributing companies.

That means three California rate cases in which we must take part in order to see that rural people are required to pay no more than their fair share of the increase and are protected in case refunds are later ordered. The sad part is the validity of the pipeline companies' rate increases is very doubtful, but they have to be paid by consumers for several years while waiting for the Federal Power Commission to determine the facts.

Whatever you can do to assist in finding an answer to this impossible situation will be of much benefit to many people.

Yours truly, California Farm Bureau Federation, PUBLIC UTILITIES DEPARTMENT, J. J. DEUEL, Director.

CALIFORNIA FARM BUREAU FEDERATION, Berkeley, Calif., April 28, 1960.

A problem of considerable importance to California agriculture and consumers in gen-

eral has been brought to my attention.

I refer to the apparent inability on the part of the Federal Power Commission to give appropriate attention within reasonable time to applications for rate increases which are filed with it by natural gas pipeline companies, and which are not heard or decided within the full statutory period for which the increases can be suspended pending review by the Commission.

While the results of this situation are due to failure to act on the part of the Federal Power Commission, some of the responsibility could logically rest with present legislation and some court decisions which create a situation that apparently only congres-

sional action can remedy.

I am informed that at the present time more than 70 percent of all the natural gas used in California is delivered to the main gas-distributing companies by a gas transmission system owned by the El Paso Natural Gas Co., which operates under the jurisdiction of the Federal Power Commission. The present volume now imported exceeds 2 bil-Hon cubic feet per day and the El Paso Co. is the only source of supply available to meet more than 70 percent of California consumer demand for natural gas fuel.

Under the Federal Natural Gas Act, if a gas pipeline company files an application for

a rate increase, the Federal Power Commission can suspend the increase for a total of 6 months if it acts within 30 days. But if the Commission does not hear the case during the 6 months, the increase automatically goes into effect subject to refund if the Commission later decides some part of the increase was not justified.

Therefore, a gas supply company can put a gas rate increase into effect 6 months after it applies, if the Federal Power Commission has not taken final action upon its request for higher rates. As the Federal Power Com-mission is several years behind with its reg-ulatory duties, California gas consumers are now paying in their regular monthly gas bill three rate increases that total \$73 million annually, based on the present volume of use. They are also faced with another application filed in February that will become effective August 24, 1960, and will increase the California consumers' cost \$20 million

There are two remedial bills, H.R. 10932, WOLF, and H.R. 10309, BROCK, and a resolution, House Resolution 474, Heckler, now pending in the House of Representatives

This situation appears to be one which merits attention.

Sincerely,

LOUIS A. ROZZONI, President.

A Doctor's Ordeal Along Death Row

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. MULTER. Mr. Speaker, in further support of my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following article by Dr. William F. Graves who, although himself a medical doctor, could not continue to remain at San Quentin because of the imposition of the death penalties and the cruelty attendant thereon:

A DOCTOR'S ORDEAL ALONG DEATH ROW (By William F. Graves, M.D.)

Unlike animals, man knows he must die one day, but the saving grace is that he does not know when. But a condemned man has this tormenting horror constantly before him. This seems to me savage on the part of so-called civilized society.

When a man is scheduled to die at San Quentin, there is an atmosphere of emotional disturbance, an uneasiness, an edginess you can't help but notice, not only among the prisoners, but among the prison officials as well. I think it is felt most acutely by those involved in carrying out the execution. It is important to remember these are people who have gone into this profession as sociologists and psychologists because they have been dedicated to helping people.

In a sense they are physicians and they are called upon in this instance to take their patient and kill him. This is as far from any natural act as can be imagined. It is something they do with the greatest sense of misgiving and moral indecision. Words cannot express the emotional disturbance that this arouses.

It is probably the main reason I left San Quentin. I felt even though there were great needs there, I just couldn't involve myself any longer in this kind of an act.

A case which illustrates the inadequacy of our laws regarding criminal responsibility is that of Henry Ford McCracken. Certainly

he belonged in a mental institution rather than in death row. He required two series of electric shock treatments before he could be executed. He had become completely uncommunicative. He became a vegetable; he wallowed in his own excreta in his cell.

I was the doctor who removed him from death row under those circumstances and took him to the prison hospital where he was given a series of shock treatments. Then he was taken back to the row. ever, he was not considered sufficiently well to be executed; and he was brought back for another series of shock treatments before he was finally considered well enough to appreciate he was being punished and therefore fit to be executed.

There was a man with cancer who required repeated surgery before his execu-tion. He was an older man, about 65 or 70. He had been, as far as we could tell, a responsible businessman in Santa Rosa. Most of his life he had operated a cosmetic salon there. His wife had left him for another man, and on the day the divorce had become final, he had gotten drunk. He wanted to see one of the children; so he went to the house where she was living. She refused this request, and in a rage he grabbed up a butcher knife which happened to be handy and slashed her. As soon as this happened he realized what he had done and he called the police. However, his wife

He was prosecuted for murder in the first degree. To my mind, this wouldn't seem to be first degree murder, and this was the way most of the people in the prison felt about it. They felt his sentence would probably be commuted. It never was. We took care of him for about 2 years while his bladder cancer slowly developed and while he exhausted his legal avenues. I think he probably wouldn't have lived more than a few weeks if the execution had not occurred. Moreover, if he had died of the cancer, his children would have received the sum of \$30,000 which was the life insurance he had carried.

I'll never forget the members of that family when they came to see him. His children, tears streaming down their faces, as they would enter and as they would leave.

Basically, these people who commit serious antisocial acts are all mentally disturbed. We should stop using the word "prison" and look upon our correctional institutions as maximum security hospitals. As a matter of fact, this would have much more de-terrent effect. The men in San Quentin fear more than anything else being considered insane.

A man like Chessman, in every sense, is the prodigal son. He has come back, and we are refusing to accept him. Of course, he personifies a problem which is much larger than himself. We do this to many other people as well, but the Chessman causes capital punishment to stand out in all its gruesomeness because unlike others on death row, Chessman will not allow us to escape the fact that he is a human being.

Transportation-Modern Concepts

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an excellent address made by Morris Forgash, president of the U.S. Freight Co., before the Traffic Club of New York at New York City on April 7, 1960, on the subject of "Transportation—Modern Concepts." Mr. Forgash is not only an outstanding businessman of America, but there is none more qualified to discuss transportation problems confronting our country than he. His views are worthy of profound consideration by everyone, particularly those in the transportation business, and interested in the same:

TRANSPORTATION-MODERN CONCEPTS

(Address by Morris Forgash, president, U.S. Freight Co., before the Traffic Club of New York, New York, N.Y., April 7, 1960)

I appreciate this opportunity to talk to you for a few minutes on a subject which holds a good deal of fascination for me. You will understand that I labor under some difficulty. The announcement of this meeting states that I am to give you a "tantalizing picture." I am not sure whether the reference is to the picture of me which was emblazoned on the flyer, or to the message I am supposed to convey. In either event, I am in trouble.

If it is true, as the old adage goes, that a man is not without honor save in this country, I stand at the bar of a stern court. I am consoled by the fact that the advance billing referred to me as your "long-time" friend. I hope no one leaves here calling me his "former" friend. For my part, I know that I count many of you as my very close friends—and friends should be able to speak frankly with each other. I intend to be frank, and if I cannot tantalize you I will at least try to challenge your imagination.

You will have taken note that the title of my talk is "Transportation-Modern Concepts." A thing is modern in contrast to something that is ancient or outmoded. Surely no one will contend that transportation in this country is outmoded. traditional American enterprise and ingenuity we year by year continue to build up massive transportation plants and facilities-to construct and improve roads-to dig channels and improve waterways. But what are we doing in the "idea" department to improve method and technique, to eliminate waste and duplication, to tailor transportation service and rates to the changing demands of industry? That is the field I want to explore.

There are hopeful signs that we are at last beginning to come out of our mental shells and tackle some of the problem areas in which a great deal of "deferred maintenance" has accrued. It is none too early if we wish to continue to be the architects of our own

destiny.

One fundamental fact ought to condition all of our thinking about transportation. The common carrier, charged with the responsibility for serving the whole public, is essential both to the economy and defense of the Nation. Private carriage, no matter how significant it may become, or how well it may serve individual segments of the economy, can never meet the needs of the commerce of the United States or the demands of national defense.

Our choice, then, is not whether, but how we shall maintain a strong and adequate common carrier system. If common carriage cannot survive under free enterprise with private management it must be maintained by Government. There is no middle ground, for interference that usurps the functions of management will ultimately lead to control and there is no point in

temporizing.

I am not trying to scare anybody with the spectre of imminent nationalization of transportation in this country, but there are certain inescapable facts that we cannot ignore. For a long time now the percentage of total intercity ton-miles of traffic handled by common carriers of all types has been dropping at a rate of about 1 percent per

year. Common carriers handled only 67 percent of the total traffic volume in 1959. The position of the railroads in particular is deteriorating at a much more rapid pace than that of the other carriers, but the others have no cause for complacency.

In the decade of the 1950's the railroad share of total intercity ton-miles of traffic dropped from 56.2 percent to 44.9 percent. In the 20-years span, 1939–1958, the ratio of railroad revenue to national income dropped from 5.7 percent to 2.7 percent. We ought to be worried about how far this trend can be projected before it passes the thin line of decision—the point where decision cannot be deferred.

Big problems always generate a lot of heat. You are familiar no doubt with the recent report of the U.S. Department of Commerce titled "Federal Transportation Policy and Program." Each man will evaluate the report in the light of his own interest, but it reaches some conclusions with which I think all will agree. One is that the responsibility is and should be with the common carriers themselves to develop service standards and rate structures which will enable them to hold their own against private and exempt transportation. Another is that we must achieve greater coordination in transportation. Regarding coordination, the report concludes that:

"The best means should be left to the industry—containers, piggybacking, and fishybacking, standardization, joint bills of

lading, etc.'

It seems obvious to me that we cannot coordinate a system of transportation made up of a countless variety of carrying units, with specialized, special-purpose equipment, requiring physical rehandling from vehicle to vehicle. By joint rates, through routes could be established but the resultant coordination would not be very efficient. This kind of coordination, always possible, has remained in the realm of probability. of the prerequisites for successful coordination is standardization of the unit of haulage. There must be free interchange among modes of transport and this can only come about in the development of a container of one or more compatible multiples which will ride with equal facility on the rails, the highways, the waterways and the high seasultimately even in the air. Our planning must be based upon economic factors and not upon an emotionalism.

Coordination is perhaps the most overworked word in transportation. The first thing we need to do is to coordinate our thinking about coordination. To me, coordination means a combination of services that complement each other, the one taking over where the other leaves off, and with each mode of transport performing that part of the through service which it is best fitted, costwise and servicewise, to perform.

Stated in the negative, coordination does not mean the mere substitution of one type of transport for another, as where a motor carrier, to complete its own transportation contract with its shippers, within its own territory, employs a railroad to pull its trailers over the rails in lieu of transporting them over the highways. Transportation will remain compartmentized under such a scheme. The benefits, if any, will flow to the carriers and not to the shippers.

Substitution is, of course, the basis of what is called piggyback plan I—the substituted service plan. I would be less than candid with you if I did not tell you that, whatever merits the plan may have from the standpoint of any interest involved, I do not think it is the answer to coordination of transportation.

From the time three-quarters of a century ago when produce wagons and teams were hauled aboard Long Island Railroad flatcars, down to very recent times, "piggy-backing" meant simply placing the vehicles

normally used by one mode of transport aboard railroad flatcars designed and used for other purposes. We are coming to the realization, based on experience, that this hit or miss method will not work.

As you know, a wide variety of equipment is used in piggyback service today. Perhaps the system still in most general use is the handling, on flatcars, of truck semitrailers on their own wheels. Under another system flanged wheels are added to the trailers or containers, for which a specially built flatcar with a center sill for a track is required. Still another system employs containers with detachable wheels or "bogies," which are sideloaded onto special flatcars turntables. These and other systems have advantages and disadvantages. The crux of the matter is they are all different and obviously they cannot all be universally employed without a great duplication of equipment which in the end could outweigh the advantages of piggybacking altogether. We must, therefore, move toward standardization, not only of containers but of other

equipment and methods.

The very complexity of our transportation system, and the differences in the characteristics of the various modes of carriage, make standardization a difficult problem. The starting point must be standardization of dimension-from that we can move to standardization of method. Progress is being made in the standardization of sizes of containers. For almost 2 years now I have had the honor of being chairman of the special subcommittee on containerization of the National Defense Transportation Association. About 8 months ago we believe we crashed the dimensional and size barrier in agreeing on a standard container 20 feet by 8 feet by 8 feet. In arriving at this con-clusion we made it clear that this did not rule out the development of other compatible multiples, such as, 10 feet by 8 feet by 8 feet or even 5 feet by 4 feet by 4 feet. You will observe that all of these sizes are mathematically related to what is rapidly being accepted as the standard-size trailer for over-the-road operation, namely 40 feet by 8 feet by 8 feet. The Army is testing prototypes of the National Defense Trans portation Association recommended 20 feet by 8 feet by 8 feet container.

Standardization will not come without experimentation and experience, but we can expedite the process by fixing a target. That we have done—perhaps with an excess of boldness, but at least with courage and determination. This is everybody's problem

and all can help.

Despite the lack of uniformity of equipment and method, piggybacking has moved further, faster, and with more enthusiastic public acceptance, than any development on the transportation scene in modern times. In 1955, the first year in which piggybacking achieved significance, the average weekly loading of piggyback cars was 3,000. In 1959 an average of 8,000 piggyback cars was loaded each week. More than 10,000 cars were loaded in the week ended March 5, 1960. In the first half of 1959 piggyback loadings totaled 209,000 cars, an increase of 62 percent over the loadings in the first half of 1958. In its latest annual report to Congress the ICC quoted from an independent survey which showed that 20 railroads are participating in plan I piggyback, 43 in plan II, 21 in plan III, and 18 in plan IV. Since then a few railroads have entered into plan V arrangements. The statistics do not show the proportion of total piggyback loadings broken down according to the various plans.

It may be appropriate at this point to mention briefly the various plans of piggybacking that are currently in use. In addition to the substituted service represented by plan I, you know that the railroads operate plan II service, using their own trailers in lieu of traditional boxcar service. Plans III and IV are based on published tariff rates, the former covering movement of shipper-owned trailers on rail-owned flatcars and the latter covering movement of shipper owned or controlled flatcars and trallers with the railroad supplying only the motive power. Plan V is based on a true toint rate between motor and rail, with endto-end truck-rail service.

Equally as important as standardization is to the success of coordination through piggybacking is modernization of pricing of this totally new service. Again adverting to the Commerce Department report, I was struck by this comment and I quote:

"Common carrier rates of all kinds are rapidly becoming regulated by competition whether the common carriers like it or not the competition of highly developed private

and exempt carriers."

The shipper by private truck determines his cost per truck movement and it is affected only to a slight degree by the commodity or content of the truck. Similarly, the railroads' cost of pulling a flat car with trailers from terminal to terminal—with all terminal handling eliminated and practically no risk of loss and damage—is almost wholly unaffected by the content of the lading.

Thus the railroads have been able to fix a charge for piggyback service, under plans III and IV, of so many dollars per flatcar movement, terminal to terminal. The plan III rate works out to 25 cents a trailer mile or 50 cents a car mile. Plan IV rates come to about 42 cents a car mile. Simple and scientific. Profitable to the railroads and sensible to the shippers. Plans III and IV piggybacking eliminate the factors that complicate costing-terminal handlings, transfers, empty car mileage, freight loss and damage, investment in and maintenance of equipment. Surely the railroads can accurately determine their cost of pulling a flatcar over two steel rails from one point to another-all other costs and hazards eliminated.

Classification is one of the time-worn principles of ratemaking, but it has largely lost its significance in today's highly competitive system. Such meaning as it has is now largely reflected by density of lading—how many pounds of straw hats or of nuts and bolts can you load into a container of standard cube? The space limitations of the trailers used in piggyback service—their cubic capacity-classify the freight loaded therein on the only basis that makes good sense to most shippers. Thus classification is not ignored, it is modernized.

Assuming that the railroads can accurately determine their cost for the line-haul movement of flatcars in piggyback service, and that they fix a rate on a flat basis which is just and reasonable, then we get down to the question: Who can match or better the rate, at comparable speeds, and for what distance? That is where economics will come into play in the coordination of rail, truck, and other transport services under modern concepts of piggybacking. Wasteful, duplicative service, and unnecessary physical handling, will be eliminated by the economics of the situation,

If shippers can buy transportation, performed and priced as transportation should be, the cost will make it profitable for them to leave transportation to the professionals and concentrate their energies in their own field of endeavor. The return of tonnage from private to common carriage will be beneficial to the whole transportation system. Transportation will gradually get back in balance. The railroad-in recent years symbolized as the "sick man" of transportation-will be able to cure himself without the aid of Government nostrums. A rapidly decentralizing industry will obtain a new and coordinated distribution tool-a transit pipeline combining the maneuverability, flexi-

bility and speed of the truck with massdistance economy of rail and water.

In the progress that we have made to date in the field of containerization, piggybacking and fishybacking we have only scratched the surface of the vast potential of the concept. The advantages already demonstrated, with the equipment so far in use, have permitted us to look over the horizon to even more fabulous developments. Tre-mendously increased speed, charges based on even larger quantities reflecting the economy of mass transport, the all-purpose container virtually eliminating empty car miles.

In the matter of speed, I have made some predictions that have raised evebrows. I make no retractions, but of course I tied time limits to some of my suggested targets. We are moving toward them even faster than I had supposed. Looking just around the corner I predict we will have 50 hours service Chicago to the Pacific coast-65 hours from New York.

Reasonably priced rail piggyback service, at speeds which are entirely feasible, can hold its own with the best that can be produced for long distance over the best superhighways or in the air even in a jet age, More than that, a combined freight-passenger service, already functioning in certain places, can reduce the overall passenger deficit that inflates the freight-rate structure. Passengers have never objected to riding in the same train with baggage and express. Why should they object to riding in the same train with freight moving in containers that can be made as attractive to look at as a streamlined passenger carespecially if it insures a payload that will keep the passenger service going?

The necessity for interchangeability, and the demands for standardization which piggybacking inherently is bringing about, inevitably will lead to the all-purpose container and ultimate elimination of specialized one-purpose equipment. In that direction lies the only hope for solution of the toughest economic problem in the entire field of transportation—empty car and truck

mileage.

We have come to take for granted, because it is a fact that nobody seemed able to cope with, that about 40 percent of freight car mileage is and must continue to empty car mileage. We have assumed that this is a natural result of the imbalance of traffic, without stopping to consider that it is not so much the traffic but the equipment that is out of balance. Trainloads of fruits and vegetables moving to the North and East—trainloads of manufactured products moving South and West-special purpose equipment that has to make a round trip with a one-way payload. This means that the freight shippers of the country have been buying a lot of round-trip tickets to get a one-way ride.

Empty car mileage will never be entirely eliminated because some freight always will require specialized equipment that cannot be used in the return direction for anything else. But the enormous waste of carrier resources and shipper dollars can be materially reduced if we devise equipment that has the absolute maximum of utility. It is my considered opinion that an all-purpose container is capable of reducing empty car miles. by at least 50 percent-a potential saving of such magnitude that we ought to be enthusiastically excited about it.

An all-purpose container that will carry everything adaptable to the ordinary box-car or truck trailer, plus automobiles and liquids, or combinations thereof, is already in production. A collapsible rubber tank holding 3,000 gallons of liquid freight will fit into this container, with two automobiles in retractible ramps riding above. Take out or fold up the tank and two additional automobiles will fit into the trailer.

On the drawing board and just about to emerge is a trailer carrying the all-purpose

concept even a step further. Insulated and refrigerated, this trailer will hold four large or six small automobiles. It will carry a collapsible rubber tank with 4,300 gallon liquid capacity. It will carry dry freight, perishables-or various combinations of all these items.

Obstacles to the use of this all-purpose equipment ought to be brushed aside like cobwebs because the results in terms of elimination of waste, reduction in empty haulage, encouragement to coordination, flexibility of transportation, and economy to the country outwelch all other considerations.

These new concepts which are right now knocking at the door of acceptance—as well as others which are already on the horizon of our vision-promise a new era in transportation. It is an era in which the shippoint public will get a long deferred and well deserved new deal. We are on the eve of accomplishing, by initiative and enter-prise, what we have long sought by policy and study-coordinated transportation based on the best elements of rail, highway, water, and air carriage, in any combination.

We have too long permitted the vast potentials of our system of transport to be obscured by tradition, ignoring basic economics, content to do things in the old order because it was old and respected. short, we have failed to use the basic tools that we have at hand-to exploit the inherent advantages of the greatest physical transportation plant on the face of the globe—and to apply new concepts in an era where the only constant is change,

I have described without too much elaboration, certainly without doing them full justice, some new concepts which I believe will revolutionize transportation in the decade of the sixtles. We are standing be-tween yesterday and tomorrow in transportation, and we cannot stand still or we will lose by attrition. We must move ahead boldly.

Politics at the Summit

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DEROUNIAN. Mr. Speaker, the bipartisan approach to foreign policy. seems to be slipping away from some Members of Congress. David Lawrence comments on this in his article, which appeared in the Washington Evening Star on April 29, as follows:

DEMOCRATS GETTING WORRIED?-GROUP IS CHIDED FOR CRITICIZING PRESIDENT ON POS" SIBLE NIXON SIT-IN AT SUMMIT

(By David Lawrence)

Are the Democrats getting more and more scared of being defeated by Vice President NIXON in the next election?

Fifty-five Democrats in the House of Representatives were so sensitive about the favorable publicity the Vice President might receive if he attended the summit conference at Paris during a possible absence of President Eisenhower that they signed a public protest. They called on Mr. Eisenhower to "explain why during this election year he has suddenly decided to relinquish his job as President to the candidate he has endorsed as his successor." They added:

"By this obvious and transparent partisan move, the Republican administration has subordinated the hopes of Americans and free man everywhere for peace in the

world to the political ambitions of Vice President Nixon."

Such a statement seems incredible. Without bothering to look into the facts and circumstances surrounding the President's decision, the 55 Democrats jumped to the conclusion that it was all just a brazen political move. What probably happened is that some publicity man in the Democratic camp prepared the statement and rushed to signatures on Capitol Hill.

What, however, are the facts about the President's decision? They could easily have been obtained. Mr. Eisenhower said to his press conference on Wednesday:

'Congress is in session and there are a number of bills that are important before the Congress. If they should come at an awkward time for me, and I felt that they should be vetoed-now, I have quite a tough time schedule because any important bill that requires a veto, not only requires the most, the deepest study in the departments concerned, but it demands daily consultation with me because I am the one that has got to be convinced that this is a bad bill or a good bill, and therefore you cannot do this-if these bills are important-from a distance.

"Now, the only reason that I happen to have said this in this particular case is that We don't know how long this summit meeting is going to be. In 1955 we had a rather, a pretty good understanding of the number Everybody agreed that this time of days. it should go as long as it was felt necessary. So, since I am leaving on the 14th and had to fix a date for my visit to Portugal on Sunday, I took the 23d to the 24th. This is getting along at a rather long period. So I said if domestic requirements did bring me back, I would have to ask Mr. Nixon to serve for me as the head of the delegation. This does not mean that I expect him to be there but I was-simply put the warning.'

The key to the President's purpose may be read between the lines. The Soviets want a long conference. Mr. Elsenhower doesn't Want to spend several weeks in Paris. In the 1955 conference at the summit in Geneva, a time limit was placed on the whole thing, This has not been done for the coming Paris conference.

It was natural, therefore, for Mr. Eisenhower to utter a word of warning. It was a difficult and delicate subject to handle, internationally speaking, so the President decided to serve warning indirectly that he would not engage in a prolonged palaver at Paris. This is a maneuver in the conduct of foreign relations which the President ought to be able to make without the sabotaging tactics of partisans on Capitol Hill.

Surely the President of the United States ought to be free from petty sniping as he prepares for a summit conference on which hope for peace and disarmament is being based throughout the world. Surely there must be ample time between June and November of this year for the snipers and the smearers to carry on their partisan attacks against Mr. Nixon. Surely mere attendance for a couple of days or even a week at the summit conference by Vice President NIXON, as he sits in for the President until Mr. Eisenhower can return to Paris or until the conference adjourns, is not something so catastrophic to the Democratic Party's hopes for victory in 1960 as to cause so many of Its Members in the House, as well as some In the Senate, to lose perspective.

Former President Truman by his statement approving President Eisenhower's plan to substitute the Vice President at some Paris session, dissociated himself from the critics. It has also been suggested on Capitol Hill that Secretary Herter should have been designated to head the delegation in the President's absence. But those who made the suggestion don't know protocol. When heads of State meet, a Foreign Secretary cannot serve as a substitute. A Vice President of the United States is considered the No. 2 man, just as is a Vice Chairman of the Soviet Union.

The Night I Met Lincoln

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following wistful and moving account of the impression made on a student from abroad by his first encounter with the statue and spirit of Abraham Lincoln, as interpreted to him by the night guard, an American student who understood and showed forth the spirit of this Nation as truly as did Lincoln himself.

> THE NIGHT I MET LINCOLN (By Andrés Berger-Kiss)

Washington, Jefferson, Franklin-those names were large ones for me as I journeyed to the United States for study. But to me-"foreign" student-the most exciting American personality was Abraham Lincoln. It was through him that I came to know better his country today.

Hitchniking about the United States, I had visited the Lincoln homeland. I had visited his log-cabin birthplace in Kentucky and his finer home in Springfield, Ill. For the climax of my pilgrimage, I had saved the Lincoln Memorial in Washington.

As it happened, my ride let me off at midnight on the west side of the Potomac River, which meant I had to walk across the Arlington Memorial Bridge. As I approached the memorial, all I could see was the enormous structure silhouetted in the moonlight. I walked through the wide, empty avenue and up the deserted steps. To my disappointment, halfway up the long steps a sign, barely legible in the night, warned visitors that entrance was allowed only at certain hours.

Suddenly the beam of a guard's flashlight fell on me. "What are you doing here this time of night?" he asked, approaching

me. He was a big Negro in a neat uniform.
"Sorry, fellow," he said, when he heard my stammered reply, "but we're closed now. Come back tomorrow morning."

"Can I sit here on the steps for a while?" I asked. "I've carried this suitcase a long way."

"Sure." In the bright moonlight he noted the college sticker on my suitcase. "I see you're a student. I'm saving some money myself to go to school—law school," he went on, "by taking care of Old Abe."

We chatted for a few minutes and when he learned that I was a stranger to his country he said, "There's a lot of talk in other lands about the Negro problem here in the United States-about discrimination and prejudice. And yet, there's no single minority group in the whole world that has made as much progress in a hundred years as we have. The people of this country have made that progress possible. Other nations expect us to settle our problems overnight. They can't seem to accept that a slow understanding is much more permanent.'

The guard looked at the place where the monument stood enshrouded by darkness. "Lincoln here, he freed my grandfather, who was a slave. I take care of Lincoln now and he's going to put me through law school. It's all part of our system, and it works out pretty well. There's a certain dignity about Lincoln," he added, "which is our own heritage; something that has lasted and has become a part of all us Americans, regardless of the color of our skins; something very good that can't ever be taken away from us. All those who come here sense that and they leave better human beings than when they came. Maybe if other foreigners like yourself would come here, maybe they'd understand."

"I will tell my friends abroad what you've just told me," I said, getting ready to leave. I bade him goodby, picked up my suitcase, and was about to descend the steps when he called:

"Guess Old Abe won't mind a foreign student visitor. Come with me and meet him.

I followed the guard, passing the massive columns, through the portal, and into the spacious darkness.

"Stay here," he said, "while I put on the lights. Look up, boy—you're gonna have the treat of your life."

I stood quietly, waiting in the stillness.
And the lights shone first on Lincoln's

head, casting the shadow of his full stature on the wall and leaving the rest of the chamber in a strange twilight; and then the brighter lights fell upon him. His presence

filled the structure with such an aura of greatness and human warmth as I had never experienced.

Long I stood there awed by all the serene humbleness of the man who now sat in stony silence but whose voice and deeds had guided his nation. I wondered about the people who had made such a nation possible. In the spell of Lincoln's presence, the spirit of their million joyous voices answered, ringing out in unison all the wondrous words of liberty.

The National Cultural Center

EXTENSION OF REMARKS OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. KEARNS. Mr. Speaker, the National Cultural Center Act-approved in September 1958—specifies a narrow and somewhat awkwardly placed plot of land in the Nation's Capital on which the National Cultural Center is to be built.

Part of the land within this site description is already owned by the U.S. Government, and part of the land is held by private owners. In order to carry out the intent of the National Cultural Center Act-namely, that the Government provide the land on which the building would be built, and the building itself would be paid for by private contribu-tions—the Board of Commissioners of the District of Columbia allocated \$705 .-000 of Capper-Cramton Act appropriations for the purchase of the privately held land within the site described in the

The board of trustees and their architect adviser tried to work out a design for facilities on this site but concluded that real justice could not be done in this way to the objectives of the National Cultural Center Act.

Accordingly, in conversations with Conrad L. Wirth, Director of the U.S. National Park Service, the idea arose for placing the National Cultural Center partly on land within the original site description and partly on U.S. Park Service land in order that a park and river setting could be achieved for the Na-

tional Cultural Center.

Incidental to such a shift in the location of the building would be the relocation of Rock Creek-Potomac Parkway so that it is moved out of the way of the proposed building. This shift of the parkway necessitates the acquisition of certain small parcels of private land not already included within the original site description in the act.

At the time this site shift was considered in 1959, it was generally believed that the \$705,000 of Capper-Cramton money would cover most of the cost of buying the privately held land, and that any small balance would be covered by funds collected from fund raising. On this basis then, the board of trustees approved an architectural concept which, in accordance with the law, was sub-mitted, for approval, to the Commission of Fine Arts, with a full explanation of the change in plans. The Commission of Fine Arts enthusiastically endorsed the building plan, as did the National Capital Planning Commission and the District of Columbia Board of Commissioners.

PROBLEM

In the past year, active work has been proceeding in redeveloping the Foggy Bottom area of the Nation's Capital. This factor, as well as announcement of plans for a National Cultural Center in this area, have caused land values to nearly triple. Informal appraisals by the appraisers employed by the National Capital Planning Commission, indicate that the \$705,000 of Capper-Cramton money is no longer adequate to complete the purchase of the privately held land.

The trustees are beginning to experience fund-raising difficulties because of inability to show that they have a clear title to the land on which the Center is to be built, and no funds are available with which to buy the land. Part of the difficulty is that prospective donors do not want to give to a project which does not have a clear title to the land, and they had understood that the Govern-

ment was providing the land.

In the second place, the National Cultural Center Act limits the life of the Board of Trustees to 5 years. In the event that the National Cultural Center project fails, all lands acquired for this purpose revert to the U.S. Government, Hence, prospective donors are either refusing to give in the face of this uncertain situation, or they are exercising their rights under the section of the law which provides that they may designate an alternative beneficiary for their donations in case the National Cultural Center project fails. As a consequence of these reservations, no funds are available with which to buy land.

The Board of Trustees is not even in a position to go to a bank and obtain a mortgage on the U.S.-owned land earmarked for the Center because of the 5-year death sentence in the act. In other words, no bank will give a mortgage on a piece of land which reverts to the U.S. Government in 1963.

In the face of these problems, the Board of Trustees authorized its officers on March 31, 1960, to explore with the appropriate Members and committees of Congress the possibility of:

First. Amending the National Cultural Center Act in order to enlarge the Center site so that the structure can be built in accordance with the approved plan as shown in the National Capital Planning Commission File No. 1-8-618.

Second. Obtaining from the Congress an appropriation of such funds as would be required to secure all of the private lands needed to built the Center in accordance with the approved concept.

In seeking this appropriation, the Board of Trustees notes that the expenditure of the additional funds may be considered a prudent investment for the U.S. Government for the following

First. Purchase of the privately held land as soon as possible will halt the rising value thereof at 1960 prices.

Second. Even should the National Cultural Center project fail by 1963, the land which will revert to the U.S. Government can be used for another governmental purpose, and the price of the land would have been held to the 1960 price.

Third. Should the United States desire to sell the land for a nongovernmental purpose in 1963, the Government could profit from the general rise on land values in the Foggy Bottom area and make the sale at a higher price than the 1960 purchase price.

Imported Agricultural Labor Doesn't Take Jobs Away From Our Own People

> EXTENSION OF REMARKS OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. GUBSER. Mr. Speaker, many opponents of Public Law 78 base their opposition upon the belief that importation of foreign labor takes jobs away from our own people.

Each week the Gilroy Evening Dispatch prints a news story which clearly shows that this argument is false. In the issue for April 27, 1960, the Dispatch quotes Mr. Arnold Hamilton, manager of the State Department of Employment Office in Gilroy, Calif., as stating that there is an urgent need for men and women to pick strawberries. The Dispatch story further reports the situation as so desperate that housewives and schoolchildren are urged to help in harvesting the berry crop.

Another portion of the same news story reports that during the week previous to April 27 there were 458 continued claims for unemployment insurance and 150 new claims.

The sense of this news story is not unusual; in fact, it is normal during the harvest season in California.

To editorialize on the Dispatch news story I should like to offer this com-ment: "Isn't it apparent that unemployed domestic workers will not pick strawberries? If this is true then do we not need imported field labor if we are to harvest highly perishable crops?"

Panamanian Election Issues

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. FLOOD. Mr. Speaker, an informative news story in the April 25, 1960, issue of the Christian Science Monitor by Mr. Ralph K. Skinner, experienced Isthmian correspondent of that newspaper, supplies some highly pertinent information about political and sociological trends in the Republic of Panama, which are now being brought into focus by the May 8 presidential election in that country.

The article follows:

PANAMA GIRDS FOR MAY 8 VOTE (By Ralph K. Skinner)

PANAMA CITY, PANAMA.—Panama's May 8 presidential elections will be held against a background of somewhat eased tension between Panama and the United States and with the usual welter of last-minute charges and strategy changes.

A political party recently founded here carries the name, Third Nationalist Party.

If this implies that it became a third party to two existing parties, it is a misnomer.

In the current campaign there have been nine legally inscribed parties, and nine can-didates for President. Included are eight opposition groups and the incumbent administration.

With the presidential elections imminent, there has been some opposition consolida-tion. Four parties rallied behind Victor F. Goytia, a perennial politico with much man-in-the-street sympathy. The other four opposition parties support Roberto F. Chiari, a sugar and dairy tycoon.

ELECTION SEEN LIKELY

The incumbent National Patriotic Coalition continues dominant because it counts on thousands of Government employees to vote for its candidate, Ricardo M. "Dicky" Arias, to safeguard their jobs.

The consensus here is that if the two present opposition candidates joined forces and put up one candidate, he would trounce administration candidate Arias. (By re-maining split, as they are likely to do, they practically guarantee the election of Senor

Opposition strength is based on the peo ple's desire for a change. The people are not just opposed to Senor Arias; they are opposed to continuation of the current administration which they say has done nothing

Although, traditionally, the people in Panama want a change every 4 years, the record shows they seldom get it; the party in power usually perpetuates itself.

It is freely admitted here that electoral probity has been missing from most presidential elections; that administration backing is tantamount to being announced the winner.

This year things are expected to be different. There is more citizen interest than in any prior election. Much is at stake.

For the first time, votes are to be counted immediately at the balloting locations. It is forecast that the results will be announced in 48 hours instead of the customary several weeks.

Local merchants, who have suffered drastically from the Panama-United States strife of recent months and the voluntary boycott of Panama by Americans in the Canal Zone, are said to have laid down the law.

POLITICIANS SOBERED

Politicos have been told that, unless they produce a stable government, establish an environment to attract outside capital, and allow local business to get back on its feet, they face (1) a bankrupt economy and (2) certain overthrow by the disgruntled populace.

Also, the merchants are adamant that whoever is elected President must include businessmen in the Government and consult with them in the formulation of administration and national policy.

Another contribution to possible peaceful elections is the realization by powerful political manipulators that they no longer control the people of Panama as they once did.

Political leaders do not dare to use the press and radio to whip the populace into a frenzy as they did last November 3. They were sobered by their inability to stop or control the violent November 28 demonstration which the leaders sincerely did not want.

A realization that violence begets violence has frightened and sobered some of Panama's political leaders. Preelection rabble rousing has been less than anticipated.

Despite rumors of coups d'etat, student uprisings, etc., the presidential elections are expected to be reasonably orderly.

More than ever before, the race issue has been injected into this year's campaigning. Full page advertisements in local newspapers extoll what each candidate has done for the large Negro population here.

For campaign purposes, the term "Criollo" is used rather than "Negro." Opposition newspapers accuse candidates of racial discrimination.

DEVELOPMENT PLANNED

Panama's most experienced political strategists recognize that when Negroes in this country develop effective leadership, Panama may well become a "Negro Republic."

Currently lacking leadership, Panama's Negroes have split into many divisions and are not prominent in the political scene here. Barring a last-minute consolidation of the

Barring a last-minute consolidation of the opposition behind a single candidate, Senor Arias is considered almost sure to win.

Senor Arias has served as President for 2 years following the assassination of President Remon. Senior Arias, who has been Ambassador to Washington for the past 4 years, is said to be the epitome of the family-ruling-class official.

It is freely forecast that Senor Arias, if elected, will be the last Fresident of Panama from the privileged class. Observers say that the growing strength of the lower and middle classes, augmented by militant student groups, will force election of a candidate from the people, a middle-class president, responsive to the man in the street.

Despite this, Senor Arias says he is confident that he will be elected.

He has told intimates that during his administration, he will restore Panama-United States relations to their traditional pattern of friendship.

If he becomes President, Senor Arias says he will press the United States for a raise in tolls at the Panama Canal. This, he says, will enable the canal administration to pay higher salaries to Panamanian employees.

To solve Panama's economic problems,

Senor Arias plans large-scale development of Panama's retarded interior. He lists penetration roads, wells to furnish sanitary drinking water, and electricity as the greatest needs of the interior provinces.

Israel's Independence Day

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. MULTER. Mr. Speaker, today, May 2, 1960, the State of Israel celebrates the 12th anniversary of its independence.

In May 1948 less than 700,000 Palestinian Jews defied the threats of the six surrounding Arab States and implemented the United Nations resolution by proclaiming the State of Israel. In the 12 years that have passed since that day the population of Israel has almost tripled. Nearly 1 million immigrants entered the country. Fleeing from the displaced persons' camps of Europe, the Russian and Communist rule of the satellite nations, and from the poverty and squalor of north Africa and the Middle East, these immigrants were welcomed by the Israelis and absorbed into the new country. The Government of Israel housed and trained them; it gave them immediate employment and provided them with steady jobs; it built new villages and towns and expanded public, social, and educational facilities; it made them productive citizens of the new

During its brief period of independence, Israel has also greatly increased its already high standard of living. It has expanded both the industrial and agricultural production of the country. Since 1948 nearly 700,000 new acres have been cultivated, and the acreage under irrigation has increased from 62,000 to 306,000. Towns and cities throughout the state are growing. This is especially true of the Negev, Israel's southern desert area. One of the main goals of the Government has been to make the desert bloom and become able to support large numbers of people. As a result, Beersheba, the "capital" of the Negev, has grown from a city of 3,000 before the state was declared to a present population of 44,000. Eilat, "frontier" of Israel, is at the southern tip of the country on the Red Sea. It is fast becoming the country's second largest port.

Israel is not, however, narrowly restricting its progress to within the country itself. It has embarked on an ambitious trade and aid program with the new states of Asia and Africa. The Israelis are sharing with he new nations of the world the knowledge they have gained since their independence. They are offering the benefit of their experience to smooth the road of the new African countries toward economic stability. At the same time Israel offers the

example of a nation which has built itself up without resorting to dictatorship, communism, or even guided democracy. It is a living example of the democratic type of government that we Americans hold so dear. As such, it offers a hope to the free world of winning over the new emerging Africa to the side of liberty.

The State of Israel has accomplished all this, not only in a rather short span of 12 years, but also in the face of persisting hostility and enmity on the part of its neighbors. Since Israel's armies defeated the Arab forces that sought to prevent its establishment, a constant barrage of propaganda has been turned on it. President Nasser, King Husein, and Prime Minister Kassim vie with each other in their sharp verbal attacks against Israel and call for its destruction. The country's ships are denied passage through the Suez Canal. It is boycotted by all the Arab States, a boycott which also affects American ships, for example, which touch at Israeli ports. Egypt has for years encouraged "fedayeen," guerrilla, attacks on the peaceful villages of Israel.

It is to the problem of continuing strife in the Middle East that we Americans must rededicate ourselves on Israel's 12th independence day. The Middle East is an area to which peace could offer much. It is to a large degree the duty of the United States to see that it is accomplished.

I fervently hope that by May 1961 we will have seen great strides in that direction so that both Israel and its Arab neighbors can live and grow in peace and harmony.

This Far and No Farther

EXTENSION OF REMARKS

OF

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. KEITH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial with reference to Loyalty Day on May 1, which appeared in the New Bedford (Mass.) Standard Times on May 1, 1959.

LOYALTY DAY

Many times in our history, beleaguered men have faced the enemy with the challenge, "This far and no farther."

Thousands said it against the murderous iffs of Normandy.

cliffs of Normandy.

Thousands more said it in the cold and hunger of Valley Forge.

Thousands more said it in the brutal Aisne-Marne offensive to turn the tide in World War I.

To those who stood, it was more than a matter of loyalty. It was their way never to see freedom lost, to die in the last ditch.

Today, the cause is no less crucial. An enemy more ruthless, more evil, more cunning, pressures all civilization into what could be a century of conflict, political as well as social, shooting war as well as economic struggle.

The attack comes from every side, within and beyond the Nation's lines.

An unarmed plane is shot down. A helpless prisoner of war is sadistically tortured in body and soul until his brain is washed clean of all resistance.

A ballet troupe, a smiling murderer, a group of farmers, eat away at the Nation's heart and will to resist.

The brainwashing is relentless. The War of Revolution was no revolution but a class struggle, the brainwashers say. The men at Philadelphia in July 1776, were no more than crafty, money-seeking, power-grubbing conspirators.

Soak the rich. Share the wealth. The slogans pour out; the battle never ceases

the minds of all.

It would come as a shock to the men of Lexington, of Normandy and Iwo Jima, that there would ever be need for a Loyalty Day.

Yet, today is Loyalty Day in New Bedford and in cities across the country.

It is a day dedicated to the American

Heritage of liberty and of human decency. Sponsored by The American Heritage Committee of Greater New Bedford, it is a day for patriots to relive the glorious past and

to replenish the iron for the troubled future. It is a day to turn to the enemy, inside and foreign, with the battle cry, "This far and no farther."

Two-Party Press-Good or Evil?

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat on April 6, 1960, as

TWO-PARTY PRESS-GOOD OR EVIL?

In an adjoining column is a thoughtful letter from Mr. Ernest M. Potts linking the decline of the Republican Party in Missouri with the nonpartisan approach which this newspaper has taken in recent years.

Mr. Potts makes an eloquent case and one in which we thoroughly concur, in the need for a two-party system. We demur when he states that this requires a twoparty press. His conclusion is that the resurgence of the Republican Party in Missouri is linked to the Globe-Democrat once again becoming the organ of republicanism.

Mr. Potts' interest in good government, we are sure, is equal to our own, although he is not quite as aware of the trend of journal-

ism in recent years.

The day of the party organ, either Democratic or Republican, faded when radio and later news magazines and television came upon the communications scene, and well it

In the early days of this century, when the citizenry had nothing but newspapers from which to get its news and commentary, editors could and frequently did stand sim-

ply as spokesmen of a party.

Nor was this always altruistic. The papers of those days were not in the strong financial position of those who survive among today's metropolitan newspapers. quently, political advertising, to put a kindly light on it, meant the difference between

solvency and bankruptcy.

Today if a newspaper is to have any believability, it comes only in calling 'em as it

sees 'em.

The true function of a newspaper is to give study and thought to the candidates and to arrive at its own conclusion as to which is the better man, regardless of party

Well-documented reasons for approving one candidate over another, or one issue against another, are believable and persuasive to the electorate. On the contrary, believability and persuasiveness would be lost if a newspaper followed the tradition of bygone days and endorsed all candidates of one party simply because they carried, by its lights, the proper party designation.

It is the function of a newspaper to print the news as it is-not as that newspaper may wish it to be. By the same token, it is the duty of a newspaper in its editorial page to support those candidates of whichever party who most clearly measure up to the ideals

for which that newspaper strives.

We share with Mr. Potts a deep-seated concern for two-party government in Missouri. We ardently hope, in the interests of good government, that the Republican Party will present candidates for election to all offices who will be worthy of the support of the electorate.

We would have better government in Missouri with a strong two-party system. As illustration, Governor Blair, a Democrat, who has been a perfectly superb Governor, would have fared better in the last session of the legislature if there had been stronger Republican representation in Jefferson City.

Instead, the Governor's program was hacked up by members of his own party and those portions which were enacted became law when certain Democratic senators like Hogan and Hillsman were absent, and the Governor received the solid support of the Republicans plus the best members of his own party.

Nevertheless, Mr. Potts puts the cart before the horse. It is up to the party to nominate good candidates—not to the Globe-Democrat to try to pull the Republican Party up by its bootstraps and foist candidates of inferior stature upon the electorate simply because they are Republicans. The Globe-Democrat, while mindful of

the problems of two-party government in a state which has been too heavily Democratic in recent years, nevertheless will con-tinue to endorse those candidates of either party, both in the primaries and the general election, who will best serve the people.

We will likewise continue to urge the participation of all the people in the nomination and selection of better men and women to run for public office. Therein lies the only solution to the problem which Mr. Potts poses so eloquently.

Mr. Speaker, I also include a letter addressed to the editor on the same subject:

WANTS A PRESS SPOKESMAN FOR GOP To the EDITOR:

I hope you will give it a very long thought before you endorse STUART SYMINGTON over RICHARD NIXON for the Presidency, as your editorial the other morning seemed to imply you might do.

This would be a cruel blow to a Republican Party here, and in the State that is just now beginning to show signs of struggling back to its feet, after a long drought of defeat.

It may outrage you for me to say that the Republican Party here expects more from the Globe-Democrat than your nonpartisan approach, but it is, nevertheless, true and rightly so, in my judgment.

Until recent years the Globe-Democrat was a frankly Republican newspaper, and the decline of our two-party system in this city began with the decline in the Globe-Democrat's partisanship. The Democrats have enjoyed an almost unbroken ascendancy since, principally because of the espousal of their cause by the Post-Dispatch, day in and day out, year after year, no matter how wretched the candidates.

The biggest joke in this community is the laughable fiction of the Post-Dispatch's nonpartisan ideal, and there are fears that Globe-Democrat may be on its way to making it a two-way comedy act.

A healthy two-party system needs a twoparty press, not a press that avoids its responsibilities in the matter. Our political system is based on the two-party approach. Anything which weakens it is bad, no matter what the excuse given may be.

In my judgment, advocacy of its cause by a newspaper is vital to a party. Traditionally the Globe-Democrat did that job for Republicanism in St. Louis, and the party can never regain its place in the community until that condition returns.

ERNEST M. POTTS.

Development Center of the United Cerebral Palsy of Northern Virginia

EXTENSION OF REMARKS OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. BROYHILL. Mr. Speaker, among the hundreds of organizations, large and small, that are engaged in trying to mitigate human misery, once in awhile a relatively small one is particularly, noteworthy because of the importance of the work it is doing, and because of the devotion with which members of the organization approach their task. I would like to call attention to one of these, the Development Center of the United Cerebral Palsy of Northern Virginia.

There can be no more worthy a goal than that of this center—the alleviation and cure of the much dreaded cerebral palsy that affects so many of our chil-

A baby afflicted with cerebral palsy is born every 53 minutes, but if a special development center in nearby northern Virginia has anything to do with it, children stricken with this dread crippler will have a much easier time of it. And, eventually, cures for this feared scourge may be found through research efforts spurred by the center.

The devotion to the task by those participating in the activities of the center can best be illustrated by tracing the development and operation of this wonderful organization.

In a sense, the story of the genesis and progress of the center, which is located at 111 North Cherry Street in Falls Church, is nearly as exciting as the work being done there.

Some 10 years ago a small but determined group of northern Virginians. alarmed by statistics that 1 out of every 300 children born is afflicted with cerebral palsy and by the fact that no facilities were available locally to fight the Nation's No. 1 multiple crippler, decided to do something about it.

nucleus of this group was made up of parents, relatives, and friends of the children who had been stricken with

this type of brain injury.

Although victims of cerebral palsy were to be found in great numbers in the arca, these leaders were shocked to realize that there was a complete lack of facilities there for treatment and education on the subject. Through their efforts, United Cerebral Palsy of Northern Virginia, a nonprofit, nonsectarian, voluntary organization came into being.

Focal point for operations of the group is the Northern Virginia Cerebral Palsy Development Center for preschoolchildren. Provided rent-free by the city of Falls Church, it is the only facility of its kind in northern Virginia. It operates solely through contributions from area

United Cerebral Palsy of Northern Virginia also contributes to national and State research activities on cerebral palsy, particularly at the University of Virginia, and conducts an extensive educational program for parents, volunteers and the general public.

A visit to the Cerebral Palsy Development Center is an inspiring yet sobering event. Here one sees, face to face, the grim manifestations of this dread crippler. Here one witnesses men and women dedicated to the task of easing the lot of those afflicted, and striving desperately to restore usefulness and happiness to stricken children.

In truth, a whole new world of opportunity and joy is opened up for the 24 youngsters who are fortunate enough to share the facilities of the center. They come from assorted families in the area, since wealth or poverty play no part in the selection of students.

At the center, preschoolchildren who had little or no hope of attending regular school, yet who might be considered educable, receive daily training, therapy, companionship, and friendship. These ingredients are essential to a program of emotional, educational and physical development.

Some of the students were unable to swallow, or talk, or walk, or even stand, when they first enrolled at the center. Long hours of patient training, under the guidance of experienced teachers has resulted in slow but sure progress for these students. More than 10 percent have been rehabilitated to the point where they have been able to move on to regular schools.

At present, the center maintains a staff of two full-time and four parttime employees. In addition to these professionally trained staffers, many volunteers have cheerfully donated their

services to the cause.

Although in the short span of 5 years enrollment has increased from 4 to 24, much more remains to be done. Scores of other cerebral palsy children in northern Virginia could benefit from the Wonders the center has to offer.

Those who are interested in the development center know that they have just scratched the surface, and are currently engaged in an expansion program. I want to take this opportunity to wish them well, and to assure them of my full support.

Medical Needs

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DINGELL. Mr. Speaker, time marches on. There appears to be very little disagreement that our older citizens cannot afford the minimum adequate care they need. It is an accepted fact that medical attention costs considerably more these days, particularly hospital care. No one will argue that older persons have larger medical needs or that their incomes are lower than those of our younger, employed citizens. It is also generally recognized that both the number and proportion of older people are rapidly increasing.

Obviously, a sensible solution to the pressing problem of adequate medical care for our older citizens is imperative.

Private health insurance plans are not the answer for the simple reason that the aged are in a high-risk, high-cost group and the premium that might be charged to provide them with the necessary medical benefits is far more than most of them can afford to pay.

There are over 15 million citizens 65 years of age or older. Every 3 years a million more people become 65 years of age. How can these people meet the cost of increased medical needs at a time when their incomes are lowest? The tragic answer is all too often they cannot. Moreover, our aged population contains a great many widows and widowers. Of all women 65 and over. more than half-55 percent-are widows: of all men 65 and over, about one-third are widowers. How much income do they receive? To get an accurate view of the income of the aged, it must be realized that only one in every five of them have any kind of paying job whatsoever, and this includes part time and intermittent work. That is why 3 out of 5 people 65 and over have less than \$1,000 in income per year, and only 1 in 5 has more than \$2,000 in income

per year.

I believe our aged should have the benefits of the recent advances in modern medicine. There was a time when chronic illness, epidemics, diseases and the illnesses of old age, were more fatal to elderly people than they are today. Older persons can benefit from the new developments in the field of medicine only if they can afford the cost of the hospital and medical care involved. Surveys show that older folks recover from illness more slowly and often require more involved types of medical

The cost of hospital care has skyrocketed. The Consumer Price Index, used by the Bureau of Labor Statistics, shows that over a 20-year period, the price of hospital care has tripled. Although much of this increase reflects a change in the character of hospitals, as well as a greater utilization of hospitals occasioned by the growth of health in-

surance, the increased cost of medical care falls heaviest upon those who need it most and can afford it least-the aged.

Legislative proposals for governmental assistance to the aged for health care have been increasingly numerous in recent years. They range from my own bill for a national health insurance program (H.R. 4498) to Federal loans to health service organizations (S. 2009-Senator HUMPHREY). Perhaps the most discussed proposal is the Forand bill, H.R. 4700, which would provide social security recipients with up to 60 days of hospitalization per year and some nursing home care and surgical benefits. I am the sponsor of an identical bill H.R.

Every industrialized nation in the world provides medical care in some form or another for all or most of its citizens. All European countries, except Finland. have some type of governmental health and maternity program in operation. Most of the 59 countries of the world which have such programs provide medical benefits under a social insurance system. Some countries, like Australia, Sweden, U.S.S.R., and England provide medical services under a separate governmental program covering all its citizens. In countries like Belgium, Denmark, and Japan, the government subsidizes private mutual sickness funds.

It seems inconsistent to me that the United States the champion of human dignity, possessor of a vast economic system second to none, and leader of the Western World, should fail to quickly resolve this problem so fundamental to every human being in our Nation. How can our Federal Government respond to the needs of its citizens, when there are those in the Congress and the executive branch who drag their feet and raise academic questions regarding the necessity of a program for which the need is obvious to all who have studied the problem?

I know not what logic or reasoning can successfully be employed to move those who would delay passage of the Forand bill. Our older citizens are deserving in their autumn years of receiving the modest medical benefits this bill would pro-

Now is the time. We must expend our every effort to secure passage of this legislation which deals with a human consideration more powerful than any other measure to come before this session of Congress.

Loyalty Day

EXTENSION OF REMARKS

OF HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I should like to pay tribute to Loyalty Day, 1960.

The establishment of Loyalty Day is another of the significant contributions of the Veterans of Foreign Wars. It was the VFW who, some years ago, began the commemoration of May 1 as Loyalty Day as a positive and highly effective countermeasure to the May Day celebrations of the Communists. Since then the idea has spread rapidly throughout the Nation. Numerous Governors and mayors have issued Loyalty Day proclamations, and, in 1959, the President gave the day national recognition.

Americans throughout the Nation, under the leadership of the VFW and other patriotic organizations, take this occasion to sponsor parades and demonstrations. It is on this day that we express our loyalty to our great Nation and to the great ideals of freedom and democracy which make up our American way of life.

Needless to say, Loyalty Day falls not only on May 1 but on every single day of the year. Only if we constantly rededicate ourselves to our country and to the ideals which she represents can we expect to strengthen our national purpose and retain our greatness as a world leader.

Automation and Its Economic and Social Challenges

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article written by Mr. Solomon Barkin of the Research Department, Textile Workers Union of America, in New York:

AUTOMATION AND ITS ECONOMIC AND SOCIAL CHALLENGES

(By Solomon Barkin)

Automation means more than the introduction of a set of new tools. If it meant merely the innovation of transfer machinery, servomechanisms and electronic computers, the effects would not necessarily be of a larger magnitude than most previous technical innovations. What makes automation important is that it introduces a new system of management and industrial organization. It inauguates the third industrial revolution.

The first two initiated significant changes. The first lead us into the era of mechanization. Machines displaced supplemented manpower. The standardized production ushered in the age of mass production. Then followed the factory and the assembly line.

The second revolution brought scientific management with its emphasis on measurement and specialization. Control could be exercised through standards and measures. Functional management would promote the greatest efficiency.

The third revolution replaces specialization with integrated business conduct which unifies all parts into a responsive and interrelated entity. All branches are responsive to the feedback directions from the central intelligence. A unitary system is created in place of coordinated components. Now there must be a close and immediate interweaving of product design, materials, processing, mechanising, selling, and planning.

The consequences for the economy are most far-reaching. The rate of increase in productivity is magnified so that output per man-hour will rise in an ascending rate. Industries and plants will become obsolete at a faster rate. Economic change will be heightened. Skills will be quickly and widely scrapped. Knowledge will spurt ahead. In-novation will be quickened. The rate of displacement will be accelerated. More communities will be left stranded. New capital demands will increase as the investment per job rises. The economy will become more rather than less vulnerable to business fluctuations as its dependence on a rising volume of new capital investment becomes more critical. Economic instablity will become more threatening. As turnover rises, the problems of personal, communal and na-tional adjustment will become more significant and demand greater and greater atten-

The new problems will be visible in more accentuated forms. Retraining and upgrading needs within the individual plant will become more significant as transfers to new jobs and processes will be commonplace. Educational programs will be in greater demand and provisions for support during retraining periods more elaborate. Companies will be required to help workers transfer to new locations and adapt themselves to new environs or the Government will have to take over this job.

But even more pressing will be the problems of the displaced. They are the people whose plants and jobs will have been eliminated and for whom employments will not be available in their previous occupations. They will need redirection and retraining. Many must be helped to advancement in their levels of achievement as jobs are generally upgraded in the community. The new openings must be filled from the ranks of the unemployed. There are many human needs of sustenance and physical and mental rehabilitation which must accompany the occupational training. Here again some help may be needed for relocation.

There is need not only of personal rehabilitation but communal redevelopment. The cities and towns which lose their older industries must also be modernized to make them suitable sites for the new industries and services which the modern economy is producing. Older communities have been adapted to older industries. Many services and facilities, public, philanthropic and private, need to be modernized. In some cases, buildings and services must be cleared away to make place for entirely new ones. In others renewal is possible. Finally, many new services and facilities will be essential to create the base for new industrial and commercial complexes.

The declining industries cannot be permitted to slip away. In some cases little can be done to help. But we have learned too much about the opportunities for industrial redevelopment to let them die and to waste the resources of knowledge, talent and capital invested in them. Research teams have made a growth industry out of paper and pulp; chemical studies are renewing the growth cycle of the bituminous coal industry; reforestation is starting a new lumber industry; metallurgists are making an economic asset out of taconite. In the textile industry research has opened up new industrial uses for textiles. Assembly halls, radar equipment, missile parts are now built in part from fabrics. Much can be done to revitalize declining industries to maintain the tremendous human and capital resources they represent.

We have the arsenal of ideas for catapulting the new economic age of automation into existence. What we need most is to learn the principles of and create the permanent instrumentalities for adjustment to the new era. The new age of rapid change demands higher emphasis on conservation. We must save our human and industrial capital and utilize them to the utmost. Waste will be costly in an age when the rate of obsolescence will be heightened. To enjoy the full benefits of the new creativity and productivity, we must be kept abreast of the many changes it inaugurates. Our emphasis must now be on renewal, rehabilitation, and redevelopment; and only secondarily on clearance and demolition.

The age of automation must be coupled with a program for adjustment built on upgrading people and exploiting capital for

human development.

Gov. J. Millard Tawes Honored

EXTENSION OF REMARKS

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. FOLEY. Mr. Speaker, on April 28, 1960, the B'nai B'rith, of Maryland, honored Gov. J. Millard Tawes of Maryland by establishing the Interfaith Youth Fellowship in his name at the University of Maryland. During the evening we were fortunate to hear the national president of B'nai B'rith, Mr. Label A. Katz, of New Orleans. Because of their compelling interest and timeliness, as well as the broad humanitarian objectives of B'nai B'rith, I insert Mr. Katz' remarks in the Appendix of the Record:

REMARKS OF LABEL A. KATZ OF NEW ORLEANS, PRESIDENT OF B'NAI B'RITH, THE JEWISH SERVICE ORGANIZATION, AT B'NAI B'RITH DINNER ESTABLISHING THE GOVERNOR J. MILLARD TAWES INTERFAITH YOUTH FELLOWSHIP, APRIL 28, 1960, UNIVERSITY OF MARYLAND, COLLEGE PARK, MD.

It is appropriate to the evening that we are assembled at a center of great learning, the University of Maryland. We are gathered for the concomitant purposes of extending our profound respects and homage to the chief executive of this illustrious State, in particular for his perceptive efforts to advance the opportunities for education, career and service among our youth, and by your splendid support, to give expression—a practical and productive expression—to our esteem for the Governor by establishing a youth-serving fellowship in his name. There is no more comfortable or responsive locale to accomplish these objectives than that of a college campus.

I speak for an organization that is now in its fifth generation. B'nai B'rith, when it was founded in 1843, was the first national service organization in our country. Like most enduring things, it began in humble circumstances. Where we now have 470,000 in our ranks, we began with only 12 men. But they were farseeing souls. And so it is a revealing fact of B'nai B'rith history that one of the earliest concerns of the movement 117 years ago persists as one of its dominant programs today. That is, the opportunities for creative maturity and constructive citizenship among American youth.

Styles change and the social order advances. So we in B'nai B'rith have progressed far beyond the simplicity of an orphans' fund that was the very first community program in our organizational history. We have also had to progress far beyond the simple measures of an earlier day

in maintaining our voluntary programs of community service.

The orphans' fund was supported by fines and assessments against members for infractions of the Victorian rules of the era. If you appeared at a meeting in improper dress—that is, without swallowtail coat and stovepipe hat, or if your accuracy with the cuspidor in the meeting hall was negligent—why, misdemeanors like these accumulated tidily to the benefit of the orphans' fund.

But that was a century ago. In the meantime, all of us have managed to complicate our lives with the intricacies of a shrinking world, where the problems of youth are no longer the emotional turmoils of the neglected orphan. The problems now, it seems to me, revolve around the intellectual shortcomings of our adult generation in approaching its responsibilities toward the generation that follows.

The basic problem of youth is not youth. It is the spirit of truculent indifference with which we threaten to endow our age. I don't think our greatest danger is the intercontinental missile or the thermonuclear bomb. I do think our greatest danger is a smug and comfortable oblivion to the intellectual and ethical demands of the modern society in which we live.

If we are to be an educated people we must destroy any lurking myth that the mere accumulation of wealth and the achievement of comfort are the ultimate objectives of our civilization. We must beware being sloganized into a habit of "Enjoy Now, Think Later."

I do not say this in order to breast beat against material comforts * * * against the idea of two cars for every family. I like that concept. I firmly believe that the road to permanent peace and brotherhood among men is accelerated by an abundant society. It is easier to achieve universal goodness in a state of plenty than in a state of poverty.

Today, we Americans have come closer than ever to an affluent society. But the question is: for what purpose? Is our affluence being used for universal goodness? Or are we making it an end in itself, a principle of personal comfort over cause?

We adults these days are buffeted by the competitive demands of the status society. It is a society of false values. Yet its sins are not visited on the fathers alone when our youth is thrust into it long before it has the capacity to develop a faith and a value system predicated on the sanctity of human living.

We give our children vitamins and elaborate summer vacations. But do we give them insight into the glory of righteousness, and the honor of truth? Do they grap the marvel and mystery of just being allve?

On the whole, we have raised a generation of youth healthier, better fed, better clothed, better traveled, and better read than before. Yet, we are confronted with more youthful waywardness and sharper rebellion.

Waywardness and sharper rebellion.

What are our youth rebelling against? Almost every American generation rebelled in one form or another. But with few exceptions these were rebellions for reform and improvement. They were rebellions that struggled to establish new values, not just the negation of old values.

We have the curious posture of an astonishing increase in church and synagogue membership among our youth at a time when we Americaus, and particularly our youth, are the most lawless of the major Western peoples. The record shows that 63 percent of all youth under 21 are enrolled in Sabbath and Sunday Schools. It also shows that in a recent year the District of Columbia had 116 murders compared with only 3 in Amsterdam. New York had 466 felonious homicides in a year when London had 35.

The sociologists tell us that a primary cause for the bewilderments of modern

youth is delinquent parents. There is a revealing commentary in the fact that while every parent wants his child to possess a personal religious faith, he doesn't always find it necessary for himself. In their religious institutions, our children may hear of humility and plety and the immutable strength of a moral code. But at home, they are more likely to hear the glorification of the status society. And from the television set comes the blandishments of the hidden persuaders.

But it is not as parents in the home that we expose our delinquency. American parents are loving parents—and any youngster will tell you they're the best kind. we fail, it seems to me, is in our diffidence and debilities as an adult group. The general outlook on life that is fashioned among our young people is a byproduct of the ethical environment we offer them. make the rules; they don't. We, the adults, are the power structure in the community. And if our idolatry is the worship of things instead of ideas, if we are to be seized by a passion for possessions that overwhelms all intellectual, moral, and spiritual values, then we are adding a new, a distorting, di-mension to the American Creed as it was spelled out by the Founding Fathers of this Nation.

The Founding Fathers neither feared knowledge nor acknowledged fear. Because they foresaw the expanding opportunities of freedom the men who made this Nation would not be astounded by the bigness that has grown out of their creation—the bigness in business, in Government, in labor, in the military. But they would be disillusioned, I fear, by the bigness of mass thinking, of the packaged cliche, that is becoming the social identity of our generation. They would look askance at the false comforts of conformity that they themselves had rebelled against; the ebb of debate and discussion, the rise of machine-produced thoughts and phrases all wrapped up in gray flannel trimming.

We live in an atomic and automated age. The question is creeping up on us: between man and his machines, who is master and who is slave? It is precisely to retain the mastery of the human spirit that in our massive bigness, and the conformity it produces, there is need to encourage a youth's wonder about the natural world and all the people and things in it; and there is an important place for a child's fantasy which looms large in his inner world, and for a child's happy sense of adventure.

Education is the admirable companion of youth, and it was a clever Adam Smith who suggested that the great secret of education is to direct vanity to proper objects. My own notion is that American education to-day is not as bad as the pessimists decry. Nor is it as good as its apologists contend. But whatever its virtues or faults they are a clear reflection, not of the youth who engages in it, but of the adult power structure that conceives and commands it.

In these explosive times there is no doubt, except in the minds of the myopic, that we must probe new ways of growing closer to peoples all over the world. American education needs to embrace a commitment that is universal in scope, not one that is merely an expedient adjustment to a single affluent society.

But what are we making of American education? We urge our youth to study, telling them that knowledge means success. We uphold the doctrine of learning as a young man's answer to the question, "How will I get the most out of life?" Forgotten is the corollary question, "How will life get the most out of me?" In other words, must we justify the value of education in terms of expediency? Must we believe that the sole purpose of the universe is to satisfy our

needs? Must we seek the maximum comfort through the minimum use of energy? Is this the height of our stars?

True learning, my friends, is the astronomy of the spirit. We are blessed with a high standard of living. We must have an equally high standard of thinking.

We have power. We must constantly seek the wisdom to use it constructively.

We have the system. We must be certain that the system retains its ethical values.

For the one thing I fear most is a generation of youth that sees the world all neatly calculated and explained.

If your children and mine are to be heirs to a payola civilization in which ethics and intellect are corrupted in favor of rigged television contests and ghost-written doctoral theses, it is a shoddy legacy indeed. We shall have robbed them not only of their ethical fortitude but we shall have robbed them of their freedoms and material strength as well.

We owe the next generation a better heritage than that. We owe it to the self-respect of our own generation.

I interpret your participation here this evening as an awareness that American youth is not an entity unto itself but a part of the continuing process of the American experience that has made of us a bold, a strong and a creative nation.

And I hope you join with me in the awareness of our responsibilities as the adult generation that holds the reins. The true adult, it has been said, is the man who has ceased to grow vertically, but never horizontally.

We honor one such adult this evening. The Governor is a composite of the virtues that are fitted to the American creed—and the American need—of democratic leadership. It is not for me, an outsider from New Orleans, to detail for this assemblage the human qualities of goodness and greatness that are the dimensions of the man. You know them better than I; you chose him as your chief executive.

I approach my pleasant assignment this evening with one vivid impression of the Governor which, I believe, it is fitting to relate.

When the representatives of B'nai B'rith first met with the Governor he exposed his personality in something he said. In the relaxed and informal atmosphere of that brief meeting, he reviewed with sincere respect the achievements of preceding administrations in Annapolis. He recited some of the enduring things that had been done by men who had occupied the Governor's chair before him.

Then, he added: "I am human enough to want to have a lasting monument to my administration. I would like that to be in the field of higher education. I would want the State of Maryland to meet its responsibility to its young citizens in a way that will encourage every boy and girl to enjoy the advantages of a college education and will provide the opportunity and the facilities for every boy and girl who wants it."

Governor, I know I speak for everyone here when I tell you there can be no greater monument to public service than that.

Therefore, it is a special privilege for me, on behalf of the members of B'nai B'rith in this State and elsewhere throughout the Nation to present to you * * in the presence of your charming wife and members of your family, in the presence of so many distinguished political leaders and colleagues in your administration, and in the presence of your many friends and well-wishers gathered here in your honor this evening * * this token symbolizing the establishment of the Gov. J. Millard Tawes Interfaith Youth Fellowship.

There are better words than mine to express the sentiment of this gathering in its

admiration of your leadership and your humanitarian interest in the future of our The words are from Malachi, as inscribed on this plaque:

"And He shall turn the heart of the fathers to the children and the heart of the children to their fathers."

Governor, my warmest congratulations.

Persecution of Italians in Tunisia

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. ANFUSO. Mr. Speaker, the new state of Tunisia, which was established as an independent nation only a few short years ago, is setting a bad example of rabid nationalism and racial persecution of the Italian minority living There are some 50,000 people of Italian origin living in Tunisia, most of whom are second and third generation natives of Tunisia.

The Tunisian Government has instituted a policy of discrimination and per-secution of these people with but one purpose in mind; to drive them out of the land. They are being deprived of their jobs and of every opportunity to earn a livelihood, they have no citizen-ship status, no political rights. They are simply outcasts whose only choice is either to emigrate from Tunisia or face starvation. Although for the overwhelming majority of them Tunisia is their land of birth, under the circumstances it is not surprising that they prefer to leave this land which is today persecuting them and mistreating them.

The question is, Where could they go? They are practically stateless people. For the most part they are workers who possess various skills. I believe that if these people, or the greater part of them, could be admitted to the United States they would prove to be a good asset. They are a hard-working and industrious group.

I have discussed their problem with our colleague, the Honorable EMANUEL CELLER, the distinguished chairman of the House Judiciary Committee, who is preparing an appropriate immigration measure for their admittance under our immigration laws. That measure will be ready for introduction in the near future and I shall be glad to be a cosponsor of it.

In the meantime, under leave to extend my remarks in the RECORD, I wish to insert the text of a resolution or racialism in Tunisia adopted on April 26 by the United-Italian American Labor Council in New York, The resolution reads:

RESOLUTION ON RACIALISM IN TUNISIA

Whereas it is a matter of public record that the United-Italian American Labor Council has consistently struggled against fascism and communism and always has supported the policies of the American and international free trade union movements against all forms of colonialism and for the complete independence of all colonial peoples; and

Whereas it comes as a painful shock to learn that the Tunisian Government is embarking on a policy of rabid nationalism and persecution against workers of Italian origin who have greatly contributed to the development and economic progress of Tunisia; and

Whereas according to the latest information, there are, at present, in Tunisia 51,702 Italians, of whom almost 40,000 are secondand third-generation born Tunisians who have, technically speaking, kept Italian citizenship on the basis of international agreements then existing; and

Whereas about 11,000 of these Italian nationals have already been compelled to leave Tunisia and return to Italy as a result of discrimination and persecution ordered by the Tunisian Government: because though not classed as such, these thousands are refugees who are deprived of all benefits under the program of assistance directed by the United National High Commissioner for Refugees; and

Whereas in pursuit of its discriminatory and rabid nationalistic policy, the Tunisian Government is replacing all non-Arabs and forcing them to leave the country by re-fusing to grant them work permits, the European population in Tunisia has already fallen from 300,000 to 77,000; and

Whereas 1,751 heads of families, most of them workers, with 6,750 dependents, have thus been deprived of their jobs and their source of livelihood; and

Whereas official circles in Tunisia believe that, with the exception of about 6,000, the remaining 45,000 Italian nationals in Tunisia, who are mainly workers, will be compelled by starvation to leave the country within the next 2 or 3 years; and

Whereas this most deplorable situation demands action, in the best spirit of labor solidarity and humanitarianism: Be it, there-

Resolved by the executive committee of the United-Italian American Labor Council. To urge:

- 1. The President and Congress of the United States to enact a special law providing for the admission of an extra quota of immigrants to our country since these are qualified and skilled Italian workers forced out of Tunisia as refugees.
- 2. The American Federation of Labor and the Congress of Industrial Organizations to take note of our deep sense of indignation against these discriminatory policies of the Tunisian Government.
- 3. The International Confederation of Free Trade Unions to put this matter on the agenda of its next executive bureau meeting to be held in early July with a view of using its good offices and great prestige for the purpose of having the Tunisian Government discontinue these terrible policies and, instead, assure justice to all the people of Tunisia regardless of race, color, or creed.

Israeli Independence Day

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. RODINO. Mr. Speaker, in May of 1948, subsequent to the memorable November resolution of the United Nations. David Ben-Gurion declared Israel an independent state. On the same day President Truman extended U.S. recognition to the new nation.

Today we celebrate the 13th aniversary of Israeli independence. In those 13 years the state has had to face many difficulties and hardships. From May of 1948 to January of 1949 Israeli was embroiled in a war with her Arab neighbors, and since that time has lived in an uneasy armistice, surrounded on all sides by unfriendly powers. Despite the need to maintain a defense system, and despite the obligation to absorb thousands of refugees from Europe and Asia, this tiny nation has, nevertheless, often by sheer determination and effort, harnessed her meager resources into a rapidly expanding economy.

Most important, Israel stands as an outstanding example of democracy in the Middle East. Freedom-loving peoples everywhere have come to respect and admire this new nation, whose own respect for democratic ideals and for the dignity of man is so much like our own.

The greatest problem in the Middle East is the continuing feud between Israel and the Arab nations. Over 12 years after the armistice, no peace treaty has vet been signed. Border disputes break out with unfortunate regularity; boycotts and blockades continue: and regional agreements for economic development are still far from possible.

The security of the free world depends on security and stability in the Middle East. The United States must make every effort to see that the parties are brought together, that intransigent policies are eliminated, and that a just and amicable settlement of differences is arrived at.

Profile in Courage

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DEROUNIAN. Mr. Speaker, I call to the attention of my colleagues the following editorial, which appeared in the April 28 issue of the Evening Star of Washington, D.C.

It would appear that the Golden Rule should apply even to "front-running" presidential candidates:

VERY DIRTY POLITICS

As the West Virginia primary campaign moves toward its day of decision, both candidates are resorting to tactics which will hardly be a source of pride as they look back on them. It seems to us, however, that Franklin D. Roosevelt, Jr., campaigning for Senator Kennedy, has hit a new low in dirty politics.

After extolling his man's war record, Mr. Roosevelt said of Senator HUMPHREY: "There's another candidate in your primary. He's a good Democrat, but I don't know where he was in World War II."

The implication is that Senator Hum PHREY was a slacker, hiding out in the hills while Senator KENNEDY was facing the enemy. But the publicly reported facts are that Senator HUMPHREY, married and the father of three childern, was first put in a deferred classification. When he tried to volunteer for the Navy he was turned down for physical disability. Then an Army physical in 1945 revealed a double hernia. If Mr. Roosevelt does not think these really are the facts, that is one thing. But to simply say that "I don't know where he was in World War II" is a slur which all decent people will resent.

It would not have been so bad if Senator Kennedy had repudiated the Roosevelt remark. But he didn't. With an above-the-battle air, he merely said: "I have not discussed the matter (of war records) and I am not going to. Mr. Roosevelt is down here making his speeches. I'm making mine."

making his speeches. I'm making mine."
This, however, will not wash. For Mr.
Roosevelt is making his speeches in Senator
Kennedy's behalf. And Senator Kennedy
cannot shrug his shoulders and escape all
responsibility for what his campaigner says.
By trying to do it, he is making certain that
the scars left by the West Virginia campaign
will not be quick to heal.

Economist's Ouster Puts China's Great Debate on View

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to call to the attention of my colleagues an article which appeared in the April 22, 1960, issue of Business Week, as follows:

ECONOMIST'S OUSTER PUTS CHINA'S GREAT DEBATE ON VIEW 3

This week a Reuters dispatch from Peiping reported that an aged scholar, Prof. Ma Yin-ch'u, the dean of Chinese economists, has been fired from his post as president of Peiping University.

Peiping University.

And this week visitors coming out of Red China to Hong Kong and Tokyo told of a new phase in China's drive for rapid industrialization: The organization of city communes, paralleling the tightly regimented rural communes, has begun.

These two events, coming together, signalize what may be the end of Communist China's great debate on the fundamentals of its economic aims and procedures—or may be a sharp turn in that debate. The issue has ranged relative moderates such as Professor Ma and his sponsor, Prime Minister Chou En-lai, against the more orthodox Stalinists headed by Liu Shao-ch'i, first deputy chairman of the Chinese Communist Party. Its outcome has an important bearing on the line of succession to the top post held by Mao Tse-tung.

Professor Ma's downfall, and the communal regimentation of the cities, strongly suggest that Liu, the doctrinaire party man, has won out over Chou, the more pragmatic government leader. This outcome has enormous implications both for China's internal development policies and for her external relations.

Persistent critic: Professor Ma was more than a pawn in a power struggle; he has been playing the traditional role of Chinese intellectuals, the mandarins, in challenging, with considerable independence and courage the basic concepts of China's policies. And Ma's attack, which now appears to have been ended, throws a sharp light on the economic development problems and programs not only of Communist China but of all other poor countries bent on rapid advance.

Politely, and in the appropriate style that is a mixture of Communist idiom and florid Chinese metaphors, Ma attacked the mammoth public works projects currently being planned or constructed, the "disregard of consumer interests" (a politer phrase for grinding misery), and the reliance on Soviet technology and ideology.

Ma criticized the principles behind the so-called great leap forward of the orthodox party group—the idea that, to break through into rapid and continuous growth, a nation should pour massive resources into one or two critical sectors, particularly power projects and heavy industry. Instead, Ma argued for a more balanced approach to growth, in which progress would go forward along many lines at the same time, thereby avoiding bottlenecks that hinder growth, as well as inefficiencies, and unnecessary hardships for the people.

Chou's support: Chou En-lai has discreetly backed this line for the past few years. "We should," said Chou in the fall of 1956, "set a reasonable rate of growth * * * to insure a comparatively balanced development of the national economy." Chou clearly saw eye to eye with his venerable mentor. For Ma, years ago, had been one of Chou's teachers in Chou's student days.

I. WHO MA IS

Professor Ma's life story is fairly typical of that of many Chinese intellectuals who grew up in the chaotic century since the opium wars of the 1840's brought China into the modern world. He was born Ma Yuanshan, the son of well-to-do parents, in 1884. As a young man, he reportedly led a dissolute life—not uncommon among the wealthy youth caught in the crush between two civilizations. But he reformed and became almost an ascetic; from then on, he displayed a traditional Chinese dedication to scholarship.

In 1907, he won a scholarship to Yale, where he graduated in 1910. He went on to study economics at Columbia, got a Ph. D in 1914 after submitting a dissertation on "Finances of the City of New York."

Back in China the next year, he became professor at the National Peking University and dean of economics. Five years later he helped found the College of Commerce at the Southeastern University in Shanghai. He became, at about that time, a department chief of the Bank of China and a member of the Chekiang Provincial Government.

From 1928 to 1947 Ma was a member of the Legislative Yuan, the law-giving assembly of the Republic of China under Chiang Kai-shek. But he was critical of that regime, wound up with several years of house arrest.

Work with Reds: In 1949, when the Chinese Communists had taken over, Ma accepted an invitation from Chou En-lai to help form a new government. Though not a full-fledged Communist Party member—despite longtime Communist sympathies—Ma was elected a member of the first Consultative Conference and became deputy director of the Committee of Financial and Economic Affairs. Three years later, in 1952, he was named president of Peking University, one of China's most respected educational institutions.

Ma stayed out of the Communist Party; he held his jobs because of his technical economic ability, and because his independence of thought and judgment were respected—certainly by Chou, his former pupil. Ma's views were published—and drew spirited rebuttals from government bureaucrats.

II. GREAT DEBATE

Ma's debate with his orthodox Marxist adversaries on economic development planning was carried out in learned journals, particularly one called New Construction. Such pseudo-public debates are not unprecedented in Communist China. Sometimes, to be sure, criticism of the government has been encouraged just to ferret out "counter-revolutionaries" or to provide a foil for the party line.

But the debate of the last few years overbalanced growth versus great leaps has clearly had a deeper meaning. It is an issue on which the top man, Mao Tse-tung, was not anxious to shut off debate prematurely. And if Professor Ma was right—and the "great leap forward" leads to disastrous breakdowns, failures, misery—the issue is bound to recur.

Dangerous infatuation: Setting himself stubbornly against the "big push" school, headed by party leader Liu Shao-ch'i, Ma argued that the various parts of an economy are closely interdependent, that the effects of progress in one area will spill over into related areas through increases in demand for the products and services of these areas, or through the impact of more intensive competition.

This interdependence of parts of an economy—carefully spelled out by Western economists since Walras and Pareto some 70 years ago—had been de-emphasized in China in favor of deep thrusts on particular sectors, especially iron and steel and machine tools.

Indeed, something like this is the commonest line taken by poor countries that aim at fast growth; their view is usually that heavy industry should get all the attention. A steel mill is the most dearly cherished aim of many poor nations. Like many a U.S. foreign aid economist, Mathinks this infatuation with huge industrial projects is frequently excess, even dangerous for sustained growth.

Communist business cycle: Ma has broken new ground, in the Communist world, in suggesting that even Communist economies may be subject to "business cycles." He holds that in a controlled economy the downside of such cycles is unlikely to invoive actual reductions in output, but rather will show up as a period when production levels off, or as a marked slowdown in the rate of growth.

This, he suggests, is a natural phenomenon. Economic expansion depends upon success in breaking bottlenecks. But it's hard to foretell the timing of a particular breakthrough. In fact, a number of them are likely to come in close succession, permitting relatively rapid growth, before another major bottleneck impedes progress again.

This theory of wavelike advances is reminiscent of the late Prof. Joseph Schumpeter's view of the business cycle: He thought it arose mainly because of the inevitable "bunching" of innovations. Ma similarly suggests an uneven rate of progress for the Chinese economy.

Record: This obviously is not pleasing doctrine for China's revolutionaries. They reject Ma's theories as nonsense, insist that growth results from a headon collision of conflicting pressures that are synthesized into a new force. In plain language, this orthodox Communist "dialectic" means violently forced industrialization.

Yet the record does not show interruptions in the rate of growth in China. One such pause occurred during early 1957, at the end of the first 5-year plan, when a disastrous harvest threatened to undo the progress that had been made.

Mao Tse-tung called for a reexamination of past policy, with the suggestion: "Let a hundred flowers bloom and a hundred thoughts contend." Many observers think, however, that this was simply a ruse to smoke out the opposition. In any case, it brought no fundamental change in China's growth policy; indeed, that policy became

more extreme—it developed into Liu's "great leap forward."

III. GREAT LEAP

How great that leap has actually been is hard to evaluate, since official Chinese statistics are extremely inaccurate. Indeed, published figures that recorded enormous achievements of the great leap had to be reduced drastically later on. U.S. experts have calculated the growth in Chinese gross national product since 1953 at rates varying all the way from I percent a year to 8 percent. Most of them, however, lean toward Chinese growth rates nearer to the upper end of that range; a rate of 6 to 7 percent seems probable.

Per capita growth has, of course, been much slower. China's population of 670 million is estimated to have grown by about 2½ percent per year. And in human terms—measured primarily by food on the table—it's doubtful that China's masses have advanced

at all.

On the masses' backs: This worries the Chinese Communist leaders hardly a bit. Their program aimed, after all, not at a rise in consumer welfare, but at building heavy industry—from which, they hoped, continuous national growth would result.

The Chinese have been sweating capital out of their masses of people at a fantastic rate. Progressively larger shares of GNP—ranging above 20 percent—have gone into domestic investment. That's a record few highly developed countries can match; for an underdeveloped country, it's outstanding.

Soviet aid: China originally expected substantial foreign aid from the Soviet Union and Eastern European countries to help finance its development program. How much of that aid has materialized is doubtful. The record shows, since 1950, only two loans totaling 1.7 billion rubles (\$170 million at the tourist rate of 10 rubles to the dollar). That's equivalent to only 11 percent of Chinese imports from the Soviet Union in the 8 years from 1950 to 1957. No new loans have been announced since 1954, and meanwhile China is under obligation to repay the earlier loans.

However, other forms of Sovit aid have been extended freely to China—blueprints and other technical assistance given in connection with industrial plant construction, education for Chinese students and workers in the Soviet Union, personnel and equipment sent to China to help set up facilities for advanced research, and visits of experts in many scientific fields.

Premier Chou reported late in 1959 that, in the past decade, 10,800 experts from the Soviet Union and another 1,500 from Eastern Europe had visited China.

This may be tapering off now. Last week the Chinese official journal, Planning and Statistics, published a report by Soviet experts that may signal such a change. It cautioned that China would have to begin to place less reliance on technical aid from the Soviet Union and "fraternal countries" in eastern Europe for the development of metalurgical, machine-building, fuel, and electric power industries.

And, curiously enough, the Soviet report sounded a warning almost like Professor Ma's (a warning couched, however, in a quotation from Lenin): "A balance which is regularly maintained indicates that it has been well planned."

IV. LOGIC OF EVENTS

In the past, the Chinese Communists have at times been driven to strive for greater balance, not by such theoreticians as Ma but by the force of events. In 1956, for example, their lack of concern for the level of agricultural investment had serious repercussions: The entire economy suffered from severe shortages that threatened the progress of the industrial program as well.

As a result, they began to give greater attention to agriculture in the basic development program. Not that the priority accorded to industry was abandoned—but there was a genuine shift. From 1957 on, Chinest planners increased the share of national investment going to farm production, reorganized the collectives into communes to improve their management, inaugurated a program of sending labor to rural areas from the citles—where industrial growth was not sufficiently rapid to absorb the large additions to the urban population.

Even so, the Chinese have done little to improve farm methods or economize on labor in farm production. This policy is at variance with what is going on in industry, where their plans call for very high use of capital in raising production. Apparently, the Chinese feel that more than enough labor is available to boost agricultural output without extensive investment in new

methods or equipment.

Cheapest resource: This apparent recognition that a sizable surplus of labor exists is in conflict with China's present population policy, now in retreat from an earlier support of birth control. Professor Ma stubbornly pointed out this contradiction for years. He consistently argued that China's real problem is overpopulation.

But China's leaders appear to have reached the conclusion that people are the cheapest and most abundant resource avail-

able.

Cost to Ma—and Chou: Though frequently denounced as "bourgeois," Ma stuck to his guns—on population policy, and on eco-

nomic development planning.

In one article he noted that a good friend (assumed to be a reference to Premier Chou) had advised him to retreat from the conflict. Ma said he apologized to his friend, but added: "One must uphold and protect the dignity of science, and therefore I could not do otherwise than to refuse to make an admission of error. Having written, one should have the courage to admit mistakes; but if one is sure of the truth, then one must face all consequences, even if they do not serve one's own interests or even one's own life."

It is not at all clear at this point whether Ma's persistence will, in fact, cost him more than the loss of the presidency of Peking University, or how much it may cost his more powerful, more flexible friend. Chou En-lai.

Possibilities; Speculation on that last point varies greatly among observers outside China. Some consider that the hard Stalinist line has definitely triumphed, and that this means loss of ground for Chou, gives the inside track to Liu as potential successor to Mao. Others insist Chou has very close ties with Stalinists, has assumed a moderate line to mislead Indian and other nations. Still others insist that, though there have been differences among Chinese leaders, they are still so submerged and diffuse as to eliminate the possibility of cliques contending for power.

Certainly Chou still has enormous prestige in China—quite possibly, greater prestige than Liu. Yet it seems clear that Mao has consistently, in favoring Liu, been centering the control over economic policy in the party, strengthening the party at the expense of the administration and the army.

Still, there are signs that the line on more balanced economic growth and greater moderation, taken by Professors Ma and Chou, has had some impact on MAO's thinking and on Chinese policy. There are reports, for instance, that the Chinese are remodeling the village communes again—more on the lines of Soviet collectives—and that China's second 5-year plan (1958-62) is being redrafted to correct bureaucratic excesses, decentralize administration, improve planning between sectors, and disperse development projects more evenly across the country.

Such acceptance of an opposing line—once the advocate of that line has been personally rejected, as in the case of Professor Ma—is common enough in Communist countries. That's what Stalin himself did on industrialization of Russia, after Trotsky was destroyed, and what Khrushchev did on increasing consumer goods production, after Malenkov was out of the way.

Washington Report

EXTENSION OF REMARKS

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include my newsletter of April 30, 1960:

WASHINGTON REPORT

(By Congressman Bruce Alger, Fifth District, Texas, April 30, 1960)

H.R. 10213, a bill to amend the National Housing Act (short title, "Emergency Home Ownership Act") provoked one of the hottest, most controversial and partisan political debates of the year. The controversy surrounded the authorization of \$1 billion additional Federal funds for the purchase of FHA and VA mortgages on new home construction. The bill's preamble became an outline of the conflicting views. The preamble states, "A bill to amend the National Housing Act to halt the serious slump in residential construction, to increase both onsite and offsite job opportunities, to help achieve an expanding full employment economy and to broaden home ownership opportunities for the American people." The disagreement focused on the short title. "Emer-Home Ownership Act." Members chose sides over whether there was (Democrats) or was not (Republicans) an emer-

Arguments for the bill: (1) Employment is off in residential construction, estimated housing starts of 1,100,000 in 1960 are 150,000 less than 1959; (2) tight money market requires Federal aid; (3) "little man" needs additional help to acquire home. Arguments against: (1) The estimated 1.1 to 1.2 million housing starts will be a good year, 1959 was the second best year in history; 4½ million unemployed is not alarming, employment is at the highest point in history; bad weather accounts for some dropoff; (2) tight money is the result of (a) business boom and demand for money to expand, (b) Government borrowing in short-term field because of interest ceiling in long-term field takes much of money available otherwise for home financing: (3) "little man" is not helped but financing: (3) "little man" is not helped but hurt by this \$1 billion Federal spending and its inflationary impact; actually, this is & subsidy for one segment of our economy.

Here is a good example of the basic clash between the liberal and conservative philosophies as championed by the Democrat and Republican Parties respectively. The liberals believe growth and economic well-being of the Nation depends on Federal spending, while the Republicans believe that private initiative, spending, and investment promote the only healthy growth. How can Federal handouts, as "aid," help the people when all the money must be taken from them? The redistribution of money through taxation has been accomplished so thoroughly already that more Federal aid can come only from taxing the low and middle income brackets. Then when

we borrow to spend more than we take in, we inflate, that is, cheapen, our money. Inflation again hurts most those in the lower

income groups.

Challenge on fiscal responsibility: The minority report on the Housing bill, pre-pared by Republic Members, points it up as, a clear-cut challenge to the Congress on the question of fiscal responsibility." minority said, "Even the title of the bill-Emergency Home Ownership Act-condemns this proposal. There simply is no emergency. Last year our economy and the well-being of our people moved to new highs. Virtually all competent observers agree that this year will be even better. And yet, this bill, a billion dollar back-door raid would be made on the Treasury for the purchase of mortgages at subsidy prices. In this time of prosperity, fiscal responsibility requires that the Congress achieve a noninflationary Federal budget. Irresponsible spending proposals of this type must be stopped."

New housing starts are not the whole picture: In considering the role of housing in our economy, one important fact should not be overlooked. New housing construction is only one part of the picture. People also become homeowners by buying existing homes and get better homes by expenditures for modernization. A breakdown of the \$15 billion in loans made by member institutions of the Federal Home Loan Bank Board last year shows only a third of that money borrowed for new home construction. rest of it went into purchases of existing homes and for repair and remodeling. The liberals were playing a housing-starts numbers game by alluding to only one part of the picture in presenting the Housing bill.
Indiana Congressman Charlie Halleck,

Republican leader, summed the thing up pretty succinctly stating, "The bill repre sented a billion dollars worth of baloney." Needless to say, the bill cleared the House by a vote of 214 to 163. Should the Senate pass it as well, it faces an almost certain Presidential veto, but will remain very much alive as an election issue.

Figures in last week's newsletter: Last week the figure for the foreign aid bureaucwas given as 12,500 people; actually, the foreign aid program gives employment to more than 50,000 people, a figure I hope,

desperately, we can reduce.

Military Leadership

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, Anthony Harrigan of the Charleston News and Courier-America's most independent newspaper-has written an excellent article titled "Military Leadership." His splendid article, appearing in the Charleston News and Courier under date of May 1, 1960, calls the attention of the Nation to the magnificent contribution our military leaders have made to freedom and in keeping America safe.

When this world witnesses the mistakes this Nation has made on the advice of certain civilians in the diplomatic field, the Nation should thank God for its military statesmen.

The article follows:

MILITARY LEADERSHIP (By Anthony Harrigan)

It used to be said that war is too serious a business to be left to the generals. But nowadays it seems that the military mind offers the best hope of this world-embattled

It is the generals and the admirals-men such as Gen. Maxwell D. Taylor, former Army Chief of Staff; Adm. Arleigh A. Burke, Chief of Naval Operations, and Gen. C. P. Cabell, USAF, Deputy Director of the Central Intelligence Agency—who are helping the Nation face the totality of Communist ag-

These men study the threat to the national security-it is their profession-and know how the enemy works from the Caribbean to the China Sea.

In refreshing contrast to the State Department's refusal to face the facts in Cuba is the statement of General Cabell in an appearance before Senate Committee on the Judiciary that "collaboration with and infiltration of popular movements, for example that of Batista in the 1930's and of Castro in the 1950's—has been communism's most effective weapon in Latin America."

General Cabell boldly stated that the "so-called national liberation strategy seeks to offset Communist numerical and political weakness through international organizational support and clandestine techniques of infiltration and coordination."

Military leaders like General Cabell are trying, in the face of foolish talk of coexistence. to explain to the American public how this Nation is at war and that the hour is late for counterattacks against the enemy.

One hopes that the American public will listen carefully to the statements of these military men. They serve as pathfinders and guides to the American people that must make transitions in thought and action in the years ahead.

The counsel of the military is in marked contrast to the unrealistic discussions of those civilian elements who urge disarmament and coexistence and who would block U.S. action by spreading fear of a nuclear holocaust.

The appearance of Castro, the H-bomb protest marchers, the advocates of recognition of Red China, the friends of vast U.S. financed United Nations programs (as a substitute for military defenses) are all of one mind. They would have the United States accept coexistence with the Communist enemy and act passively and appeasingly before Red imperialism.

The American people should ignore the counsel of passivity before a terrible threat. They should remember George Washington's advice "to choose peace or war as our interest, guided by justice, shall counsel.

The military leaders of the United States understand that this Nation cannot win the war with communism by thinking or acting with passivity. They know that con-flict cannot be avoided by any treaty, any scrap of paper or verbal agreement with the Soviet enemy. Conflict is the history of mankind. It is the history of our own time, We haven't the option now to choose whether or not we want war; we have it-and right in our own hemisphere.

Edmund S. Whitman, vice president of the United Fruit Co., an American company whose properties in Cuba were recently confiscated for Soviet-style collectives, has said:

"The international Communist conspiracy in the Western Hemisphere acts like the buzzards. The disciplined agents from Moscow hover over a country waiting for it to soften up to a point where they can move in and devour it * * *. The disciplined for-eign agents know how to roll with the punch. Their ring tactics are highly flexible. when a movement by force falls, they adopt

the Trojan horse tactic of temporary coexistence. That is the stratagem the free world is confronted with today."

Thus it is absurd for civilian officials to talk about avoiding all war. The task of true national leaders is not to run from conflict but to strengthen the will to win. They also have the task of shaping national policy in such a way that the outcome of the protracted war with communism will be favorable to the United States.

The transitions in thought and action that the military can help the American public make are from absurity to realism in foreign relations.

American ideas about national conflict are vague and lacking in realism. The American approach to foreign relations is that peace and mutual satisfaction is natural among nations. Many citizens have the unsound no-tion that because various territories have their own flag that all nations are morally equal, that self-determination is a basic right the United States should respect in all in-

This is folly. Castro's Cuba is not deserving of the same kind of respect as Canada. Neither is national self-determination in Castro's Cuba, where a Communist-front regime controls, as valid as it is in England.

That every people has the right to choose its own kind of government, to go its own way—as in Castro's case forging links with Red China and the U.S.S.R .- is a notion that handicaps the United States in its struggle to preserve freedom against Communist tyranny. It is this notion that leave the United States unable to decide between the claims of an old friend and a new nation.

The Algerian situation is a case in point. The peculiar idea prevails that the Algerian rebels, who accepted aid from Red China's military advisers and who engage in terroism, are deserving of no less consideration than France, a pillar of Western civilization.

Too often a spurious moralism becomes involved in national policy as a result of foolish ideas about the sovereignty and rights of foreign states. War becomes in this view, a way to protect rights that are illusory.

Thus, after World War I President Wilson considered not U.S. strategic needs but the alleged rights of various Balkan peoples. the conclusion of World War II, the same error was repeated.

America's Dutch allies were forced out of the East Indies. The result was a Javanese Government that is leftist and no ally of the United States. The spurious, moralism resulted in denial of military aid to Chiang Kai-shek with the harrowing result of the loss of free China to world communism.

Imprecise, pseudo-moralistic aims have been the undoing of the United States since World War II. The only cautionary force in the United States have been the professional military people. The determination to hold Formosa stemmed from the military instance on its ncessity. The Panama Canal Zone is still under firm U.S. control because the military regard it as essential. Spain is a free world bastion, no longer scorned by the U.S. Government because the military know its importance for air and naval bases. And Cuba may be liberated from Castro because the Navy considers its Guantanamo base of too great importance to lose.

America's best military minds share the idea that Prime Minister Palmerston once enunciated, namely that "England has no permanent friends; England has no permanent enemies; England has only permanent interests." If the United States keeps its eyes on its strategic interests, leaving aside other considerations, it will be able to resist Communist attack.

Despite good counsel from the military, U.S. opinion is still a captive of the oneworlders, the coexisters, and the America lasters. Because of this the United States fares ill in foreign affairs. It will continue to fare badly until realism dominates in our national councils, and that means until the military, which is to say the strategic point

of view, is more widely appreciated.

As George Santayana, the philosopher said, "Those who will not learn from history are condemned to repeat it."

What the American people must learn is to look at the world around them in a new They must look at it, with the United States and its interests always at the center-with one goal always in mind-U.S. survival.

The military leaders of the United States can play a great role in the education of Americans by constantly reminding their fellow citizens that the cold war they are in is the protracted war of communism against freedom.

This war may continue for decades; the enemy's unchanging objective is defeat of the United States. "We will bury you," said Nikita Khrushchev. The only thing that will change is the method of Communist at-It may be conventional military operations, subversion, or the cultivation of a public philosophy of weakness, defeatism and appeasement in the United States.

The military leaders of the United States can serve their countrymen by stressing time and again that in the struggle against communism there is no substitute for victory.

Realism of Idealism-The Only Way To Deal Successfully With World Communism Based on Atheistic Materialism and Cynicism

> EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the distinguished Chaplain of the Senate, Dr. Frederick Brown Harris. The article itself illustrates the high idealism guided by practical realism on the part of Dr. Harris which in the article he so properly commends. The article from the Washington Star of May 1, 1960 follows:

SPIRES OF THE SPIRIT-REALISM OF IDEALISM (By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

In the present world situation we need idealist who see visions and dream dreams. But we desperately need idealists who are also realists. The dictionary tells us that idealism is "the tendency to see things as they should be instead of as they are," and that realism is "the tendency to concern oneself with actuality of fact. A surgeon is an idealist who is also a realist. He isn't the sort of idealist who puts a mustard plaster over a malignancy and just hopes for the best. He knows that some things have to be cut out before the recuperative powers of the body have a chance to be mobilized.

Those who understand the present peril the world is in because of the malignant growth of atheistic communism are idealists who dream of a healed and happy world, but who vividly realize that you cannot compromise with a cancer in the body politic. Bishop Gerald Kennedy of the Methodist Church is

both an idealist and a realist. Returning to America after recent weeks in Soviet Russia, he declares: "The issue is joined at last. Either God is or He is not. Either a man is of value only as a citizen of the state or he is of value because God created him. Christianity is true or communism is true, but not both. Coexistence is a pleasant term, but one of these systems is going down."

Again and again church leaders have failed their time tragically, because they were unreal idealists. Sincere church people were back of a British Prime Minister when he went to Munich with an umbrella, but with no righteous sword. It was then that for "peace in our time" a glorious little democracy in the heart of Europe was thrown to wolves of appeasement. And now, in this year of our Lord 1960, there are religious leaders especially ecclesiastical bureaucrats—who are as gullible and blind as were the church leaders to whom Jesus spoke sad-The Master said to the leaders of His day, You can prophesy about the weather. You read the signs in the sky, but you cannot read the signs of the times." Now, remember, He was talking to religious leaders when He said: "If thou hadst known in this, thy day, the things which belong to thy peace, but now they are hid from thine eyes, for the time shall come upon thee that thine enemies shall lay thee even with the ground and shall not leave one stone upon another because thou knowest not the time of thy visitation." And Christ's dismal prophecy came to pass when the armies of Titus pul-verized Jerusalem. Jesus' heart was heavy because those at the head of the church were not reading aright the signs of the times.

A leading professor in one of our bestknown theological schools some time ago issued a petulant, scolding message to all the churches. Because it has in it idealism without realism the statement might just as well have been written in the Kremlin. This is exactly what he said: "We should avoid a position of hostility to them (that is, to the regimes of Russia and China) and cease the practice of moralizing and the practice of continual lectures to them by our leaders." What that church leader is really saying is let the Red secret police arrest innocent peasants by the truckload; let the interrogators brainwash and torture them; let the official butchers kill, or perhaps merely send them to a slave camp where the terrified peasants will be reformed through labor. But—let no gentle Christian in America whose life by comparison is a bed of roses say a rough or accusing word about such atrocities. To do that might postpone the time when Red China will be received into the United Nations as peace lovers. And then to thus speak out will interfere with Russia's ideas of coexistence. All that is idealism without realism. Now I can tell you, out of my personal knowledge, that to the enslaved people of the captive countries for the missionaries of the Cross in Korea, Taiwan and the Philippines, and for all those across Asia yearning for freedom, that sort of a call from church leaders in America advising padlocks on the lips of our churches is frightening, disturbing, and devastating to the morale of Christian churches in those lands

I am not charging that any of these mistaken church leaders are Communists. I do not go into that controversy at all. I am simply saying that the thinking of some who are as prominent today as spokesmen for the church as the Pharisees were in Christ's day is akin to those to whom the Master said: "You do not rightly discern the signs of the times."

The thing that alarms me is so much idealism divorced from realism is that many in the religious forces of the Nation seem to be affected by a moral flabbiness, an absence of indignation at appalling

crimes, a tendency to forget, not as God forgets when there is genuine repentance, but forgetting which indicates a sort of moral blackout-a willingness to grasp unrepentant, bloodstained hands in cooperation and partnership.

With the precious things we hold nearest our hearts being attacked by sinister forces without pity or conscience, let us pray every day as this struggle rages: "From a dangerous idealism bleached of the common sense of a sanctified realism, good Lord, deliver us."

The Folly of the Buy-European Program

EXTENSION OF REMARKS OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 13, 1960

Mr. FLYNN. Mr. Speaker, my thoughts turn to the folly of the buymy European program because of a letter written by one of my constituents to Mr. Charles Coe, editor of the Whitewater (Wis.) Register. The letter is set forth as follows:

MARCH 23, 1960.

Mr. CHARLES COE, Whitewater Register, Whitewater, Wis.

DEAR CHARLES: I do not know whether this information is of interest to your readers or not. Sometimes I think there is no interest, again I believe there is interest but they do not know what to do about it.

As you know 80 percent of our production is in plastics. We have just received a letter from the Society of the Plastic Industry telling us that a total of 6,547,000 plastic raincoats were imported to the United States from Japan and other foreign countries in When this is a broken down against our labor in Whitewater it means a total of 4 coats per hour or a total of 818 people working 40 hours per week for 1 year's time.

This is what is happening to the plastic raincoat industries in the United States. Now, this is but a small example, what about the 1,001 other products and industries in the United States where imports are taking command.

I would think that if politicians and union leaders would get out and promise relief and fight this infiltration of foreign goods it would mean a lot more to our economy than many of the things being promised and offered to get votes.

It can only mean that many a worker will be seeking unemployment compensation and then relief if this situation continues. Any worker that goes out and buys foreign products is asking for trouble, as we cannot have our cake and eat it too. I am beginning to think we should again think in terms of "Buy America First."

Very truly yours,

LEO PERRY.

It has been brought to my attention, through a committee in which I serve, that this country is a customer for 12,000 fishing vessels in the next 10 years. These vessels can be bought in foreign shipyards for one-half of what they can be purchased for in this country. Our committee is informed that it is the policy of the administration to permit these fishing vessels to be purchased in foreign shipyards. Our committee is almost unanimously opposed to this policy. have a special interest in that particular contract, because most of the powerplants in these boats will be manufactured by Fairbanks, Morse Co., a substantial industry in my district.

I have many cases in my district where manufacturers have reported to me that they were the low American bidder, and that the bid was so low that they could not reduce it and make out on the job: nevertheless, because of low wages in foreign countries, coupled with a lower standard of living, which means a lesser cost for raw materials involved, and because the manufacturer is not paying American taxes, the 6-percent preference granted to American bidders was wholly insufficient to make up the difference in cost and the work is going to Japanese, German, Italian, or other European concerns. I refer to a wire cable company in my district, a fine organization with a background of about 100 years of manufacturing, which lost a large contract in competition with a European bidder. I refer to a \$6 million contract for locomotives at the Panama Canal where several American bidders, including one in my district, lost out to the Mitsubishi Co. of Japan. Each of you who read this article can add many specific examples to this list, I am sure, and I could, also, add many others. These, however, pinpoint the fact that American business is going European. When this happens, it means that American citizens lose employment. When they lose employment, the Government loses taxes for the reason that the Government is a partner with every individual workman and manufacturer. The manufacturer loses the normal profit and suffers idleness of his plant, causing harm to his corporation and loss to the entire community, because of the loss of payroll and subcontract work in the area where the manufacturer is located. If the manufacturer takes the contract at a price competitive with European bidders, it means that he must lower wages in his plant and lower other costs. The result of this is that his workmen and those dealing with him must, because of their lowered income, reduce their standard of living. This tends to lower the American standard of living and brings it down to the standard of living of people in European or Asiatic countries.

I do not believe this is proper. I believe it is the duty of every elected representative to support, maintain, and improve the standard of living of all American citizens. People, the world round, desire American citizenship because of the fact that this country has been able to offer its citizens a better way of life and a higher standard of living than they have known in other countries. It is the duty of all of us to maintain this and to continue to build our country and to improve the way of life in our country.

It is appalling to most of us to see the Eisenhower administration supporting, encouraging, and promulgating the "buy European" program. We all know that we must buy abroad if Europe is to buy from us, but—there is such a thing as Government control—such as we had during the days when Cordell Hull was

Secretary of State when he negotiated independent trade treaties with each foreign country and thereby improved trade relations for American merchants throughout the world and at the same time kept a balance of trade in favor of this country. This kept moderation in the "buy European" programing and prevented unnecessary high tariffs. Today, we have a steam engine running without an engineer. There appears to be no one steering the ship of State. American purchasing power is being spent abroad to improve the standard of living in Europe, while American manufacturers have idled their factories, and American workmen are unemployed because they cannot secure American orders unless they reduce their standard of living to that of Europe or Asia. The result of this is loss of taxes to the United States and a lower standard of living for American citizens.

I believe that Leo Perry of Whitewater, Wis. was entirely correct in the position that he took in his letter to the editor of the Whitewater Register. His small industry is typical of the thousands like it throughout the country who have suffered, and will continue to suffer, if this country permits the "buy European" program to grow without the imposition of controls and regulations.

Resolution on Federal Excise Taxes on Communications Services

EXTENSION OF REMARKS

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WOLF. Mr. Speaker, the people of the Second Congressional District of Iowa have indicated to me over and over again that they are in favor of the elimination of the Federal excise tax on communications.

The following resolution, adopted by the 65th annual convention of the Iowa Independent Telephone Association last month, sets forth clearly the widespread views on this subject:

RESOLUTION ON FEDERAL EXCISE TAXES ON COMMUNICATIONS SERVICES

"Whereas the anticipated condition of the Federal budget holds some promise that some lowering of taxes can be done; and

"Whereas the Federal excise tax on communications services constitutes a heavy burden on telephone users throughout Iowa; that it is discriminatory to apply this tax only to telephone service and exempt the other household utility services; that it was originally adopted as a wartime effort; that under present taxing provisions it is classified as a luxury along with liquor, tobacco, cosmetics, and jewelry; that, if not dropped at the first opportunity, the telephone tax may become a permanent part of the tax structure: Therefore be it

"Resolved, That the Iowa Independent Telephone Association go on record as favoring the elimination of the tax on local telephone service in June 1960 as now scheduled and repeal of the other communications excise taxes as soon as practicable." Resolution adopted unanimously April 6, 1960, by the 65th annual convention, Iowa Independent Telephone Association, held at Hotel Fort Des Moines, Des Moines, Iowa, April 5 and 6, 1960.

Attest:

WILLIAM F. MILLER, Secretary-Treasurer.

The Balance of Payments Problem

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WIDNALL. Mr. Speaker, I am pleased to call to the attention of the Congress the excellent article by Secretary of the Treasury Robert B. Anderson, entitled "The Balance of Payments Problem," which appeared in the April 1960 issue of the magazine, Foreign Affairs. The Nation is confronted with a balance-of-payments problem that must be resolved if we are to fully and effectively discharge our responsibilities of free world leadership. Secretary Anderson's article presents an analysis of the causes of the deficit and, noting that the dollar has become the reserve currency of the world, stresses the vital importance of moving to correct the im-

The solution is by no means simple, and Secretary Anderson proposes a firm, many-faceted attack combining sound domestic fiscal policies directed at keeping the dollar stable, with a foreign exchange policy that will maintain international confidence in our currency. Rejecting the temptation to solve the problem by restrictive action in our international economic policy, Secretary Anderson cites the role of both the Government and the private sector of the economy in resisting inflationary pressures, and describes the need for a united effort by the whole American economy to seek foreign markets on an increasingly intensive scale. The article is appended under unanimous consent:

THE BALANCE OF PAYMENTS PROBLEM (By Robert B. Anderson)

It is a new thing for Americans to be concerned with our balance of payments. We are accustomed to thinking of ourselves as a Nation with almost limitless productive resources—a Nation capable of turning out goods and services sufficient for our own needs and for a sizable foreign demand, without undue monetary strain. After all, didn't World War II demonstrate that the United States, with a very small proportion of the world's population, could produce much of the material needed to win a world war, maintain high living standards at home, and afterward provide an unprecedented amount of assistance to war-torn countries elsewhere?

All this is true. But time moves swiftly. Our resources did in fact make it possible for us to act quickly after World War II in easing the balance of payments problems of others. The destruction and economic dislocation of the war had wiped out much of Western Europe's monetary reserves. Export earnings had greatly diminished. The United States recognized that the war-

devastated countries had little ability to pay for imports of food, materials, and equipthe foundations on which swift and effective rehabilitation had to be built.

It was clear that capital was required in the underdeveloped areas of the world also. During the war and afterward, people in many formerly isolated areas were brought into abrupt contact with both the institutions and the advanced technology of the West. Not only were old customs and allegiances weakened; there was an urge, stronger than any ties with the past, to achieve the conditions making for improved standards of living. For this, too, capital was needed.

was against this background of re habilitation needs in Western Europe and the thrust toward economic advancement elsewhere that the United States supported the International Bank for Reconstruction and Development and the International Monetary Fund, devised the Greek-Turkey ald program and the European Recovery Program, and has continued during the post war period to participate actively in broad programs of aid and foreign loans. As a re-sult of all of these efforts the balance of payments problems of many countries have been reduced to manageable proportions; indeed, in some cases, they have been eliminated. What is new in our present situation is the realization that we now have a balance of payments problem of our own.

This recognition has been forced on us by the sudden and substantial increases in the deficits occurring in our balance of payments during 1958 and 1959. Deficits had occurred earlier. But it is the sharp recent uptrend which has caused concern-and rightly so. The events of the postwar period have made the U.S. dollar the major reserve currency of the world. Never before has it been so important to us and to our friends abroad that the balance of payments should be in a healthy equilibrium so that the dolcan continue to be a strong currency fully justifying the confidence of our own

and other countries.

In brief, one can say that if excess drawings on reserves are to be avoided over a period of time, total outpayments must equal total inpayments (both on current and capi-tal account). In this respect, there is a cer-tain analogy between the situation of a nation and of a region within a nation or of an individual. Mr. Micawber, in one of his more reflective moods, remarked that a person who persistently ran a deficit in his monetary affairs was doomed to misery. Not dissimilarly, a community which does not currently "earn its way" in transactions with the rest of the country will soon feel the adverse effects of the defict in its balance of payments. Both the individual and the community can borrow to offset the deficit in their current account, and this is constructive if the borrowed funds are wisely used, and it can continue for a long time. But neither can expect for very long to solve the problem of deficit by borrowing for consumption or by using up reserves. However, it is not wise to push these analogies very far, because there are two important differences between the balance of payments of an individual or a part of a nation, and of the nation itself. These differences are the separate monetary sys-tems of nations and the problem of transferring funds from one country to another to which this gives rise.

The mechanism of adjustments by which a balance of payments tends toward equilibrium is a complex subject on which many books have been written. But before turning to an examination of the U.S. balance of payments, it may be useful to summarize some general conclusions:

(1) Large deficits or surpluses in the balance of payments should not persist.

(2) The reason for this is that large oneway movements of gold or large increase in foreign short-term holdings currency will not continue indefinitely

While there is a tendency toward equilibrium in the balance of payments, the rapidity and effectiveness with which a country moves from unbalance back to balance varies from case to case.

(4) Over a period of time, net movement of capital into or out of a country is made possible by appropriate shifts in the current account of the balance of payments. The ways and means of bringing about these shifts comprise the balance-of-payments problem.

There need not-and generally will not-be a balance in any single year; that is, some movement of short-term funds or gold is normal. But how much movement is normal and sustainable and how much is abnormal and unsustainable cannot be laid down by rule.

Let us now examine the balance of payments of the United States.

Table I gives a summary of our balance of payments since 1946; and table II gives greater detail for the years since 1950. In the 14 years shown in table I, the total payments of the United States increased greatly, from about \$13 billion in 1946 to more than \$28 billion in 1959. The current account was in surplus every year before 1959, but there were wide fluctuations in the surplus, and in 1959 there was a small deficit for the first time since World War II.

Notwithstanding the surpluses on current account, there was an overall deficit (as measured by recorded foreign gains of gold and liquid dollar balances in transactions with the United States) beginning in 1949 and running every year since then except in 1957. This deficit averaged \$1.3 billion, 1950-57, and was \$3.4 billion in 1958 and about \$3.7 billion in 1959.

In every year shown in table II, total U.S. payments exceeded total receipts. Consequently, in every year except 1957 (when the balance of payments and receipts was very close), foreigners increased their gold and liquid dollar assets. In 6 of the years foreigners gained both gold and dol-lars. In 3 years the United States gained gold, but foreigners' gains in dollars exceeded U.S. gold gains. In 1957 alone, U.S. gains in gold exceeded increases in foreign dollar holdings.

How does it happen that the United States has had a current account surplus year after year and still has an overall deficit in the balance of payments? Table II supplies the answer.

1 Excludes grant-financed U.S. military supplies and services.

\$ Public and private U.S. capital outflow and remittances are entered net in U.S. payments; foreign payments in United States include foreign long-term investment here.

\$ Includes military expenditures shown separately in table II.

\$ Includes subscriptions to the International Monetary Fund and the International Bank amounting to \$300,000,000 in 1947.

\$ Less than \$50,000,000.

\$ Excludes \$1,375,000,000 subscribtion to International Monetary Fund.

Source: U.S. Department of Commerce, (Detailed figures may not add to totals because of rounding.)

First, the net outflow of U.S. private capital was large throughout the period, and in 1956-58 averaged \$3 billion. In 1959 it de-creased to \$2.3 billion. Second, U.S. Government nonmilitary loans and grants (minus repayments) averaged \$2.5 billion during the 10 years, and would have been close to that level in 1959 except for some exceptional repayments received. Third, the surplus of exports of goods and services over imports of goods and services fell short of covering these capital outflows. As table II indicates we normally include in imports of goods and services not only merchandise brought into the United States and payments for services performed for us here by foreigners, but also various payments abroad such as our tourist expenditures and our military expenditures in various countries for services and goods used to support our troops stationed there. These military expenditures were determined by national defense considerations rather than by economic forces of demand and sup-

ply; they increased steadily from \$576 million in 1950 and exceeded \$3 billion a year in 1957-59.

If we add together military expenditures abroad, net private capital outflows and net Government nonmilitary loans and grants, we find that they averaged \$6.3 billion in the years 1950-57. They amounted to almost \$9 billion in 1958. They were greater than the excess of U.S. exports of goods and services over imports of goods and serv-ices (excluding from our imports in this calculation our military expenditures abroad). In 1959, although they were smaller (\$7.5 billion) because of special debt prepayments to the U.S. Government and the reduction of private capital outflow, they still exceeded the export surplus which dropped sharply for the second consecutive year. Consequently, foreigners again greatly increased their holdings of liquid dollars although they converted a smaller portion of these dollars into gold in 1959.

m

Two principal facts emerge concerning the balance of payments of the United States. We have been running an overall deficit for 10 years and it has become relatively large in the last 2 years. This overall deficit results from a net outflow of public and private capital larger than the surplus on current account-and it should be kept in mind that military expenditures abroad are included in the current account.

But after these facts are established, we still have the question of why-there is currently a "problem" connected with our balance of payments. After all, the economy of the United States is very large, the gross national product is currently running around \$500 billion per year, and our total merchandise exports are little more than 3 percent of GNP. Why need we be concerned about so small a segment of our total economic activity?

Or can it not be argued that, with a gold reserve of more than \$19 billion, and with foreigners continuing to show a willingness to hold increasing amounts of dollar deposits, even a relatively large deficit in the balance of payments should cause trouble?

Table II. U.S. balance of payments, 1950-59 1

Finally, even if it has to be concluded that the deficit was too large, wouldn't it be simple enough merely to cut back on imports or to decrease the outflow of capital and take care of the deficit in this way?

It would be comforting to reason the balance of payments problem out of existence by those arguments. Unfortunately, how-ever, none of them can be accepted. The United States must be able to sustain an increasing amount of international payments and obligations as the years go by for several reasons.

First, merchandise imports have become Increasingly essential to the United States. As our economy grows, our demand for im-ports will also grow. It is, of course, evident that our capacity to pay for imports is bas-ically dependent on the foreign exchange earnings which we receive from our exports of goods and services.

Secondly, as a great power with far-flung responsibilities and with worldwide financial and economic interests, both public and private, the United States to a surprising extent must depend on a reasonable equilibrium in its balance of payments to carry out its re-ponsibilities and to acomplish its political and economic aims. We make military ex-penditures abroad, we carry on private investment in foreign countries, and we extend grants and loans with public funds, not as a matter of chance and relative indifference but cause these activities are important to us and to the rest of the free world. We can carry out these activities on a large and continuing scale only if we have a reasonable equilibrium in our balance of payments.

Moreover, this equlibrium should in large part be achieved through a surplus on current account of substantial size chiefly by an expansion of exports. Large and continuing outflows of gold and long-continued and substantial increase in foreign holdings of U.S. dollar balances cannot be relied on as the way to deal with the balance of payments deficit of the United States.

It has long been a truism of international economics that a capital-surplus country which is to transfer savings to capital deficit areas over a period of years must do so primarily by means of a surplus in the current account. Within reasonable limits the United States can export long-term capital and solve the transfer problem by an offsetting inflow of short-term funds. This has happened since the war on a large scale as table II shows. In fact, since 1949 foreign holdings of short-term dollar balances and other liquid dollar assets have increased from \$6.4 billion to approximately \$18 billion.

On the whole this has not been an undesirable development. Foreigners have been prepared to hold dollars, especially in view of the status of the dollar as a reserve currency and the reassurance of a large U.S. gold reserve. These dollar balances have comprised a considerable part of the foreign exchange reserves of other countries, and are an important means of economizing the gold reserves of the free world. However, at least in the intermediate term the amount of foreign liquid dollar holdings which can with confidence be maintained is not unlimited. The increase in such balances under the impact of overall balance of payments defi-cits of the size of those of 1958 and 1959 would certainly threaten to reach that limit if so rapid a buildup continued much longer.

The same considerations serve as limiting factors on gold outflows. The U.S. gold reserve is large, exceeding \$19 billion. But it should be large in order to provide a cushion against various contingencies and to secure our short-term liabilities. It seems to me that substantial changes in that reserve can be viewed with equanimity only if they are likely to be of relatively short duration and not persistently in one direction. It does not seem that the proper function of our gold reserve is to be heavily drawn down on a large scale over a period of years to transfer capital to the rest of the world.

Overall deficits in the balance of ments of the United States in 1958 and 1959 clearly were too large to be safely sustained for very long. Moreover, the circumstances which have led to a persistent balance of payments deficit for 10 years and a sharp worsening of that deficit in the past 2 years have certain qualities of persistence which must be given serious consideration. What seems to have occurred is a coincidence of several developments.

There has been a reemergence of the competitive strength of the other industrial countries. This is not a surprising develop-

Not available.

¹ Including other capital.
⁸ Including military transactions for each and credit.

ment. The political, economic, and defense policies of the United States since the war have been aimed at this rehabilitation of the other industrial countries, most of which had suffered tremendous damage.

The success of these policies has been outstanding, and is shown in the statistics. Between 1952 and 1958 Germany's share of total world exports of manufactured goods increased from 12 percent to 18.6 percent, and Japan's from 3.8 percent to 6 percent; while the share of the United States declined from 26.2 percent to 23.2 percent. The United States share of total world exports was 17.3 percent in 1958, which is about the same as the figures for 1950, 1953 and 1955, but below the figures for 1951, 1952 and 1956, which ranged from 18.2 to 18.6 percent, and much below the peak of 19.6 percent in 1957 which was due to very special factors.

Detailed analyses have been made by the Department of Commerce of changes in our share of major world export markets. the whole, these analyses have been encouraging because they showed that serious reductions in our share of export markets have been confined to comparatively few classes of goods, especially motor vehicles and steel, Nevertheless, the aggregate losses in these classes have been substantial and they have occurred at a time when the need is to expand our current account surplus rather than to allow that surplus to shrink

Another development has been the continuous increase in our merchandise imports. In 1955 imports were \$11.5 billion, while in 1959 they reached slightly more than \$15 billion. In the same 5 years, exports increased by about \$2 billion. As our economy grows, there is reason to expect a rising trend in imports.

Unofficial estimates for 1960 are for an increase in our exports; and while our imports are also expected to expand, the improvement in the current account will reduce the year's overall deficit in the balance of payments below the 1958-59 levels. This, of course, is all to the good. But the deficit will still be large-probably substantially larger than the 1950-57 average. Moreover in a year of boom conditions abroad, when foreign demand for our exports should be high, it seems particularly unsatisfactory that the deficit be so large.

The conclusion is quite clear: We have a balance of payments problem. The essence of it is how to bring our total inter-national transactions into a reasonable equilibrium which will enable the United States to carry out its responsibilities in the world without provoking large and persistent gold outflows or excessive increases in foreign holdings of dollar balances. However, I do not feel we are confronted with an emergency. We have time to find a proper solution and I am confident we will.

Our solution must be found along lines consistent with our international economic policy, which emphasizes the expansion of world trade on a multilateral basis and a continuing attack on barriers to trade. In terms both of our own economic interest and our responsibility as a leader in the free world, we must set ourselves resolutely against any temptation to solve the balance of payments problem by restrictive action. Of course, any country can tackle its balance of payments problem by deliberately cutting imports or by imposing restrictions on capi-tal outflows. But the kind of balance which would result from such measures would be based on contraction and not expansion. It would push us back into the beggar-myneighbor policies which were so disastrous in the great depression of the 1930's. It would mean an abdication of our role of leadership.

Within the framework of broad and established U.S. foreign economic policy, we must pursue our task from many sides. Our balance of payments problem is not simple in its causes and we are going to find that the solution will not be simple. I suggest that this many-sided attack can proceed along several lines.

We may expect that to some extent corrective forces are at work and will continue to be at work. Our balance of payments deficit itself results in the transfer of purchasing power to surplus countries and there will be a tendency for this increased pur-chasing power to have an expansionary effect on total economic activity in those countries. Some of this increased activity should be reflected in increased purchases in the United States. In addition, import competition is undoubtedly exerting an influence on product design and prices in the United States.

However, we cannot comfortably relax, hoping that automatic correction of our balance of payment deficit will solve the problem. We must take the actions on the domestic front which will not only help preserve the value of the dollar but let the nations of the world who have such a real interest in how well we manage our affairs know that we intend to do everything to keep the dollar stable. We must maintain sound fiscal policies with a budget surplus in times of prosperity, as the most recent budget submitted by the President proposes. We must have flexibility and freedom from artificial restrictions in the management of our debt so that the world will know that we can handle it in the least inflationary manner. Our monetary policy must be keyed to the containment of the strong demand for capital which otherwise might break through as a major inflationary pressure. And certainly we must do all in our power to maintain the proper relationships between wages, prices, and productivity so essential to our competitiveness in world

These domestic actions, coupled with a foreign exchange policy which would leave no one at home or abroad with any doubt concerning our intent or capacity to maintain the dollar as a fully convertible cur-rency at the existing official price for gold, should bring about two good results.

Producers in the United States will be assisted in competing abroad. There has been much concern of late as to the competitive position of our goods in world mar-An examination of price and wage trends and of changes in our share of world trade (especially in manufactures) does not provide clear evidence that the United States has priced itself out of world markets. However, there are examples which can be cited on the other side; and there is ample indication of intensified competition in world markets and of increased world capacity to produce goods for export. What we conclude is that the United States has little margin of competitive superiority. This means that we cannot risk any erosion in the stability of U.S. prices if American producers are to succeed in expanding their exports.

Foreigners will have no reason to lose confidence in the dollar as a reserve currency. Confidence in a currency, particularly so far as concern persons outside of the country, is not something which is won by promise of pleas. Confidence is based on evidence and expectation that the purchasing power of the currency is-and will be-dependable.

American producers must seek foreign markets on an increasingly intensive scale if our exports are to expand to the extent called for to correct our balance-of-payments deficit. It will not be enough to maintain our exports at their 1959 level of about \$16 They should increase at least by some billions of dollars if the United States is to maintain a net outflow of capital and to make military expenditures abroad in the amounts of recent years. For some time

following 1946 other countries—and especially other industrial countries—undertook export drives of great intensity, and they have shown that even in the United States market, so long thought to be a hard nut to crack, there is great room for success. The time has come to mount our own export drives: no American producer who has a product susceptible of export should fail to explore the possibility of expanding foreign sales. The Government is examining the facilities available to American exporters, in comparison with those enjoyed by their foreign competitors, to determine whether or not improvement is needed particularly in the field of export credit and export insurance. The administration also is working to improve the factfinding fa-cilities of our Foreign Service and the services of Washington agencies in analyzing foreign trade information so as to enable more American businesses, large or small, to participate in export sales.

But we cannot rely solely on Government action to increase our exports on the substantial scale which is going to be needed. This requires the united effort of all American industry, labor, and agriculture-the

whole American economy.

Developments in the other industrial countries may help us in our task. Europe is in the middle of a very substantial boom and some of this surge of economic activity is likely to be reflected in the demand for American goods. Moreover, in Europe and in other parts of the world we can expect that during 1960 most of the task of dismantling discrimination against American goods will be completed. The timing of this action is fortunate, because it coincides with our own need to leave no opportunity lost to expand our export business.

At the annual meeting of the International Monetary Fund in Washington in September 1959, I suggested the need to look at the world payments situation as a whole and not exclusively at the balance of payments

of the United States.

In 1958 and 1959 (basing the latter on figures for the first 9 months at an annual rate) acquisition of gold and liquid dollars by Western Europe was roughly \$3 1/4 billion in each year. For the 2 years taken together. about half of this amount was obtained through direct transactions with the United States. For the same period, Canada lost gold and dollars in transactions with the United States, but more than offset this by gains in transactions with other areas. The rest of the world was in balance in 1958, when large receipts from the United States were offset by payments to Western Europe and Canada. But it gained heavily in 1959 when net receipts from the United States exceeded losses to Western Europe and Canada by over \$800 million. This net gain in 1959 for the rest of the world in considerable part reflects the gain of over \$450 million by Japan.

This broad picture of the structure of world payments indicates to thinking persons that two developments seem necessary if the United States is to eliminate its own deficit through an enlargement of exports-First, in the long run there should be a more than cyclical expansion in the imports of Western Europe both from the United States and from the rest of the world, particularly by the countries grouped in the Common Market. Second, there should be an en-hanced flow of capital from the European industrial areas to the less developed areas.

VI

It is my firm conclusion that we can bring our balance of payments into reason-

¹ The figure is adjusted to exclude transactions between I.M.F. and member countries in gold and dollars.

able equilibrium. But the task is formidable.

Competition in world markets is sharp and there is no reason to assume that it will become milder. The manufacturers in the other industrial countries have reached the point in their technological advance where they are at little if any disadvantage in competing with the best which American technology can offer. It will require good will on an international scale, persistent and sober efforts by governments, and enlightened as well as energetic action by business and labor to bring about, over time, a better balance in the world's payments system.

The recent change in the Development Loan Fund policy, putting primary emphasis on financing the procurement of U.S. capital goods, should be interpreted in the light of the need to move on many fronts in seeking to bring our balance of payments into reasonable equilibrium. I would certainly oppose any limitations on the freedom of U.S. private capital to go abroad or for our capital market to extend credits to foreign borrowers under terms which seem reasonable to lender and borrower. When a foreign borrower approaches private lenders in the United States he should not be told that the proceeds of any loan would have to be spent on U.S. goods. However, the United States through the Development Loan Fund, makes public funds available on long term to underdeveloped countries on a basis unequaled by any other industrial country. The terms offered by the DLF, including repayment in local currency, represent very substantial and generous U.S. public assistance. It is important, for the reasons put forth throughout this discussion, for the United States to continue to be in a position to provide capital on a large scale to underdeveloped countries. I have also made clear that we can do so as a practical matter only if we solve our balance-of-payments problem.

Moreover, other industrial countries also are recognizing the importance of their providing increased amounts of public financing on a long-term basis to underdeveloped areas. They are now in position to do this and may be encouraged in this direction by the realization that DLF dollars are not generally available for financing portions of their exports to underdeveloped countries. In like manner, they may be encouraged to give long-term loans for capital export items which heretofore, in some cases, have been financed with short-term credits that are more appropriate to the financing of consumer items.

I have made the point that we must achieve a reasonable equilibrium in our balance of payments, and must do so in a constructive way, not only for reasons of selfinterest but because of the broad and vital requirements imposed on us by the role of leadership which we have assumed and which we must fulfill. The United States finds itself in an international financial position which is at least as much the consequence of the long course of world development as it is of our deliberate choice. We have become the leading reserve banker in the free world and the dollar has become the Principal reserve currency. Moreover, we and the countries associated with us are committed to the progressive and sound ex-Pansion of production and world trade.

The conclusions to be drawn are clear and evident. There is a discipline from which we cannot escape. It is our continuing task to maintain the purchasing power of our currency and to merit unfaltering world confidence in the dollar. Our fiscal and monetary policies, our approach to the question of the proper relationship between wages, prices and productivity, and the consequent competitive vigor of our industry and agri-

culture are all essential components of the solution to our balance-of-payments problem. In that solution the other countries of the free world have a stake scarcely less vital than our own. I am confident that with prudence and understanding the right solutions will be found.

Tobacco in War Emergencies

EXTENSION OF REMARKS

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. LANKFORD. Mr. Speaker, I am happy to bring to the attention of my colleagues an article by T. P. Headen, editor of the Charles County Leaf, La Plata, Md., which appeared in its issue of April 7, 1960:

THE EDITOR'S CORNER (By T. P. Headen)

A group of old hands in the U.S. Department of Agriculture sit down from time to time to make sure that tobacco will be ready to go into action if we have another war emergency.

This is because the histories of all major conflicts in the last century are filled with vivid testimony to the value of tobacco as a morale booster to fighting men and civilian workers alike.

Top tobacco men in the Agriculture Department's Tobacco Division have fresh recollections of the problems of getting cigarettes and tobacco to the Armed Forces in World War II and the Korean war. They want to be ready if an emergency arises again.

Three succinct sentences spoken by three great military leaders, spanning three historic conflicts and 166 years of history, tell the story of tobacco in war.

In 1776, when the first American Army was struggling desperately for independence, Gen. George Washington, who knew better than anyone what his soldiers needed to keep their fighting spirit alive, wrote: "I say if you can't send money send tobacco."

if you can't send money, send tobacco."
In 1917 Gen. John J. Pershing, commander in chief of the American Expeditionary Forces, wrote from France: "You ask me what we need to win this war. I answer tobacco as much as bullets."

In 1942 employees of an aircraft firm collected \$10,000 and wired Gen. Douglas MacArthur, commander in chief of the Southwest Pacific, asking what his soldiers needed most. General MacArthur replied: "The entire amount should be used to purchase American cigarettes, which, of all personal comforts, are the most difficult to obtain here"

Millions of Americans still recall the cigarette shortages of World War II, when long lines of civilians queued up as if by magic when word went around that a store had received a few cigarettes for sale. This was because the Government preempted a major part of the cigarette output and shipped them to the Armed Forces.

In December 1942 President Franklin D. Roosevelt issued an Executive order declaring tobacco an essential crop. Draft Director Lewis B. Hershey ordered the deferment of tobacco farmers along with others engaged in essential agriculture. The War Production Board allocated materials to the tobacco industry to assure the continued growing of leaf tobacco and the processing of the finished products.

Even after the war the story of tobacco was unique. The Government had, surplus to its needs, \$13.5 million worth of cigarettes, cigars, smoking and chewing tobacco, and snuff. Without "dumping" and by exporting most of this stock, it received in payment \$10.7 million. Other surpluses at the same time were returning only 10 to 12 cents on the dollar.

In the limited Korean war, the National Production Authority issued hundreds of priorities to tobacco manufacturers to assure delivery of scarce materials used in processing tobacco.

In World War II, the American cigarette became one of the most highly prized articles an England and war-torn France.

Lord Rhondda, the British Food Commissioner, declared: "Tobacco is a necessity, not a luxury * * * I believe that its loss would be a national misfortune."

Shortly after the World War I armistice, the popular magazine, Leslie's Weekly, wrote: "According to the men at arms * * * their

"According to the men at arms * * * their officers, from the highest to the humblest; the physicians, nurses, chaplains, and stretcher bearers who labored to save the wounded and minister to the dying; the women of the Red Cross, the secretaries of the YMCA's * * * tobacco was one of the most pronounced blessings of the struggle, one of the greatest factors in preserving the morale of the troops."

During the American Revolution, tobacco was doubly important. Virginia leaf was used to pay interest on loans from France and to pay for war material. Nor was the strategic value of Virginia leaf lost on the enemy. The 1781 campaign waged by Phillips and Arnold in the Old Dominion was later recalled as "The Tobacco War," since the British troops seemed more anxious to kill off green tobacco plants than to shoot blue-coated revolutionaries. At the close of the war, Virginia's General Assembly was fixing salaries in terms of leaf tobacco, currency having lost its stability.

In the Civil War, tobacco rations for both Federal and Confederate troops were authorized but historians say that both quality and regularity of issue left much to be desired.

Tobacco historically has played another big part in war. In the United States the first excise tax on cigarettes was levied to help finance the Civil War. For each war since then, additional taxes have been levied. The last one was the "temporary" addition of 1 cent a pack at the outset of the Korean war. That temporary tax has been extended six times since and is still in effect.

Twelfth Anniversary of the Independence of Israel

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. WIDNALL. Mr. Speaker, May 2 marks the 12th anniversary of the independence of Israel. Congratulations to that courageous nation on this important day.

To better appreciate the difficulties that confront Israel in its infant years, it may be useful to remember the ordeals endured and the hardships surmounted by our own hardy forebears during the early decades following the signing of the Declaration of Independence of the United States of America. Our budding Nation was not without monumental challenges to its very existence. And

Israel today knows the hazards of growing into full stature.

Over the years the United States and Israel have seen the ties that bind closely Americans and Israelis continue to grow stronger. Our people of whatever lineage are freedom-loving and are in sympathetic support of Israel as a country where democracy has sprung up on the once-barren sands of the desert.

Israel and the United States stand together-and firmly-on their most vital interests in the Middle East. Israel's security depends ultimately upon mutual understanding and agreement with the Arab countries, so that the young nation can devote all of its resources to peaceful economic development in cooperation with its neighbors and with the rest of the free world.

Today Israel lives in uneasy peace. As we in America send to our Israeli friends our congratulations on their Independence Day, we include hopes that genuine peace soon will come to them and to all peoples everywhere.

Notable Union Contract

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 12, 1960

Mr. ROBISON. Mr. Speaker, it is self-evident that the only news that reaches the front pages of our newspapers, and therefore the attention of most of our citizens, is that which involves conflict of some kind or another. In saying that, I am not in any way attempting to criticize our newspapers and the other news media for their reporting policies. After all, they try to cater in large measure to the demands and interests of their readers or listeners. and if the American public wants to hear or see the more sensational side of our way of life who can blame our news media for complying.

So it is easy, I suppose, for all of us to fall under a spell of continually expecting to be subjected to evidence of one kind or another that the order of the day is conflict, violence, dissension, payola, and so on, whether we are surveying the day-to-day debates in Congress, or on the international scene, or on the level of our domestic economy.

I have long been urging the American people to begin to recognize that, in order to meet the threat of worldwide communism, they badly need to seek to regain that sense of partnership that has hitherto been the foundation for the great strides we have made as a people. Particularly, it would seem, is such a sense of partnership desirable if not vital between the forces of management and labor.

I am, therefore, grateful for the fact that one of the Nation's great newspapers, the New York Times, on April 5, 1960, took the trouble to look behind the headlines and remind us that there are

segments of our economy where, though ever so quietly, that sense of partner-ship exists and flourishes to the lasting benefit of those directly concerned, and, by way of inspiration, to the benefit of all of us.

In order that the inspirational value of one such instance may have wider impact among us, under leave to extend my remarks, I herewith include the following editorial taken from the Times of that date:

NOTABLE UNION CONTRACT

The recently negotiated contract between Local 1 of the Amalgamated Lithographers of America and the Metropolitan Lithographers Association is exceptional in these days of heightened tension in labor relations and of galloping changes in technology. It is the fruit of a relationship between the union and the employers of unusual confidence and respect-also evidenced by the fact that their contracts have been negotiated for 40 years without a single strike.

This situation has been due, in turn, largely to the fact that the union has never fought against improved methods and machines. Its theory has been that the expansion of the industry due to lowered unit costs would, in the not so long run, increase employment and permit higher wages. This has been amply proved in practice. The has been amply proved in practice. The union has even encouraged and assisted in the process by setting up in the international office a technological development department. It keeps union members informed of new improvements so that they can be dealt with most effectively in the interest of greater productivity.

In line with these views the new contract calls for support by the employers of a jointly administered education and training fund. This is to be used not only for the training of apprentices at the New York Trade School but for the retraining for other tobs of the craftsmen who have been displaced by improved methods of produc-

The new contract also shows how well the union's basic policies are paying off for its members. Besides a \$10-a-week wage increase within 2 years, the employers have stepped up their contribution to a jointly managed welfare fund. It is used to cover all the medical and hospital care expenses of the workers, their families and retired pensioners for the full 52 weeks of each year. Incidentally, both the union and the employers showed their interest in the industry's stability by agreeing on the new con-tract 5 weeks before the old one will run out.

Deplorable Defense Gap

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include herewith an editorial which appeared in the Belleville (Ill.) News-Democrat on Friday, April 29, 1960 entitled "Deplorable Defense Gap":

DEPLORABLE DEFENSE GAP

Secretary of Defense Thomas S. Gates, Jr., painted a very rosy picture of Uncle Sam's deterrent posture at the annual meeting of the Associated Press in New York this week. He denied that any gap exists in our

arsenal, and reasured that militarily our country is second to none. The implication is that Americans have nothing to worry about.

We earnestly wish we could share Secretary Gates' optimism. However, the hard facts contradict his glowing contention. And, notwithstanding narcotic claims to the contrary, there are indeed some disturbing gaps in our national defense setup.

An example is the alarming inadequacy of military airlift. This had been suspected for some time; it was emphatically proved last month by the gigantic simulated emergency airlift to nearby Puerto Rico.

Making an all-out effort, the Military Air Transport Service functioned very efficiently—with what it had. But that was not enough to satisfy today's requirements.

By World War II standards—to which the Defense Department has geared MATS—the "Big Slam" record would have been phenomenal. We have since progressed into a supersonic age, yet MATS is hobbled by ponderously slow, obsolete, wornout, piston-engined aircraft that properly belong on the junk pile. It has only three modern jet transports to its name, and these are reserved for the White House and State Department.

Continuing neglect in refurbishing the MATS airfleet is a challenge to Defense's smugness. For, though we may have the best trained soldiers, and the finest weapons in the world, what good are they to us if we can't swiftly move them to where they will do the most good?

Perhaps it is not healthy to run scared as regards our national might. But it is far worse to know the salient shortcomings and do nothing to remedy them.

We pray that Congress will not perpetuate this potentially fatal mistake, but will heed the urging of the Rivers group of the House Armed Services Committee and move forthrightly to close the deplorable MATS gap which Secretary Gates pretends doesn't exist.

They Are Known but to God

EXTENSION OF REMARKS OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin, Mr. Speaker, on Sunday, May 1, some 1,500 members of the Independent Order of Odd Fellows made their annual pilgrimage to the Tomb of the Unknowns at Arlington National Cemetery. As a member of the Odd Fellows, I took part in the pilgrimage and had the honor of placing the wreath from the lodges in my home State of Wisconsin at the Tomb of the Unknowns. I also heard the excellent address by Sovereign Grand Master Everett O. Richards. Under leave to extend my remarks, I would like to include his speech in the RECORD:

Address at Tomb of Unknowns

Once again, we have assembled here for another annual pilgrimage and ceremony. in the beauty and quietude of this hallowed place.

I am sure that no one who has lost a relative or a friend in any of the wars can approach the Tomb of the Unknowns without have a lump in his throat and a tear in his eye.

We have gathered here on this momentous occasion to pay tribute to these three who lie here unknown to all but God Himself, and who represent all who gave their lives so that we might enjoy the freedom and liberty that we do have and enjoy today.

Sometimes these ceremonies may seem futile; but, if by these exercises we can instill in the hearts and minds of even one boy or girl something of the spirit of the brave ones who have gone before—the spirit of patriotic sacrifice and high resolve—then these ceremonies will never be in vain. It is our duty to keep alive this spirit of liberty and freedom which is our greatest possession.

Livy, the historian of Rome, tells us that by some convulsion of nature, the ground in the center of the Roman Forum suddenly sank to an immense depth. The astrologers Were consulted and the response came that the Roman Commonwealth could not be Derpetuated unless the most valuable thing should be cast into the opening; Marcus Curtius, considering that arms and bravery were Rome's most valuable possessions, dressed himself in full military costume, mounted a spirited horse, and in full view of a vast concourse of his fellow countrymen, plunged into the chasm. The writer tells us that as Marcus Curtius plunged into the chasm, the opening closed.

Mighty convulsions have shaken this country—yawning chasms opened that could only be filled by the most precious thing this country had to offer, and she offered it in the lives of the flower of her manhood, and the openings closed. Let us pray in God's name that these chasms have been closed forever and ever, never to be opened

again.

We should never forget that those who have died in all the wars endured all the evils that humanity could suffer, yet they did not shrink nor faiter—and at last peace crowned the efforts of patriotism, and its banner is still floating over us—Old Glory, the Stars and Stripes—and palsied be the hand that would dishonor it.

At the close of World War II, a soldier was introduced as one of the speakers at a dinner; the presiding officer mentioned the fact that the young soldier lost an arm in the war; and he was greeted with enthusiastic cheers as he rose to speak. But the young soldier began by disavowing the introduction. "No," he said, "I didn't lose anything in the war, for when we boys entered the service, we were prepared to give to our country everything that we had, and whatever we brought back was that much clear gain."

That was the spirit of the most noble patriotism, and that is the spirit that should animate our hearts as citizens of this won-

derful country.

It is a noteworthy fact that of all the Pilgrims who landed on Plymouth Rock, despite the hardship and suffering of that first winter, when the Mayflower set sail for England the following spring, not a single Pilgrim returned with it—they stayed.

In Belleau Woods and Chateau Thierry, when the German troops in overwhelming numbers charged the Americans and the Allies, some of them broke and ran—but the Americans stood like a rock. Most of them were slain, but they stayed. The American soldler furnished a new and never-to-beforgotten exhibition of courage and bravery to the German hosts at that time, as well as to all of our enemies in the past.

In the event of war, only a small portion of our population would be actually in the Armed Forces—probably not over 10 percent at the most; but we can all fight the enemy within, for the enemy within sometimes is a far more serious threat than the enemy without. Today we have an enemy within—communism. This demon has dared to raise its ugly head within our midst. I sincerely submit to you that we must be continuously on guard lest this demon, through infiltration and otherwise, so weaken us that we might fall a prey to it.

Nations have seldom lost their liberty in the shock of battle. Babylon had fallen long before the feast of Belshazzer, when she saw the handwriting on the wall. No barbarous Goth was necessary to complete the extinction of Roman liberty. Some nations have been rotten to the core long before the invasion by their enemies. My friends, the decay of a nation, like that of an oak, begins at the heart.

Today we have assembled here to pay homage to our Unknowns, as well as to the many thousands who made the supreme sacrifice that justice might prevail, and whose work was so abruptly terminated by their untimely death. Men in their youth; men in their prime; men who walked uprightly but humbly in their chosen work—all have encountered life's inexorable end.

In Scotland there is a battlefield on which the natives and their Saxon foes met in terrible encounter. No monument marks that spot—but a little flower grows there and there alone. It is called the Flower of of Culloden because it had sprung from soil in which the bodies of patriots had been buried—the seeds were there, of course, but seemingly needed the baptism of blood to make them grow, and now every blue flower on Culloden Field, as it bends its head to the summer breeze, is a tender memorial to the brave spirits who dyed that sod with their hearts' blood. My brothers, sisters, and friends, the choicest flowers of human civilization are always Culloden flowers, because they alone spring from soil that has been watered by sacrifice.

American wars have been defensive wars. It is true that in the two world wars, and in the Korean conflict, our soldiers were sent across the sea-but these were just as much defensive wars as though the battlefront had been on American soil. The principle of self-defense which permeates all animate creation does not require that action shall be withheld until it will be of no avail. When the rattlesnake gives warning of its deadly purpose, the wary traveler does not wait for the fatal strike, but at once plants his heel upon the head of the serpent and crushes out its venom and is strength. When the hunter hears the rustle in the jungle and beolds the green eyes of the spotted tiger glaring at him, he doesn't wait for the deadly spring, but immediately sends a bullet into the brain of the animal.

If war were to be declared upon our country by an insulting foe, should we wait until our sleeping cities are awakened by the bursting of bombs?

No, my friends, I am sure that you will agree that we should send forth all branches of our military forces—we should let loose some of the weapons at our command, the thunder of which would arouse stern echoes along hostile shores—yet that would be national defense prompted by the same great principle of self protection which applies no less to nations than to individuals.

The unknowns fought and died because they believed in self protection, they believed in universal justice; they believed that right should triumph over might, that no foreign foe should ever land on our soil to endanger "the land of the free and the home of the brave."

We as Odd Fellows and Rebekahs, and as citizens of this great country, should be inspired by the heroic sacrifice of those whom we honor here today, to exert our energies to the end that the teachings of our order and the principles thereof may be spread throughout the world; that friendship, love, and truth will not be meaningless words upon our lips, but the sentiment of our hearts and the practice of our lives.

That we should be further inspired by fulfilling our pledge to those who rest beneath the sod—that they have not died in vain, by rededicating and reconsecrating our lives, not only as Odd Fellows and Rebekahs, but also as good and loyal citizens by doing

those things that are incumbent upon us as members of this great fraternity and as citizens of this great country; and to pledge ourselves, a million three hundred thousand strong, that we will do our utmost to preserve the peace in the world; and, finally, by doing those things that we have been asked to do by our Heavenly Father, so that when we shall have crossed the silent river to join the loved ones gone before, that we may hear the welcome plaudits, "well done, good and faithful servant, enter thou into the joy of thy Lord."

Careless Ad by Farm Journal

EXTENSION OF REMARKS

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. COAD. Mr. Speaker, undoubtedly many Members of the Congress noticed the ads which have appeared in certain newspapers comparing the average gross farm family income with the average net family income. These ads were paid for by the Farm Journal magazine in an attempt to show the importance of the farm market to American business and industry. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert an editorial from the April 30 issue of the Des Moines Register, Des Moines, Iowa, which clarifies the impact of the headlines in this ad upon the casual reader by explaining the reason for the comparison of gross and net incomes.

Higher production costs during the past years have forced farmers to spend an increasing amount of their gross income for the materials used to make their living. This fact coupled with lower wholesale prices on goods farmers sell, has produced a cost-price squeeze.

The operations of these forces in 1959 was, in part, the reason the average net farm family income was \$2,547 es compared to the average net family income of \$6,470 for nonfarm families. So when the expenses of doing business are deducted it is very apparent that the average farm family has precious little left to spend for their living expenses.

The editorial follows:

CARELESS AD BY FARM JOURNAL

We could hardly believe our eyes when we read this headline in a full-page advertisement Tuesday in the Wall Street Journal: "In 1959, average U.S. family income, \$6,470; average U.S. farm family income, \$9,978."

We were still more surprised when we looked at the bottom of the ad and found that it was paid for by the Farm Journal magazine. The Farm Journal, of all people, ought to realize that the figures it used are highly misleading.

The figure \$9,978 is average gross income per farm. But most of this goes for production expenses. Average net income of farm operators per farm in 1959 was \$2,547.

The average U.S. family income figure used in the ad is a net income figure and represents family purchasing power for consumer goods and services.

The Farm Journal was advertising the importance of the farm market to American business and industry. It was saying, in effect, that farm families spend more (in-

cluding their production costs) than city families, which is true.

The Farm Journal stated in smaller type than the headline that the \$9,978 was gross income, but quick readers would not notice

Unfortunately, its ad gives the impression that farm families have more income for consumption purposes than city families, which is untrue. The ordinary, unwary reader of the Wall Street Journal would conclude that farm families are earning \$3,500 more per year than city families on the average. The fact is that farm families earn less than half as much on the average as nonfarm families.

Many business readers of the Wall Street Journal might think after reading this ad that farmers are doing plenty well on the income scale and don't need any help from the Government. We're sure the Farm Journal did not intend to mean that because its editor, Carroll Streeter, recently wrote a little pamphlet called "Myths About the Farm Situation," in which he gave some facts about farm income and farm subsidies.

But that is likely to be the effect of the

ad on most readers.

Pennsylvania Highways

EXTENSION OF REMARKS

HON, JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. SAYLOR. Mr. Speaker, an editorial that is prompting a new look at Pennsylvania's highway situation recently appeared in the Patton Press-Courier and has been reprinted elsewhere in the congressional district I represent. It is a product of Editor Thomas A. Owens, Jr., who feels that Pennsylvania cannot afford to wait any longer for the kind of highway system that will permit development of areas blessed with rich natural resources but long deprived of opportunities of unreasonable planning at the State level.

So long as the Federal Government is making funds available to the States for highway construction, I feel impelled to insist upon a new approach to Pennsylvania's highway system. I invite my colleagues from Pennsylvania and adjacent States-particularly New York, Maryland, and West Virginia-to peruse carefully this editorial. It is a key to improving the economy of some of our regions, and it may also serve a useful purpose in your own States. When the proper highway links are established among our respective States. I think that we will have removed at least one important obstacle to industrial progress in neglected areas.

The editorial follows:

[From the Union Press-Courier, Apr. 7, 1960] WE'VE GOT "TURKEY PATHS"

Drive north, drive south, drive east-or west—and there you'll find one of the big reasons why this depressed area hasn't been able to secure many new industries. For almost as soon as you get across the county line into Blair, Indiana, Bedford, Somerset, or Westmoreland Countles you'll find modern highways-many of them four-lane jobs, and the others wide enough and straight enough to make them a pleasure to drive.

"Turkey paths" are what we have here. And exactly that term was used by a Department of Commerce official in telling the Hastings Industrial Development Association representatives why it took so long to obtain a lead for their shell building, now the location of the Ace Footwear plant.

We've been listening, and we've heard a lot of things—most of them adding up to nothing for us in the immediate future as far as the State highway department construction plans are concerned. According to what Fred Hogan, district engineer, told a Patton Chamber of Commerce meeting months ago, apparently the only road building that will take place in northern Cambria County this year will be the stretch from St. Boniface to Lantzys Mills, and the few miles of road that have to be reconstructed, of necessity, in the Prince Gallitzin State Park.

Hogan did stress that Governor Mr. Lawrence was pushing for the limited access route from Somerset to the Shortway, but that will be years away. And, at that, if one draws a straight line on the map he finds the direct route after leaving Johnstown and heading for Du Bois would take one through Indiana County, via Strongstown and Heilwood. If the surveys take the road that way, we'll be just as bad off as we are now.

Meanwhile, the industries we do have here—the Phillips-Van Heusen plants at Patton and Barnesboro, the Patton Clay Manufacturing Co., the McGregor Sportswear plant at Coalport, and other concerns do most of their shipping by tractor-trailer. And who can blame a customer if he cancels his order because some other plant with a similar product can be reached quicker and easier?

We agree with the Tri-County Community Development Association that the time for action has come now-that is if we want to push for action. That time is at the primary elections on April 26. People of both parties should buttonhole the candidates for both State senate and assembly, and find out what their approach will be toward getting rid of these "turkey paths" and getting us some roads. And then, with four men elected out of those eight next fall, keep up the push from all angles so that more than promises result.

When Republicans were in office at Harrisburg we were shortchanged because Cambria County was Democratic, and with the Democrats now in power, we're still being shortchanged because it is felt the vote here is

Polish Constitution Day Ceremonies in Philadelphia

EXTENSION OF REMARKS OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. TOLL. Mr. Speaker, it was my privilege to attend the Polish Constitution Day ceremonies in the city of Philadelphia yesterday, Sunday, May 1, 1960, at St. Adalbert's Auditorium. It was an invigorating and inspiring sight to see nearly 1,500 Polish-American citizens listening to numerous speakers, who in fiery oration encouraged the people in their continued fight for the land of their origin.

It was particularly interesting to hear the Honorable WILLIAM J. GREEN, JR., chairman of the Democratic City Com-

mittee and a Member of Congress from the Fifth Congressional District of Pennsylvania, introduce the principal speaker, Maj. Gen. A. J. Drexel Biddle, adjutant general of Pennsylvania. General Biddle delivered an inspiring ad-

The chairman of the program was Mr. William F. Siemion, who is to be congratulated for his efforts and presentation of such an outstanding affair.

Romeo Gosselin

EXTENSION OF REMARKS

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DADDARIO. Mr. Speaker, last week in Hartford, members of the Franco-American community and other leading citizens of Connecticut gathered to pay honor to a man who has done a great deal for the people of the State. He has contributed many years of activity to religious, social, civic, fraternal, ethnic, and business programs in this country and Canada.

Romeo Gosselin is president general of the Union of Franco-Americans of Connecticut, an organization founded in 1885. He is also a successful businessman, executive vice president and general manager of the Roger Sherman Cos. of East Hartford. A native of Canada. one of 8 children in his family, he was orphaned at 15 and began work that same year as a roadway construction employee, followed by a job in the asbestos mine shafts of Coleraine and Black Lake, Canada. At 16, he was employed on the construction of dams, as an underwater diver pouring concrete, also in Canada.

He came to this country in 1822, when he was 18. His career since then has been one of hard work and dedicated effort in behalf of the charities and religious activities in which he believes so greatly. A self-made man, he is credited with 44 different inventions and innovations of use to his trade.

I am happy to note honors being paid him, and I want to add my warm congratulations. I hope the Members will have a chance to draw attention to his remarkable record so it may be an inspiration to others throughout the country who note what this Hartford man has

I also submit for the RECORD an article concerning Mr. Gosselin. It is from the column of Art McGinley in the Hartford Times:

Few men have had a more interesting of busier life than Romeo Gosselin, who is to be hailed at a banquet in St. Ann's Memorial Hall, 726 Park Street, Saturday evening and whom I am proud to list among my friends.

When only 16, Romeo was an underwater diver pouring concrete in the construction of great dams at Weedon, Province of Quebec,

Orphaned at 15, he set about earning his own living and no job was too hard work or too dangerous.

In 1922, he left Canada and took up residence in Lewiston, Maine. The next few years found him traveling about as construction jobs called him to various places. His companion on those journeys was Josephat Lesperance, who later became a missionary and who died some years ago in China. During these years of hard work and long

During these years of hard work and long hours, Romeo found time to study; he studied English evenings and also took correspondence courses, the better to be prepared for the challenges of his adopted country.

He has been described by associates as a "genius" in what has become his life's work, which now and for many years has found him a key figure with the Roger Sherman Co., but Romeo, a modest soul, rejects that high appraisal.

As a citizen, Romeo has met all the re-

quirements.

A devout Catholic, he has given freely of his time and his talents to many of the good works of the church; then he has affiliated with scores of worthwhile projects, notably the Boy Scouts.

He never has been too busy to respond to a

call for civic duty.

At the dinnerboard Saturday evening speakers will pay tribute to him for all this and they will be bearing true testimony.

Governor Hollings of South Carolina Defends New York's Right To Handle Its Own Affairs

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therewith excerpts from a telegram addressed to the chairman and members of the House Judiciary Committee by our distinguished Governor of South Carolina, the Honorable Ernest F. Hollings, as follows:

The Governor of South Carolina is particularly privileged to join Governors Rockefeller of New York, Meyner of New Jersey, and Senators Krating and Javits of New York in their plea and fight for States' rights in preventing congressional interference in the affairs of the Port of New York Authority. I understand * * * House Joint Resolution 615, now before Congress, would require congressional approval of any further State legislation under the Bi-State Port Compact, and would also give Congress or any committee of Congress access to all books, records, and papers of the authority—a right which they do not have even for Federal agencies. * * *

I believe the fundamental questions of Federal-State relations reflected in this proposed legislation merit the special attention of the U.S. Advisory Commission on Intergovernmental Relations, of which I am privileged to be a member. • •

Mr. Speaker, the worm turns, Governor Hollings is consistent. Governor Hollings has very generously offered to assist the gentleman from New York, the Honorable Emanual Celler, in his effort to retain the right of New York to run its own business. Governor Hollings has always been for States' rights.

It is comforting to see that the State of New York is for States' rights, at least when it is in their own interest. South Carolina will always lend a helping hand to those who want to handle their own affairs whether it be against the Federal Government, the NAACP or the U.S. Supreme Court.

Governor Hollings knows that what is good for South Carolina is good for New

York.

W. C. Handy, "Father of the Blues"

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1960

Mr. KEFAUVER. Mr. President, whenever any American earns a niche in the hall of fame—be he a scientist, a lawmaker, a poet, a physician, or a person of prominence in any other field of activity—his accomplishments are certainly worthy of widespread attention, recognition, and commendation.

Such a celebration was held recently in the city of Memphas, at the dedication of a statue to W. C. Handy, "Father

of the Blues."

Lt. George W. Lee, a citizen of Memphis, who is himself an author, prepared a biography of "Professor" W. C. Handy, the Father of the Blues." The biography was distributed to all those present on that occasion.

The honorary chairmen of the committee were Mayor Edmund Orgill and County Commissioner David N. Harsh.

The general chairman was Mr. Frank R. Ahlgren, of the Memphis Commercial Appeal.

I ask unanimous consent that the biographical sketch of W. C. Handy, who has brought fame to Memphis and to the Southland, be printed in the Appendix of the Record.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

THE LEGEND OF W. C. HANDY, "FATHER OF THE BLUES"

(By Lt. George W. Lee, author of "Beale Street Where the Blues Began," "River George," "Beale Street Sundown")

The life of W. C. Handy and the story of how he originated the "blues" has been told many times. His travels with the Maharas Minstrels all over the South brought him into close contact with the true expression in song of a people. The wailing that he heard among the roustabouts, the field hands and the workers on the levee took root in his mind, and he felt in his soul the apathy and despair later expressed so admirably in his music.

Handy was born on November 16, 1873 in Florence, Ala. As a child, he was thrilled by the singing of his people. In his 10th year he could read music at sight, and he had a good tenor voice. His father and mother wanted him to be a minister and attempted to map out for him a career in the church; but Handy wanted to be a musician and he started early to acquire a thorough grounding in music.

The first step was to get enough money to pay for instruction. To this end he left home and walked all the way to Birmingham, where he taught school for a while. Later, he left the schoolroom to work for the Bessemer Pipe Co., which paid better wages than he could earn as a teacher.

When the depression that marked the Cleveland administration brought general unemployment, he joined a quartet and set out for a World's Fair at Chicago. The singers had no money, so they hopped a freight train and attempted to beat their way west. Luckily for them, the brakeman who discovered them had a weakness for song, so with coronet and guitar, as Handy says, they "soothed his savage breast," and instead of being red-lighted they were conducted to a caboose de luxe. But the World's Fair was cold to Handy and his quartet, so it dis-banded, Handy moving on to St. Louis and thence to Evansville, Ind., where he laid bricks for a while. Later he joined a band in Henderson, Ky., where the roustabouts and stevedores on the levee kept the air around the river ringing with those work songs that he had loved from childhood.

In 1897 Handy returned to Alabama and taught vocal and band music at the Agricultural and Mechanical College in Huntsville. His life at that period was restless, interspersed with travels in Mexico, Cuba, and Canada. Handy, the composer, had not

yet found himself.

In Clarksdale, Miss., Handy received the impetus which sent him eventually along the road to renown. Playing at a white subscription dance there one night, Handy, who had selected music that he thought would be most acceptable, found the dancers becoming more and more bored. They clamored for music such as they heard at Negro breakdowns on Saturday nights, such as their farm hands whistled while plowing the fields, and the guitarpicker played as he trudged down the road at midnight. Handy and his band made several attempts but were unable to satisfy these dancers. a local colored band, consisting of a mandolin, bass violin, and guitar, was sent for. The players sat down, tuned up, and started to play something about "Gwine Where de Southern Cross de Dog."

Handy had heard this type of wailing throughout his childhood in Alabama, but he never dreamed that it would attract attention anywhere except in the back alleys. An idea of its commercial value began to dawn upon him as he stood outside under the light of the stars and listened to the noisy reception it received. He found himself turning the thought over in his mind. If these kinds of songs were acceptable here, they might be acceptable elsewhere, he

reasoned.

Finally, Handy stood at the door of his big opportunity. Through the mist of the years he beheld the golden towers of his dreams rise at last against a background of reality, and a great impulse to set these songs to music and make the world sing them stirred in the young musician. He returned to Beale Street and set his pen to music paper. Memphis woke up one morning with the blues.

A political situation in 1909 afforded nationwide publicity for Handy and his new music. In that year Williams, Talbot, and E. H. Crump, were running for election as mayor of Memphis. Jim Mulcahy, political boss, hired Handy to play for Crump. Echford and Bynum were employed for the other two candidates. In order to outdo these two great bands, Handy was spurred to creative efforts. Down at Clarksdale, Miss., he had devoted himself to acquiring the material and atmosphere which would some day aid him in making a musical rendition of the plantation and levee camp songs. Now he found his store of knowledge useful in an-

other way. His band opened the campaign at Main and Madison with a piece called "Mr. Crump," a composition which took the shape of the inevitable results of the tempo of cotton-picking, work songs along the aching side of Old Man River, of happy nights in the pleasure palaces strung out along Beale Street, and the privation of poverty-chinked cabins and slender precarious meals.

The crowd in the streets literally went wild over it. They shouted until they were hourse, demanding to hear it again and again. They whistled and danced with the rhythmic sway of the music, as the words

floated out upon the air:

Mr. Crump don't 'low no easy riders here, Mr. Crump won't 'low no easy riders here. I don't care what Mr. Crump don't 'low, I'm gonna bar'l-house anyhow. Mr. Crump can go and catch hisself some air.

That tune was the vehicle which carried two to victory. Handy rode on it from Beale Street to Broadway. Crump, with the addi-tional aid of his uncanny genius for organizing political groups and with the assistance of his astute lieutenants, Frank Rice, Tyler McClain and E. W. Hale, rode on it not only to Washington and the Congress of the United States but also to 25 years of undis-

puted leadership in Shelby County.

The band that played "Mr. Crump" under the leadership of Handy was composed of Ed and Paul Weir, Jim Turner, Archie Walls, George Higgins, George Williams, Robert

Young, and James Osborne.

In 1905 Handy met Harry Pace, who was a smalltown songwriter. A common interest developed into plans for a working part-nership in which Handy was to write the music and Pace the words. Nothing came of them at the time for Pace accepted a position as Latin and Greek instructor in Lincoln University, Jefferson City, Mo. But a year later, when, at the invitation of R. R. Church, Pace came back to Memphis to act as cashier of the Solvent Savings Bank of Memphis, Handy immediately joined hands with him and they devoted virtually every Sunday evening after church services to this cooperative composing.

After the election the "Mr. Crump" song title was changed to "Memphis Blues" and offered for publication. After every publisher in the country had turned it down as worthless, it was sold to T. C. Bennett, a young white man who at that time was head of the music department of Bry's Department Store. He made a fortune out of "Memphis Blues."

Prior to this, Handy devoted himself to writing popular music, with little or no success. The popularity of the "Memphis Blues" turned him back to writing the blues. But his next number, "The Saint Louis Blues," suffered the same fate with the publishers as did the "Memphis Blues." When the publishers rejected it and laughed at him, he became discouraged and laid it aside. He and his partner, Pace, returned to popular numbers but still their efforts met with little success. Finally, with Pace he organized the Pace & Handy Music Co. to publish the "St. Louis Blues." But the success of this undertaking would never have been accomplished if Handy's band had not struck on him in Atlanta. To this circumstance the music known as the blues owes much of the renown which it now has.

Handy took his band to play an engage ment in Atlanta, and was to go from there to the University of North Carolina but his boys had made so much money out of the Atlanta engagement that they wanted to get back to strut on Beale Street. Handy was stubborn and would not yield. He was determined to fill the engagement at the university, but when he found that the boys wouldn't go he conferred with Pace, his partner, who advised him to go to New York, a city which he thought would offer a better market for their songs. Thus it came about the Handy & Pace Co. was moved to New York City in 1917 and lodged in the Galety Theater Building. Handy at the time had very little capital, but abundant faith in his product. He carried with him to New York the song, "A Good Man Is Hard To Find," that he had bought for \$125. This song created an overnight sensation on Broadway, and with its popularity the fame of Handy spread throughout the world. The revolution in music, launched when Handy wrote his first "blues" had succeeded.

Two years after Handy went to New York he was joined by Pace, who realized the value of the "St. Louis Blues" and finally succeeded in selling it to the Nation. He induced a girl to sing it for a Victor phonograph record. The result was an almost instantaneous hit. Every rival company sub-sequently sought to record it; every playerroll manufacturer took it up and recorded it. It became one of the most popular songs in the history of songwriting. It has earned more money than any other song ever written by a Negro, and probably few songs written by whites have earned more.

During his long career Handy has written and published many songs. The "St. Louis Blues," "Memphis Blues," "Beale Street Blues," "Joe Turner Blues," "Mr. Crump," "Make Me a Pallet on the Floor," "Yellow Dog Blues," "Hesitation Blues," "Ole Miss Blues," "Harlem Blues," are only a few of his scores of songs that are known throughout the country. His company during its first year in New York took in more than a quarter of His company during its first year a million dollars on "A Good Man Is Hard To Find," and "Yellow Dog Blues."

Handy has also done distinguished orchestral work, both as composer and leader. In 1919 Handy appeared as guest conductor of the Clef Club with an orchestra of 100 pieces, and it was Handy's evolution of the blues that Vincent Lopez used in his first jazz concert at the Metropolitan Opera House in 1924. He also conducted the initial Negro Achievement Hour for the Columbia Broadcasting System, with his family giving the entire program. Later he was guest conductor with Signor Mariana in a national broadcast for which "Rhapsody in Blue" and "Yamekrew" were played. On this occasion a great tribute was paid to Handy by the announcer, who said, "In this studio are 75 picked jazz artists. Mr. Handy is now approaching the conductor's stand. He is shaking hands with Signor Mariana, who now hands him his baton which Mr. Handy is just about to wave into the immortal strains of 'St. Louis Blues.' "

Handy appeared in a company of oldtimers doing a vaudeville act. The name of the act was, "Joe Laurie Junior's Memory Lane," which depicts New York's theatrical life in the days of the Bowery. Among them was a man 89 years old who danced for Abraham Lincoln, and J. Rosamond Johnson, who wrote the Negro national anthem, "Lift wrote the Negro national anthem, "Lif Every Voice and Sing." Johnson was a part ner of Cole and Johnson 30 years ago. He composed the music for "Emperor Jones."

W. C. Handy was once asked, "What is the source of your greatness?" He pondered the question for a moment and finally when he lifted his head to answer, a strange light was in his eyes. He said slowly, "Just say that I love people and I love doing things to glorify them. Somewhere in the Book it says, 'Inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto me'."

Handy's life is the tale of three streets-Beale Street, Market Street in St. Louis, and Broadway in New York. But from the dust of Beale Street rose the legend of a man. He pressed his trumpet to his lips and a song rose with the drift of the wind. "I'd rather be there than any place I know."

Handy had no more irritations or problems on Beale Street than any other genius would

have in any other place that men suffer who star their age and time. He once said to friends, "Whenever I come to Memphis, a freedom comes over me that I feel nowhere else. The past fills me with a boundless joy and the present prompts me to every fond delight when I am in the midst of these comforting scenes."

Handy loved Beale Street. He spent a life-time in full service to all its demands and its traditions, its weaknesses and its ecsta-To him there was humor, pathos, and drama in this crooked little street which sprang as from a miasmic dream of a paved congo, the jerky pantomime of plaint and piety, suppression and sensuousness which was the outer soul of the Negro come to the American town.

Handy had been blind for years, but he could see though his eyes were closed. Mrs. Louise Handy, his faithful wife, was his eyes. She was the increment of his humble fortune. He had been married once before to Mrs. Elizabeth Handy, the companion of his youth, who died in 1937.

On Friday, March 28, at 3 in the morning. at the Sydenham Hospital he slipped quiety away into the unknown before he had time to see the evening sun go down. There were those about his bedside who saw him come to the end of his day long before the night had fallen from Heaven on a rope of twilight-W. C. Handy, Jr., and Wyer Handy, his two sons, Charles Handy, a brother, Mrs. Catherine Lewis, a daughter, Mrs. Irma Louise Logan Handy, his wife, and William Handy, a grandson. But from the ends of the earth there were mourners as thick as grief.

Long before his passing, he had left his beloved Beale Street to try his fortune on Broadway, but he came back to get the Cot-tonmaker's Jubilee off the ground. He came back again and again to furnish the drama for the Elks Blues Bowl Christmas charity game. All the while, he was working on Broadway to establish a Foundation For the

Rivers of muddy water have rolled down to the sea since the night back in 1909 when Handy first got a song right in his head and set it down on music paper, and gave it everlasting voice with his golden trumpet. The mood and melody of the "Memphis Blues" has resounded around the world and then back to a crossroad shack in the Montana plains. Its melody created the "St. Louis Blues" which went with President Harding's flagship to Alaska and to Wash-ington to entertain Ramsay MacDonald, England's Prime Minister.

Handy admitted to friends many times.

the part white southerners played in popularizing his music. When they went north, they clamored so loud for his music that band leaders in hotels and night clubs were forced to place it in their repretore. Matthew Thornton, the venerable mayor of Beale Street, invited him to Memphis and helped to make him one of its most glamorous figures.

The life of W. C. Handy and the story of how he originated the blues has been told many times. He has been honored by everybody. His hometown of Florence, Ala., re-cently erected a handsome ultra modern public school in his honor; Memphis has a town square named after him; and St. Louis has a scholarship fund in his name to be awarded annually to worthy Negro and white youngsters with musical talent. The fund offices will be housed in a new building to be erected on the spot where Handy once slept as a hobo. The huge clock on its facade will play the opening bars of "St. Louis Blues" on the hour.

Memphis, his home, again paid a tribute to him on his 84th birthday. The Blues Bowl game on the night of December 2 at Melrose Stadium was dedicated to him. He wasn't able to attend as he once did, but there was one-half hour of Handy's blues played and at 11 a.m. that day, at Main and Madison, Hon. Lee Winchester, Sr., an attorney, and Mr. Edmund Orgill, mayor Memphis, made speeches; this spot on Main Street is just a stone's throw from where the "Memphis Blues" was born-in its first form as a political song in the support of the late E. H. Crump. Official Memphis greetings went to the Waldorf Astoria to Handy's birthday party from Mayor Orgill, who also sent a check for the W. C. Handy Foundation for the Blind.

Soon after Handy passed, the Honorable Frank Ahlgren, editor of the Commercial Appeal, fathered the idea of a monument of W. C. Handy to be elected in Handy Park. In an editorial he coined the motto for the cause when he wrote, "If his mortal frame does not repose in the Beale Street Park which bears his name, there should be a monument there in metal and stone to serve as a material testimonial to the immortality of his music." Edmund Orgill, the mayor of Memphis, and Mr. David Harsh, chairman of the Shelby County commission, agreed to serve as honorary chairmen, and Mr. Frank Ahlgren was named chairman. The monument was assured when a \$5,000 contribution from the American Society of Composers and Publishers, of which Professor Handy was long a member, was added to what had been raised locally.

Handy made a long step from Alabama to the advancing wave of circumstances on which he advanced himself to one of the high

pinnacles of earthly grandeur and renown.
The Milwaukee Journal, in its issue of September 22, 1949, listed 20 grand old men of the world. It named W. C. Handy along with Bernard Shaw, Lionel Barrymore, Connie Mack, Toscanini, Bernard Baruch, Cordell Hull, and others

The growth of Handy's music in our times has a consequence which is still impossible to determine. I think some day this music called "blues" will provide the raw material that will be of importance in the development of an art which will stimulate American culture. For the music of Beale Street expresses a sorrow and a joy that the heart cannot tell in its own futile terms, but must borrow out of travesty and fervent plaint, the walls from which W. C. Handy drew his own great songs.

There are many people in these vast United States who have become famous in the field of music, but without a doubt the leader and an of them all is the late W. C. Handy, famous for composing and writing the "Mem phis, the St. Louis, the Beale Street Blues," and in addition many sacred songs that America is now listening to, such as "They That Sow in Tears Shall Reap in Joy."

Among the outstanding and leading books that have been written by Handy, "Father of the Blues," is his autobiography and treasury

of the blues, which he edited.

The last time Handy was a visitor in Memphis, he said that Handy Bros. Music Co. was about to publish an outstanding symphony called "Blue Destiny." The movement based on the "St. Louis Blues," the second movement on the "Beale Street the fourth movement on the "Harlem Blues" and the "Memphis Blues."

So, the dean of American music has passed. He brought to the American public songs that will live forever. The "Beale Street Blues," the "Memphis Blues," the "St. Louis Blues" hold fast to something deep inside of one. They are more than songs. They are a loving, shining symbol that only the soul of man can understand.

So, when the last evening sun goes down on the judgment day, it will reveal three bright musical mansions in the sky. The one on the right for George Gershwin, built out of "Rhapsody in Blue," the one on the left for Stephen Foster, built out of "My Old Ken-

tucky Home"; then a shaft of lightning will thwart the inky skies and reveal in the center one for W. C. Handy, built out of the "Memphis Blues" and the "St. Louis Blues" and resting on the solid foundation of "Those Who Sow in Tears, Shall Reap in Joy."

St. Peter, standing in the doorway, in extending his hand in fellowship will say, "You captured the attention of art, and music entrusted her charms to your joyous care. Your magic genius opened the closed door. Your achievement under the Stars and Stripes engaged the wonders of civilized

Israel's 12th Anniversary

EXTENSION OF REMARKS

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mrs. DWYER. Mr. Speaker, one of the brightest and most hopeful developments in international life since the end of World War II has been the birth and growth of the state of Israel.

Against immense odds, and surrounded on all sides by hostile neighbors, the people of Israel have founded and developed a working democracy, a self-governing haven for many of the victims of some of the most terrible persecutions in world history.

Under the skilled and devoted hands of its people, this tiny and largely barren land has flowered into a productive and vigorous nation—a nation which, despite its youth, is already making a major contribution toward the development of other newly independent countries. The growth of Israel's cultural, technical, agricultural, industrial, and intellectual resources in a brief dozen years has been impressive testimony to the vision and indomitable courage of its founders, its leaders, and its people.

Today, Israel is an outpost of freedom and democracy in a corner of the world which historically has been the target of dictators and the victim of oppression and exploitation. It is distinctly in the best interests of our own country that Israel thrive and be made secure.

In the current dispute over the use of the Suez Canal, Israel deserves the understanding and support of all people-and nations-who believe in the rule of law, who subscribe to the goal of settling disputes by peaceful means.

The aggressive and arbitrary seizure

of the cargoes of ships bound to or from Israeli ports and using the international waterway of the Suez Canal is a violation of the basic tenets of international law. The highhanded behavior of the Government of the United Arab Republic and its President, General Nasser, is an affront to world opinion and a threat to world peace.

As a Member of Congress and a member of the House Banking and Currency Committee, it has been my privilege to join with many of my colleagues to urge our Government and the international agencies with which it is associated to use its influence to halt the depreda-

tions on Israeli shipping and to require that the Suez Canal be so administered as to assure the rights of all nations.

Mr. Speaker, we can celebrate Israel's 12th anniversary in no better or more practical way than by resolving to continue our efforts to obtain international fair play.

A Positive Program To Strengthen the Public Economy

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. ULLMAN, Mr. Speaker, under leave to extend my remarks, I would like to insert the following excerpts from an address to the Electric Consumers Information Committees Legislative Workshop of January 19, 1960, by Prof. Horace

M. Gray of the University of Illinois.
As can be seen, Professor Gray is highly critical of many aspects of current public policy. While there are probably few, if any, of us here in the Congress who would agree with all of his points, they are relevant to issues of great interest to all of us end are made so clearly and directly that I think they are worthy of our attention. I might add that Professor Gray is perhaps best known as a coauthor of the book, "Monopoly in America: The Government as Promoter, published a few years ago.

The address follows:

A POSITIVE PROGRAM TO STRENGTHEN THE PUBLIC ECONOMY

(By Horace M. Gray, professor of economics, University of Illinois)

Before an audience of this character, it is unnecessary to elaborate on the gross deficiencies of the public economy or to defend the thesis that the public economy is properly entitled to adequate support.
Rationalizations of inaction conceal

basic philosophy; namely, that private gain should have priority over public welfare and that government should use its sovereign powers to implement this principle. It shall be my purpose to examine briefly some of the institutional means by which this grand objective has been accomplished. This discussion centers about the allocative institutions by which resources are directed into either the private or the public economy.

FEDERAL INCOME TAXATION

The progressive income tax is the master key of the Federal Government's allocative power. By this means the Federal Government can command the resources of the Nation and determine their allocation as between the private and public sectors of the economy. That is, it can withdraw at will from the private sector whatever resources are required to sustain the public economy and then, through its appropriative power, direct them into desired areas of employment according to public need. Because of its decisive role in the allocative process the progressive income tax is the subject of bitter and continuous political conflict.

During recent years, and particularly since World War II, the system has been so riddled by evasions, exemptions, immunities, preferential treatment and loopholes that its theoretical progressivity has theoretical progressivity has been largely

nullified. As matters now stand, the Federal income tax, both individual and corporate, falls to reach well over one-half of the income actually realized, most of the avoidance being concentrated in corporations and high-income brackets. It is estimated that some \$25 to \$30 billion of potential revenue is "lost" each year by such evasions and loopholes. Obviously, an allocative device whose cutting edge is so blunted is an ineffective instrument for diverting resources from private to the public economy.

THE APPROPRIATIVE POWER

The sovereign power of the Federal Government to appropriate public funds is a crucial allocative institution. Constitutionally, it can be used only for public purposes, but seekers after special privileges have discovered many ingenious ways to clothe their selfish interests in the disguise of public purpose so as to qualify for bounties and subsidies from the Federal Treasury.

and subsidies from the Federal Treasury. Since World War II a big business—military coalition, with only minimal supervision from Congress and the President, has spent some \$485 billion for national defense. This expenditure has been characterized by colossal waste of resources—duplication of effort, extravagant military construction, vast inventory accumulation, continued purchase of technically obsolete equipment, procurement at negotiated, noncompetitive, monopoly prices, fantastic profits for contractors, and plain fraud. Much of what has been done bears no technical or functional relation whatever to military security in an age of nuclear warfare; despite our prodigality we have fallen behind in the arms race and have falled to attain the desired security.

The same indictment can be levied against much of our foreign-aid spending. Here again, a vital and necessary national program has been perverted into a planned subsidy for big business. Only recently, the administration tacitly admitted this when it attached "buy American" conditions to foreign aid, thereby branding the program as an export bounty or subsidy for American producers.

In addition to these indirect subsidies, through defense and foreign-aid expenditures, we are plagued with a multiplicity of direct subsidies for big business and big agriculture. The practice is so general that scarcely any powerful interest group lacks a pipeline into the Treasury, through which it drains off some portion of the public revenue under the pretense that it is serving some vital public purpose.

THE MONEY POWER

Money, and its substitute—credit, is a claim, or title, to resources. As such, it is a powerful allocative institution by which resources are mobilized and directed into various fields of employment. He who controls money, or credit, is thus the arbiter of the economic process; his decision determines what shall be produced and in what quantity, who shall produce it, and for whom it shall be produced.

This strategic allocative function is largely in private hands, the Federal Government, through an independent agency—the Federal Reserve Board, exercising only a general control which at best is indirect, remote, and partial. The world of private finance is populated by a variety of independent, autonomous, profit-seeking institutions engaged in the creation and allocation of money and various forms of credit, or debt. Within the broad latitude of quantitative restraint imposed by the Federal Reserve Board, they pursue their self-interest subject only to private considerations of profitability, security, risk, and liquidity. This system is socially irresponsible in the sense that it is not directed by, or answerable to, public authority for its decisions.

The public economy enjoys no special priority, or privileged position, in respect to its demand for money; i.e., for resources—how-ever urgent or socially superior its needs may be. Thus, to build a school, a road, a hospital, or even to defend the Nation against attack, Government must compete in the private money market against the totality of private demands-many of them trivial, speculative, wasteful, or even socially harmful. A company desiring to borrow \$10 million to ballyhoo a new cigarette or deodorant has just as good a claim on money as a city desirious of building a sanitary plant. It is a question of profitability and capacity to pay, not of social utility. If the pressure of private demands against the supply of money pushes interest rates upward, Government must either outbid private claimants, whatever the cost, or else forgo fulfillment of its public responsibilities.

Since World War II this uncontrolled, irresponsible private money system has generated a vast inflation of money, credit, and debt-the preponderant portion of it to satisfy private demands upon available resources. The effect has been to mobilize and direct resources into the private sector of the economy and to make it increasingly difficult and costly for Government to finance the urgent needs of the public economy. A large portion of the resources thus misallocated have been wasted or put to low-value uses, such as: Inflation of capital values, inventory speculation, excess plant capacity, aggrandizement of economic power, and catering to frivolous, unnecessary private consumption.
An important residual consequence is that mass purchasing power, having been seridepleted by the combined impact of inflation, excessive debt charges and an increased taxes of a regressive character, is no longer adequate to sustain the burden of repairing the massive deficiences which have developed in the public economy.

MONOPOLY

Monopoly is a powerful allocative institution, the malign influence of which permeates both the private and public sectors of the economy. Through its control of production, investment, technological progress, employment, opportunity and prices, it diverts private resources into its own hands. In like manner, it abstracts resources from the public sector by inflating the cost of Government procurement and by imposing on Government the added burden of caring for the victims of its exploitation. Monopoly is a principal contributor to inflation, to the misallocation and waste of resources, and to the distortion of demand by artificial manipulation of consumer choices.

If private monopoly is bad per se, its power for evil is compounded when Government intervenes to supplement private by public power. Such devices as Government price fixing, grants of special privilege, subsidies, stockpiling, noncompetitive procurement contracts, tax loopholes, patent grants and import restrictions merely serve to bolster private monopoly power and to enhance its capacity for exploitation. A government that tolerates monopoly incurs grave dangers; one that not only tolerates but actively protects and subsidizes monopoly almost guarantees disaster. • •

SUGGESTIONS FOR REFORM OF ALLOCATIVE INSTITUTIONS

If we would strengthen the public economy, we must reform the four allocative institutions discussed above—the tax system, the expenditure system, the money system and the monopoly system. Specifically:

1. Tax evasion must be stopped; tax loopholes eliminated; the progressivity of the income tax restored; and rates in the lower income brackets reduced.

2. Expenditures must be drastically reduced by eliminating all wasteful and unnecessary outlays for defense and foreign aid, all subsidies for big business and big agricul-

ture, and all stockpiling outlays beyond normal operating inventories.

3. The money power must be brought under effective Federal control; private excesses in the creation of money and the expansion of credit restrained; the national debt reduced and the remainder refunded on long term at low interest rates; the integrity of the dollar assured; and special priority given to the needs of the public economy.

4. The monopoly system must be broken and competition restored to the maximum extent technically feasible. This calls for a multiple attack—tax, expenditure, and money reforms as per above, elimination of all special privileges and subsidies, vigorous enforcement of the antitrust laws, structural reorganization where necessary, patent reform, positive encouragement of competition, and public yardstick competition in certain areas.

The resources of this Nation are ample to sustain both a flourishing private economy and a strong public economy commensurate with modern needs. The problem is to secure a balanced allocation of resources between the two sectors. As I have indicated, our present institutional arrangements are powerfully biased toward the private and against the public economy. This institutional bias results in gross inflation of the private economy and chronic malnutrition and deterioration of the public economy. My suggestions seek to correct this imbalance and to restore a better functional relation between the two sectors by shifting the allocation of resources.

These institutional reforms will be difficult because they challenge the possessors of privilege and power. Some professed liberals, appalled at this prospect and doubtful of success, would avoid the struggle by resort to fatuous expedients as inflation, deficit financing, or cheap money. They delude themselves that these artificial contrivances. by promoting economic growth and full em-ployment, will automatically strengthen the public economy. Nothing could be further from the truth. Since our allocative institutions are strongly biased in favor of the private economy, further inflation, whatever the rate of growth or level of employment. will merely worsen the present misallocation of resources. The public economy is weak from lack of resources; it can be strengthened only by allocating more resources to it. This calls for direct action by the Federal Gov-ernment to control the allocative process-

Israel's 12th Anniversary

EXTENSION OF REMARKS

HON, HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. TOLL. Mr. Speaker, today is the 12th anniversary of the institution of Israel as a nation. Israel's anniversary coincides with the hundredth anniversary of the birth of Theodor Herzl, the Viennese journalist and dramatist who founded political zionism, whose chief aim was the establishment of a Jewish homeland in Palestine.

It was Dr. Herzl's pamphlet "The Jewish State" that resulted in the convening of the first World Zionist Congress in Basle, Switzerland, in 1897.

The strong democratic character of Israel is well known, and its relationship and favorable attitude toward the United States is equally well known.

The National Zionist Executive Council issued a resolution hailing Israel's anniversary and called on the U.S. Government to "take vigorous action through all channels at its disposal to induce the leaders of all Arab countries to accept the permanent existence of Israel." It would be well for the U.S. Government to follow the recommendation in the resolution.

Martinez Veterans' Hospital: Progress Set Back 20 Years

EXTENSION OF REMARKS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. COHELAN. Mr. Speaker, Dr. John Lawrence, famed medical scientist from the University of California in Berkeley, Calif., takes issue with the recent action of the House of Representatives in approving the Saylor amendment to the Independent Offices appropriations bill in the following article which I submit for the Record.

The Saylor amendment included several Veterans' Administration hospitals, including one at Martinez, Calif., an out-of-the-way community with only negligible medical resources. It was passed despite the findings of the House Appropriations Committee that the Martinez facility, for one, will not well serve the veterans of northern California.

In this article from the Oakland Tribune in Oakland, Calif., Dr. Lawrence points out that in this matter the possibility of locating a new hospital near the University of California "where teaching and research facilities and staff consultants are readily available" has been completely ignored.

I wish to call it to the attention of Members of the House and our colleagues on the other side where the independent offices appropriations bill is now facing final action.

U.C. SAVANT HITS MARTINEZ HOSPITAL SITE— VA FACILITY SHOULD BE NEAR UNIVERSITY, DR. LAWRENCE SAYS

LIVERMORE, April 27.—Dr. John Lawrence, University of California famed medical scientist, said last night the decision to replace the Oakland Veterans' Administration Hospital with one in Martinez has turned the clock of progress back 20 years.

He sharply criticized the idea of building the \$11.714.000 facility in a "relatively outlying community" instead of leaving it close to the University of California.

"At the present time nearly all VA hospitals in the United States are being placed near universities or medical schools where teaching and research facilities and staff consultants are readily available," he said.

HOPES FOR REVERSAL

Dr. Lawrence is director of Donner Laboratory, a medical research center at U.C., and is the brother of the late Dr. Ernest O. Lawrence, Nobel Prize-winning physicist.

Dr. Lawrence said he hopes the Senate will reverse the House of Representative's decision. The House last week rejected its appropriations committee recommendation and approved funds for construction of the facility in Martinez.

Chances of Senate rejection are considered slim because Senator THOMAS H. KUCHEL, of California, an appropriations committee member, favors the Martinez site.

Dr. Lawrence delivered his remarks at a kickoff dinner for a drive to raise an additional \$225,000 for construction of the \$1,700,000 Valley Memorial Hospital.

He said it was very fortunate the new hospital will be near the Lawrence Radiation Laboratory at Livermore because "the modern practice of medicine is no longer possible without the aid of tools and techniques of nuclear physics."

TELLER STATEMENT

This same note was sounded last month by Dr. Edward Teller, laboratory director, who spoke at ground breaking for the hospital to be built on East Stanley Boulevard.

Dr. Lawrence said important discoveries in medicine have resulted from cooperation between physicists, chemists, and medical doctors. Dr. Lawrence was a pioneer in the use of radioactive substances in the treatment of diseases, particularly cancer of the thyroid.

The supplementary hospital building fund drive will be conducted among business and residents who have moved into Livermore since the first campaign concluded in December 1958. It will last about 5 weeks.

The hospital is scheduled to open with 46 beds in the fall of 1961.

When the State Takes a Life

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of April 30, 1960:

WHEN THE STATE TAKES A LIFE

Barring providential intervention, Caryl Chessman will cease to exist as a person at 10 a.m., Pacific time, on Monday. He will not cease to exist as an issue. Foreign reaction to the execution of this convict nearly 12 years after his arrest would see to that, even if the grisly process of capital punishment exacting its metered toll had not already begun to haunt and sicken many Americans.

Governor Brown, who stayed the execution in February, may yet request the Supreme Court of California for clemency. But it may well be that this sacrifice in the gas chamber is necessary, as Chessman himself has seemed to think, in order to jolt the conscience of California and of the United States. That jolt is surely coming.

Capital punishment is not only brutal, it also is futile. Many penologists, including a number of prison wardens, agree that it is not a significant deterrent to crime. The seven States in this country and the many foreign countries that have prohibited or abolished it have reported no untoward problems on that account. Moreover, capital punishment makes no restitution whatever to the victim or victims of the crimes for which it is exacted. Instead, it involves the State—and thereby all the people—in a new enormity that compounds the original crime.

Whether Chessman had a fair trial and review of his conviction for the rape-kidnaping of which he was accused is pointless to argue. There are enough discrepancies to warrant some serious misgivings—in the identification by witnesses, in the transcript of the trial and in the curious technicality that subjected him to the death penalty because he transported his victim a short distance. But State and Federal courts have spoken, and the men who compose them are not unfair or insensitive. It is enough to accept the judgment that under present law Chessman has exhausted his rights. He has been convicted of a fiendish crime, and it is unnecessary to squander pity on him as an individual.

A far larger questions is that of the punishment itself. Apart from the moral issue, which is very great and which involves society in the role of God, the very finality of the act precludes any correction of error.

This is not a negligible factor. A number of men are said to have been reprieved from death row at California's San Quentin Prison in the last few years on the basis of new evidence. Howard K. Smith, in his extraordinary CBS radio documentary Thursday night, carried the account of a onetime assistant to a Governor of California who sought to flash a last-minute stay of execution because of new facts exonerating the accused, only to hear the trap on the gallows drop as he was talking to the warden.

drop as he was talking to the warden.

And then there is the brutalizing factor. Elsewhere on this page we reprint from Frontier magazine an article by Dr. William F. Graves, a former physician at San Quentin. He recounts how an insane convict was shocked back to legal sanity so that he could be executed, and how another convict dying of cancer was subjected to three operations so that the State rather than the disease could claim his life. This amounts to sheer sadism.

Caryl Chessman may die under a system of law that exacts a life for a life or, as in his case, for something less. This brilliant, warped, wretched, and dangerous man may warrant no special grief on his own account, but he has at least served to focus attention upon an archaic procedure under which others without Chessman's facile pen die substantially unnoted and without purpose. Happily, such instances in the District of Columbia should be markedly diminished when Congress passes the proposed revision of the death penalty.

What is at stake, basically, is in Albert Schweitzer's memorable phrase, "reverence for life." A society which profanes this reverence, in respect of even the most dastardly criminal, inescapably degrades itself in the process. "Any man's death diminishes me," said John Donne many years ago, "because I am involved in mankind."

How Much Does It Cost?

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. DERWINSKI. Mr. Speaker, it is gratifying to see that responsible newspapers are thoughtfully appraising our action last week in passing the pseudo emergency housing bill. Without further comment, I wish to insert into the Record an editorial entitled "How Much Does it Cost?" from this morning's Chi-

cago Sun-Times:

Many visitors from abroad, and, in fact, some Americans, often ask whether there is

publican and the Democratic Parties.

The vote last week on a Democratic housing bill gave an example of a basic difference between the philosophies of the two parties. The bill is designed to pump more than \$1 billion from the U.S. Treasury into housing mortgages.

The Democrats said the action is "necessary" to stimulate building of small homes

and bring down interest rates.

The Republicans said the scheme was a "backdoor raid" on the Treasury and that it would be inflationary. There is plenty of private mortgage money available to keep the housing industry humming they said, A billion dollars of Federal financing might even push up housing prices for all.

Democrats wish to use Federal power and money—and if necessary printing press money—to keep the Nation in a perpetual

state of stimulation.

Vice President Nixon summed up the Republican attitude last week when he asked, "Whose dollars are they [the Democrats] talking about?"

His answer: "Yours."

The President, said Nixon, has to consider the cost of programs in dollars. He must consider whether results of programs might be outweighed by damages that would result.

"What is the position of a conservative with regard to better housing, with regard to all the progress that Americans want?" Nixon asked. "We are conservative not because we are against the progress but because we are for it. We oppose the programs of our liberal friends not because we oppose the ends to which these programs are directed but because we know the means they advocate, however well intentioned they are, would, in the end, cost more in dollars * * * than the results achieved would merit."

The Democratic billion-dollar scheme would finance 70,000 new houses—a small number considering the total of 1,200,000 to be built this year. If the bill passes the Senate it will be vetoed by President Eisenhower. The Democrats will say the President is against housing for workers but voters should keep in mind, as Nixon noted, it's their dollars that the President must protect.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is lo-cated in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Memof Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD,

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1009).

any discernible difference between the Re- LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44. SECTION 181. CONGRESSIONAL RECORD: ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.) Title 44, Section 182b, Same; illus-

TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style .- The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter .- The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock to insure publication the following morning.
- 5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Mem-

bers without charge.
6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.-The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report of print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a news-paper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

Appendix

The Constitution—Torch of Liberty and Union

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. BRIDGES. Mr. President, I recently had the pleasure of reading an excellent address which won for the author a regional title in the 1960 American Legion high school oratorical contest.

The address, entitled "The Constitution—Torch of Liberty and Union," was written and delivered by Frederick A. Jakobiez, a 17-year-old senior at Bishop Bradley High School in Manchester, N.H.

This is an outstanding piece of work, in my estimation, and one which is worthy of widespread attention. I ask unanimous consent that the complete text be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONSTITUTION: TORCH OF LIBERTY AND UNION 1

(By Frederick A. Jakobiec, Bishop Bradley High School, Manchester, N.H.)

From the beginning of time freedom has been the force that has motivated and dictated civilization's advance. Its suppression has resulted in the hait of this advance, but at the time of its greatest activity the blessings of prosperity and progress have been secured.

History witnessed freedom's birth under the sunny skies of Greece, its growth in England's island empire in those who wrested from an unwilling royalty the Magna Carta, and finally its adoption in America by those lofty spirits who guided our Revolution to success. Then, in May of 1787, in the city of Philadelphia, its most baffling problem was faced by those men who took up the work of consolidating and perpetuating the fruits of victory. For the consummation of freedom's forward march was the American Constitution.

Into that Constitution went the wisdom of Franklin, the majesty of Washington, the vision of Hamilton, the jurisprudence of James Madison, and the ardent love of liberty of Thomas Jefferson. Into that Constitution went liberty and union, the gifts of the immortal framing fathers of our citadel of freedom.

But what would our Nation be today without union? We could be as distraught as Prance, which has lived under three monarchies, two empires, five republics, a directory, a consulate, and a bewildering set of constitutions.

Or, we could still be ruled under the weak and inadequate Articles of Confederation. Professedly there would be union among the States, a seat of government, and a central power. But how smoothly alien infiltrators, well-trained agents from Russia or Nazi Germany, could agitate the weakly connected States; our land could at best bargain for an ignominious coexistence, but such ruthlessly ambitious nations would not be satisfied with this, our ultimate subjugation would be their goal. How can we ever forget Hitler's cry "Today Germany, tomorrow the world"? How can we ever lose sight of the unrelenting objective of Soviet Russia to crush America?

But ours has never been nor will ever be a fear of insecurity due to lack of unity, a fear of insurgent States seceding from a superficial government as one formed by the Articles of Confederation. Our Nation has been able to survive the ravages of a Civil War and two great World Wars. For superimposed upon the several States is unity, unity which they imbibe in and use as food for strength to fight the savage onslaught of oppression, unity which gives them a oneness of purpose.

Indeed, unity is an integral part of the success or failure of a government; but, it can be overemphasized and exceed its beneficial bounds. It could convert our present Nation into an entity of strongly united States, so centralized in power that we would become like Nazi Germany or Communist Russia. The individual States would be starved of their integrity and sovereignty and become the pawns of the centralized power; we would assume the semblance of a dictatorial government. Therefore, unity must be measured that it might be distributed in wholesome doses, allowing contentment for the two parties involved, the States and the central power.

Upon investigation we perceive how our Constitution checked this threat, how our Framing Fathers infused into this document the means for a positive relationship between the States and the Federal Government. It created two check and balance systems; first of all allocating certain powers to the Government and others to the States, seeing to it that neither became sated with authority. Secondly, it afforded a check and balance system within the Government itself, providing special powers for the executive, legislative, and judiciary branches, powers exclusive to the others, and protected from infringement by the other branches.

In its Presidential message and Presidential veto, in its representative initiative and senatorial clarification, in its judicial review for constitutional violation and finally in its amendatory prerogative we see how the Constitution fused our Nation together with unity, furnishing the United States of America with the greatest written guide for law-making and potential progress ever devised by the human mind. In the words of Chief Justice Samuel Portland Chase:

"The Constitution in all its provisions looks to an indestructible union composed of indestructible States."

But Justice Chase inadvertently omitted one important fact—the Constitution in all its provisions succeeded in creating an indestructible union composed of indestructible States, a union that has risen to the pinnacle of governmental success.

But union is only one-half the explanation of the success of our Government and our Constitution. Its concomitant liberty is of equal import, and its neglect would unquestionably effect the failure of any government, no matter how highly developed and efficient its political machine might be, no matter how great and strong the unity of its members might be. A government must not become too pragmatic nor too idealistic; it must not accentuate unity at the expense of liberty nor must it accentuate liberty at the expense of unity, or the two are complementary. It is due to the realization of this that our Founding Fathers made liberty an unequivocal part of the Constitution and the Government and way of life which it created.

For the first time since governments had been instituted among men our Constitution provided for a government whose base was in the bedrock of the God-given rights of the individual; for the first time a government had been formed, which guarded its citizens against the encroachment of class and arbitrary power; for the first time man's desire for freedom found complete fulfillment in the Constitution of the United States. Freedoms of speech, religion, press, assembly, petition, and open criticism of the Government, these are what our Constitution insures us. It is these guaranteed rights that have elevated our country to an unparalleled place among nations.

Union: How man has strived to acquire it. Liberty: How man has attempted to preserve it.

And what solemn obligation is ours, ladies and gentlemen, to unite ourselves to our Government thereby sustaining its unity, and to treat our freedoms with respect, thereby strengthening our liberty.

But I ask you, how many of our fellow Americans have done this? For example, how many Americans showed up at the last presidential polls? I am ashamed to say that only 60 percent of the eligible voters fulfilled this duty and exercised their privilege.

The spirit of indifference which exists today toward our governmental institutions must be replaced by courageous and responsible citizenry. We must exercise eternal vigilance which is the price for eternity's gift of liberty. We must see that the liberty and unity of our Nation remains secure and sheltered from the insidious plans of those who are dedicated to its destruction. We must stand sentry "at the golden door." We must strengthen our democracy for posterity, for in our hands as a sacred trust is the Constitution for which our fathers died and it is the rightful heritage of posterity. Let us, then, be true to our trust and place in their waiting hands the undiminished torch of liberty and union.

How Much God Is There in Government?

EXTENSION OF REMARKS

HON. LAWRENCE BROCK

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. BROCK. Mr. Speaker, as we go about our daily chores, and this aptly applies to the membership of this legislative body, many of us are prone to forget the divine force that guides us and very often provides the impetus leading to greater heights.

There is little we accomplish in our daily lives that is not inspired by the spiritual mentor within us, by the Creator who made us, and who will one day deliver us from our burdens.

There is religion in government, although there are too many instances where we fail to recognize it and appreciate it. It is felt by many of us, regardless of race, creed, or the faith we profess.

My good friend and colleague, the Honorable Walter H. Moeller, Representative of the 10th District of Ohio, fully recognizes this prevailing moral or religious composition within us.

He has expressed this with great clarity and feeling in a recent contribution to the religious magazine, This Day, for inclusion in their February issue. It is my belief that his article will prove a greater inspiration for all of us in our daily deliberations on the fate of and the future of a great nation.

Therefore, and with the unanimous consent of my colleagues present, may I insert this article in the Congressional Record and commend its reading to this membership and those who are fortunate in receiving the issue:

How Much God Is There in Government? (By Congressman Walter H. Moeller, 10th District, Ohio)

The answer to the question in the title of this article is probably that there is as much God in government as there is God in the hearts of the American people. We can say this in America whereas it cannot necessarily be said of more than a few other nations in the world, for we are as close to being a "government of the people, by the people, and for the people" as has ever existed on the face of God's earth.

Certainly it cannot be said of the godless government of Communist Russia, where God still lives in the hearts of millions of people despite every effort to root Him out. Far less could it be said of Poland, for another example, where a devout people are subjected to the merciless whims of an atheistic regime, leavened only by the more or less powerful influence that the Roman Catholic Church and its followers can still bring to bear.

How much God there is in the hearts of the American people reflects the quantity and quality of God, or of religious motivation, in the policies and practices of government, arriving eventually at an answer to the corollary question, "How much God is there in America?"

The people who make up our Government, who determine its policies, who pass its laws, who administer its daily operations, and who pass judgment in the courts on our crimes and on the constitutionality of our laws, are, in a large sense, a cross section of the greater population. It is true that there is something at least slightly extraordinary about them, or they would not be in government. In the cases of a President, a Supreme Court. Justice, or even a Member of Congress, there is usually something more than slightly extraordinary before such a position may be This extraordinariness, however, achieved. is not usually of the kind that makes them either more or less religious than the average individual. Thus it is fair to say that where God is concerned, He moves the man in government to about the same extent that He moves the man in the street.

From this we make the assumption that government, as far as its moral or religious

composition is concerned, and as far as its net worth Godwise is concerned, is no more or less than a summing up of net worth of the individuals who make up government.

There is, however, no human brain, nor combination of brains, nor electronic computer which can exactly assess these individual godly net worths. We have no unit of measurement upon which to rely, for God and His impact upon the minds and hearts and actions of men is not to be measured in pounds or inches, but is simply a weightless and boundless evidencing of the eternal spirit evoked by Jesus Christ when He said, "Before Abraham was, I am."

For this reason we must turn to the external evidences we can find to substantiate or disprove the existence of God in our Govment, such as the moral qualities of the laws which govern us, the mercy and the justice with which these laws are administered, and in the public acts and the private reputations of the men and women who form the Government of the United States.

As I write this, the Congress of the United States has just finished writing legislation to control the corruption and the racketeering which has dominated certain aspects of the American labor movement. Here in microcosmic form we may examine the influence of God and the Godlikeness of the motives which have touched the legislative processes since America began. Here we have an issue which is as close to Godlikeness confronting godlessness as any we are likely to find. Here we have not only the problem of individual sin, but also the problem of a great social and moral issue involving the conscience of mankind. How did we as legislators and as Christians, Jews, or freethinkers react?

Brought to bear upon us were the most powerful forces in American political and economic life. Groups representing labor and capital, the two great and often divergent economic powers, were there. Political leaders from our two great parties wielded every stratagem available to them. Cleavages developed within the parties, based on a combination of geographical and philosophical differences.

Some individuals faced the problem with a strictly practical weighing of the possibilities of political gain or loss.

Others, and I think the majority, devoted themselves to prayerful thought and to close examination of the social and moral issues involved.

Examination of the debates on this legislation discloses that many Members, for example, called attention to some passage from the Scriptures or to some generally accepted moral truth to bolster their arguments, thus indicating that the Congress is not oblivious to what Holy Scripture says, and that our legislators often do rise above their own material interests and those of their party or their constituents to a higher spiritual level.

Many may quarrel with the terms of the new law. Many have questioned the motives of those who stood on either side of the issue. Yet it is my honest belief that the new result was a clear justification of our democratic processes and of our reliance upon our legislators to permit the hand of God to guide them in the performance of their duty to Him and to the people of the United States whom they are elected to serve.

Let me turn for a moment to the morals and the mores of those who make up the Government of the United States. From my personal experiences up to this time, I am convinced that there is a basic structure composed of deeply honest and sincerely devout religious-minded people upon which the frivolous and the at times sinful is only a facade, more evident to the undiscriminating eye than the solid foundation to which it has attached itself. Further, as

we reach positions of real importance among those who exert a significant influence upon public policy and its administration, the moral stature of the individual grows with few exceptions.

On Capitol Hill and elsewhere in our Nation's Capital there are prayer breakfast and luncheon groups which meet at regular intervals and discuss their responsibilities and the issues of the day in terms of religious values. I have attended some of these gatherings, and while I am unable to accept all the conclusions reached, each time I came away with the conviction that the search was made for the divine will, and that the door opened for the presence of God in the deliberations.

It is commendable to know that in the U.S. Capitol, just off the rotunda, is a prayer room where men and women of every faith visit daily and renew in prayer and meditation their private and public oaths of devotion to God and country. Further, each of the Houses of Congress has its fully appointed chaplain, and each session of the Senate and of the House is opened with prayer.

It is by these things and by many other signs that I have come to accept the fact that the majority of the men and women in our Government do have a very definite religious influence in their lives which motivates them as they, amid all human weakness, endeavor to enact just and equitable laws for the land.

In Government, as elsewhere, the number who say, "Thus saith the Lord," and that His will must be advanced, is always too few. It raises a challenge for Christian men and women to make service in the Government their ambition. For true it remains also to this day: "Evil triumphs when good men fail to speak."

Chile's Economy

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a recent statement by His Excellency, Ambassador Walter Mueller, of the Republic of Chile. This gentleman, after political success in private business in his own country, has won wide popularity in the United States of America by his clear exposition of economic principles and facts.

It may also be noted that the people and the Government of Chile accorded President Dwight David Eisenhower one of the most enthusiastic welcomes he received in the course of his recent visit to South America.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CHILE'S ECONOMY—ADVANCED STATUS IN DIS-TRIBUTION OF NATIONAL INCOME STRESSED

To the EDITOR OF THE NEW YORK TIMES:
In your April 8 editorial "The Chilean Elections" you hailed the results of the municipal elections, calling them most heartening and a renewed mandate for the economic program of President Alessandri, all the more admirable when it is considered that the economic stabilization plan means temporary economic sacrifice for the people.

Once again the reputation of Chile as a confirmed democracy with a high degree of clvic consciousness is proved.

As Chileans we sincerely appreciate these opinions, which we feel are strictly true.

Unfortunately, we cannot say the same of the rest of the editorial, which refers to certain supposed aspects of the economy of our country as discussed in an article published by Julio Cesar Jobet in the Venezuela monthly Politica.

Your editorial states that Chile "is a nation with a striking social and economic imbalance" and that "Chileans tend to get upset when this is pointed out," even when their own authorities, such as Mr. Jobet, are cited

PROCEDURE QUERIED

We are not upset by reliable statistical citations which are found in Chile, nor by the correct consequences to be derived from them. What does upset us is that a newspaper with the circulation and influence of the New York Times should copy isolated paragraphs from a study without going deeper into the article that served as a basis for the statements made in the editorial and accepting without further analysis figures and conclusions.

To probe the inconsistency of such a procedure we shall make only a few comments

respecting them:

The editorial states, reproducing Mr. Jobet in a truncated manner, that with a population of 7,300,000 in Chile there are 300,000 persons who "have 52 percent of the national income and a mass of several millions have nothing." Omitted from the editorial but mentioned by Mr. Jobet is that there are, also, "2 million persons having 28 percent and 600,000 persons having 20 percent of the national income," a number adding up to slightly less than half the population.

Applying exactly the same criterion, we may just as well state that in the United States there are over 80 million persons that have nothing, and for the very simple reason that this figure includes youths less than 20 years of age, who are preparing to share the national income, and unemployed women and the aged.

The fact that they do not directly receive a part of the national income does not, of course, indicate that they are indigents, neither here nor in Chile, because they evident live at the expense of others receiving income.

DISTRIBUTION OF INCOME

Elsewhere there is advanced the serious argument against the Chilean economy that workers and employees receive only 57 percent of the national income. In the United States, a highly capitalized, industrialized, and mechanized country, workers and employees receive approximately 66 percent of the total national income.

We have labeled as "incorrect" the statistical conclusions cited in the editorial and we feel sure, also, that there is no justification for the statements made in Mr. Jobet's article that inspires such confidence: That Chile is underdeveloped because of imperialist penetration in mining and public utilities; that our Government is subordinated to political imperialists; that our illa are aggravated by Yankee imperialism defending its monopolies; that the United States imposes on us the hemispheric defense policy; that our copper troubles derive from control by international monopoly, etc.

There are further statements indicating the tendencies of Mr. Jobet which we do not believe are shared by the New York Times, but which may be respectable within his Political ideology.

Political ideology.

We are making a serious effort to develop and diversify our economy, to better the liv-

ing conditions of our people, and to overcome our economic weaknesses.

As opposed to what Mr. Jobet states, Chile is not semi-feudal or semi-colonial. On the contrary, it is one of the most advanced countries in Latin America in the distribution of its national income; with a solid middle class, the origin of the greater part of our political leaders; with social legislation that has been criticized at times for being too advanced with reference to our economic development. Our country has assimilated all its citizens into its civic life, and its workers and employees are organized in strong unions, defenders of their interests.

Walter Mueller, Ambassador of Chile, Washington, April 12, 1960.

Poland Must Be Free

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DAGUE. Mr. Speaker, today is Poland's Constitution Day and marks the anniversary of the adoption by the Polish people of a constitution, much as we did in 1789, setting forth their determination to remain a free Christian nation with her destiny linked with Western civilization and Latin culture. It is also important on this anniversary to remember that in just 6 short years Poland will celebrate her millennium—a full thousands years of fearless dedication, even in slavery, to the belief that in God's sight all men are equal and, by divine sanction, should be free.

For us moderns the names Chopin and Paderewski bring visions of great masterpieces and remind us of the part these artists have made to the musical heritage of mankind as well as to its legacy of freedom. But antedating these artists and statesmen there was another great Pole—Goslicki—who laid down these fundamental principles, which are accepted as basic politics today; namely, laws must be greater than the individual, such laws must be founded on Christian principles, conflicting views must be compromised through mediation, and rulers must make law the guide of their conduct.

With such a background of Christian principle and patriotic sacrifice we are better able to understand the undiminished zeal of the Poles among us in their determination that their beloved homeland shall be liberated from the tyrant. And those who have accepted America as the land of their adoption are no less zealous for a free Poland since they well know that so long as the land of their forebears is held in bondage there can be no sure freedom for anyone anywhere. Let us then as we cherish our glorious birthright also join with these brave people in commemorating the inception of their liberty and pledge to them our moral, spiritual, and material help in the realization of their proper place in the commonwealth of nations.

The Harlem Forum Committee

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. KEATING. Mr. President, an interesting group called the Harlem Forum Committee is now in the midst of a series of meetings on various topics of national and international interest. In particular, this group is concerned with the problems of civil rights and insuring equality among all peoples.

Leaders of both major political parties and experts in the subjects dealt with will help carry out the committee's purpose of taking the forums into every aspect of the Negro community. I am hopeful this group will succeed in conveying important information and strengthening all efforts toward the goal of understanding in New York City.

Mr. Horace Carter, of 961 Willoughby Avenue in Brooklyn, has sent me a statement about the aims and objectives of the Harlem Forum Committee. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HARLEM FORUM COMMITTEE

Harlem Forum Committee is a special group organized for the purpose of conducting forums. In general, Harlem Forum Committee gives views and information about issues, topics and questions that are vital in current and historical affairs. Our group simply recognizes those who choose to speak or consent to be interviewed on particular subjects.

Increased tempo by Americans is existing today in an effort to bring about equality and integrated climate. Issues arising out of this tempo will crystallize activities by Harlem Forum Committee. The committee further gives independent, extensive but impartial views and it is a contact outlet for the expression of ideas. The actual framework of the forums will center on the formulation of three separate units functioning with the framework of Harlem Forum Committee. These will be known as, Harlem Forum, Harlem Business Forum, and Forum at the Tayern.

For many months now, the committee has been at work designing the correct concept and format presentation. One that would reflect and reach the committee's objectives in dealing with issues and topics both current and historical. It is our intention to take the forums into every aspect of the Negro community. We will set up forums and select subject material in keeping with the Hariem Forum Committee's objectives.

It is not unusual for many organizations already functioning within a community to minimize their effectiveness due to the heavy and burdensome problems affecting their organizational setups. And at the same time overlook certain basic approaches to problems which affect them and the community.

Harlem Forum Committee can effect the proper balance through its forums by stimulating the pulse of the public and correctly presenting the issues of the day through the medium of active participation. The forum sessions will be scheduled on a weekly basis, each representing its own area of contact.

The Harlem Forum will go into the community as a whole. Harlem Business Forum will go into the business community. Forum at the Tavern going into the taverns. Each of these will be effective in reaching down and getting at the heart of the matter. We sincerely hope we will be of service to the community and you.

"Poland Will Rise Again"—169th Observance of Poland's Constitution Day Recalls Glorious History of Great Nation

EXTENSION OF REMARKS

HON. FRANK KOWALSKI

OF CONNECTIOUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. KOWALSKI. Mr. Speaker, it is entirely fitting that the Congress of the United States should today be paying tribute to the great nation of Poland on the occasion of Poland's Constitution Day.

Not only did Poland make a great contribution to the very birth of the United States, and not only did Poland give to America so many of her precious sons and daughters to play important roles in the tremendous growth and development of this great land, but, even more importantly, Poland today stands before the world as the symbol of man's unconquerable desire for freedom.

Poland today lives under the will of a foreign oppressor, but in the hearts of her people still burns unquenchably the fire of liberty. Poland has known oppression; her people have suffered persecution before, but the faith of the nation and her citizens has always reconquered in the end.

"Poland will raise again." These last recorded words of the indomitable Polish patriot and statesman, Ignace Jan Paderewski, are the banner under which the cause of Polish freedom marches today. Dignity for the individual will not come today, or tomorrow, but its eventual return cannot be stopped by any Communist dictators. It is beyond the comprehension of the Soviet mentality, but the human spirit is powerful, too.

This year's observance of Poland's Constitution Day has a special significance in that the year 1960 also marks the 100th birthday anniversary of the great Paderewski, to whom not only Poland but the whole Western World owes so much.

I was happy to be informed yesterday by the Postmaster General that approval has been given the request made by a number of Members of the Congress for the issuance of a special commemorative stamp honoring Paderewski. Appropriately, the stamp will be issued as one of the "champions of liberty" series, for Paderewski was certainly a true champion of liberty and a foremost fighter for freedom for all men.

The Paderewski Stamp, to be issued in conjunction with the centennial of his birth next November 6, will be another shining symbol of Poland's contribution to the cause of human freedom.

Our 1960 observance of Poland's Constitution Day is also significant for another reason. We are approaching Poland's millennium.

It will be surprising to many who are not familiar with the history of Eastern Europe, but Poland's history goes back far beyond that of many Western nations. She was already an established nation when, in 966, Poland embraced Christianity and for the first time joined her progress and her destiny with those of the Western World.

In just 6 years Poland and those of Polish heritage all over the world will be celebrating Poland's millennium. It will be a most historic occasion, and the world cannot help but give thought to the permanency of this liberty-loving land which has withstood the vicissitudes of time and fortune for 10 full centuries.

The spans of today's aggressor nations are as nothing when compared to the thousand years of Poland as a Western nation.

Mr. Speaker, as we observe Poland's Constitution Day, it is hardly necessary for me to review the great achievements of the Polish nation or the great contributions which Poland and her people have made to American democracy.

In war and in peace, Americans of Polish ancestry have served their country well. They have made their mark in the arts, the sciences, and the professions; they were among the men and women who have built America into the great Nation that she is.

From their heritage they brought to this land of liberty a fierce and burning love of independence and hatred of oppression. There have been no more loyal Americans, nor none more ready to fight for the preservation of democracy and democratic ideals.

In my own State of/Connecticut, sons and daughters of Poland have played a most important part. They worked unceasingly for the betterment of our cities and towns; they built churches and schools in every corner of the State; they established newspapers; they struggled to provide every possible educational advantage for every child.

No one can pay enough tribute to the Polish immigrants whose faith, self-reliance, love of family, and determination enabled them to perform feats of almost superhuman accomplishment. To their sons and daughters they not only taught the lessons of good citizenship, but they themselves were shining examples of what they taught.

Mr. Speaker, the cause of Polish freedom is the cause of freemen everywhere. We should take every possible opportunity to let the people of Poland know that we have not forgotten them, that we still know how strongly they yearn for a return of liberty.

It is for us to inform them, and show practically in every way possible, that we in America are their friends, and that our hearts are stirred by their plight. We must demonstrate our conviction that the days of Soviet tyranny will end and Poland can again take her place among the free nations of the world.

In these sad and bitter days in Poland, the zeal for liberty which still burns in Polish breasts should serve as an inspiration for all peoples everywhere.

Let us pray that the day will be soon when Poland will again join the community of free nations and her people can walk with heads high in a land that once again is an independent nation. Let us pray that the people of Poland can soon again enjoy the freedom for which they have fought for centuries and which they so richly and justly deserve.

The Danger of Unintentional War

EXTENSION OF REMARKS

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. PROXMIRE. Mr. President, a recent editorial in the Appleton (Wis.) Post-Crescent effectively underscores the urgency of continuing all possible efforts to reach international agreement for disarmament and nuclear weapons controls.

Because of the urgency of this problem and the pointedness of the editorial, I ask unanimous consent for it to be printed in the Appendix of the RECORD. There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGER OF UNINTENTIONAL WAR

A couple of recent dramatic offerings have pointed up something frightening about the nuclear powder keg on which the world is sitting.

The movie "On the Beach" and the television show "Alas, Babylon," both adapted from widely-read novels, depicted the horrible state in which our world would find itself during and after a nuclear war.

It is interesting to note that we have heard both productions referred to as "science fiction tales." The nearness of nuclear war no longer is in the science fiction category. It can happen here, if current armsrace trends aren't halted.

Both stories were controversial and shocking. And, in each, it appeared that the wars may have been started by accident. The awful fact is that the world could be plunged into a fiery holocaust accidentally.

The countries currently possessing hydrogen and atomic weapons are being led by sane men. It is improbable, but not impossible, that rational men would intentionally launch world war III. The United States and Russia have vast arsenals of modern weapons with nuclear capability, standing at the ready. Both insist that they won't use them unless attacked.

Some dull day a radar watcher, on either side of the Iron Curtain, may spot some unidentified flying object, or a cluster of them, and become wrongly convinced that his country is under attack. It is conceivable that his superior could be convinced, too. And, after consultation with supreme command, the key button might be ordered pushed.

The likelihood of this happening could be increased if the United States were to adopt an airborne alert with nuclear potential; this might have influenced President Eisenhower's decision against such a move. Yet not

having an airborne alert also involves terrible risks; such is the awesome nature of the decisions our leaders must make in this era.

Can there be complete assurance that this country would never retaliate against a non-existent attack? What precautions have we taken to prevent this possibility? Have the Russians taken similar measures? And won't the Chinese Communists, when they get nuclear weapons, constitute an even greater danger because of their demonstrated unwillingness to accept the responsibilities of a great power?

The grim eventualities brought to mind by a negative answer to any of these questions tell us why we must continue disarmament negotiations despite the crushing frustrations we continue to experience in them. One chance in a million is not too long a shot, when millions of human lives are at

stake.

Helium Act of 1960

SPEECH

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. SAYLOR. Mr. Speaker, This bill does not come to you with the glamour of a new space agency, it does not come to you with the cloak and dagger staging of the Department of Defense.

But, unless this bill is passed, neither one of those agencies will continue to operate, because they cannot continue to operate without helium. Helium is becoming more and more important to the Department of Defense in its missile program, to the exploration of outer space, and to the maintenance of the free world. Only in our country the United States, in all the countries of the free world, has any supply of helium been discovered.

The purpose of this bill is to see to it that this great natural asset, which is irreplaceable and is now being wasted into the atmosphere, will be preserved and conserved for the use not only of the agencies of Government but for all of the people of the United States. The plants which are authorized in this bill will be built by the Government if private industry does not come along and offer to build them. There are provisions in the bill that if any of the plants are desired to be built by any private industry or private capital, the Secretary is authorized to enter into a contract and allow that construction, and to purchase and store the helium.

I would like to call the attention of my colleague, the gentleman from Iowa IMr. Gross! who has raised a question of back-door spending, that the provisions in this bill are specifically designed to prevent any back-door spending. The Helium Act of 1937 is a great deal looser in its financial arrangements than this bill. The Comptroller General of the United States called that to the attention of the committee in making his report and requested that certain changes be placed in this bill which have been made by the committee. This bill will permit the Secretary of the

Interior to use money from the sale of helium, which will be sold not only to Government agencies but also to private industry, and hold him to a general accounting so that at the end of the 25year period specified in this bill all the money used for the construction of the plants will be repaid to the United States with interest. There is every evidence that a profit to the Government will result from this project. I think that in this respect this is an unusual procedure, and some of the protections, I think, have been built into this bill, which will prevent the Government disposing of an asset at a future time at a tremendous loss.

Mr. RHODES of Arizona. Mr. Speak-

er, will the gentleman yield?

Mr. SAYLOR. I yield to my friend

the gentleman from Arizona.

Mr. RHODES of Arizona. The gentleman from Pennsylvania is one of the most astute Members of the House of Representatives . He is particularly astute in determining the feasibility of projects. I have known the gentleman for many years and know his ability in figuring feasibility of reclamation projects. Now I ask the gentleman as to the feasibility of this particular expenditure. The gentleman has stated un-equivocally and clearly that this money will be repaid to the Treasury. Now, is the gentleman satisfied from the testimony before the great Committee on Interior and Insular Affairs that this, in fact, can be done?

Mr. SAYLOR. Very frankly, I am happy to tell my colleague from Arizona that that was one of the particular points which we were very interested in having Mr. Bennett, the Under Secretary of Interior, testify concerning. He not only presented to our committee facts which lead me to believe that this bill is feasible from a financial standpoint; this may even be one of the few fields in which the Federal Government will make some

money.

Mr. GRAY. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Illinois.

Mr. GRAY. I want to first congratulate the gentleman for his forthright statement and read a portion of the testimony of Under Secretary Bennett and then ask the gentleman a question, if I may.

The Under Secretary had this to say before the committee:

Many companies have already displayed genuine interest in the program, and I most certainly can assure you that the Department will be ready to sit down with them and work out fair and equitable contractual terms as soon as it has the legislative authority this bill will provide,

Is it the understanding of the gentleman that wherever private interests can supply helium the Government will use those facilities and those plants instead of building these 12 plants? Is that the understanding of the gentleman?

Mr. SAYLOR. The understanding of the committee is that we will ask any one of these private industries to build any of these plants. If there is any other

place discovered where helium can be produced it will be necessary to come back and ask for authority to construct another plant.

Section 14 was added to the bill so that the Secretary would have the authority which Under Secretary Bennett testified to and which the gentleman has just referred to.

Mr. GRAY. The gentleman just answered the question I was going to ask, if that applied to section 14.

Mr. SAYLOR. I thank the gentleman from Illinois for giving me the opportunity to explain this section of the bill.

Mr. GRAY. I thank the gentleman. (Mr. GRAY asked and was given permission to revise and extend his remarks.)

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Mr. Speaker, I want to commend the gentleman from Pennsylvania for his very clear and convincing explanation of the purposes of this bill and for the emphasis which he placed upon the fact that this is a program in which there is very good reason to expect that the Government will come out ahead in terms of the finances involved.

Mr. SAYLOR. That is correct; and I thank the gentleman.

Making It Tough for the Cops

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very able editorial appearing in the Richmond (Va.) News Leader of May 2, 1960, with respect to the so-called Mallory case.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

MAKING IT TOUGH FOR THE COPS

At about 6 o'clock on the evening of April 7, 1954, a white woman, living in Washington, descended to the basement of her apartment house intending to do some laundry. Encountering some difficulty in detaching a hose from the sink, she sought assistance from the Negro janitor, who lived on the premises with his half-brother, Andrew Mallory. Shortly thereafter, a masked Negro man entered the laundry area, seized the woman, and savagely raped her.

Mallory disappeared from the apartment house shortly after the crime. On the following afternoon, about 2:15 o'clock, police arrested Mallory and took him to headquarters. He at first denied any knowledge of the crime. At 4 o'clock he agreed to take a lie detector test. Meanwhile, two other suspects (Mallory's nephews, who also lived in the basement apartment) were examined, and it was not until 8 o'clock that a polygraph operator began on Mallory. About 9:30 o'clock he broke, and confessed the rape.

At midnight he voluntarily dictated his confession to a stenographer. The following morning he was brought before a U.S. Commissioner for arraignment. In the course of time he was convicted of rape, and was sentenced to death.

On June 24, 1957, more than 3 years after the offense, Mallory's case came before the Supreme Court of the United States. By a unanimous vote, the Court reversed the conviction and set him free. The following January, Mallory was again arrested, this time on a charge of housebreaking and assault on the daughter of a woman who had befriended him; he was convicted on that charge in April of 1958. We are not advised what punishment was imposed upon him in that case, but Mallory now has been again indicted in Philadelphia for rape and

burglary. There was not the slightest doubt of Mallory's guilt in the original rape case, and the Supreme Court made no issue of the evidence against him. In an unfortunately phrased opinion-Mr. Justice Frankfurter referred to the rapist, with touching solicitude, as "a 19-year-old lad of limited intelli-gence"—the Court freed him solely because of the long delay between his arrest on the afternoon of April 8 and his arraignment

on the morning of April 9. The opinion aroused strong protest among law enforcement officials across the country. And when in December of 1957, the Court freed one Willie Moore, a young Negro sen-tenced to life imprisonment in Michigan for the murder of an elderly white woman, on the grounds that he had not intelligently waived his right to counsel at his trial 19 years before, the chief justices of State supreme courts were moved to an unusual protest. They complained that the Court "does not seem to have given any consideration whatsoever to * * * the risks to society They complained that the Court which might result from the release of a prisoner of this type."

Since then, the Mallory case has figured constantly in criminal proceedings. Defense lawyers have been quick to seize upon any delay between arrest and arraignment as an excuse to win their clients' release. Confessions freely given to police have been attacked for want of due process. In Congress, a bill to override the Mallory decision barely failed of enactment in August of 1958. Now Senators ERVIN and BYRD have introduced a new bill stating flatly that "a voluntary confession of an accused shall be admissible against him in any [Federal] criminal proceeding * * * and the finding of the trial court in respect to the voluntariness of the confession shall be binding upon any reviewing court in the event it is supported by substantial evidence."

The Ervin-Byrd bill impresses us as an admirable statement of Federal policy. "Some of us believe that enough has been done for those who murder and rape and rob," said Senator Ervin, "and that it is time to do something for those who do not wish to be murdered, or raped, or robbed." Enactment of this bill should strengthen the hand of trial courts in dealing with defendants in a wide variety of cases.

At the same time, there is something to be said in the Supreme Court's behalf. The Court erred in the Mallory case, as it has erred in many Communist cases, by failing to reach a fair balance between the rights of an individual and the rights of society. this is a delicate balance to reach, and despite the unfortunate sequel to Mallory's release, we are not disposed to denounce the Court unduly for its decision. And for this reason:

Life ought not to be made too easy for the police. If due process of law means any-thing in a free republic, it means that the

individual must be free from third degree methods, prolonged interrogations, and the infinite threats and coercions that can creep into police work. Our whole system of criminal laws rests upon the hypothesis that every defendant is presumed innocent until proved guilty, and upon the further precious right that no man may be compelled to give evidence against himself. If the door be opened too widely in this field, abuses will creep in.

The Ervin-Byrd bill, in our view, will help to correct the imbalance created by the High Court in Mallory, without tipping the scales too much in the favor of the police. But in supporting this Senate bill, it ought not to be implied that there is not another side to the story. There is.

House Concurrent Resolution 30

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. WIER. Mr. Speaker, under leave to extend my remarks I would like to insert a letter recently reprinted in the Staten Island Advance, written by Clifford R. Johnson commending House Concurrent Resolution 30, my resolution dealing with a new peace formula for the United Nations Charter:

[From the Staten Island Advance, Mar. 25, 19601

MARCHI, AMANN HAILED FOR ACTS

As a consecrated Christian who was spiritually thrilled by reading Pope John's recent Christmas message dedicated almost exclusively to world peace, and asking for the active cooperation of all Roman Catholics in an effort to remove the causes of war, I feel that all Staten Island voters (no matter what their religious beliefs may be), who are praying for world peace, should be especially and exceedingly proud of the action of State Senator John J. Marchi and Assemblyman Edward J. Amann. They introduced resolutions recently in the State legislature, at Albany, known as Senate Resolution 85 and Assembly Resolution 106.

These bills would memorialize Congress to speedily pass Congressman Roy W. WIER'S bill, House Concurrent Resolution 30, dealing with a new peace formula for the United

Nations Charter.

Suffice it to say, that no peace formula now on the political horizon can do more to effectively utilize the universal opposition to war by all religions, than can House Concurrent Resolution 30.

It is the seed of an idea that can change the course of human history and it certainly behooves the religious leaders of all denominations, to enthusiastically support all these political measures as soon as possible with appropriate letters to President Eisenhower, Governor Rockefeller, Mayor Wagner and right down the line. All voters can join this crusade.

The high type of leadership and vision as expressed by Senator Marchi and Assemblyman Amann in this particular case, will never be forgotten at election time by this crusader for world peace. The goal of world peace should be nonpartisan and non-sectarian. * *

CLIFFORD R. JOHNSON.

GRYMES HILL.

Capital Rounds Made for Cough Medicine

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. BEALL. Mr. President, recently the Baltimore News-Post performed a valuable public service in publicizing the abuses which were arising from the fact that certain cough medicines containing narcotics could be bought without prescriptions. These habit-forming cough medicines are now sold only on doctors' orders in Maryland, but addicts report-edly are traveling into the District of Columbia for their supplies.

An article dealing with this latest problem was published in the News-Post of April 21, 1960, and I ask unanimous consent that a copy of it be printed in the Appendix of the RECORD. The article was written by Mrs. Joyce Lewis.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

DRUG BAN DRIVES ADDICTS TO DISTRICT OF COLUMBIA-CAPITAL ROUNDS MADE FOR COUGH MEDICINE

(By Joyce Lewis)

Washington.—Cough medicine addicts. driven underground in Baltimore, drive 40 miles over the expressway to Washington, where they make the rounds of drugstores and buy the habit-forming cough medicines banned in Maryland except on a prescription basis.

But the underground movement will be wiped out soon.

At the White House is a bill which would give authority to the Federal narcotics commissioner to remove habit-forming and abused cough medicines from the exempt (no prescription) list.

Representative Frank Karsten, Democrat.

of Missouri, introduced the bill.

The measure is expected to be signed by the President but the bill will not become

effective until January 1, 1961.

In the meantime, John Donaldson, president of the District of Columbia Board of Pharmacy, said he will send a letter of warning to all pharmacists in the area cautioning them about the influx of Marylanders into the District of Columbia to buy the medicines recently put on a prescriptiononly basis in Maryland.

Those preparations are Cosanyl, Tussar,

Endotussin, Coricin Syrup, and Deka-all containing the habit-forming ingredient,

hydrycodeinone.

Dr. F. S. Balassone, chief of the drug enforcement division of the Maryland State Health Department, said after a 9-month check of sales last year, no further information was neded in deciding there had been widespread abuse in the purchases and consumption of the cough medicines.

During January to October, four Baltimore wholesale drug firms sold 22,296 4-ounce bottles, 997 pints, and 292 gallons—a total of 1,140,096 teaspoons.

Also taken into account was that a large amount of cough medicines were sold during May, June, July, and August-months when few people should have colds.

Numerous phone calls to the News-Post indicated carloads of youngsters were going to Washington and making the rounds of drugstores there.

These reports were confirmed yesterday by LeRoy W. Morrison, agent in charge, Washington field office of the Bureau of Narcotics; Capt. Ernest P. Jefferson, commanding officer of the narcotics squad of the Washington police and Det. Sgt. Leonard J. Burnett of Arlington.

Since Maryland enacted its statewide regu-

lation April 1, Captain Jefferson said:

"Hardly a day goes by that I don't get a call from a pharmacist. One told me he had youngsters coming into his store by the

"Some druggists have asked what they can do. Since there is no law banning the sales, I suggest they sell no more than 4 ounces to a customer.

"What happens, though, is that the youth turns around and asks for a bottle of another brand."

Morrison said he too has had about a dozen calls.

"Druggists telling me they're getting a run on certain cough medicines. 'What's the story?' they ask.

"Many haven't heard the news about the

Maryland regulation.

"I heard one story that a youth demanded eight bottles and became belligerent when refused."

Morrison said druggists have asked him whether they could be sued if they refused to sell Cosanyl, Tussar and the others. "I tell them no," said Morrison. "If a

druggist questions whether a preparation is being used for medicinal purposes, I don't believe he can be forced into selling the preparation.

"Of course, he can always run out of the preparation or not carry it on his shelves." Detective Sergeant Burnett said he also has noted an increase in sales of the cough medicines and heard of boys making the rounds.

He said one druggist told him that after selling a bottle to a boy, the pharmacist noticed that as the boy walked out, he had two other bottles in his back pocket.

Donaldson said he is "afraid cough medi-

cines are a growing problem with our young

people."

Sales have doubled within the past year, he said. "I don't have the exact figures, but I know that sales are continuing to increase.

"I'm sorry to hear about the numbers coming in from Baltimore and the rest of Maryland.

"But I'm not surprised. It's only logical to go over the State line."

H. J. Anslinger, Federal Narcotics Commissioner, said before passage of the bill:
"Something has got to be done nationally

about stopping teenagers, drug addicts, and others from drinking up to seven bottles a day."

He said he had complaints from throughout the New England States, Pennsylvania, Ohio, and Minnesota.

Oregon and Washington had a "big problem" before they passed regulations, he added.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACRUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the text of the speech I made Sunday, May 1, in Boston at impressive exercises conducted by the Polish-American citizens of the Greater Boston area in observance of the 169th anniversary of Poland's Constitution Day.

The anniversary ceremonies were held under the auspices of the Polish American Congress, Eastern Massachusetts District, in the quarters of the Polish American Citizens Club, South Boston.

The material follows:

POLISH CONSTITUTION DAY

Reverend Fathers, Mr. President, and friends, it is a very high privilege and a genuine pleasure for me to join you on this very inspiring occasion honoring Polish Constitution Day and to meet with the members of your outstanding Polish-American organization, your officers, spiritual advisers, and friends.

At the outset, I heartily congratulate each and every one of you for the interest you have shown, the work you have done, and the support you have given to the ideals of American liberty and the preservation of freedom and justice throughout the world.

Loyal citizenship like yours is the most precious political contribution that you can make to protect and defend our free way of life, because it is just as true today, if not more so, as when first uttered by a great American that "eternal vigilance is the price of liberty."

You are blessed with a great and proud heritage indeed, which we so fittingly honor today. You are the descendants and the successors of a noble people who throughout the long centuries of history have never faltered in their devotion to God and their allegiance to the principles of freedom.

Time and time again the gallant Polish nation has been battered and torn by the ravages of war and its people have suffered indescribable torment under the cruel bondage of tyrants and oppressors who visited upon them every indignity, every persecution, and every torture known to man.

Right down to this very hour, your brave and noble people still suffer under the lash of a brutal tyranny, perhaps the most ruth-less, the most barbarous, and the most unspeakable of recorded time.

Other peoples shackled in slavery and whiplashed in brutality and torture by this most efficiently organized of all tyrannies have been weakened in body and spirit by the great lie, the great conspiracy of world communism, and finally became too weak, too forlorn, to fight back.

But not the Polish people. They have been beaten, flogged, and imprisoned, stripped of their loved ones, denied their rights as free men, deprived of their right to worship the God of their choice, compelled to see their priests and nuns insulted, cast into jail, driven from pillar to post, forbidden to prac-

tice their holy calling.

They have been forced to stand by unarmed and helpless while their constitution was scrapped, churches were desecrated, their sacred personages and their dear ones were cruelly attacked and slaughtered before their very eyes, and yet they have never given up.

They have never thrown in the sponge. They have never surrendered their birth-

They have never permitted bondage, persecution, torture, or any other horrible affliction upon their persons, their dignity, and upon their common rights as free men to swerve them from their unflinching purpose to stand up bravely and courageously before their tormentors and say to the whole world, "We will never give in; we will die first."

You know the background and the shameful story of betrayal, broken promises, and breach of trust that lies behind the delivery of sacred Polish soil, the Polish nation, and the Polish people to the bloodthirsty tyrants of the Kremlin and I need not recite it in detail here.

It will suffice to say that the illegal and unmoral surrender of Polish territory, the Polish nation, and the Polish people to Russian domination was one of the blackest pages in history, so shockingly devoid of moral principles, ethical doctrines, legal validity, and ordinary political rights as we have known them in the past as to constitute a gross violation of international law, and a calloused abandonment of a faithful, courageous ally.

But there is hope, believe me, and there will be hope so long as there is a Poland. so long as there is an America, and so long as there is justice in the world and a Divine Ruler governing the affairs of mankind.

Some misguided people who do not know the Polish people, and apparently do not know the American people either, although they profess sometimes to speak for them, have been of the shallow belief that after a while Russian mastery of Poland would not only become an accomplished fact, but would be accepted not only by other nations but by the Poles themselves.

Such people are totally lacking in any understanding of the loyalty, the religious faith, and the fierce determination of the Polish people for self-determination and freedom.

And these same people certainly overlook and have greatly miscalculated the attitude and purpose of the American people who in such large and overwhelming numbers are not only sympathetic with Poland in its sorrows and its enforced political and economic slavery, but are determined to do everything in their power to speed the day when Poland will be liberated from its shackles and restored to its rightful and former proud place as a member of the society of free nations.

Yes, the American people are deeply concerned about helping Poland, and the Congress of this great Nation has time and time again on Constitution Day and at other times expressed its intention to help Poland secure its liberation from unspeakable Communist tyranny, and in the spirit of humanfty and justice it has extended the warm hand of encouragement, succor, and assistance to the sorely afflicted Polish people.

Now we approach another summit conference, so-called, to try to settle some of the problems, and to try to ease some of the tensions, that are afflicting the world because of the nefarious policies and aggressive threats and actions of the Soviet Government.

We have had summit conferences before, you will recall, and many of us are wonder-ing whether the end results of this one will differ in many respects from the ones that have been held in the past.

There are some of us, indeed I think this embraces the strong majority of the American people, who are not willing to trust the further promises, nor endure the additional and blandishments of a national leadership like that of the Kremlin which has littered the fields of international diplomacy with broken promises in the past, and which even now as the allied nations are solemnly and hopefully preparing for a new summit conference continues its tirade of insult and abuse of our chosen leaders, its campaign of infiltration of helpless peoples. its stirring up of revolution and insurrection in many places, and its brazen, repeated threats of aggression against and nuclear destruction of the entire free world.

To those leaders who pursue such a course, I will say that they neither understand the temper of the American people, nor do they properly estimate the strength and power of this great Nation.

There will always be those, to be sure, of a weak and vacillating nature or of definite leanings toward the Communist system itself, who may urge and try to direct this less way of appeasement.

But the American people do not favor and will never tolerate such a craven policy.

We are free men and women, not cowards and cringers. We well know the difference between freedom and slavery, and we are not going to stand by while misguided leaders in our own country, or in any other part of the world, lead us down the road to appeasement, to Communist domination of additional nations, and the almost certain loss of our own liberties that would be the final result of a policy of appeasement.

This Nation does not seek political ag-grandizement, territorial gain, or domination and exploitation of other peoples, nor do we intend to remain silent and unmoved while the Soviet pursues these objectives.

Let the Soviet Government take due notice of that fact. Let their leaders know that while we ardently desire, zealously seek, and earnestly work for peace, a peace based on justice and equity, that we will never under any circumstances forfeit any part of our great heritage of liberty, nor will we remain impassive and inert while any other nation or any other political system moves by deceit and force to enslave mankind.

Just a word about our present posture. This Nation has great and powerful strength, let me assure you. We have an unequalled, effective, military and defense system equipped with the latest, largely unmatched, most devastating nuclear weapons and adequate means of using them against any aggressive force that dares to attack the United States, or attacks the security of the free world.

This Nation has the greatest economic strength, developed resources, and economic productivity that this world has ever seen. It is unrivaled and unmatched by any nation.

We hope and pray that these great resources of ours will never be used in warfare, certainly they will never be used for aggression.

But let those who have their eyes on the security, independence, wealth resources, and freedom of this Nation be fully notified and advised that we will fight to the death to defend our great heritage against communism or any other aggressor.

Though some would have us believe otherwise, the fact is that Russia is not the allpowerful and invincible nation that they would have us believe. We do not underestimate its progress and strength which has been impressive in some limited areas. But neither do we overestimate its potential.

Never in its 40-year history has the Soviet Communist regime faced such difficult and challenging problems, both internal and ex-

It has staggering financial, economic, and social problems at home involving diminishing food productivity, industrial inefficiency, short consumer goods supply, and need, want, and low standards of living stalking through its so-called geophysical heartland and plaguing its collectivist system.

For the first time since its unconscionable acquisition of other small, helpless nations in continental Europe, it is confronted with the most serious satellite trouble in the vigorous unrest of enslaved nations intent upon breaking away from the Soviet police state orbit of armed might and economic defici-

Worst of all from the Soviet standpoint, it views with great apprehension the great ogre of Red China looming up to threaten her from the east, and I doubt very much that with all these gigantic problems of mere survival of the Communist system and threats to its own security, and the security of its debased system on its hands that the Soviet is looking for, or intends, to start a

Government to pursue the shameful, spine- world war. Only extreme fanaticism would cause such catastrophe.

I am not suggesting for a moment that we can rely on the good will, good faith, or peaceful purpose of the Kremlin.

Knowing the Marxist aim of world conquest, we must be prepared for every contingency that may arise, militarily, economically, and above all spiritually, because it will be largely in the realm of moral principle, spiritual belief and the continued high faith, patriotism, and loyalty of the American people, as well as armed and economic strength, during the immediate years ahead that the triumph of freedom over slavery can best be assured. In this contest with serfdom, the Nation must renounce and reject the threatening softening influences of crass materialism and licentious paganism and rigorously apply our time-tested spiritual and moral values to every part of American life.

Just another brief reference. I recently introduced in the House of Representatives a resolution once more bringing to the attention of the Congress and the American people and the leaders who will represent us at the summit conference the urgency of the liberation of Poland and other subject nations being held in the ruthless vise of com-This resolution is short and I will munism. read the essential parts urging you to give it your wholehearted and most vigorous

"The Congress of the United States also urges the President to open up for discussion and settlement all those questions pertaining to the sovereignty, the control, the independence and the freedom of Poland, Lithuania, Latvia, Rumania, Bulgaria, East Germany, and other nations which remain unsettled by virtue of failure to consummate any major, comprehensive treaty of peace following World War II; and

"To express to the Soviet Union the sense of the Congress of the United States that no lasting peace can be established until;

"(a) The principle of self-determination is applied to all nations, great and small, so that the enslaved may be liberted; and

"(b) the Soviet Government ceases and desists from threats of aggression, encouragement to aggression, and conspiracy to excite aggression in other nations, and from the material and ideological support of revolutionary and subversive movements designed to supplant free governments with Communistic depotism in the Western Hemisphere and throughout the world.

(c) Proposals for international disarmament and control of nuclear weapons and energy by proper inspections safeguards."

I hope this will be done. It would strengthen our chances for a just peace.

Before I close, however, I want to leave with our glorious Polish allies this message. Stand firm. Don't be dismayed or discouraged. Continue your fight for the Polish cause, which is a holy cause if there ever was one, because it is the cause of freedom and justice and the God-given rights of man.

Continue to stand upright, fearless, courageous, and zealous in your love of God, and in your devotion and loyalty to America. Stand loyally and gratefully in support of great outstanding leaders like Monsignor Sikora, Monsignor Lekarczyk, Father Skoniecki, and the others in the lofty, spiritual field who have directed your loyalties, your ef-forts, and your objectives so wisely and so

Above all, let us all have the faith, and, God willing, the strength and purpose, to preserve and perpetuate our great free government, and to speed the day when brave, noble Poland may enjoy its own constitution day and join us in freedom and peace.

Thank you, all.

Tribute to Alfred Kohlberg

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. BRIDGES. Mr. President, since the recent death of Mr. Alfred Kohlberg, many well-deserved words of praise have been appearing in the press across the Nation commenting on his ardent fight against the evils of communism.

A column by George S. Schuyler which appeared recently in the Pittsburgh Courier has been brought to my attention. I think it is one of the better commentaries on the life and work of Alfred Kohlberg, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD. as follows:

VIEWS AND REVIEWS

(By George S. Schuyler)

The Nation lost a great patriot and I lost a great friend and associate a few days back when Alfred Kohlberg, importer of Chinese products, but better known as an inveterate and extremely dangerous foe of communism. here, and in Red China, passed away. Often called "the China Lobby" because of his vigorous and continuous defense of free China as embodied in Chiang Kai-shek, he was the bete noire of the clique with our State Department who sold Nationalist China down the river and are still fighting for this country and the United Nations to recognize the Mao gangsters who run Red China.

It was Alfred Kohlberg who launched the successful exposure of the Communist dominated Institute of Pacific Relations by Senate investigation which confirmed that the powerful Red cell within the organization had unduly and unfortunately so influenced U.S. policy that the free world lost continental China and North Korea to the Reds. The Korean war flowed from these initial disasters. An assiduous student of Communist line in documents and action, the San Francisco-born importer was in the forefront of every effort to stem the flood of Communist subversion.

I became associated with Alfred Kohlberg shortly after the war when he came to the aid of the Negro ex-Communist party executive, George Hewitt (alias Tim Holmes) whose exposures incurred the undying enmity of the Reds who tried to starve him to death. Mr. Kohlberg gave him work. Hewitt had previously done a series of articles for me on Red efforts to subvert the colored Then we were together on the brethern. editorial board of that pioneer anti-Communist monthly Plain Talk, edited by Isaac Don Levine, which performed yeoman service in exposing the Red conspiracy.

In 1951, I was voted director of the American China Policy Association, of which Kohlberg was founder and chairman, and in 1953 I was elected president, a position previously held by Clare Boothe Luce and publisher William Loeb. I have been serving ever since, and in this position I have profited greatly from this knowledge, experience, and wisdom, and that of the brilliant group of China experts and anti-Communists as

associated with us.

Alfred Kohlberg was always the genial, gracious host, and his parties were famous whether at his mansion in Bronxville or his Park Avenue apartment. There was usually

present the cream of the anti-Communist corps such as Senator Joe McCarthy, Roy Cohn, Rabbi Benjamin Shultz, Irene Kuhn, Suzanne Lafollette, Dr. Maurice William, Max Eastman, Wm. Henry Chamberlain, Geraldine Fitch, former New Jersey Governor Charles Edison, Freda Utiley, Lin Yutang, Louis Waldman, Representative Walter H. Judd, and others too numerous to mention who were dedicated to keeping the world from being enslaved, including that great authority, Maj. Gen. Charles A. Willoughby.

The tables groaned, the libations flowed, the conversion sparkled, and moving among the guests was the plump, smiling little man whose value to world freedom was inestimable, and whose example inspired us all.

Gen. Sylvanus Thayer Day

EXTENSION OF REMARKS

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, Saturday, April 30, will be a memorable date in the history of the town of Braintree in Massachusetts. On that occasion, known as "Gen. Sylvanus Thayer Day," was dedicated the birth-place of Sylvanus Thayer—1785 to 1872—Braintree's most distinguished citizen, founder of Thayer Academy, of the Thayer Public Library, and of the engineering schools at both Dartmouth College and the U.S. Military Academy. Best known nationally as "the Father of the Military Academy," which he served as Superintendent from 1817 until 1833, and also as "the Father of Technological Education in America," General Thayer is presently a candidate for the National Hall of Fame.

Through the intensive efforts of the Braintree Historical Society, Sylvanus Thayer's original homestead, which dates from 1720, has been relocated at its present site on Washington Street, opposite the town hall, and over the past 2 years has been completely restored. The Sylvanus Thayer House will henceforce be a historic shrine and serve as a community historical center for the town of Braintree.

On the same day, Thayer Academy, founded in 1876 through a generous bequest by General Thayer, honored its founder while celebrating its first alumni day. Thayer Academy and the Braintree Historical Society jointly sponsored a reception and buffet luncheon in the school's memorial gymnasium, attended by returning Thayer Academy alumni, by a large contingent from the U.S. Military Academy at West Point, headed by its Superintendent, Lt. Gen. Garrison H. Davidson, and by the many public-spirited citizens and visiting dignitaries, both civil and military, assembling in Braintree for the dedication ceremonies.

Joining General Davidson at the head table at the luncheon following the reception were Mrs. Robert C. Leggett, president of the Braintree Historical Society; Dr. Gordon O. Thayer, headmaster of Thayer Academy, and Mrs. Thayer; Mr. Gilbert L. Bean, chairman of the committee in charge of the restoration of the homestead; Mr. William F. Spang, president of the board of trustees of Thayer Academy; Mr. Harry F. Rice, Jr., president of the Thayer Academy Alumni Association; Mr. A. Wendell Drollett, president of the Thayer Academy Parents Club; and the Honorable James A. Burke, Representative of the 13th Congressional District of Massachusetts.

Honored military guests included Lt. Gen. Willis D. Crittenberger, chairman of the committee sponsoring General Thayer for entry into the Hall of Fame; Lt. Gen. Anthony C. McAuliffe, president of the West Point Graduates Association; Maj. Gen. Chauncey D. Merrill, commanding the 94th Infantry Division, U.S. Army Reserves; Maj. Gen. William J. Verbeck, commanding officer of Fort Devens and representing Lt. Gen. Edward J. O'Neill, 1st Army; Brig. Gen. Alden K. Sibley, commanding officer of the New England Division of the U.S. Army Corps of Engineers; Col. Paul C. Davis, representing Brig. Gen. Robert Hackett, 56th Artillery Brigade, Air Defense; Col. Joseph Kelly, representing Maj. Gen. Otis M. Whitney, Yankee Division, Massachusetts National Guard; Col. Clement Kennedy, Massachusetts aide to Secretary of the Army Wilber M. Brucker; Col. Karl L. Scherer, commanding the Boston Army Base; Col. Ivan W. Parr, Quartermaster Corps; Col. Norton B. Wilson, secretary of the West Point Graduates Association; Col. Ralph G. Barrows, president of the West Point Society of New England: Col. John G. Booton, past president of the West Point Society of New England; Col. Edwin Allen, commanding the 13th Battle Group, USARTC; and Lt. Col. Joel B. Stevens, information officer of the U.S. Military Academy.

The afternoon parade prior to the dedication ceremonies had as joint marshals two Braintree veterans of World War II, both of whom are wearers of the Congressional Medal of Honor: Mr. Charles MacGillivray, a former U.S. Army Ranger, and Mr. Everett Pope, formerly of the U.S. Marine Corps. The line of march included a contingent of cadets from the U.S. Military Academy, a color guard from the 56th Artillery Brigade—which also included the 18man honor guard for General Davidson and his group-the 28-piece Regular Army Band from Fort Devens, and units representing the U.S. Army Reserves, the Massachusetts National Guard, American Legion, the Disabled American Veterans, the Veterans of Foreign Wars, and the Air Cadets; also several military and marching bands.

As princial speaker at the dedication ceremony, Lieutenant General Davidson expressed the warm regard and high esteem held by West Pointers everywhere for Sylvanus Thayer, who himself graduated from the Military Academy nearly 150 years ago, subsequently to become an outstanding educator, engineering pioneer, military leader and public benefactor.

The program for "General Sylvanus Thayer Day" followed.

Registration of Thayer Academy alumni, Main Building, 9:30 to 10:30. Film: "Sylvanus Thayer at West

Point," Frothingham Hall, 10:30 to 11:30, Reception for General Davidson and guests, Memorial Gymnasium, 12 to 12:30.

Buffet luncheon, Memorial Gymnasium, 12:30 to 1:45.

Military parade, Washington Street, 2:30 to 3:15.

Dedication of Thayer birthplace, Sylvanus Thayer House, 3:30 to 4:15.

Public inspection of Thayer birthplace,

Sylvanus Thayer House, 4:15 to 5:45.

Reception: Thayer Academy alumni and faculty, Frothingham Hall, 5 to 6.

Concert: West Point Glee Club, Braintree High School Auditorium, 8:30 to 10:30.

A buffet luncheon in the Memorial Gymnasium was held for invited guests of Thayer Academy and the Braintree Historical Society. The evening concert presented by the West Point Glee Club in the Braintree High School Auditorium was open to the general public. All Thayer Academy and Thayerlands School buildings were open for inspection by Academy alumni and alumnae throughout the day.

Thayer Academy, situated in Braintree, Mass., was founded in 1876 as the result of a generous bequest by the late General Sylvanus Thayer. Opening its doors in 1877 with a faculty of 3 and a student body of 30, the school has expanded and developed over the years until, with an enrollment of over 600 students, it is now the largest coeducational, country day, college preparatory school in New England. The present institution includes 3 component parts: Thayer Academy proper, comprising grades 9 through 12; Thayer-School, comprising grades 1 through 8 and the Thayerlands Preprimary School; the 3 schools make private educational facilities available to more than 30 communities of the south shore of Massachusetts. Additional service is rendered by the Academy's sponsorship of a summer school with an enrollment of 250; and, with the collaboration of the American Academy of Arts and Sciences, an advance science studies program designed for 60 talented boys and girls of eastern Massachusetts high schools. The latter program, now in its third year at Thayer Academy, is participated in by 16 regional industries, and by 7 universities-Boston University, Brandeis, Brown, Harvard, MIT, Tufts, and the University of Massachusetts.

Dr. Gordon Oliver Thayer, present headmaster of Thayer Academy, is a graduate of the University of New Hampshire, and received his master of education at Harvard, and his Doctorate of Education from Boston University. He is a lecturer in education at Tufts, Boston University, and the University of Maine. He was president of the Independent School Association of Massachusetts in 1958-59; and is currently a director of the Alumni Association of the Harvard Graduate School

of Education, a delegate to the National Council of Independent Schools, and a secondary school representative to the College Entrance Examination Board. With other American secondary school and college educators, Dr. Thayer will engage in a field study of Russian education during the months of August and September, the project being sponsored by the Comparative Education Society; and he is scheduled to conduct a series of lectures on American schools and colleges in Russia, Poland, Germany, and Yugoslavia during September and October.

Merger of Armed Forces Along Functional Lines Recommended

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. ENGLE. Mr. President, it is my belief that a functional reorganization of our national defense is essential to meet our national security needs. I was therefore interested to note that the Washington Evening Star of April 25 emphasized the same point in an article entitled "Triple Service Flaws Cited by Consultant." This story was based on the remarks of James A. Perkins, frequent consultant to the Government on administrative management. Mr. Perkins appeared before the Senate Government Operations Subcommittee on National Policy Machinery to urge changes in the organization of both the State and Defense Departments. I would like to call the attention of my colleagues to this article and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIPLE SERVICE FLAWS CITED BY CONSULTANT (By Richard Fryklund)

The traditional three-service organization in the Pentagon is largely obsolete, James A. Perkins, frequent consultant to the Government on administrative matters, told a Sen-

ate subcommittee today.
"If anything is clear," he said, "it is that modern warfare does not divide itself into problems of land, sea, or air. Functional tasks now divide along lines of strategic deterrents, limited warfare, continental military defense, civil defense and military as-

sistance to allies in support of the above. "The hard, unvarnished truth is that it has been impossible to assign tasks on a functional basis along existing service lines."

Mr. Perkins is a vice president of the Carnegie Corp. He served on the Gaither Committee, appointed by the President in 1957 to survey national security problems. He appeared today before the Senate Subcom-mittee on National Policy Machinery.

Mr. Perkins recommended changes in the organization of both the State and Defense Departments. The State Department, he said, seems unaware that foreign policy and military policy are inextricably linked. This has led to some acute practical difficulties.

He said, "An automatic reply to any Russian aggression seemed to ignore completely the existence and implications of a Russian strike capability."

'He recommended that an assistant secretary for military affairs be appointed in the State Department, that regular military briefings for State Department officers be held and that at least two dozen middle-grade officers a year should be sent to the National War College.

The Need for Constitutional Reform in Wisconsin

EXTENSION OF REMARKS OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. PROXMIRE. Mr. President, last Friday, I was pleased to place in the REC-ORD a speech by the Governor of Wisconsin, the Honorable Gaylord A. Nelson, in which he called for a thorough study of the need for constitutional reform in Wisconsin and announced the appointment of a distinguished commission to study the need as well as the ways and means of achieving such reform. Even though Wisconsin's 1848 constitution has the impressive qualifications of classic brevity and great age, it seems wise to periodically look at the constitution and its amendments as a whole to see whether it meets the challenge of this and future generations.

On Sunday, May 1, the Milwaukee Journal carried an editorial praising the Governor's action and approving both the idea and the membership of the 15 member study commission.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT LAST, A REAL LOOK AT WISCONSIN'S CONSTITUTION

The Wisconsin constitution is one of the most difficult in the Nation for the people to get at

It does not permit amendments to be initiated by popular petition. It does not provide for periodic popular votes on whether to have a constitutional convention. It does not allow amendments to be submitted to the people for ratification except by two consecutive legislatures. Only nine other States are as tough in all three respects.

And the Wisconsin constitution, as amended, is the oldest in the Nation outside tradition loving New England. All the other States older than Wisconsin have long since written more modern constitutions, six of them in this century.

It does not follow that the Wisconsin constitution is worse than most. The wisdom, of the original authors, as it happens, gave us an unusually sound document, on the whole, for the mid-19th century.

What does follow is that nobody-not the legislature nor a convention nor a study commission-has ever stood back from the trees and surveyed the forest, reappraising all at once the constitution as a whole and from

beginning to end, its outdated concepts and its patchwork of 61 amendments up to now.

Past legislatures have jealously preserved their exclusive guardianship over it, for fear that anybody else looking into the subject might not duly respect the sacred cows. The current legislature did halfheartedly direct a legislative council study, but nothing has come of this and obviously nothing is going to come of it. Meanwhile the same legislature has started a whole raft of new amendments.

So it is sound and needed statecraft by Governor Nelson now to create on his own motion a study commission to give us this whole view that we have never had. He has carefully chosen 15 people for scholarship, expertness and open mindedness, to insure against partisan impeachment. They will labor without even expense money, for there is none.

The Governor has asked them to advise whether the constitution contains material that properly belongs in the statutes in-stead, archaic material that can be eliminated, confusion that needs clearing up: whether complete overhaul or continued piecemeal amendment is preferable; whether a convention is needed or some lesser revision process is feasible.

It is cheering and exciting that such great work is now to be undertaken, under such leadership as that of Supreme Court Justice Thomas Fairchild, Madison Attorney Burgess Ela., and UW Political Scientist David Fellman. Even if the legislature remains unexcited, the product cannot fail to give the public the best information it has ever had in this fundamental field.

The Census

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1960

Mr. BOSCH. Mr. Speaker, I have had several constituents discuss with me the question of the census and they were somewhat concerned that in some instances immediate neighbors are enumerators and that the information disclosed, while not of an incriminating nature, is in the form of disclosure of personal information which the citizen would like to feel is not the subject of common knowledge or information. It was suggested that in connection with this the individual citizen might, at his option, provide and forward to the Secretary of Commerce in Washington, D.C., the information required of him in connection with the census without disclosing such information or surrendering any report or return to the enumerator.

Therefore, at the request of these citizens of my area who have evidenced this concern, I have today introduced legislation which would permit the citizen to forward the information directly to the Census Bureau. The regulations to carry out the above could be prescribed by the Census Bureau in the form of an affidavit certifying to the date when the required information was mailed to the Census Bureau, this affidavit to be surrendered to the enumerator.

My Mother, Eleanor Roosevelt

EXTENSION OF REMARKS

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. MONRONEY. Mr. President, we who have been privileged to live in the same era with Mrs. Franklin Delano Roosevelt have formed our own pictures of her from newspaper accounts of her activities, from her daily newspaper columns, from her magazine question and answer pages, from books by her and about her, and, if lucky, from personal acquaintance.

As she has continued year after year to be listed in polls as the best loved woman in the world, following her remarkable career as first lady with another in her own right equally unsual, we still ponder how she does what she does, and how she became what she is.

The May Good Housekeeping magazine gives us some new answers to some of our unphrased questions. James Roosevelt, her oldest son, writes with Sidney Shalett, his collaborator on a recent book about President Roosevelt, a warm and moving article, "My Mother, Eleanor Roosevelt."

Because of the new insight this story provides of one of the greatest women of our time, I ask unanimous consent that it be printed in the Appendix of the RECORD. I have inquired regarding the cost and have found that it is \$216.

I ask unanimous consent that the article be printed in the RECORD notwithstanding the cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MY MOTHER, ELEANOR ROOSEVELT

(By JAMES ROOSEVELT With Sidney Shalett)

In writing of my warm and wonderful life with my mother, Eleanor Roosevelt, I never can forget that I have been privileged to have a mother, as well as a father, who is one of the great personages of our time. Yet I—and my sister and brothers—think of her not in her role as the peripatetic spokesman for democracy, champion of the oppressed and underprivileged, and crusader for a thousand and one good causes, but as our generous, ever-loyal, deeply human mother, who has taught us, inspired us, loved us—and spoiled us—all our lives.

I have written of my father, Franklin Delano Rocsevelt, that he was not one but three parents. He was the rollicking companion and playmate of prepolio days; the gallant fighter of his convalescent period, struggling not to lose touch with his children while engaged in his desperate personal battle to conquer his deadened legs; and, finally, the father of the White House period, who had to balance his family relationships against his responsibilities to the world. I have much the same feeling about mother; she has been at least four mothers, each a separate and distinct personality.

First, there was the mother of my earliest memories—shy, uncertain, afraid of her shadow, ridden by inferiority and "guilt" complexes, and dominated by an imperious, all-demanding mother-in-law. In those early days, it seemed completely natural to us children that "grannies" were the real heads of families and that mothers were only slightly above us small fry in the household hierarchy.

Then came the mother who was the hero-

ine of Father's period of illness and convalescence. When infantile paralysis struck her husband, rendering him first a helpless cripple and then a man who never again would walk without the aid of cane and braces, Mother's true strength and courage emerged. She was his nurse, his "legs," his good right arm, his wellspring of confidence. When it became necessary, the erstwhile meek and subservient daughter-in-law even stood up for him against his well-meaning but overpowering mother, who, overcome by the tragedy that had engulfed her Franklin, wanted him to retire from the public eye and bury himself at Hyde Park. Mother became the mortar that held the family together in the face of strains, separations, and financial crises.

Then, in the period of Father's return to public life—first as Governor of New York, then as President—still another Eleanor Roosevelt emerged. This was the mother who kept track of her restless, turbulent brood while she herself evolved into a roving, one-woman task force for social and international causes. Even her family marveled at her seemingly inexhaustible energy, and Father howled with glee when the British, during World War II, gave Mother the code name of Rover.

the code name of Rover.

Finally, there is the Eleanor Roosevelt of today—a woman on her own. Though I am her son, I view her unabashedly as a great lady, a great person, and, above all, a great mother. When Father died, just 26 days after their 40th wedding anniversary, Mother refused to lapse into idle widowhood. Soon she was creating a useful and productive career.

Last October 11, Mother—though she refused to celebrate it—passed her 75th birthday. I am pleased that these recollections of mine are appearing in the issue of Good Housekeeping devoted to observance of its own 75th birthday. I do not mean to write, however, of Mother as if she were an institution. She wouldn't like that, I can assure you.

Despite all the honors that have been heaped upon her, Mother remains completely natural and unassuming and absolutely without side. For example, when she was in India a few years ago, she donned a plain cotton dress and tennis shoes and devoted a long day to touring the slums. She kept going so long she was late for a reception in her honor. Not wishing to keep guests waiting while she cleaned up and changed into appropriate clothing, Mother simply went to the reception as she was and met the leading citizens of Bombay in her soiled cotton dress and sneakers.

It is no easy thing to be the son of two parents who are not only world figures but extraordinarily complex personalities. There is no doubt that my brothers, my sister, and I would have benefited had Mother and Father—particularly Father—been stricter disciplinarians and had they had more time to devote to us.

We were outrageously pampered by our wealthly grandmother. Sara Delano Roosevelt, who delighted in upsetting what parental discipline we had by giving us new cars to replace ones we had wrecked and showering us with costly gifts and trips to Europe. Indeed, Father's softness as a disciplinarian was directly attributable to the fact that his strong-minded Ma-ma, as he called her, tried all her life to dominate him. Even after he became President, she would remind him to wear his rubbers, to drink only bottled water, and to keep himself "in order" when traveling in the tropics. After resisting this sort of maternal swaddling from

childhood to manhood, father developed a psychological block against telling us how to run our lives. Mother had the same feeling.

To me, Mother's true greatness as a person lies in the fact that she is not infallible. Far from it. Her deep, penetrating wisdom often is tempered with naivete, and she will do and say impulsive things or allow herself to be used by persons whose motives are suspect. But these are slips which stem from her heart and from her boundless, instinctive sympathy for humanity.

The real miracle is that Mother ever lived down the traumas of her early childhood and became the strong character that she is. If ever there was a real-life prototype for the "poor little rich girl" character of the lachrymose Victorian novels, it was Mother. Her own mother, Anna Hall, whom Mother remembers as one of the most beautiful women she has ever seen, treated her daughter as an ugly duckling; she even shamed the little girl by calling her "granny."

It was a different story with her father, Eillott Roosevelt, brother of Uncle Theodore, who became President. He adored her and called her "little Nell" and "golden hair." When he was around, he showered her with all the love and companionship a child could want from a father. But he was not well, and he lapsed into alcoholism (which gave Mother her lifelong horror of strong drink). When Mother was 8 years old, her mother died of diphtheria, and her tyrannical Grandmother Hall refused to sanction more than occasional visits from her father. He, too, died before Mother was 10; for a long time, Mother refused to believe her beloved father was gone, and, as she has written, she lived in her private dream world in which they still were together.

There were other scars that added to her feeling of loneliness and rejection. She lived for a while with a beautiful but tragically unstable young aunt, who sometimes was warm and loving and at other times heaped her with scorn and verbal abuse. There also were two well-loved uncles who became alcoholics. But Mother had a good mind, an inner strength, and an innate sense of humanity-the qualities that eventually led her into what her detractors call her "do-gooding" activities-which enabled her, though she suffered, to survive and grow. It was Mother, incidentally, who gave Father his first closeup glimpses of what poverty meant. She induced Father, then a rather shallow, typically upperclass Harvard undergraduate, to call for her at the Rivington Street Settlement House in lower New York, where she was doing social work; then she took him to a tenement to call on a sick child. The experience left him shaken, and he exclaimed, 'Human beings can't live this way."

The early years of married life did little to build up Mother's confidence; there was always her formidable mother-in-law in the background, and Father's mother was an empire to herself. To be sure, the marriage of Franklin Roosevelt to his fifth cousin Eleanor was accomplished over his mother's objection. She had nothing in particular against Cousin Eleanor, but she had been looking forward to enjoying her handsome son's company when he had graduated from Harvard, and she wasn't ready for him to leave the nest. Granny took him off on a Caribbean cruise, hoping the romance would cool, but Father was stubborn, too, and, on March 17, 1905, he and Mother were married.

As Mother always had yearned for a mother of her own, her desire to be accepted and loved by Sara Delano Roosevelt was almost pathetic. But the young bride found herself swamped not with affection but with domination by her mother-in-law. Granny was excessively generous—she gave the newlyweds material things they never would have been able to afford otherwise—but she did love to manage. The young couple's first

rented house, conveniently close to her own, was selected by Granny. Their second home was a Christmas present from her, but she built one for herself right next to it-with connecting doors. Mother hated that house and protested to Father that she didn't want to live in it, but Granny had her way. Even our summer home at Campobello was a gift from Father's mother. She helped him meet his bills, paid his insurance, and even sent us barrels of apples and potatoes from the Hyde Park farm. Father, of course, was quite accustomed to her generosities and thought nothing of dropping hints on what he might like in the way of gifts. For instance, in November 1913, when he was Assistant Secretary of the Navy, he gally wrote her: "Dearest Mommer-I'm still alive and have wore out three sets pyjams in 1 year. If you go to Army and Navy store remember your affected son. F.D.R. Also he likes neg-ligee shirts not silk and without collar."

Mother's indecision in those days is hard to believe. It is difficult to visualize the Eleanor Roosevelt of today writing, as she did to Father in 1913: "My head whirls when I think of all the things you might do this coming year-run for Governor, Senator, go to California. I wonder what you really will do." An even more remarkable line appeared in one of her letters to "Dearest Honey"her customary salutation of that periodshortly after he had been nominated for Vice President in 1920. "Oh, dear. I wish I could see you or at least hear from you,' she wrote. "I hate politics."

Father always loved to tease Mother. On their European honeymoon, though he was almost as unsophisticated as his bride, he treated her as if she were a helpless little child. In presidential years, when Mother became such a world traveler, he referred to her as "my will-o'-the-wisp wife" and joked about her fantastic energy. her public statements differed from his own views, he told her to go right ahead and do as she pleased "because I can always say I can't do a thing with you." Mother learned to return the riposte; when he went out on the campaign trail and was lionized by women's clubs, Mother let him hear from her about the "lovely ladies" who, as she put it. "worship at your shrine."

Mother's strength and courage revealed itself when she was truly a soldier during the difficult, painful period between the time that polio struck and Father's return to active politics. Father himself had a courage that was simply unbelievable. He never let any of the children see him with his spirits sagging, and he constantly conjured up cheery ways to boost our morale. Yet, as I have since learned, he had his periods of black despair, and it was then that Mother came through for him. Working closely with the faithful Louis Howe, Father's political aid, Mother strengthened his resolve not to give in to the temptation to crawl into a hole at Hyde Park and let the world pass him by. Once the active period of his sickness was over, Mother simply refused to treat him as an invalid; she even dismissed the nurses and saw to it that he led as normal a life as was possible for a man in a wheelchair.

As time went by, Mother did more and more things for Father and for the family. Though she died a thousand deaths every time she had to stand up before strangers she began making speeches for him to keep

his name before the public.

During the four winters when he cruised off the Florida Keys in a houseboat, hoping that sunshine and swimming would restore his limbs, she stayed in New York, keeping the family together. Finances were difficult. We never were actually poor; the trouble was that we never learned to live economically, and the private schools, European vacations, servants, and chauffeurdriven cars went right on. Father frequently was forgetful about sending the monthly allowance, and Mother's letters of this period were filled with almost desperthis period were lifted with almost desper-ate pleas, such as: "I find after paying all the household bills * * * and cash for food * * * I have \$151.46. * * * Please send me what you can. * * *" And: "* * * The regular expenses go on the same as ever. * * * I just pray I will have enough. * * *** Mother taught school, wrote articles, and took an ill-fated fling at operating a furniture factory to bolster the family finances.

The emergence of this new Eleanor Roosevelt was not without its price. Father gained a valued and trusted new lieutenant and a new pair of legs and eyes, but he lost a good deal of the woman Eleanor; indefatigable as she was, Mother simply could not be the little homemaker and self-effacing house-wife, as well as the political helpmate. Perhaps the evolution was inevitable, and Mother's public career would have developed even if Father had not been stricken with polio; I suspect the drive within her was so strong that she could not have been content forever in a purely domestic role. Be that as it may, the diminution of the woman Eleanor cost Father a good deal in simple companionship and added poignantly to the burden of loneliness that beset him with the advent of polio and the beginning of his years in the glaring limelight of the presidency.
With all his outward gaiety and gregar-

iousness, it is hard to visualize Father as a lonely man, but there were times when he was dreadfully alone. The presidency can be as confining as any prison, and Father had the additional physical handicap of not being able to get around on his own; also, he had no real, personal confidents with whom he could talk over matters of a

private nature.

By this I do not mean to imply, as so many Roosevelt haters and scandalmongers have untruthfully alleged, that father, and mother were not compatible. Even in the years when both of them became so intensely busy, there was a deep understanding and an indestructible affection between them. To the end of his days, father, in his letters to mother, addressed her as "Dearest Babs"—the nickname he had given her on their honeymoon. Her tender feeling toward him is indicated in the following excerpt from a letter she wrote to him in 1931, just after he sailed to see his mother, who had been taken ill in Europe: " * * I hate to see you go. • • We are really very dependent on each other though we do see so little of each other. other though we do see so hate or each own.

I feel as lost as I did when I went abroad.

* * * Dear love to you. * * * I miss you and hate to feel you so far away * * *."

Just as Father, even when the terrible years of World War II closed in on him. never ceased trying to be a warm, close, personal father to his five children, mother, too. always had a maternal eye on us. Neither of them believed in openly interfering or attempting to dominate us. All of us. I am sure, hurt our parents many times by rash or indiscreet actions, but always we received from them the same unswerving lovalty and affection.

Mother was slightly inconsistent; while she did not intrude by injecting herself directly into our affairs and attempting to advise us directly, she constantly was writing Father about our various jams. In the case of my sister Anna, it was poor work at school and later was her interest in boys. In my case, mother fretted over my erratic scholastic record and what she considered my addiction to frivolity and expensive living. I was following in father's footsteps at Harvard by joining all the right clubs, and once, when I wrote a candid letter home admitting there had been a certain amount of financial outlay and drinking connected with

my initiation into Hasty Pudding, Mother caustically wrote Father at Warm Springs: "Too bad James needs the money; you never can get away from your many golddiggers, can you? I can't say three nights drunk fill me with any thing but disgust.

My brother Elliott liked to play cards. and mother, learning while en route to Europe that two State employees (Father then was Governor of New York) had cleaned him of \$70, sent off a hot letter to Albany: "I had a talk with him about gambling but I did not realize it was for sums like that he had played. I think perhaps you had better not tell him we know but if you get a chance say something about using judgment in all things and the right use of money. Mama gave him his Poughkeepsie Savings Bank book which I think was unwise if he is doing fool things of this kind."

As Franklin, Jr., and John came of age. Mother worried about their conduct, too. One letter to the White House asked bluntly: "Will you speak seriously and firmly to F., Jr., and John about drinking and fast driving?
[Father didn't.] I really think it's important." She also discussed with Father our various business problems and our divorces. but rarely did she mention these matters to us, except obliquely.

Mother came into her own during the 12 years Father occupied the White House. While she made some mistakes, she had become one of Father's greatest assets. Though he delighted in teasing herdoing it so subtly that Mother wasn't sure she was being ribbed-Father relied upon her in many ways. She made inspection trips, including her memorable survey of the wretched Puerto Rican slums, which left her aghast at the thought that humans could live in such misery. She also appraised sit-uations and personalities for her husband. Her comments were sharp and to the pointe.g., her 1939 letter to Father: "This WPA mess seems to me the fault of the unions. Perhaps no job should be done by WPA which would otherwise be done by regular labor, but that is the only legitimate grievance that I can see." Father valued and respected her judgment, even though he did not always agree with her or follow her rec-ommendations. He was conscious, too, that some of her supercharged activities provided ammunition for the anti-New Dealers, but he did not try to curb her.

I've always felt that Mother's true greatness of spirit revealed itself on that terrible day-April 12, 1945-when Father died in Warm Springs. Harry S. Truman, deeply shaken by the event that had precipitated him into the Presidency, came to see her at the White House. "Is there anything I can do for you?" he asked. Mother looked at him with sympathy and understanding and replied, "Is there anything we can do for you? For you are the one who is in trouble now." At the moment of her supreme grief. she was concerned about the new President's

With Father's death, Mother was confused and lost—but only momentarily. One of the most perceptive things Mother ever has written about herself is found in her auto-biographical volume, "This I Remember." Recalling her life in the White House, she observed: "* * * I think I lived those years very impersonally. It was almost as though I had erected someone a little outside of myself who was the President's wife. I was lost somewhere deep down inside myself. That is the way I felt and worked until I left the White House."

That era ended, mother began working her way out of her impersonal shell and became the President's widow but Eleanor Roosevelt, active citizen. President Truman appointed her as a delegate to the United Nations Organization meeting in London in 1946, and she served with genuine distinction.

Father, who knew mother and her overgenerous impulses well, had left a remarkable will in which Mother was the major immediate beneficiary. However, he drew up airtight provisions that restricted her from using a penny of the principal—only the interest from the estate. He had a reason for this, which he confided to me (as the eldest son, I was to be the family trustee) sometime before his death: he was simply afraid that mother, with her penchant for good causes, would give away the entire estate and be left destitute.

I think that father was partially right and that mother, if free to follow her own impulses, indeed would have given away at least a large portion of the estate. He was wrorg about one thing, however; mother never would be destitute. Immediately after his death, she weighed her situation. She could have lived more than comfortably on the estate income, but the idea of idleness appalled her. I once heard her say emphatically that she had no desire to become an old lady in a little lace cap. She decided she would earn an income of her own in order to have money to contribute to the philanthropic, political, and humanitarian causes—as well as the many private, personal charities—in which she so firmly believes.

So mother went to work. Today she earns a sizable sum as a writer and lecturer, and she gives away the major portion of it, over and above her business operating expenses. By conservative estimate, mother has given away well over a million dollars.

As one of the three trustees of father's estate, I sometimes have the unhappy duty of telling mother she cannot do something on which she has her heart set. Recently, for example, she wanted the estate to invest a considerable amount of money in a fourstory townhouse in New York City; she was going to live and work in half of it and rent the other half to her personal physician and his wife. We did not think it was a proper business investment under the terms of father's trust; also, we doubted the wisdom of her incurring such a responsibility at her age, so we turned her down. Mother was hopping mad-mostly at me-but she didn't stay angry long; in fact, I've never known her to stay peeved with any of us for any length of time. She merely went out and made private financial arrangements to buy her house and now is living there happily, with nothing to worry about except a 20year mortgage.

I can testify personally to Mother's remarkable generosity and also to the fact that she has no large sums of ready cash or other assets. In 1950, when I made my ill-fated race for Governor of California, I finished the campaign owing \$100,000. I paid it off with a personal loan from Mother, which I have secured with a life-insurance policy payable to mother or her estate. I know that her generous act in bailing me out left her with virtually no capital assets except her current income; yet she did it without

a murmur.

Similarly, to help my brother Elliott, Mother permitted him to sell off certain real estate which was not irrevocably tied up by Pather's will. As a matter of fact, this has been the subject of a fierce family argument, with sis, my brothers, and I all jumping on Elliott for permitting Father's beloved Hilltop Cottage to pass out of the family.

Mother never forgets Christmases, birthdays, or anniversaries, and the Eleanor Roosevelt Amalgamated Annual Gift List is a truly formidable institution. It includes each of her five children and their spouses (even one or two ex-spouses of whom she is fond), her 21 grandchildren, and her 12 great-grandchildren, not to mention inhumerable godchildren, relatives, and friends. She starts her yule shopping on

December 26 of each year, collecting appropriate gifts whenever and wherever she sees them and piling them in what she calls her "Christmas closet." It did not surprise me a bit when I read in the newspapers that mother, touring Israel last year, had bought a live camel for her granddaughter Nina. Fortunately, the camel was jettisoned before reaching Hyde Park.

Mother divides her time today-when she isn't in Israel, or in Moscow, or teaching her class at Brandeis University, or doing something for the Eleanor Roosevelt Institute for Cancer Research in Denver, or making a speech in any one of the 50 States-between the new townhouse in Manhattan and her rambling cottage at Hyde Park. Each of her residences has the same flavor as any place, including the White House, in which the Roosevelts ever lived. The decor, if you can call it such, is a melange of family photographs, mementos of Father, water colors the late Louis Howe and other amateur artists, autographed pictures of world figures, well-worn furniture bric-a-brac, and some plain junk from the 4 corners of the earth almost every piece, of course, with a story behind it.

As for Mother's daily schedule-any day it wearies me just to think about it. She usually arises any time between 6 and 7 a.m., never later than 7:30. Often she entertains departing house guests at the breakfast table, then herself takes off for New York or Washington or elsewhere for a full day of meetings, interviews, and speeches. Before the day is over, she will have dictated one or two newspaper columns and answered a batch of her interminable correspondence. Nightfall will find her back at Hyde Park or New York or starting off for somewhere else to make still another speech. If she is asleep by 1:30 a.m., she is lucky; often she does not get to bed until 3 a.m. Frankly, I don't know how she does it, but her energy is boundless, and she was telling the exact truth when she wrote recently: "At present I look like Methusaleh, but I feel no older than my youngest friends. am sure that I am no more exhausted at the end of a busy day than many who are half

Mother still is here—very much so—and I pray she will be with us for many years. It is gratifying to all of us who love her so dearly that the calumnies, the vicious libels, the tasteless jokes about Eleanor Roosevelt have all but vanished. True, there still is a crackpot fringe ready to condemn anyone who bears the name of Roosevelt—Hyde Park branch, of course. But from every corner, in this country and abroad, words of respect and affection may be heard whenever the name of Eleanor Roosevelt is mentioned.

Even if I am her son, I think she has earned these tributes and that she has established her place not only in the pages of history but in the hearts of her countrymen. I feel certain that Father would be enormously proud of how Mother has molded her life without him, just as she was—and is—proud of him. To have had such a father and to have such a mother is the greatest legacy a son could ask.

Low-Cost Wool Fabric Imports

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a resolution by the Textile Workers Union of America, regarding the importation of low-cost wool fabrics and urging the application of the wool tariff quota separately to each category of fabrics in order to permit the importation of a fair share of each category.

There being no objection, the resolution was ordered to be printed in the

RECORD, as follows:

RESOLUTION ON TARIFFS

Imports of textiles have resumed their upward thrust. The halfway measures adopted by the administration in 1956 slowed the rise in imports of certain products but they have not afforded the degree of protection needed to prevent further serious injury to the domestic textile industry. Foreign producers have stepped up their export programs so that we are again witnessing a rising tide of foreign goods unstabilizing our textile markets.

The increase in imports of cotton fabrics

The increase in imports of cotton fabrics which resulted from the Japanese incursions of 1955-56 was halted temporarily by the negotiation of a voluntary quota by Japan. However, the expansion in shipments from Hong Kong has helped boost cotton fabric imports from 122 million square yards in 1957 to 142 million in 1958 and over 180 million in 1959. The increases in shipments of garments from the Far East have been astronomical, thereby raising the actual fabric yardage imports well above the above figures.

The rise in imports of wool fabrics was temporarily halted by the implementation of the Geneva reservation in 1956, under which the ad valorem tariff is raised from 25 to 45 percent when imports exceed 5 percent of domestic production. However, this device was inadequate to prevent a resumption of the rise in imports in 1958, when a new flood of low-cost fabrics from Japan boosted imports to 34 million square yards, from 32 million in 1957. Imports this year will set a new record of more than 40 million square yards as a result of an even greater upsurge of shipments from Italy while Japan continues to supply enormous quantities.

The administration has turned a deaf ear to pleas for relief from segments of the industry which have been particularly hard hit by imports. The cordage and twine divisions have pleaded in vain for protection on the grounds of national security. The "escape clause" petitions of the wool felt and the velvet and wilton carpet divisions have been turned down. The woolen and worsted division's request for a tightening up of the administration of the Geneva reservation has been rejected.

The Textile Workers' Union of America has been in the forefront of the struggle to achieve equitable protection from the inroads of rising imports. We have highlighted the human and social costs of the administration's irresponsible do-nothing policies. We have urged the Congress to adopt a new enlightened approach to the problems of domestic industries faced by growing incursions from abroad. Under such an approach, the growing elements of our economy would be opened up to free competition with foreign producers, while the historic level of production of each basic industry would be safeguarded. We have also urged the abolition of the two-price system for raw cotton, under which the Government subsidizes exports of raw cotton at a price of 8 cents a pound cheaper than domestic mills have to pay: Therefore be it

Resolved, That the executive council of the Textile Workers' Union of America urge the U.S. Tariff Commission to determine the perlipoint for wool-fabric tariffs at a point in excess of the 45-percent ad valorem rate currently in effect. In renegotiating the tariffs on wool fabrics next year, the U.S. Government should establish a duty in excess of

45 percent in order to prevent further serious injury to the domestic industry. tariff quota provision should be retained and applied separately to each category of fabrics so as to prevent excessive concentrations of imports on narrow segments of the market to the detriment of American producers.

We urge the U.S. Government to adopt the policy of safeguarding historical absolute levels of national production for industries essential to the economy, geographical areas of concentration, and groups of employees

concerned.

We urge immediate action to hasten the elimination of the present two-price system for raw cotton which raises costs for the American consumer, bleeds the U.S. Treasury, and handicaps the industry in competition with foreign producers and other domestic consumer uses. We recognize the proposed import fee on cotton-product imports as a temporary measure for equalizing raw-cotton costs under a two-price system to assure fair competition.

Secretary of Defense Gates

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Gates Gets Things Done at the Pentagon; Sits in With Joint Chiefs, Breaks Deadlocks," published in a recent edition of the Philadelphia Evening Bulletin

There being no objection, the article was ordered to be printed in the RECORD. as follows:

GATES GETS THINGS DONE AT THE PENTAGON; SITS IN WITH JOINT CHIEFS, BREAKS DEAD-LOCKS

(By Hanson W. Baldwin)

Washington, April 30 .- Secretary of Defense Gates has galvanized the decisionmaking process of government by the simple expedient of making decisions.

Last December, Gates announced he would join the meetings of the Joint Chiefs of Staff whenever matters in disagreement were under discussion.

This simple practice, since broadened and formalized to bring the civilian Secretary into the military decisionmaking process, has broken quite a few of the minor log jams that obstructed Joint Chiefs business.

In time, it may lead to solutions of some of the major disagreements in the Defense Department.

POWER NEGLECTED BEFORE

Secretaries of Defense prior to Gates had the right to meet with the Joint Chiefs and the authority to make decisions about matters on which the Joint Chiefs did not agree. But none of them ever met regularly with the Joint Chiefs and few of them exercisedexcept on minor matters-their power of de-

Gates' meetings with the Joint Chiefs have become periodic instead of intermittent. Each Monday at 2 p.m. he attends a JCS meeting whether or not a so-called split paper, or disagreement, is under discussion.

In a number of instances he has promised, and given, prompt decisions in matters on which the Joint Chiefs disagreed. PRESSURES NOTED

Some of the decisions may have been wrong. Some have trended toward still more centralization in the Pentagon, a process which Gates is believed to oppose. And some of them may be reversed.

The Secretary is not all-powerful and the pressures from the individual services and from industry, labor unions, politicians, and Congress are tremendous, not only in the Pentagon but in the White House.

But Gates' directive of last December already has led to a kind of chain reaction in the Pentagon and has won him much respect in the White House and praise in Congress.

VINSON PLEASED

Representative VINSON, Democrat, of Georgia, chairman of the House Armed Services Committee, told Gates to his face at a recent Navy League dinner:

"With this one directive, you have left an impressive mark on defense organization.

You have strengthened our great Joint Chiefs of Staff system and at the same time have dealt a shattering blow to the advocates of a single Chief of Staff system.

"You have vitalized and reaffirmed the constitutional principle of civilian control."

Eulogy to Mr. Bernard Weitzer, National Official of Jewish War Veterans, Who Worked Tirelessly in Behalf of Nation's Veterans

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. YARBOROUGH. Mr. President, one of the best friends of the veterans of this Nation, Mr. Bernard Weitzer, passed away on May 1 in his Chevy Chase, Md., home after an illness of 2 months, at the age of 68.

Mr. Weitzer for the past 13 years has been associated with the Jewish War Veterans as their national legislative director. He became well known throughout the country as one of the most sympathetic and hard working men on behalf of the Nation's veterans. No problem or person was too great or too small for Mr. Weitzer's sympathetic ear. It was my privilege to know Mr. Weitzer personally and to consult with him on many problems concerning the veterans of this Nation. I therefore have personal knowledge of his conscientious desire to do everything in his power not only for the veteran, but also for the cause of peace and the betterment of humanity.

Mr. Weitzer was a great protector of the service men and women and their dependents. He felt that his job began not when they became veterans, but from the time they became potential veterans, and he was constantly working for better housing, hospitals and medical care for service personnel.

Mr. Weitzer was especially devoted to providing educational opportunities to veterans. His efforts helped bring about the GI bill for World War II and Korean veterans, and he has given his stanchest support to the cold war GI bill now pending before the Congress.

Mr. Weitzer was well known in Washington legislative and civic circles. He graduated from Cornell University in 1913. He worked with the Alexander Hamilton Institute in New York until the outbreak of World War I when he enlisted in the Army. After World War I. Mr. Weitzer was employed successively with a New York import-export firm; as vice president of Trade Ways, a New York management consultant firm: as vice president of sales for the New York Post Encyclopedia and Book Division, and as vice president of the Bureau of National Affairs here.

I extend my sincere sympathy to Mr. Weitzer's bereaved widow, to his son David, and his two sisters, Miss Edith Weitzer and Mrs. John Shaw. Although the veterans of this Nation have suffered a great loss from his passing, I am consoled by the thought that the result of his good works will live on.

I ask unanimous consent to have printed in the Appendix of the RECORD the account of Mr. Weitzer's death published in the May 2, 1960, issue of the New York Times entitled "Bernard Weitzer, Veterans' Aid."

There being no objection, the article was ordered to be printed in the RECORD. as follows:

BERNARD WEITZER, VETERANS' AID, 68

Washington, May 1.—Bernard Weitzer, national legislative director of the Jewish War Veterans for the past 13 years, died today at his home in Chevy Chase, Md., after an illness of 2 months. His age was 68.

Mr. Weitzer, well known in Washington legislative and civic circles, had returned to his home yesterday after having been in the hospital for a series of intestinal operations.

He graduated from Cornell University in 1913. He worked with the Alexander Hamilton Institute in New York until the outbreak of World War I, when he enlisted

in the Army. He served in the artillery.

After World War I Mr. Weitzer was employed successively with a New York importexport firm; as vice president of Trade Ways, New York management consultant firm: as vice president of sales for the New York Post Encyclopedia and Book Division, and as vice president of the bureau of national affairs here.

He is survived by his widow, Eva; a son, David, and two sisters, Miss Edith Weitzer, and Mrs. John Shaw.

Address by Maj. Gen. D. W. McGowan Before St. George's Society

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. BUTLER. Mr. President, on Saturday, April 23, I had the distinct pleasure of attending a meeting of the St. George's Society, in Baltimore, Md. .On that occasion an address was delivered by Maj. Gen. D. W. McGowan, in charge of the National Guard units throughout the United States. I ask unanimous consent that this illuminating address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY MAJ. GEN. D. W. McGOWAN TO THE ST. GEORGE'S SOCIETY, BALTIMORE, MD., APRIL 23, 1960

I am very happy to have this opportunity to be here this evening with the St. George's Society of Baltimore, at your annual meeting

Dedicated to keeping warm the ties of Britain's sons and daughters with the old country, your society has, since its inception almost 100 years ago, devoted itself also to manifestations of practical Christian charity.

In the true tradition of the good Samaritan, you have comforted the bereaved and

cared for the orphaned.

In a thriving seaport such as Baltimore, the merchant seamen of the world's greatest maritime power were to be encountered in great numbers. Your practical efforts to provide a haven for British sallors on shore leave, and to assist those in distress, illuminates but one interest in your broad program of help to Britain's sons away from home.

It should be noted that our two organizations—the St. George's Society and the National Guard—have much in common, specifically in the military tradition of St. George, and generally in the recognition of Our common Anglo-Saxon heritage.

St. George, long regarded as the patron saint of the soldier, is said to have appeared to the Christian army in the crusades before the Battle of Antioch and lead them on to victory. This famous victory for the Christian knights spread the fame of St. George throughout Europe and his name became the battle cry of English men at arms: "England and St. George."

Interestingly enough, the oldest regiment of the British military forces is a territorial regiment that bore this name. It is the honorable artillery company of London, the first to be recognized of independent volunteer military bodies. The famous regiment was known originally as the fraternity or guild of St. George, as long ago as 1537. It was composed in the first instance of the archers of the city of London, and in the city of London its headquarters remains today. The honorable artillery company of Boston, Mass., is modeled upon and is closely associated with this celebrated corps.

But though all military men can invoke the aid of St. George, it is the National Guard alone that has been privileged to carry forward to this day the military tradition of our Anglo-Saxon forbearers. That tradition goes back to the earliest days of Britain when free landowners between the ages of 16 and 60 formed the fyrd, the local militia. Their term of active service was fixed by custom at 2 months in each year.

When the Danish King Canute conquered England, he did not dare to rely on the old domestic fyrd, but formed instead a royal bodyguard of about 5,000 loyal Danish warriors. Under the Norman kings the militia units, or "train bands" again flourished, and not least because—as Frederick Martin Stern but it-the Welsh longbow became the Weapon with which English infantry dominated the battlefields of the Hundred Years War. The art of the longbow was a difficult one-so difficult indeed that despite the lessons of Crecy and Agincourt, where English bowmen overthrew the armored French knights, none but English yeomen ever mastered it. England's kings not only permitted Englishmen to keep their arms, they required them to do so, encouraging proficiency in archery with contests and prizes—a tradition carried forward into our own American Constitution, which states in the second amendment that, "A well regulated militia,

being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed."

Our own militia system, though uniquely American in concept, actually stems from these English train bands, and has evolved through colonial times up to the present, based on our own military experience in the colonial wars and in the wars of the Republic.

The stockades that protected the early colonial settlements were garrisoned by the local militia company composed of all ablebodied males in ages from 16 to 60 years.

As mobile forces were needed for expeditions to harass the Indian and attack him in his strongholds, each local militla company was called upon to furnish its proportionate share of young, and unencumbered men who could remain in the field for extended periods of time, and who were formed into ranger-type companies called, like their English predecessors, "trained bands." These quotas were generally filled by volunteers, but any shortages were supplied from men who were drafted or impressed.

These ranger companies were grouped into battalions for expeditions against the French and Spanish (Louisburg and Santiago.) The basic and advanced training of the frontiersmen was rugged, on the job in nature, and self-assessing. Indian fighting soon divided them into either the quick or the dead.

George Washington was the most eminent product of this system. Lt. Col. Washington's "Virginia Regiment", which he trained on the western frontier (presently the 176th Infantry, Virginia National Guard), saved Braddock's veteran regulars from complete destruction in the ambush near Fort Duquesne.

The New England militia companies, which stood up to the British regulars at Bunker Hill, were worthy descendants of the companies of English yeomen I mentioned earlier. So were the men of Smallwood's 5th Maryland who saved Washington's army at the Battle of Long Island, Jefferson Davis' Mississippi Rifles at Buena Vista, Louisiana's Washington Artillery at Fredericksburg.

Frederick Funston's Kansas Volunteers in the Philippines; New York's 14th and 23d Brooklyn, with the 118th Palmetto Regiment of South Carolina in World War I, smashed the Hindenberg line in Flanders; Virginia's 116th Infantry (the Stonewall Brigade), assaulting Omaha Beach in Normandy; Maryland's 175th Infantry at St. Lo. All were successor units to those 'trained bands' and they portray dramatically the march of George Washington's well regulated militia" through the pages of this Nation's history. These were service militia units, uniformly organized, armed, and equipped, capably led and adequately trained. The soundness of the militia system in general, with its beginnings stemming from free English yeomen is attested by the combat divisions and other units the National Guard sent overseas in two World Wars and in the Korean emergency.

It was, of course, during the two World Wars that militia and regular units of both the United States and Great Britain fought side by side for the first time since the French and Indian Wars. The very presence of these units side by side in the great battles of those wars, not to mention their outstanding battle records, attests to the strength and vitality of their common military heritage.

It was my privilege to train in England during World War II in command of New Jersey's historic Essex Troop—the 102d Cavalry Regiment—in the same command with Maryland's 29th Division. The spirit of friendship, warm hospitality and comradeship that was extended us during our nearly 2 years in the United Kingdom preceding

the Normandy invasion will forever be gratefully remembered by all of us.

We arrived at Liverpool on October 7, 1942, and debarked at the Princess Stage. By coincidence, certainly not by plan, it was at this same landing that the 102d debarked 24 years earlier, on its arrival in England for service in World War I.

In February of 1943, the 102d took part in ceremonies on Washington's Birthday, together with the Kings Royal Rifles Corps at Sulgrave Manor, the ancestral home of George Washington. It was a colorful ceremoney and we were deeply impressed in being reminded that both regiments were recruited in the New York-New Jersey colonies for service in the French and Indian Wars. Our regiment, the Jersey Blues, and the KRR's originally raised as the Royal Americans.

While stationed at Chiseldon Camp near Marlborough, the 102d was directed to provide a motorcycle escort for the Queen Mother who had been invited to a baseball game between two American service teams in Bristol. Selected to explain the mysteries of our national game to the Queen Mother and her companion, the Duchess of York, was Sgt. William Glynn, who in the closing days of the war was to be awarded the Distinguished Service Cross for gallantry in action.

Our stay in England served to emphasize to many of us the common traditions of the United Kingdom and the United States.

The student of history is most impressed by the way in which the traditions we have inherited from British ancestors have weathered the test of time. It was the ancient laws of England that formed the basis of our own system of jurisprudence. Further, freedom of speech, freedom of the press, the right of peaceful assembly, the right to bear arms, restrictions upon quartering soldiers in private homes, protection against search and seizure, the right to protection by due process of the law, trial by jury: which are found in our sacred Bill of Rights—the first 10 amendments to our Constitution-but they all derive from Runnymede and the Magna Carta. They are today's heritage of freemen as a legacy from the freedom loving Englishmen who in 1215 forced King John to affix his seal to the Magna Carta.

But what of our militia tradition as exemplified today by the National Guard of the States.

In 1952, before this very group, the Australian Ambassador to the United States, Sir Percy Spender, speaking of the turbulent times in which we live, had this to sav—and I quote:

say—and I quote:

"We have nothing to fear so long as we regard the need to prepare and defend ourselves not as an emergency, but as a normal way of living for a long time to come, and so long as we maintain a balance between armed strength and economic strength."

Surely no words could more fittingly describe the military requirements of today which must be met by our National Guard. It is a force of private citizens who train in time of peace to defend our liberties in time of war; and it has long been recognized as the most effective way to train adequate numbers of men and units without an undue strain on our economy.

undue strain on our economy.

Gen. Maxwell D. Taylor, former Chief of Staff, U.S. Army, in these words sums up the key role of today's National Guard:

"The guard justifies its existence as a Federal force through its potential contribution to support the national strategy as expressed in current war plans. These plans, covering both limited and general conflicts, depend for most of their effectiveness upon the ability of the National Guard to play the important part assigned to it in and after mobilization."

In the Army National Guard we have 400,000 trained men who make up 21 infantry divisions, 6 armored divisions, hundreds of other combat and combat support type units, and most recently, Nike missile units which right now are defending key industrial and population centers throughout the United States. Here in the Baltimore-Washington area, six National Guard Nike-Ajax batteries of the Maryland and Virginia National Guard are actively engaged in the air defenses of the United States. Three more batteries of the Maryland National Guard are now training at Fort Bliss, Tex., scheduled to take over active defense missions by the 1st of July.

In the Air National Guard we have more

In the Air National Guard we have more than 70,000 men in 22 combat wings, including 40 fighter-interceptor squadrons, 14 tactical reconnaissance squadrons, and 22 tactical fighter squadrons, in addition to 2 air transport wings. Our combat squadrons are all jet equipped, many of them with supersonic aircraft such as the F-100 and the

-104.

The Air National Guard is a force in being, capable of augmenting the active Air Force instantly in case of attack. It has interceptor aircraft on full-time runway alert at 20 air bases in the continental United States and Hawaii, ready to respond on 5 minutes notice to a "scramble" from the Air Defense Command.

Air guard tactical fighter and reconnaissance squadrons represent an important share of the combat potential of the Tactical Air Command. In addition, we have just taken on a new global mission in strategic airlift. Six air guard squadrons are now equipped with Boeing C-97 Stratocruisers which enable the air guard to fly combat troops or essential cargo anywhere in the world.

This Army and Air National Guard is truly a formidable array and in the tradition of the National Guard, it is still a volunteer

force.

As informed citizens and as taxpayers, Americans are entitled to a clear picture of the National Guard in this age of highly technological fighting forces: a National Guard which is manning Nike missiles and supersonic jet aircraft around the clock; a National Guard prepared for instant mobilization, ready to follow the active forces into combat in a matter of weeks; a National Guard which because of its assigned roles and missions upon mobilization, is truly vital to the survival of the free world.

Still, to answer the question: Does the National Guard meet the requirements of today's nuclear warfare? Has lightningfast warfare outmoded the National Guard's Since my testimony on this subject could

Since my testimony on this subject could well be suspect, let me tell you what the Secretary of the Army, Hon. Wilber M. Brucker, recently stated in testimony before the Congress, and I quote:

"There are divisions of the National Guard that are so ready that they could move in right behind the Regular Forces in a matter of days—that's how ready they are."

The tradition of our Anglo-Saxon forebears lives on because it is the spirit of that tradition—the bearing of arms by free citizens—that will never become outmoded. So long as we nurture that spirit, our free institutions will live.

The Tariff Quota on Woolen and Worsted Imports

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record a letter to the President of the United States by Bernard Smith, Esq., of New York, counsel for the American Trade Association for British Woolens, Inc. I think that Members will see from this discussion that the wool fabric tariff quota as it now operates can be very detrimental to the small businessman engaged in the importation of higher quality fabrics, as well as to the small businessman who manufactures garments from such material—many of these being located in New York.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN TRADE ASSOCIATION FOR BRITISH WOOLENS, INC., New York, N.Y., February 16, 1960.

Re wool fabric tariff quota, Hon. Dwight D. Eisenhower, President of the United States,

The White House, Washington, D.C.

Dear Mr. President: A year ago, for the period from January 1, 1959, to February 7, 1959, 2,755,885 pounds of imported wool fabries were charged against the 1959 tariff quota, with the breakpoint in the tariff quota being reached on May 18 of that year. For the similar period of this year, viz., from January 1, 1960, to February 6, 1960, according to the Bureau of Customs, 7,302,282 pounds of imported wool fabrics were charged against the 1960 wool fabric tariff quota, representing an increase of approximately 250 percent over the similar period of 1959, At this rate, the wool fabric tariff quota can be expected to be filled by early March of this year.

Thus, the imposition of the tariff quota in this year will result in an ad valorem rate of duty of 45 percent being applicable, for almost 10 months of the year, on all but an infinitesimal quantity of wool fabrics that will be dutiable at 30 percent after the breakpoint in the wool fabric tariff quota is reached.

A year ago, because the breakpoint in the wool fabric tariff quota was unexpectedly reached in mid-May, rather than in July, as in the 2 previous years, American importers of wool fabrics valued at over \$4 per pound were obliged to pay out large sums required to absorb the 80-percent increase in duty with respect to wool fabrics that they had ordered for delivery to be made at a time reasonably expected to take place before the wool fabric tariff quota for 1959 would be These American importers at the time they placed their orders could not possibly have anticipated the huge and unprecedented influx of reused and reprocessed wool fabrics from the Prato district of Italy, for these fabrics are sold in markets in the United States with which importers of traditionally used wool fabrics are not familiar. Moreover, it was not until 1959 that the flow of these Prato fabrics rose to such unprecedented heights.

Just as American importers could not have anticipated that the breakpoint in the tariff quota in 1959 would be reached in the middle of May, rather than in July, as in the 2 previous years, so American importers of higher cost and relatively noncompetitive fabrics could not have been expected to anticipate that the breakpoint in the tariff quota would be reached in the year 1960 in early March. Most of these fabrics of special design take from 6 to 7 months to manufacture. At the time these fabrics were ordered, American importers could not reasonably have been expected to plan their purchases on the assumption that the tariff quota would be reached so desperately early in this year.

Thus, unless relief substantially along the lines hereinafter requested is granted, important segments of American small business will not only be obliged to absorb an 80 percent increase in duty for fabrics they had ordered many months ago, but will be obliged to contract their volume of business for the last half of the year for few, if any, of these fabrics can be acquired in the United States in the specific qualities and designs required, or in the limited quantities per style that American users of these fine fabrics traditionally employ in the operation of their businesses,

It is true, of course, that these dark days that American importers and users of traditional higher cost specially designed imported wool fabrics are going through are lightened to some degree by the hope that renegotiation which you have made possible will bring relief to them in 1961. We submit, however, Mr. President, that no useful purpose is being served by maintaining in the current year the punitive effect of a 45 percent duty on the distinctive higher cost imported fabrics on which American users thereof for many years have traditionally relied.

The domestic industry in the year 1959 enjoyed the highest level of prosperity it had known since 1951 and the Department of Commerce has recently reported that the volume of business of the American industry is expected to increase in the current year. The domestic industry may point to the sharp increase in wool fabric imports from 1956(the year in which the Geneva Wool Fabric Reservation was invoked) to 1959, the year of the greatest prosperity in the domestic industry since 1951. This increase, however, was limited entirely to wool fabrics valued at not over \$2 per pound with wool fabrics valued at over \$2 per pound showing, instead of an increase, a marked decline for such period. The following is a comparison by pound weight of imported wool fabrics for the years 1956 and 1959, respectively, in the value categories established by the Bureau of Census with respect to imported wool fabrics, classified under 1109(a) of the Tariff Act:

	1956	1959	Increase (+) or de- crease (-)	
Valued not over \$1,25 per pound. Valued over \$1,25,	199, 698	4, 754, 615	+4, 554, 917	
not over \$2 per pound	1, 324, 189	3, 534, 608	+2, 210, 419	
Valued over \$2, not over \$4 per pound.	10, 289, 481	9, 418, 381	-841, 100	
Valued over \$4 per pound	5, 183, 875	4, 438, 421	-745, 454	

The tremendous increase in imports of wool fabrics valued at not over \$2 per pound has stemmed almost entirely from the accelerating flow of low-cost reprocessed fabrics produced in the Prato district of Italy. This influx of Prato reprocessed and reused wool fabrics did not begin to make itself felt until almost 2 years after you initially proclaimed the invocation of the Geneva Wool Fabric Reservation.

These reused and reprocessed wool fabrics, we are informed, are made almost entirely from worn civilian clothing that the United States exports to Italy. For the 2-year period, 1957 and 1958, for example, the United States exported to Italy, 140,000,834 pounds of used civilian clothing and old or used rags, wholly or in chief weight of wool. It is significant, on this score, to note that the second largest importer of American used wool clothing and rags was the Netherlands, to which country the United States exported only 18,490,000 pounds thereof, as against the huge quantity of 140,000,834 pounds that the United States exported to Italy. (Bulletin of the National

Association of Wool Manufacturers, vol. LXXXVIII. 1958.)

Thus, the worn civilian clothing that for the greater part Americans donate to American charities which realize the proceeds thereof when resold to Italian importers, are in effect, subsequently returned to American shores in reprocessed form, consuming an unintended major share of the tariff quota at the expense of American importers and users of distinctive higher cost imported fabrics upon which the American importer, the American garment industry, and the American custom tailoring industry have traditionally relied.

The result of the American policy of exporting American worn wool clothing to Italy is clearly evidenced by the figures compiled by the U.S. Tariff Commission from the official statistics of the U.S. Department of Commerce for the month of October 1959. In that month, the average unit value of wool fabrics imported from Italy was 58 cents per square yard as against \$1.90 per square yard for United Kingdom wool fabrics, \$2.09 for those of France, and \$2.17 for those of Ireland. We have discussed methods for dealing with the problem of these reused and reprocessed wool fabrics in our testimony at the hearings before the Tariff Commission and the Committee for Reciprocity Information in early December of 1959. These hearings, however, dealt with the peril point investigation and the proposed renegotiation, the results of which are not calculated to become effective until January 1961.

We are concerned now, however, with the problems of American small enterprises in the year 1960, for it is they who will have to absorb the penalty of an 80-percent increase in duty for having ordered specially designed quality fabrics in 1959 for delivery in this year by failing to anticipate that the breakpoint in the tariff quota would be reached in early March of 1960 as against July of 1957 and 1958 and in mid-May of The consequences thereof in this year can begin to be appreciated when the results of the unanticipated early breakpoint in 1959, which took place in mid-May of that year, is examined. When, on May 19, 1959, it was announced that the breakpoint in the wool fabric tariff quota had suddenly been reached, over 1 million pounds of British wool fabrics had either already left the United Kingdom bound for American harbors or were en route from British mills to British docksides or were being readied for shipment scheduled to arrive at American ports prior to the time when the wool fabric tariff quota could reasonably have been expected to be filled.

According to statistics compiled by the U.S. Tariff Commission from official statistics of the U.S. Department of Commerce for the first 6 months of 1959, 3,210,922 pounds of wool fabrics were imported or entered for consumption. In assessing these figures, it must be remembered that under present methods of computation employed by the Census Bureau, a considerable proportion of the wool fabrics actually imported in May are reflected in figures of imports for the month of June 1959. For the last 6 months of 1959, approximately 1,103,000 pounds of Wool fabrics valued at over \$4 per pound were imported or entered for consumption. It can be assumed that by far the greater Part of the 1 million pounds of British wool fabrics that had been previously ordered for delivery calculated to take place before the breakpoint in the tariff quota was reached in 1959, consisted of fabrics valued at over \$4 per pound. Importers faced with the Obligation of paying an 80-percent increase in duty on such fabrics, rescheduled deliveries or placed such fabrics to a large degree in bond so that they would not be obliged to absorb the 80-percent increase in duty until such time in the year as these fabrics would be required for manufacture. When to British woolens there is added wool fabrics valued at over \$4 per pound of other exporting countries that were affected by the early breakpoint in the quota, it should be clear that most of the fabrics valued at over \$4 per pound imported or entered for consumption in the last 6 months of 1959 consisted of cloths that had been ordered by American importers for delivery at a time reasonably expected to be earlier than the date the breakpoint in the tariff quota for that year was reached.

Thus, the penalty in effect imposed by the unanticipated early breakpoint in the tariff quota was visited not upon foreign exporters but basically on American importers, who found themselves obliged to absorb the 80-percent increase in duty, for they had neither a legal nor a moral basis upon which to request cancellation of orders long since placed in foreign lands because of a tariff quota imposed by their own Government being filled so much sooner than could reasonably have been expected.

With the breakpoint in the wool fabric tariff quota expected to be reached in early March of this year, rather than in mid-May, as in the previous year, American importers of high cost relatively noncompetitive fabrics are going to have to pay much greater aggregate penalties for failing to anticipate a so much earlier breakpoint in the tariff quota this year than last. The imposition of these penalties will serve no useful purpose. They will not help the American industry. They will serve only to penalize their fellow Americans, for these wool fabrics arriving unexpectedly after the breakpoint must be manufactured into cloth with American importer, manufacturer, and consumer absorbing in their respective turns the consequences of the 80-percent increase in duty.

We do not suggest a rescission of the wool fabric tariff quota for the year 1960, for, the decision to maintain the wool fabric tariff quota for 1960 having been made, we recognize that it will not now be rescinded. ask only that after the breakpoint in the wool fabric tariff quota is reached an ad valorem rate of duty of 30 percent be applied to all fabrics valued at over \$4 per pound. An amendment to your decision in keeping with this proposal will not involve any additional costs in computation, for the category of fabrics valued at over \$4 per pound is currently computed by the Bureau of the Census and is the highest value category for imported wool fabrics for which records are maintained by the Bureau of the

We submit. Mr. President, that the granting of such limited relief to American small business cannot be expected to result in any material increase in the quantity of wool fabrics valued at over \$4 per pound being imported in the current year than in the years 1955, 1956, 1957, or 1958. Indeed, if the domestic industry is concerned lest as a result of such limited relief materially increased quantities of such wool fabrics may be imported, we would regard as appropriate the inclusion of a proviso to the effect that after 5,139,360 pounds of wool fabrics valued at over \$4 per pound are imported or entered for consumption in this year, that the rate of duty thereafter be increased to 45 percent. I suggest this figure of 5,139,360 pounds because this was the amount of wool fabrics valued at over \$4 per pound that were imported in the relative recession year in the domestic industry of 1958 and before the full impact of reprocessed and reused Prato fabrics began to be felt. Indeed, from 1955, the year before the Geneva wool fabric reservation was invoked, through 1958, imports of wool fabrics valued at over \$4 per pound fluctuated only slightly. Imports thereof during such 4-year period were as

	Pounds
1955	5, 214, 381
1956	5, 183, 875
1957	5, 180, 716
1958	5, 139, 360

Only in the year of maximum prosperity in the domestic industry, viz. 1956, as a consequence of the sudden and unprecedented influx of reprocessed and reused wool fabrics from the Prato district of Italy consuming so much of the quota, that imports of wool fabrics valued at over \$4 per pound fell below 5 million pounds descending to only 4.438,421 pounds.

While clothing is manufactured to some degree in other States of the Union, New York State is basically the fashion clothing center of our country. The garment industry in New York State and nearly all the principal importers of wool fabrics are located in this State. Fashions in clothing require freedom of choice in the construction of cloth, in style, in design, and in the right to acquire them in one or two pieces to a style—quantities in which such cloths cannot be purchased in the United States even if in other respects occasionally comparable.

It is respectfully submitted that it is scarcely appropriate to disturb the economy of a great industry in one State for the doubtful convenience of another spread over so many other States of the Union. We cannot expect to persuade the American industry to support our plea for their leaders. in testifying before the Tariff Commission. maintained the position that every yard of imported cloth displaces a yard of domestic cloth. By the same reasoning, of course, every imported gallon of French wine displaces a gallon of California or New York wine, and every imported Rolls Royce dis-places one of Detroit's more costly cars. No American industry should expect to seal off the United States from foreign manufac-tures for their convenience unless the foreign economic policy of the United States dramatically changes, which is as unlikely as it is undesirable.

We therefore respectfully pray, Mr. President, that you will consider a prompt amendment of your decision with respect to the wool fabric tariff quota for the current year by providing that all wool fabrics valued at over \$4 per pound imported in the year 1960, after the breakpoint in the wool fabric tariff quota is reached, be dutiable at an ad valorem rate of 30 percent; or, alternatively, tht after the breakpoint is reached, the ad valorem rate of duty of 30 percent, shall be applicable to wool fabrics valued at over \$4 per pound until a total of 5,-139,360 pounds (the 1958 total of such fabrics) are imported, with any of such fabrics imported thereafter dutiable at 45 percent.

If, for any reason, the foregoing proposal does not recommend itself to you, may we suggest that consideration be given to an increase in the wool fabric tariff quota for the year 1960 by the amount of the increase from the year 1956 to the year 1959 in imports of wool fabrics valued at not over \$2 per pound. Since the increase in such fabrics stems almost entirely from imports of reprocessed or reused fabrics from the Prato district of Italy made of American used wool clothing, such increase in the quota can to some degree at least limit the serious adverse effect of these American exports of used clothing on American importers and manufacturers who have traditionally used higher cost distinctive imported fabrics which these Prato reprocessed wool fabrics are preventing from reaching our shores.

May we point out, Mr. President, that this is not a request for relief for foreign exporters or foreign manufacturers. This request is directed solely toward relieving important segments of American small business who rely in the operation of their enterprises on

higher cost distinctive fabrics from the heavy burdens that will be imposed upon them in the absence of such relief by the unprecedented early breakpoint in the tariff quota expected in this current year.

May we urge consideration of these proposals promptly, for, with the breakpoint in the wool fabric tariff quota rapidly approaching, such relief as may be provided, to be fully effective, should take form before the breakpoint in the tariff quota is reached.

We trust that the plight of these small

American enterprises will receive your favor-

able consideration.

Very respectfully yours, BERNARD B. SMITH, Counsel, American Trade Association for British Woolens, Inc.

Radford Code of Ethics

EXTENSION OF REMARKS OF

HON. OREN E. LONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. LONG of Hawaii. Mr. President, a code of ethics was recently drawn up by the student council of Radford High School in Honolulu working together with representatives of the Oahu Youth Council. This code of ethics is so excellently stated that I think it will be of interest to the membership of the Congress and, indeed, to persons throughout the Nation who are concerned with the overriding question of morality in our daily lives. I ask unanimous consent to have printed in the Appendix of the RECORD the Code of Ethics of Radford High School in Honolulu.

There being no objection, the code of ethics was ordered to be printed in the RECORD, as follows:

RADFORD CODE OF ETHICS.

This I believe:

Knowing that all my actions reflect upon myself, my parents, school, and Nation, I as a Radford student must:

Have a high and permanent code of honor governing all things I do, for by raising my standards. I raise the standards of my school and country;

Dress neatly and appropriately for all occasions for neatness inspires pride;

Show my loyalty and support to those people in positions of leadership, for they are devoting their lives to guide us;

Feel that a really big person is one who has high goals and ideals that he will define

and follow no matter what;

Try to respect all other people and their property in such a way as I would like to be respected because freedom for me means freedom for others;

Think before acting, for one little deed may have far-reaching effects;

Broaden my experiences and help others by participating in school and community activities;

Realize that for my own sake and that of others, I should obey all rules set down by those in authority;

Know that showing pride in my school may be exemplified by protecting its grounds and reputation;

See that I, as a teenager, will conduct my-self in such a manner as to be an asset to the community;

Try to be spiritually and morally right-

Ambitiously pursue knowledge from many sources in order to be a wise and well-informed adult; and

Live every day the very best I know how and make an effort to improve myself in at least one small way every day.

By accomplishing the above, I will be able

to respect myself as well as others.

Law Day U.S.A.

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. BYRD of West Virginia. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Charles Jules Rose at the Law Day Chapel Service of St. Albans School for Boys in Washington.

Mr. Rose is a native West Virginian currently practicing law in the District of Columbia. He has long been interested in government and law, having been awarded the DAR medal for excellence in American history when but 13.

He majored in political science while an undergraduate at the George Washington University, and, upon graduation. was recipient of the Phi Mu award for outstanding achievement in that discipline. Since 1942, he has been a member of the American Political Science Association.

After his discharge from the service, he completed his study of law at the George Washington University Law School under the GI bill, and, upon graduation, became an active member of the Junior Bar Section of the Bar Association of the District of Columbia. He has written on such varied topics as administrative law and arbitration, and is currently a panel member of the American Arbitration Association.

In addition to being a member of the bar of the Supreme Court of the United States, Mr. Rose is a member of the bars of the U.S. Court of Appeals for the District of Columbia, the U.S. District Court for the District of Columbia, the Municipal Court of the District of Columbia, the Court of Claims, the Tax Court of the United States, and the U.S. Court of Military Appeals.

The address which I am privileged to present bespeaks the glory of our system of law, it stresses the relationship between our law and our liberty, and it visualizes the bright promise of a world in which the law of nations is adhered to by all.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

LAW DAY U.S.A.

(By Charles Jules Rose)

In 1958 the American Bar Association decided that the Communists had used the 1st of May for their own purposes long enough and that we of the free world should avail ourselves of the opportunity the 1st of May afforded to honor our system of law.

President Eisenhower in proclaiming Law Day duly noted, "A free people can assure the blessings of liberty for themselves only if they recognize that the rule of law shall be supreme and that all men are equal before the law."

In the final analysis laws are but rules that command us to do what is right and prohibit us from doing what is wrong. Yes, laws are but rules—but without these rules we would have chaos.

You boys know that not even the simplest game you ever played was started without rules. Of course such rules are not always precise, nor are they always understood by all the players and—let's face it—the rules of the game are sometimes breached, with dissension, rancor, tears, and occasional bloody noses.

Men are only boys grown large. They, too, have established rules to govern their individual conduct in the game of life. These rules, which we call laws, to be honest do not always work to perfection. Yet they are better than no rules at all, and there is no reason that in the days to come we cannot perfect that which is good in our law and eliminate that which is not good, so that the laws that our children will inherit from us will be better than those we now have.

The primary requisite of law is to establish

There is no law in the animal kingdom other than that established by nature. As a consequence the strong devour the weak. Happily animals have no apparent desire to transfer property, pursue knowledge, or develop the arts, for they could accomplish none of these things without law. Were it not for law we too would forever remain at the animal level.

Yet in a democratic society law must mean more than order. Dictatorships through the ages have had plenty of laws and plenty of order. Nazi Germany, Fascist Italy, Com-munist Russia, and China have not lacked for laws. What dictatorships do lack is what is the essence of a democratic society; namely, justice administered equally for all. The inscription above the entrance to our Supreme Court Building proclaiming, "Equal Justice Under Law," well describes what we strive for. Justice that can be had only under law and justice that is equally administered to all.

There are three large areas of law.

First, there is the law which concerns itself with the relationships between individuals involving such matters as marriage and divorce, inheritance, contracts, personal injuries, and the ownership of property. In our modern idiom this is the law of personto-person.

The second area of law concerns that body of law between an individual and his government. In a democratic society both have rights and privileges and neither can encroach upon the other. It is vital that this area of law be precise and vallently defended against attack, for it is in the interpretation and administration of this phase of law that our liberty as free men is maintained or forever lost.

The third great category of law governs the relationship between nations. This area is assuming ever more importance in this critical moment in the history of mankind.

In the past decade more has been accomplished in dealing with the difficult problems of breaking down barriers between nations, promoting international trade and assisting the less fortunate people of the earth than ever before. Still it is not enough. It is not enough because the cry for a system of law that all nations will adhere to, which is necessary to assure world order and justice is more pressing than ever before.

Only law between nations, universally adhered to and fairly and impartially administered can relieve mankind of the bur-

den of armaments that saps the strength and resources of nations everywhere.

Only world law can dispell suspicion and permit peoples everywhere to seek their own destiny untroubled by fear.

Only world law can assure justice to both the weak and the strong, the rich and the poor, the old nations and the young.

There are those who say such law cannot be achieved, and of course it cannot unless we give to its achievement the full dedication of our energies. The hour is late and every minute counts. The choice it has been well said is between one world and no world, between the brotherhood of man and the annihilation of man.

The prophesy originally stated by Isalah and later repeated by Micah that, "They shall beat their swords into plowshares and their spears into pruning hooks: nation shall not lift up sword against nation, neither shall they learn war anymore," shall become a reality only when we recapture the vision of Isalah and Micah and then—to continue the classical metaphor—put our hand to the plow.

May I leave you this morning with this thought, "In the final analysis it may be said of law as it may be said of truth—it not only sets men free, it keeps them free."

The 1964 New York World's Fair

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. JAVITS. Mr. President, one of the hardest tasks in the creation of anything of great and lasting value is the often unseen work that goes into its beginning. This is as true of buildings as of projects of other kinds. It is certainly the case with the plans for the 1964 World's Fair, to be held in New York City. A number of New York's leading citizens have been instrumental in the work of organizing the New York World's Fair Corp., securing participants and initiating plans for construction. One of the most gratifying effects of this groundwork has been the cooperation of the President of the United States and the Department of State in working with the foreign nations which we hope will participate in the fair. As the President has pointed out, this fair can be a powerful instrument for peace and friendship in freedom.

Among the builders of the World's Fair project for New York, and the Nation, some of whom are now retiring, their work well done, with the naming of Robert Moses as permanent head of the organization was the executive vice president, Mr. Robert Kopple, whose particular efforts and devotion merit public notice

I ask unanimously consent that a letter which I recently wrote to Mr. Kopple may be printed in the Appendix of the Record, and am pleased to note that a similar letter written by Senator Keatmag, together with a letter from President Eisenhower halling the fair have previously been so printed in the Record. There being no objection, the letter

was ordered to be printed in the RECORD, as follows:

APRIL 6, 1960.

Hon. Robert Kopple, New York World's Fair 1964 Corp., New York, N.Y.

DEAR BOB: The obvious growing success of the New York World's Fair is due in great part to the devoted and unselfish spadework you did during the time it was suffering its birth pangs. Certainly your understanding role in the struggle to secure Federal recognition and support for the fair against the opposition of some mighty forces were a most important contribution to the success which has been achieved here in Washington.

New York owes you a debt of gratitude, and you yourself should have a deep feeling of satisfaction and achievement in this regard. Yours is an outstanding public service.

With best wishes. Sincerely,

JACOB K. JAVITS.

"Passport to Dignity" by Miss Kay Smith of Dallas, Woodrow Wilson High School Student, Wins Prize in National Essay Contest

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. YARBOROUGH. Mr. President, Miss Kay Smith of Dallas, a student at Woodrow Wilson High School, has won national recognition in the 1960 National Essay Contest with her essay on the subject "Jobs for Handicapped—Passports to Dignity."

The contest was conducted by the President's Committee and cooperating Governors' Committees on Employment of the Physically Handicapped. The essays were judged on content originality, organization, impact, clarity of expression, and neatness.

There were over 1,700 entries in the contest and all of the national winners did outstanding work to win in such keen competition.

I ask unanimous consent to have Miss Smith's essay printed in the Appendix of the Record.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Kay Smith, Woodrow Wilson High School, Dallas, Tex.)

Handicapped people do not need pity, they need help. To be loved, to feel needed, to be wanted—universal desires acutely felt by the handicapped person who needs only a job to raise him from depths of despondency to planes of dignity. "Hire the handicapped." "Believe in the handicapped." These are excellent slogans, but they should be based on a faith in people and a sincere love of mankind, not on pity or vain self-righteousness. Helping someone regain dignity is important, but the correct attitude toward that person is equally important.

According to the September 1959 Report of the U.S. National Health Survey, 17 million people in this country have disabilities which hamper their normal ability to work or to carry on the ordinary jobs of daily living. Around 250,000 people annually are disabled to the degree where they need rehabilitation and the annual cost to the Nation for assistance to these people and their dependents is over a third of a billion dollars. No matter how revealing these facts may be, they are still merely figures on paper unless American citizens help the handicapped. The time to act is now—but how? One person cannot hire 17 million people. But one person can might the plight of the handicapped known to others and maybe his earnest desire to see something done for these people will influence someone in a position to be of real help to the handicapped of this land.

America's heritage abounds with justice and an in-born love of freedom and equality. However, this sense of justice and equality is not always extended to the handicapped. Theirs is not only an American heritage, but theirs is the legacy of the handicapped, handed down to them through centuries of personal extinction, ridicule, and imprisonment. Great have been the advances made toward the disabled in the 19th and 20th centuries, and many able-bodied citizens have given and are giving the handicapped a real chance, but superstitions and prejudices are hard to overcome and many of the handicapped have not been given an opportunity to be well-adjusted and useful human beings. However, great expansion is foreseeable in America's future, and with the realization of bigger industrial dreams, maybe the dream of employment for all handicapped will become a reality.

Today many industries are helping the handicapped through jobs which are given on the basis of ability. Goodwill Industries and Abilities Inc. are two good examples of industries established for the reahabilitation and employment of the handicapped. Placing the plight of the handicapped before the eyes of the public are such committees as the President's Committee on Employment of the Physically Handicapped and similar State and local committees. The AFL-CIO has done commendable work in stressing that it is "ability not disability" 1 that counts in hiring employees. Many more committees and groups are waging successful battles against prejudice where the handicapped applicant is concerned. However, the campaign for the handicapped is not finished and there is much work to be done. Everyone can help: First, by being aware that handicapped face a problem; second, by realizing that the loss of dignity by the handicapped results from the inability to support themselves and their families; third, by pleading the case of the handicapped to family, friends, and neighbors, and by using influence with those in position to hire handicapped workers.

It pays to hire the handicapped. Why? It has been proved that, as a group, the productivity of handicapped workers is slightly higher than of nonhandicapped workers, while their injury, absenteeism, and resigning records are lower than those of nonimpaired workers. These reasons in themselves are proof that it pays to hire the handicapped. Moreover, everytime a handicapped worker is employed, his name is subtracted from the Government's dependents list and added to the list of taxpayers. But the most important reason for hiring the handicapped is that when a handicapped person is employed, an investment is made. And investments in

¹ Mason, Walter, "It's Ability That Counts," reprinted from the AFL-CIO American Federationist, January 1959.

human beings reap the biggest dividends of

Losing the use of both legs does not take away a person's right or ability to use his hands and arms. Many jobs only require that a person be adept with his hands and there are many handicapped persons who could, with a little training, fill these positions. Often it is only custom which dictates that a man must stand to do a particular job. Someone paralyzed from the waist down might prove that many of the so-called standing jobs could be done just as effectively in a sitting position. Too often the ability of the handicapped is underestimated. Operating a service station is no difficulty for a man in Corinth, Miss., who is blind. brothers in Dallas, Tex., both victims of muscular dystrophy, successfully own and operate a hobby shop. A deformed hand is no problem for a truck driver in Tulsa, Okla. With the use of braille textbooks, several blind teenagers are successful students in three Dallas high schools. The fact that they are blind has no bearing on their ability to join in the crowd and enjoy the same experiences and excitements as their classmates. In a sense the above people are not They may have deformities or handicapped. diseases, but these handicaps have been a beginning, not an end to a successful life.

There is a place in this country for the handicapped The future sees a tremendous industrial output for America, and with this output will come jobs—jobs which can be filled by the handicapped people of this land. Will these jobs be given to the handicapped? Will the handicapped person be given the chance to prove that he can be a dignified and productive member of his community? The answers to these questions lie in the future, and the future lies in the hands of the American people. In time maybe the country which is always willing to give each man his chance will provide more jobs, "the passports to dignity," for the handicapped.

Rolla Clymer

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. CARLSON. Mr. President, Kansas has produced many men and women who have achieved great distinction and honor, one of whom is Rolla Clymer, editor of the El Dorado Times.

This year Mr. Clymer was given special recognition by his selection as "Kansan of the Year." He is a native Kansan and today is revered as the dean of Kansas editorial writers, a position vacated some 16 years ago by the State's most noted journalist, William Allen White.

Mr. Clymer is a kindly, influential, and highly respected citizen of El Dorado, Kans. His editorials receive national recognition.

Mr. Clymer has always been at the forefront of every movement to make Kansas a bigger and better State.

I ask unanimous consent that an article entitled "Sage of the Flint Hills," which appeared in the March-April issue of the magazine Kansas, published by the Kansas Industrial Development Commission, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SAGE OF THE FLINT HILLS

"It doesn't matter where you were born the important thing is to die in Butler County and have an editorial written about you by Rolla Clymer." So penned one Kansas editor recently about another.

The subject of this printed remark happens to be the same relaxed gentleman, comfortably titled back in his swivel chair before a rather cluttered-up rolltop desk, scanning the newspaper in the photograph on the opposite page. This is Rolla Clymer—and it doesn't take a second glance at his surroundings to peg this man for what he is: namely, a newspaperman of the old school. This description sells Rolla short, however, for in the State of Kansas, the El Dorado publisher is revered today as the dean of editorial writers, a position, you may remember, vacated some 16 years ago by the death of the State's most noted journalist, William Allen White, of Emporia.

What other editors think of Clymer is pretty well summed up in the opening paragraph above by Stu Newlin of the Wellington Daily News: It doesn't matter where you were born, as long as you die in Butler County and have an editorial written about you by the editor of the El Dorado Times.

Kansas Journalists are not the only citizens who hold Rolla Clymer in high regard, as was evident a few weeks ago when the Native Sons and Daughters, at their annual Kansas Day banquet, bestowed upon Rolla their most signal honor as "Kansan of the Year." That this award was well-deserved, no one questions, for few Kansans ever have demonstrated their love for their native soil as has this south central Kansas writer, who piously refers to his home State as "Mother Kansas."

Coming from the lips or pen of someone else such a reference would more than likely evoke at least a choked-up snicker. But ah, from Rolla, it is genuineness and sincerity to the core, and the Kansas reader not only knows it, but respects it. And in this cynical age when even the Gettysburg Address, if attempted for the first time, would in all probability be pooh-poohed as trite and corny, many of Clymer's articles rank as pure poetry, standing out on the editorial pages of Kansas papers like a basketball center in a room full of midgets.

The high point of each day's work, Rolla admits, is when he is doing what is shown in the photograph opposite, that is, reading and absorbing the editorial pages of the scores of other daily and weekly newspapers delivered to his second-floor office in the Times Building at El Dorado. During his session with the exchange, or as other ideas pop into his mind, Rolla swivels to his left and assaults the most modern piece of equipment in his office, his standard-sized typewriter.

Once the plug is pulled on an editorial idea, the words appear to flow effortlessly as his typewriter prowls the confines of Kansas and the borders beyond, extolling, commenting, sometimes praising, sometimes criticizing. His prose and style is in a class by itself; there's no mistaking a Clymer article. His favorite subjects are the ones closest to his home: the city of El Dorado, Butler County (often referred to as the kingdom of Butler), and his beloved Flint Hills which "stand off there along the horizon, in serried ranks stretching from the Kaw to Oklahoma fastnesses, brooding over what mysteries no man knows."

For 42 years Rolla Clymer has been on the newspaper scene at El Dorado, except for a 6-month stint on a Santa Fe paper in the early 1920's. As a fellow editor remarked, "By unanimous agreement this lapse will not be charged against him, the theory being that it made him a better Kansan."

Born at Alton in Osborne County, the son of a Presbyterian minister, Clymer spent his boyhood in a number of small towns in Kansas and other States. At Miltonvale he experienced his baptism with printer's ink; it left an indelible mark which was never to leave him. He was graduated from high school at Quenemo and from the College of Emporia where he distinguished himself both in sports and oratory. While at Emporia he came under the influence of William Allen White who started him off in his career in journalism. It was White who made both a writing newspaperman and businessman out of Clymer. During his last 2 years at college, he worked as a string reporter on the Gazette and following graduation he joined the staff at the magnificent sum of \$10 a week.

Three years on the Gazette inspired Clymer with the idea that he needed more education so he enrolled as a graduate student at Kansas University. From 1914 to 1918 he was the editor-manager of the Olathe Register. Then in 1918, turned down by the Army because of his hearing, he took Editor White's advice and settled down in El Dorado on the Republican, which later merged with the Walnut Valley Times to become the El Dorado Times in 1919.

First he was coeditor of this newspaper and in 1923 he became the publisher.

Rolla Clymer's editorials are not limited to any field. They deal literally with everything and the variety of his subjects is amazing. But one thing is certain, he writes editorials for folks to read. When the occasion demands it, as it did last year when some upstart Texas editor suggested that the K. C. Steak was named for a Texas rancher. Rolla can editorially blast off with both barrels. On the other hand, when he is commenting on the death of a local citizen, his writing can only be described as touching and beautiful.

Clymer is a brilliant—but reluctant—orator, as well as the possessor of a facile penannually he is called upon to deliver the address for the award of journalistic merit given by the William Allen White Foundation to a Kansas editor. That is, except for the occasion of a few years ago, when Clymer was the recipient of the award himself.

Last December when the centennial reenactment of Abraham Lincoln's visit to Kansas was staged in northeast Kansas, Clymer portrayed the Civil War President. Typical of his desire for perfection, he spent weeks reading newspaper files to study 100year-old accounts of the speeches given by Lincoln in Kansas. He also studied works of Lincoln's biographers to glean all he could concerning the man's mannerisms, gestures, and speaking voice,

And as the critics would say, "He was a smash hit" in the role.

Clymer is a past president of the Native Sons and Daughters of Kansas and the William Allen White Foundation. In 1924 he was elected president of the Kansas Editorial Association, the forerunner of the Kansas Press Association. In the period 1939 to 1942 he served as the first director of the Kansas Industrial Development Commission.

His wife is the former Elizabeth Hoisington of Newton. They have two children: David, who is associate general manager of the Times, and half owner of the Barber County Index, the Oakley Graphic and the Rush County News; and Catherine Clymer of Los Angeles.

Politician Knows Pressure

EXTENSION OF REMARKS OF

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. WILLIAMS of New Jersey. Mr. President, legislators are accused of ignoring the wishes of their constituents about as often as they are accused of yielding too easily to pressures from constituents. As usual in our particular line of work, we legislators find that we must judge each particular issue against many points of reference. We must make our decisions after having gaged many kinds of "pressures" which may be at work at any particular time.

An editorial in the Morristown (N.J.) Daily Record of April 6 points out, however, that there is always one general guiding rule which should be followed. It is "Vote 'right' with the United

States."

The editorial and a letter to the editor written after it appeared express this guiding rule in very direct terms.

I ask unanimous consent that the editorial and the letter to the editor be printed in the Appendix of the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

POLITICIAN KNOWS PRESSURE

The politician knows pressure like the farmer knows the weather. He lives with it. cannot ignore it. Depending on his makeup and his political problems, his resistance to it will vary enormously.

Yet, at the national level, if he does not manage to fend off much of the pressure group activity, he cannot really hope for

genuine stature.

A statesman is not a patchwork product of willing responses to any and all demands

but upon him.

Unluckily, many who exhibit resistance to pressure find themselves assailed and sometimes victimized at the polis. Campaigns aimed at penalizing the holdout can strike fear in political hearts.

Too often the pressure groups measure the suitability of a lawmaker by the number of times he voted right with them. Just as frequently, politicians go before the voters to boast of their rightness with labor, the

farmer, the veteran, or whoever.

No one would argue for an instant that the needs and interests of these groups should not have the fullest consideration. But the proof of good public service is not the sum of good deeds done for those who press their case so hard in Washington.

It would be refreshing for a change to see a candidate get up and contend that he had tried for the last 2 or 4 or 6 years to Vote right with the United States.

After all, that is a big part of his job. If it isn't, then he's just a water carrier for his State or district, or for whatever group can push him hardest.

Sometimes the essence of being right with the United States means resisting stoutly the demands of special groups, even if those they represent be counted in the millions.

This country will be moving toward real political maturity when men seeking office are judged on this broad plane, rather than by the narrow gauge of service to limited interests.

But, for the most part, neither the politicians nor the people they represent seem close today to the threshold of that maturity.

MENDHAM, N.J., April 13, 1960. The EDITOR, THE DAILY RECORD,

Morristown, N.J.

DEAR SIR: Compliments on your editorial of April 6, "Politician Knows Pressure." One would hope that it succeeded in inspiring the reflective attention it deserves.

Well pointed up is the horrendous pressure placed upon our elected officials at all levels of government and the unfortunate-but all true-emphasis on measurement of their performance solely by the number of times they voted for or against the promotions of limited Interest. Voting "right" with the United States is an ideal of which the elected official and the voter alike must be eternally mindful.

While we move all too slowly toward the real political maturity to which you refer, I hope you'll help by reminding us from time to time-legislator and voter-that the proof of good public service is not the sum of good deeds done for those who press their case so hard in Washington-or elsewhere. Sincerely,

G. A. LLOYD.

Wilkes-Barre Veterans' Administration Regional Office Receives Best Office of Year Award

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Wilkes-Barre Record of Friday, April 29, 1960, reporting that the Wilkes-Barre Veterans' Administration regional office has received the Best Office of the Year Award from the Veterans' Administration in Washington for its outstanding administrative performance. I wish to take this opportunity to congratulate the entire staff of the Wilkes-Barre VA regional office for this high honor; and it is indeed most gratifying to me personally because many staff members, in fact the great majority, reside in my congressional district. In view of the great number of such offices throughout the Nation, it is a great distinction to be chosen the best. Again, my congratulations to the staff of the Wilkes-Barre VA regional office.

The article follows:

"BEST OFFICE OF YEAR" AWARD IS PRESENTED WILKES-BARRE VA REGIONAL OFFICE HEAD—CHIEF BENEFITS DIRECTOR OF VA DESCRIBES LOCAL SETUP AS "OUTSTANDING" FOR RECORD; 225 GUESTS, INCLUDING B. A. O'HARA, ATTEND

Wilkes-Barre Veterans' Administration regional office last night officially received the "Best Office of the Year" Award from William J. Driver, Chief Benefits Director of the Veterans' Administration, Washington, D.C. Approximately 225 persons, among them employees, guests, and former employees from

out of town, attended the presentation dinner at the American Legion Home.

In presenting the award together with awards to five divisions of the office recognized as outstanding, Driver commended the local office for its record. It was the best of 67 regional offices through the Nation.

The Veterans' Administration has people working in 85 foreign countries as well as the United States, 3 more countries than represented in the United Nations, Driver told the gathering. Hungary is one of the most recent countries where an office has been located and Romania is being considered, he reported. He related some of his experiences in visiting offices in foreign countries, saying the effect from benefits distributed in those countries is tremendous.

Looking into the future, Driver predicted when World War II veterans begin to reach 65 in about 1995, there will be approximately 7,250,000 pensioners receiving an estimated 85,250 million each year. This amount, he said is "just about the size of the entire budget today" for the Veterans' Administra-

Driver discussed veterans' benefits, reporting that a commission headed by Gen. Omar Bradley had examined the benefit structure in great detail and, after an exhaustive report, left it for the country to decide whether or not the veteran is a privileged character. Driver said the conclusion the American people as shown in GI legislation was that the veteran is a person of special privileges for his service in time of

The VA official stressed that those getting benefits who do not deserve them are in the minority. He told of the impact veterans' benefits, such as education and housing aid, have had on the Nation, mentioning that more than 10 million men have been educated since World War II. In addition to impact on the country from the approximately \$18 billion spent in the program, the GI bill education program changed the philosophy of the country as to what part Government should play in education, Driver added.

Impact from veterans' legislation on housing has had an immediate effect on the economy, the speaker told the VA office staff. One out of every six homes in the country built since World War II has been built under the GI bill, he reported, with approximately \$50 billion involved.

Speaking on the possibility of extending veterans' benefits to include peacetime servicemen, Driver voiced the opinion that the GI bill is good as a readjustment program, but that peacetime benefits should be planned for the entire population not just the servicemen. Debate continues on the question, he added, expressing the belief the debate will continue in Congress until the matter is settled.

Five of the seven divisions in the regional office which received national "Runner-Up to the Best Division" awards are vocational rehabilitation and education division, contact division, finance division, administrative division, personnel division. The awards were accepted by Fred J. Beers, Wilson R. Jones, Gerald C. Kelly and Michael Rushton.

A. G. Palmer, manager of the regional office, accepted the "Best Office of the Year" award. He stated the award was earned by hard work, cooperation between divisions and an earnest endeavor to interpret central office instructions correctly and carry them out fully. He added that Wilkes-Barre regional office will continue to give outstanding quality service to the veterans.

Driver received an electric clock set in anthracite coal as a memento of his visit. Miners' helmets were presented to Driver and Bernard A. O'Hara, area field director, as novelty souvenirs. Remarks were made by O'Hara.

Invocation and benediction were by Rev. T. A. Hiznay, Catholic chaplain at the Veterans' Administration hospital. Others at the speakers' table, Walter B. Rice, assistant manager of the veterans' hospital, and Mrs. Rice; Dr. John B. McHugh, manager of the veterans' hospital, and Mrs. McHugh; Mrs. A. G. Palmer; T. V. Williams, manager of the Veterans' Administration regional office, Newark, N.J., and Mrs. Williams; Harry L. Stackpole, chief, administrative management division, Veterans' Administration regional office, Syracuse, N.Y.

The Cross at Nowa Huta

EXTENSION OF REMARKS

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. KARTH. Mr. Speaker, because a plain wooden cross still stands in an empty lot there is no trouble in the streets of Nowa Huta.

The cross marks the place where the city's first Roman Catholic Church was to be built according to a promise grudgingly given 3 years ago by the Polish Government. Last week when a construction crew came to take the church site for a new school people of Nowa Huta showed dramatically that loyalty to their religion runs deeper than do their ties to Gomulka and his uneasy government. As the cross fell it was as if an alarm had been given to the people to rise. A bloody battle raged around the fallen cross at Nowa Huta during which untold numbers of the citizenry, police, and militia suffered wounds. Fighting ended when the harassed government faced with May Day preparations stopped further work and raised the cross

The city of Nowa Huta was to be the symbol for a new Poland that was to arise on the foundations of Marxism-Leninism-as forged in Moscow. Ten years ago the Lenin Steel Foundry was erected and a new town laid out for its workersbut without a church. After the Polish riots of October 1956 a concession was wrung out of the Gomulka regime for Nowa Huta's church. A prominent location was picked and a cross was erected in dedication of the holy place.

The devotion of the Polish people to their church is a strong tradition-far, far stronger than any attachment to the present Communist regime. The reverence for the church was best described by Adam Wazyk in his classic "Poem for Adults" who pictured the pioneer army that had been sent to build Nowa Huta, the new Eldorado. Wazyk pointed out that the builders wore round their necks a little string carrying the cross of Czestochawa.

As deep seated as their religious feeling is the historic love of the Poles for freedom. Today is especially important for it marks the 169th anniversary of their great Polish constitution which is a landmark in the evolution of the political order of a true democracy.

Unhappily because of Communist oppression only the free peoples of the world can today openly commemorate this solemn occasion. But the fierce spirit of liberty as brilliantly shown at Nowa Huta, the increasing flood of outspoken criticism by the intellectuals throughout the Polish nation, and the disturbances in 1956, and since, gives heart to free men and women throughout the world that soon the ranks of democracy may again be swelled by free and independent Poland.

The cross which stands defiantly on the vacant lot in Nowa Huta is a symbol of the immortality of the Polish people's passion for liberty.

On this May 3 one can then with great hope echo the dying Ignace Jan Paderewski's prophetic promise: "Polska powstanie-Poland will rise again."

Twelfth Anniversary of the Independence of Israel

EXTENSION OF REMARKS OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. GIAIMO. Mr. Speaker, on May 2. Israel celebrated the 12th anniversary of her independence. A tiny David in the family of nations, Israel has been forced to meet and defeat many modern Goliaths in her brief history. In so doing, she has taken her place in the vanguard of freedom-loving peoples everywhere.

The giants that Israel has confronted are the same ones that terrorize many small countries and some larger nations in our contemporary world; international communism, internal economic problems and active aggression by other nations in a world still unable to insure lasting peace. Israel has met these threats to her national integrity, Israel's Government has retained her independence, and Israel's people have preserved their freedom under a democratic state. During the same period, other peoples of greater numbers, other governments of longer experience, other nations with greater resources have succumbed to one or the other modern-day Goliaths.

If Israel accomplished nothing else, she would merit our respect and sincere felicitations on the occasion of her anniversary. But to us in the United States Israel stands as more than a symbol of the indomitable will of a free people to remain free. Throughout all of her struggles, Israel has remained a true friend to us and a stanch defender of democracy in the vital Middle East.

On the occasion of her anniversary. wish to join with my friends in this great House and with all Americans in extending best wishes to Israel and her heroic people.

philosophy of freedom, based on law and Nursing Homes Now Going Ahead by Reason of FHA Mortgage Insurance

EXTENSION OF REMARKS OW

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a news release of Federal Housing Administration. Private nursing homes meeting high standards of safety, health, and efficiency are one of the greatest needs today in meeting the health problems of the aged both as to cost and quality. This is an auspicious report of progress:

The Federal Housing Administration formally embarked on a new service to the Nation today by accepting for consideration an application for mortgage insurance in the amount of \$200,000 on a nursing home planned for construction in Beckley, W. Va.

The project, according to FHA Commissioner Julian H. Zimmerman, is to be known as Pine Lodge Nursing and Convalescent Home. The sponsors are two local doctors and an attorney. Their plans have approved by the State of West Virginia. Their plans have been initial unit provides for 75 patient beds in a fireproof, all-masonry, one-story structure without steps.

The Raleigh County Bank of West Virginia has agreed to take the mortgage if the project receives FHA certification and approval for insurance.

Authority was given in the National Housing Act of 1959 for FHA to provide mortgage insurance to encourage the building of modern nursing homes.

"Many long hours of study went into the establishment of the new service," Mr. Zimmerman says. FHA officials worked with professional and industrial authorities to set up minimum standards for the new institu-

"What we now have will provide nursing homes where skilled nursing care and related medical services can be furnished to people of all ages-convalescents and others who are not acutely ill or in need of hospitaliza-tion, but who do require some expert care and attention."

The Pine Lodge Home will be located near the Beckley Memorial Hospital built under the auspices of the United Mine Workers Welfare and Retirement Fund.

Mr. Zimmerman also reported that a survey of the 75 FHA field offices revealed nationwide interest in the creation of approved nursing homes. It was a "toss-up" week whether the first application would some from West Virginia, from Fort Worth, Tex., or from Fort Lauderdale, Fla.

The Fort Worth project known as Fireside Lodge, is to be an 83-bed nursing home similar in structure to the one in Beckley. Its sponsors are two local doctors and the request is for FHA mortgage insurance amounting to \$450,000.

The Fort Lauderdale project is called Royal Palms Village. It will provide 120 beds when constructed and its sponsor is a former nursing home owner from Rhode Island. The mortgage insurance request is for \$500,000.

Many applicants inquiring in regard to nursing homes expect to finance the rehabilitation of existing buildings or to expand nursing homes now in operation.

Preapplication analysis of proposals is made without charge in the FHA field offices

to determine the feasibility of each suggested project and to determine the acceptability of the sponsorship as required by the National Housing Act.

A pamphlet outlining the basic requirements for qualified nursing homes is avail-

able on request to any FHA office.

Foreign Aid a Monstrous Mess

EXTENSION OF REMARKS

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. THURMOND. Mr. President, although the authorization bill for mutual security was passed by the Senate yesterday, the amount of appropriations for this program has yet to be determined. Every day greater inconsistencies and instances of maladministration of this program come to light. Surely Congress must face up to the absurdity of the socalled mutual security program before it is too late. On this issue, at least, the American people are apparently far ahead of the Congress.

On Friday, April 22, the able editor of the Augusta Chronicle of Augusta, Ga., Mr. Louis Harris, wrote a penetrating and timely editorial entitled "Foreign Aid a Monstrous Mess." The Members of this body and the House of Representatives would do well to consider What Mr. Harris has to say. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial. was ordered to be printed in the REC-ORD, as follows:

FOREIGN AID A MONSTROUS MESS

Now that House investigators have accused the Development Loan Fund of earmarking millions of dollars for Toreign aid without knowing how the money would be spent, and that the House itself is about to debate the issue, the whole question of such assistance is pinpointed anew.

The DLF is the agency set up by Congress in 1957 to make "soft loans" to American business firms to finance projects in undeveloped countries, the loans to be repaid in foreign currencies. In 4 years it has received

The House committee report said it was Congress' intent that the DLF should make loans only for specific programs and pur-poses, but that it actually has been setting aside funds for particular governments and approving projects for advance commitments.

This, however, is only a part of the for-eign-aid folly which has been described and criticized repeatedly by conservative Mem-

bers of Congress.

Moreover, there have been strenuous efforts to keep the American people uninformed about where some \$85 billion of their tax has gone in the last 10 years. Even Congressmen have been unable to obtain the full facts and figures.

Many of the program's fantastic features have come to light, however, and are pointed out by the Independent American, published

at New Orleans. We quote:
"There are 86 nations in the world. are giving aid of one kind or another, financed by your tax dollars, to 73 countries and territories.

"Our national debt of \$283 billion is \$47 billion more than the debts of all the other nations of the world put together.

"Every billion dollars that goes overseas r so-called economic aid to so-called underdeveloped countries means that financial capital which could have provided jobs for 10,000 Americans at home has been

"Great Britain has again cut income taxes and sales taxes. This new cut was made possible because of the billions of dollars shipped to Britain in foreign aid."

Congressman George W. Andrews of Alabama said recently: "If we continue dissipating the wealth of the United States, we may wind up in a worse condition than a great majority of the countries we are now helping.'

And John T. Flynn, noted writer and radio commentator on economic subjects, has stated: "There is not one word in the Constitution which empowers the Federal Government to tax the people of this country to pay the bills for running other coun-

Is America spending itself into chaos? The signs most surely point in that perlious di-rection. Hence it is to be hoped, we feel, that the House will dig deeper than ever before into this monstrous mess, since it seems that the big spending liberals who control both political parties wish to continue this basic blunder regardless of ultimate consequences.

And Nero Played a Fiddle

EXTENSION OF REMARKS OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial from yesterday's Harrisburg Evening News.

The editorial speaks for itself and needs no commentary from anyone.

I have elected to insert it in the Con-GRESSIONAL RECORD not because it is likely to inspire the youth of our land but rather as a help to future historians. Ages hence, when they are striving to determine why it was what our civilization went down the drain, the editorial which follows just might afford them a small clue:

IKE FORGOT HIS OWN WORDS

"The right, the highest privilage, the duty of every citizen is to vote."

The same man also said:

"We can have unlimited faith in America as long as America will express itself. The thing I should like to see is that every American vote."

President Dwight D. Eisenhower issued a little statement, with these brave words, back in another election year when he was on

Last Tuesday, President Eisenhower, a registered voter in Adams County, did not vote in Pennsylvania's primary election.

An early White House announcement said that the press of business would make it impossible for the President to make the short and familiar trip to Gettysburg to vote. (Under a new election law, the President could have voted by absentee ballot. Many Pennsylvanians did.)

A later announcement reported the President played golf at Burning Tree, election day afternoon.

What was it some man said once about

deeds and not just words?

Perhaps it's no wonder that Pennsylvania had a light voter turnout Tuesday. If the President of the United States won't bother to vote, how can ordinary citizens be expected to go to the polls?

Castro's True Color Is Showing

EXTENSION OF REMARKS

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I desire to insert an editorial which appeared in the Levittown Times of Levittown, Bucks County, Pa., on April 29, This seems to be a very good résumé of the situation as it now appears with the present Government of Cuba: [From the Levittown (Pa.) Times, Apr. 29, 19601

CASTRO'S TRUE COLOR IS SHOWING

Soon it will be a year and a half since Fidel Castro took power in Cuba. In that time he has become a pitiable figure, one of the great disappointments of the age of emerging peoples.

While he fought dictator Batista in the hills, his infectious romantic idealism capti-vated many liberal idealists in America and

other places.

It seemed fitting he should be called Dr. Fidel Castro, for he was thought of almost

as a philosopher of revolution.

Whatever there was of the true man in that image, it is gone now. The aura of romanticism is stripped away. Castro stands before the world as a weak, floundering, ineffectual man, totally incapable of govern-

Yearning still for the smell of revolution, unhappy at his desk, he has made the television studio his citadel. There, in 3- and 4-hour sittings before the camera, he shouts against America in effort to hide his total incapacity for sober, rational leadership.

If any of his one-time distant admirers are still tuned in, they must be stunned at the content of these attacks. For they are cheap, transparent imitations of the Communist and Nazi propaganda techniques.

Castro is supposed to have been something of a genuine student of government and revolution. He seems to have remembered all the wrong things.

When he should have fastened in mind the true character of American freedom and the sympathy of Americans for freedom everywhere, he remembered instead the old totalitarian lessons: when you're having trouble at home, make constant charges that foreign plotters seek to undermine you.

As a matter of fact, Castro must look to Red China as his model today. The Soviet Union long since has moved on to subtler and more mature devices of propaganda.

We cannot hope there will be any end to this, that Castro by some miracle will become again the liberal idealist he seemed, that he will settle down and govern.

Since he cannot master the arts of governing, he has no choice but to practice the arts of deceit to cloak his inadequacy from the Cuban people.

The world—and some Cubans—see through him now. In time most Cubans will see how empty a man he is.

Then Castro will go down.

In an era when crusades for independence are being mounted in many places, he will be sadly remembered as one who wore the outer garments of the free, independent leader—but lacked his heart and substance.

Civil Rights

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I also wish to include a column by Jackie Robinson, which appeared in the New York Post, Friday, April 29, 1960. This pertains to the debate in the House on Thursday, April 28, 1960, on the antiracial discrimination amendment to the Emergency Home Owner Act.

The article follows:

[From the New York Post, Apr. 29, 1960]

CIVIL RIGHTS

(By Jackie Robinson)

As I drove home from the office Wednesday night, I chanced to hear a broadcast by Martha Rountree, radio commentator on Washington affairs for the Mutual network. "Those of you who thought you had heard the last of civil rights for a while are mistaken," she announced, pointing out that the Republicans in the House were deliberately adding a nondiscrimination rider to a billion dollar housing bill they oppose in order to get southern Congressmen to help them defeat the measure.

Actually, the measure was passed after the rider was killed by northern Democrats, who had been put squarely on the spot. In voting against the rider, their civil rights records were besmirched. But if the rider had been passed, they maintain, the Republican-southern Democrat coalition—as so many times in the past—would have been able to defeat the entire bill. What all this political maneuvering has accomplished is still anyone's guess, for it seems certain President Eisenhower will veto the bill should it manage to pass the Senate.

This kind of political gobbledygook is one more reason why Negro Americans the country over are demonstrating and protesting. We deeply resent our civil rights being made the pawn in such a cheap, partisan chess game. This housing bill—and any other measure in which all Americans are supposed to share-should have had an antibias provision to insure that in practice it does become just another measure for whites only. And neither the fact that Republicans introduced the rider solely as a device to defeat the whole measure, nor that northern Democrats voted against it on the grounds that the bill could not have passed otherwise, will escape unnoticed by Negro voters. For no matter which group won this skirmish, it was at the expense of Negro Americans.

From my travels around the country, I get the unmistakable impression that Negroes are sick and tired of double-dealing by Congress and the White House. If any party thinks the meaningless proposals or excuses tossed our way are enough to insure our continued support and contentment, I can point to two strong reasons why they should change their minds: the student sitins and the presidential primary in Wisconsin. The mushrooming sitins speak for themselves. But the nearly 4-1 Negro vote for Humphrey over Kennedy is merely a hint of what could happen in sections with large proportions of Negro voters.

Miss Rountree referred to this in appraising the chances of Senator Lyndon Johnson to win the Democratic nomination. Somebody should tell Negroes, she admonished, that Johnson engineered the 1960 civil rights bill through Congress. Somebody should tell Miss Rountree that Negroes aren't at all fooled by Johnson, or by Rountree either, for that matter. Not only isn't this bill worth the paper it's written on in terms of actually insuring southern Negroes their right to vote, but I well remember Miss Rountree's constant sniping at the key provisions since struck from the measure fore passage. And her open attack on sitins is but another proof of her obvious southern sympathies.

Though she, and others like her, may be tired of hearing about civil rights, I submit that this is merely a beginning. People may try to blame the NAACP or anyone they please for what is happening in Biloxi or Tallahassee or Montgomery, but the true stimulus is what colored peoples the world over are doing. When we see Africans and Asians—with even less protection than a Negro gets in Mississippi—standing up for their freedom, it gives us a completely different outlook here in America.

For if Africans and Asians, enslaved for centuries by imperialism, can gain their full and equal liberties—sometimes overnight—you can be sure that Negro Americans will not be content with scraps. Fear is rapidly turning into pride, and no threats of violence can slow the pace. Our protest is wisely a nonviolent one, but we mean to have our rights. Let there be no mistake about that.

HUAC: "A Shaky Reed To Lean On"

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I am pleased to call to the attention of my colleagues a recent New York Times editorial on the House Un-American Activities Committee.

It is also gratifying to me that this eminent paper, as usual, grasped the meaning of my position when it stated:

The House is responsible for the actions of Representative WALTER'S Un-American Activities Committee. This is the fundamental point, as we see it, of Representative James Roosevell's massive attack on the committee in a House speech a few days ago.

I heartly agree with the editorial comment that—

If the security of this Nation were dependent on the kind of exposure for exposure's sake that the committee has repeatedly indulged in, whether investigating actors in New York or schoolteachers in California, then our country would really be in a dangerous condition.

Finally, may I say I certainly concur with the New York Times editorial observation that—

For such positive subversion as exists, the FBI is sufficient. The United States no longer needs—if it ever did—the aimless pursuit of heresy.

Since one of my colleagues has reported the full text of the New York Times editorial I shall not also do so. But I trust it will be obvious to all that the need for action to abolish the Un-American Activities Committee is being set forth by those of proven integrity, patriotism, and sound judgment.

Poland's Constitution Day

EXTENSION OF REMARKS

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. MILLER of New York. The greatest hope of Western civilization for the emancipation of the millions who now are slaves of communism rests in something wholly removed from hydrogen bombs, intercontinental missiles and space weapons—although we must maintain these deterrents because of the aggressive nature of our enemies who are dedicated to world domination.

The true hope for a free world rests rather in the hearts of men—men whose devotion to principles of freedom and

liberty burns fiercly.

I say this, Mr. Speaker, because this is the flame which licks most insidiously at the foundations of communism. It is a fire which cannot be extinguished even by the most awesome and cruel force the world has ever known.

Today, as it has for centuries, this blaze burns brightly in Poland, despite an oppression so heartless, so savage as to make the mere suggestion of true lib-

erty seem ridiculous.

We, who are descended of those who spilled their blood in the cause of human freedom at Lexington, at Chateau Thierry in France, on the sand beaches of the Pacific, and in the mountains of Korea, appreciate and understand the centuries-old desire for dignity and human freedom which burns within the hearts of all civilized men. We, who have fought so long and bitterly to defend our own freedoms, cannot help but feel these blessings should be available to everyone everywhere.

Along with our strong feelings about freedom is an acute awareness that the time must come when those gallant peoples, who still are held prisoners within the Poland of their birth, may see their indomitable homeland break free of Red shackles and resume its proper place among the nations of the free

world.

History has proved that nowhere in the world is the love of freedom and independence stronger than in Poland. The intense patriotism of the Polish people is not confined to any single class, or group, but is common to all people of Polish birth or descent, whether they are captives within the Soviet-erected prison of international communism or are among the 7 million Americans in whose veins flow Polish blood.

Indeed, Mr. Speaker, two of Poland's greatest patriots were better known to the rest of the world for their musical genius, and others of Polish birth, such as Thaddeus Kosciuzko and Casimir Pulaski, so intensely were devoted to freedom that they crossed oceans to fight tyranny.

Kosciusko, who contributed so much to the American fight against the British during the Revolutionary War, and Pulaski, who died for the United States in the Battle of Savannah, were military men. Kosciusko was a distinguished Polish general and become one of that Nation's greatest heroes when he led an unsuccessful but valiant revolution against Russian and Prussian oppression in 1794. Pulaski was well known as a military man before he organized cavalry units for the American military cause. To both of these, fighting was a profession and patriotism and freedom were principles. It was fortunate for America that each possessed great military ability and was so devoted to the cause of independence.

In short, both Kosciusko and Pulaski, two of the greatest military men in the history of two nations—Poland and the United States—could be expected to lead men in warfare because that was their profession. What was unusual about them was that they used their professional ability wherever it could help the cause of freedom and independence.

But even more unusual were the contributions made by Frederic Chopin and Ignace Jan Paderewski, who belonged to the world of music—not one of fighting and political principles.

And yet, even though such causes entailed the greatest possible sacrifices, each threw himself wholeheartedly into the battle for freedom, each gave his life to the Poland of his birth.

Chopin, because of his intense patriotism, lived in exile most of his life, but everywhere he went, he carried an urnof Polish soil.

In all his music, there was either the sadness of an oppressed people or the stirring strains which could arouse men to rise up against their oppressors.

Today, most of us recognize the works of this ascetic and physically tortured patriot only as the greatest piano compositions ever written. We listen in rapture to his Revolutionary Etude, his Polonaise Militaire as the products of a true genius.

But we forget that these were the works so hated by the barbarians who, more than a century ago, held Poland in bondage as she today is held.

We forget that this was the music which stirred Polish people to attack, even when hopelessly outnumbered, those who held her in slavery.

We forget that because of this music,

the Russian forces occupying Poland took Chopin's piano, hurled it into the streets and smashed it into bits. They silenced his piano, but not his soul.

We forget, too, that when this great pianist, composer and patriot died, his heart was sent to the little Church of the Holy Cross in Warsaw to rest.

Just as the greatest composer of piano music devoted his life to Polish freedom, so did the greatest concert pianist of his day—and, according to many critics, the greatest of all time.

The immortal Paderewski gave up his beloved piano at the beginning of World War I to battle for Polish freedom.

During 1917 and 1918, he served as Poland's representative in Washington and was primarily responsible for swinging American support behind Polish independence. In 1918 and 1919, he assisted in organizing the Polish Republic. As president of the Polish delegation at the Paris Peace Conference in 1919, he signed the treaty through which Poland regained her independence. He served Poland with the League of Nations, as minister of foreign affairs, as president of the Council of Ministers and as chairman of the National Council of the Republic.

While living in retirement in Switzerland in 1939, Paderewski again saw his beloved homeland threatened by its traditional enemies—Germany and Russia. Despite his age and infirmity, Padarewski came to the United States to enlist aid for his people. He arrived here November 6, 1940, his 80th birthday, and immediately began an extensive speaking tour, against the advice of his physicians.

A few months later, while addressing a group of Polish war veterans, he was stricken with an attack of pneumonia which took his life.

His last words, uttered as his brilliant and devoted battle came to an end, were: "Polska powstanie"—Poland will rise again.

Today, as we observe Poland's Constitution Day, let us pledge ourselves anew to the task of fulfilling the last expressed wish of a great man. We must assure the world that our people cannot live in peace while our Polish brothers are held in slavery. We must reassert our determination to support in every way possible independence for the Polish people.

In this pledge, I feel we can give the oppressed and the exiled some degree of hope on the 169th anniversary of Poland's Constitution Day.

In it, we may also express our appreciation to Poland in the 150th anniversary year of Chopin's birth and the 100th of Paderewski's birth for the contributions each made to music and human liberty.

In such an action, we may rekindle the flame that burned so brightly in the hearts of Chopin, Paderewski, Pulaski, and Kosciusko.

For this flame can ignite the fires which inevitably must destroy the monster of communism and cremate the last vestiges of oppression. Union-Industries Show

EXTENSION OF REMARKS

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. BURDICK. Mr. Speaker, I would like to call my colleagues' attention to the Union-Industries Show which will be held May 6-11, 1960, in the National Guard Armory, Washington, D.C.

This is a cooperative project between labor unions and management to focus attention on the day-in, day-out good working relationship that exists between union labor and employers in a free-enterprise society. There will be many exhibits shown as specific examples of the product of labor and management working and cooperating together. An exhibition of this type helps also to bring about better employer-employee relations.

The show enables cooperating labor unions to set up displays for the purpose of acquainting the public with the skills and crafts of union labor and to familiarize the public with the union label carried on union-made goods. Employers also exhibit their union-made goods or union services.

The shows have been held since 1938—except during World War II—in major cities throughout the United States. They are sponsored by the Union Label and Service Trades Department of the AFL-CIO. Employers, or companies, participate in the show at the invitation of the unions with which they have a union contract.

The booths will feature union-made goods or services. For instance, the American Bakery and Confectionery Workers will decorate cakes and give them away at their display. Other exhibits will feature wearing apparel, building equipment, furniture, radios, upholstery, and a wide range of other products. The postal unions will demonstrate their services with an operating post office. The Meatcutters will hold about five sheep-shearing demonstrations and drawings for numerous free meat cuts daily.

The International Brotherhood of Electrical Workers will give away an allelectric kitchen valued at approximately \$10,000, at a drawing to be held on May 11. The Glass Bottle Blowers Association will give away a boat; the printing trades will set up an operating newspaper and will publish daily news about events occurring at the show. The bricklayers will hold a bricklaying contest for apprentices, and the pottery workers and many others will give educational demonstrations of how they do their daily jobs.

Government agencies which will participate in this year's show include the Department of Defense, the Civil Service Commission, the Office of Civil Defense Mobilization, the Treasury Department, and the Department of Labor,

Joseph Lewis, secretary-treasurer of the Union Label and Service Trades Department, AFL-CIO, which sponsors the show says:

Our exhibitions prove that harmony between labor and management is practical and possible. The basic function of industry is to increase high quality production and obtain a fair profit. The objective of organized labor is to have security of steady employment at fair wages. Both these goals can be achieved through the teamwork of labor and management.

Over the years, the Union-Industries Show has broken every attendance record for the auditorium in which the show was held. Last year's attendance in San Francisco was over 364,400; largest attendance was in Chicago—900,000.

The show will be open to the general public, admission free. Nothing is sold or offered for sale at the Union-Industries Show.

Polish Constitution Day

EXTENSION OF REMARKS

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. NELSEN. Mr. Speaker, in the last decades of the 18th century unhappy Poles were having internal as well as international troubles. Their governmental system was autocratic and unwieldy, and the country was surrounded by three powerful neighbors, always ready to overrun it. These three powers-Austria, Prussia, and Russiahad already grabbed part of Poland, and were preparing to partition it once more. Poles were fully aware of such dangers. They felt that if their governmental system could be reformed, and old obstructive methods could be abandoned, then internally the country would become stronger, and thus better prepared to face external dangers. With that definite purpose in mind they began the reforming and reconstructing move in 1788, which culminated in the Constitution of 1791.

This Constitution forms a great landmark both in Poland's history and also in the history of liberal, constitutional government in Europe. It was one of the earliest efforts, put forth without resorting to revolutionary means, in which the unlimited and autocratic authority of the monarch was reduced. Responsible cabinet form of government was established and the popularly elected legislature took on real importance. Townsmen were given certain political rights, and the peasantry was brought under the protection of the law. For all these important changes the Constitution was hailed as a real charter for the liberties of the underprivileged. It is true that the unfortunate turn of international events prevented the carrying out of the provisions of the constitution. but the fine ideas and ideals embodied in it became the political creed of freedomloving Poles. To this day they cherish those ideas as fervently as did their forebears 169 years ago.

Hoffa Purge List Revealed, It Calls for Political Demise of Members of Congress

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, some weeks ago the well-known political reporter of the New York Herald Tribune, Earl Mazo, revealed that James R. Hoffa, international president of the Teamsters' Union, had sent a confidential memorandum to trusted lieutenants calling for the political demise not only of Senator John F. Kennedy but also of such distinguished Members of Congress as our able colleague from Oregon [Mrs. Green] who were actively supporting Senator Kennedy's bid for the Democratic presidential nomination.

The Washington, D.C., Post pointed out editorially that the Hoffa confidential memo or "set of political orders" contemplated the purging of Representative EDITH GREEN of Oregon who, in the Washington Post's own words "has a strongly progressive and prolabor record in Congress" and adds that—

The recklessness of this program and its cynical subordination of union interests to personal spleen is surpassed only by the self-delusion it betrays.

I include here as part of my remarks two articles by Mr. Mazo from the New York Herald Tribune and an editorial from the Washington Post:

[From the New York Herald Tribune, Mar. 13, 1960]

HOFFA PURGE LIST REVEALED—WIDENED TO TAKE IN KENNEDY'S BACKERS

(By Earl Mazo)

Washington, March 13.—James R. Hoffa, international president of the Teamsters' Union, has sent a confidential memorandum to trusted lieutenants calling for the political demise not only of Senator John F. Kennedy but also of congressional figures actively supporting Senator Kennedy's bid for the Democratic presidential nomination.

Mrs. EDITH GREEN, a well known prolabor Congresswoman from Oregon and the Massachusetts Senator's campaign manager in Oregon, is high on this Hoffa purge list, it was learned today.

Mr. Hoffa, whose distaste for Senator Kennedy dates to the McClellan rackets committee hearings, also has urged numerous political alliances to defeat anti-Hoffa Senators and Representatives that seem strange for a labor organization.

WANTS KEFAUVER DEFEATED

In Tennessee, for instance, he proposes that the Teamsters get behind Judge Andrew (Pit) Taylor to beat Senator Estes Kefauver. Judge Taylor is considered the No. 1 segregation extremist among the leading Tennessee

politicians. Senator Kepauver a ranking southern liberal, is regarded as one of labor's best friends in the South.

AN ELECTION BLUEPRINT

Then the Hoffa memorandum added: "Recommendation: Investigate Judge Taylor's labor record and explore possibilities of having him buy our minimum program."

The memorandum, in effect Mr. Hoffa's State-by-State preliminary election blue-print, is understood to have been prepared for the Teamster president by Sidney Zagri, chief of the Teamster organization's department of legislation and political education, a new multimillion dollar political action agency of the union. Mr. Hoffa created the department in the wake of his troubles with the McClellan committee, of which Senator Kennedy was a member and his brother, Robert F. Kennedy, chief counsel.

Tomorrow night, Mr. Hoffa is scheduled

Tomorrow night, Mr. Hoffa is scheduled to speak at a big Teamsters' rally in Madison Square Garden, New York. He is, among other things, expected to call for a \$1.50-anhour minimum wage for Teamsters.

The term "prolabor" is equated in the Hoffa memorandum with pro-Hoffa and pro-Teamster-organization interests. The Teamster yardsticks vary for various Congressmen. One is the individual's vote on final passage of the compromise labor bill last year. In the Senate the vote was 95 to 2 for the compromise. The only "no" votes were by Senator Wayne Mosse, Democrat, of Oregon, and the late Senator William Langer, Republican, of North Dakota. The House vote was 352 to 52 with most of the Representatives who are regarded by the AFL-CIO as "labor's friends" voting for.

Mrs. Green was among them. She helped bring about the compromise, actually a watered-down version of a tougher labor measure known as the Landrum-Griffin bill, which probably would have been enacted except for the compromise by the liberals.

In calling for Representative Green's defeat for reelection this year—and urging his associates in her State to find "a strong candidate" to bring that about—Mr. Hoffa described Mrs. Green's part in the compromise as "her ugly role."

Then the Teamsters' chief added: "EDITH GREEN is west coast manager for Senator Kenner's presidential nomination. While there is no open break with Senator Mosse, she is aware that he will not campaign on her behalf."

Mr. Hoffa notes that Senator Jennings Randolph, a Democrat marked for his purge, probably will be supported by COPE, the political action arm of the AFL-CIO.

Therefore, the Teamster chief said, "It may be easier to defeat him by supporting Gov. Cecil Underwood who is the Republican nominee."

Mr. Hoffa's long memorandum, secretly distributed to his principal lieutenants several weeks ago, emphasizes activities in "marginal" congressional districts which the incumbents won by 5 percent or less of the vote.

The new labor law, though a compromise version of several bills, is labeled the "Kennedy-Landrum-Griffin Act," obviously to make that a "hate" phrase in labor circles, as "Taft-Hartley" has been—and thus to harm Senator Kennedy among labor leaders.

The Hoffa memorandum found potential backing in other southern States, however, and urged an all-out effort to reelect Representative Dale Alford, of Little Rock, Ark., a political disciple of Gov. Orval Faubus.

Representative Alford was elected as a last-minute write-in candidate in 1958, defeating the veteran Representative Brooks Hays, one of the best known southern liberals.

Then the Hoffa memorandum added: "Recommendation: A fight should be made to unseat McClellan."

The next major notation on the Arkansas memorandum was this:

"Support ALFORD on the same ticket with Supreme Court Justice Johnson, also a segregationist but prolabor. ALFORD deserves labor support for his independent stand on the Landrum-Griffin amendment. In this campaign the issue was not the amendment."

Then the Hoffa memorandum established the line by which his union could excuse its support of such an extreme segregationist in this way: "In this campaign the issue would not be integration versus segregation, but the support of a friendly labor movement versus restrictive labor legislation. On this basis, Congressman Alford and Supreme Court Justice Johnson deserve support. There are no candidates in the field who are not taking a segregationist line."

[From the New York Herald Tribune, Mar. 15, 1960]

HOFFA MALIGNS CONGRESS MEMBERS WHO CROSS HIM—HIS MEMORANDUMS LIST THEM AS "BAD ACTORS," "PHONY LIBERALS"

(By Earl Mazo)

Washington, Mar. 15.—To James R. Hoffa, general president of the Teamsters Union, a "bad actor" and "phony liberal" is a normally prolabor Member of Congress who opposes any of the wishes of Mr. Hoffa.

That is pointed up in the political memoranda the Teamster boss has been issuing for the instruction and education of

his principal subordinates.

The memoranda, four of which have been made available to the New York Herald Tribune, include a plan for doublecrossing other labor unions and considerable advice on achieving Mr. Hoffa's political objectives (one technique spread the word that a Hoffa foe is an alcoholic; another, "call in" "weak" individuals and threaten them with defeat for re-election).

PURGE LIST

Others in this group which Mr. Hoffa also called "bad actors" are Representatives Frank Thompson Jr., New Jersey; Edith Green, Oregon; Stewart L. Udall, Arizona; Richard Bolling, Missouri, and James G. O'Hara, Michigan. All are leaders in the House liberal Democratic bloc.

Mr. Hoffa's stated reasons for disliking these "bad actors" varies. But mostly it is because some are vigorous backers of Senator John F. Kenney, Massachusetts, for the Democratic Presidential nomination and others cooperated with the AFL-CIO instead of the Teamsters during the fight last year over labor legislation.

CALL FOR DOUBLECROSS

It is in his comments on political cooperation with the AFL-CIO that Mr. Hoffa makes his call for a doublecross.

On February 1 he sent a memorandum to all of his joint council presidents urging political cooperation with other labor organizations in the 1960 elections.

Two weeks later he sent another, more comprehensive memorandum to a few of his most trusted associates. It named names in a State-by-State breakdown, and pointed up many instances where the Hoffa organization was directed to oppose candidates backed by other unions, particularly the national AFL-CIO through COPE, its political action agency.

[From the Washington Post, Mar. 15, 1960] JIMMY'S VALENTINE

James R. Hoffa seems to have no scruples about using his position as head of the Teamsters Union for a campaign of personal political revenge. There have, of course, been previous indications that he regards the Teamsters as no more than a

vehicle to be driven to the achievement of his own ambitions; but the election memorandum published in the New York Herald Tribune by reporter Earl Mazo suggests a mind so warped by vindictiveness as to be in a real sense irresponsible.

Mr. Hoffa's consuming aim, it appears, is to "get Kennedy"—that is to throw all the weight his farflung union can bring to bear against the presidential candidacy of Senator John Kennedy. Mr. Kennedy was a member of the Senate Rackets Investigating Committee which caused Mr. Hoffa so much trouble and embarrassment.

Thus the confidential memo or set of political orders sent by Hoffa to his lieutenants contemplates the purging of Representative Edith Green of Oregon. Mrs. Green has a strongly progressive and prolabor record in Congress, but she is on the Hoffa blacklist because she is serving as Senator Kennedy's campaign manager in Oregon. To defeat Senator Estes Kefauver, Hoffa is willing to give support to one of the most notorious of Tennessee segregationists; in Arkansas, he goes so far as to urge the reelection of Representative Dale Alford, a protege of Gov. Orval Faubus.

The recklessness of this program and its cynical subordination of union interests to personal spleen is surpassed only by the self-delusion it betrays. Is it possible that Hoffa does not realize that his hatred is money in the bank to JOHN KENNEDY—or to anyone else whom he opposes?

Whirlpool Awarded Silver Anvil

EXTENSION OF REMARKS

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Congress and the people of the United States the awarding of the Silver Anvil, the highest award given by the American Public Relations Association, to the Whirlpool Corp., a large division of which is located in the city of St. Paul, which is part of the Fourth Congressional District of Minnesota. This award was granted to the Whirlpool Corp. for "an outstanding public relations program which assisted greatly at the American national exhibit in Russia in communicating the story of American homemaking to the Russian

Last spring Whirlpool was asked by the Departments of State and Commerce and the U.S. Information Agency to send two kitchens: the celebrated Whirlpool miracle kitchen—a research and engineering conception of the kitchen of the future—and a workaday model, used by countless housewives here at home. It was generally believed that these kitchens did more to say "America" in Russian than perhaps anything else shown at our first national exhibit in Moscow.

Whirlpool has again been asked by the Government to send the miracle kitchen behind the Iron Curtain. Kitchens will also be sent to the International Trade Fairs at Poznan, Poland, and to Zagreb, Yugoslavia. I would like to join the American Public Relations Association in commending Whirlpool for a job well done.

Ben E. Atkins

EXTENSION OF REMARKS

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. WHITENER. Mr. Speaker, while on the floor of the House yesterday afternoon, I was very shocked to receive a message from my hometown, Gastonia, N.C., advising me that a very dear friend of mine and one of the most outstanding newspapermen in North Carolina had passed away.

Mr. Ben E. Atkins, president of the

Mr. Ben E. Atkins, president of the Gazette Publishing Co. at Gastonia and editor of the Gastonia Gazette, died early Monday morning after falling to rally from a serious abdominal operation. For 33 years he was a reporter, a publisher, and an editor. His untimely death is an irreparable loss to the newspaper profession in North Carolina.

I extend to the member of his bereaved family my deepest sympathy on this sad occasion in their lives. Their loss is shared by the countless friends of

Mr. Atkins.

The Gastonia Gazette, in whose service he labored with outstanding success, carried a very fine editorial on May 2 which very ably expresses the character and personality of this splendid citizen. Mr. Speaker, I ask unanimous consent that the editorial be inserted in the Appendix of the Record:

FAREWELL OUR EDITOR

"Yea, though I walk through the valley of the shadow of death, I will fear no evil * * * for Thou art with me."

Death came down the carpeted steps Sunday afternoon and took our editor by the hand.

And now, we at the Gazette work in a

We continue on our jobs, but our actions are mechanical. We are like a speeding locomotive without an engineer.

Our editor is dead.

He spent his life on the Gazette. From the time he was a little boy, he knew that, one day, he would be its editor.

That's why he sat for long hours at the linotype machine during his high school days, learning its intricate operation. That's why he pushed heavy turtles with leaded pages and read proof and hustled copy.

His father would come to him one day and say, "Son, we'd like for you to be our editor." And he had to be ready.

So, he moved up the line, step by step. He was a cool-headed, hard-working city editor who felt the city's pulse like an M.D.

And then later, when he was managing editor, it must have been fascinating to watch as he coordinated the activities of the composing and news rooms into a fast-moving, accurate body with a deadline to meet.

He moved easily across problems. He knew the why of a situation. He had come along the graveled road of experience, and that experience had given him the ability to reduce problems to hand size, where he could handle them.

Irritating situations didn't ruffle him, and the only way you could tell he was perturbed was to see the faint and red glow that came to his cheeks. He never hurried, but maintained that slow, sure shuffle that accompanied him through life. Ben Atkins was a brilliant man. He received a wonderful, basic, formal education. He read good books and, having saved his money, traveled in foreign countries. His mind was constantly seeking, prying, making notations for future use.

His reputation as a colorful, yet perceptive, writer fanned out across the country. During the war, servicemen, reading their hometown Gazette, would toss the paper to a buddy on a nearby bunk with the suggestion that he read the "Quirky Quill."

This column, filled with delightful phrases and prickly wit, brought moments of joy from shore to shore. It was looked forward to like mail from home.

Had Ben Atkins been driven by necessity to write books, his talents would have taken him on a long and fruitful journey. He had a vast, untapped reservoir of talent.

In recent years, we have noticed "Mr. Ben" walking with a slower gait. And, during the months just past, we knew that our boss was more than a little ill.

Still, even after a serious struggle at the hospital, he returned to work—a weak but determined man. And just his presence made us strong

made us strong.

Just knowing that he was in his office, just seeing him once in a while shuffling along toward the composing room where he supervised the making of his editorial page, just knowing that if anything went wrong, Mr. Ben would be there to tell us what to do—all this was a great help to us.

But, those whom the gods love die young.

Mr. Ben was 52.

His typewriter is silent today, and his desk is almost as he left it weeks ago. But the words that he wrote and the thoughts he expressed are buried now like seeds in the minds of many people. Their fruits shall be his monument.

Ben Atkins was a peace-loving man. He detested turmoil. He tried to avoid arguments. But, when his conscience dictated a course of action, he wrote with a pen of steel and the point of a diamond.

And that afternoon, the people would

Sometimes, we think we understand death for the first time when it lays a hand upon the shoulder of someone we love. Then, we look a second time and know that the riddle is just as deep as ever.

It is as natural for man to die as it is to be born, and we cover death with a sheet of gloom and mourning—not knowing whether, once visiting death, it would be death itself to come back to life.

Light has faded from Ben Atkins' brain. His own Editor has turned down the lamp and whispered that it was time to say goodnight.

We would say goodnight to our editor, remembering that there comes a night when no man can work.

BILL WILLIAMS, Gazette Associate Editor.

Polish Constitution Day

EXTENSION OF REMARKS

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. PIRNIE. Mr. Speaker, on May 3, friends of a free Poland and Poles everywhere will celebrate Poland's Constitution Day.

Only 2 years after ratification of our own Constitution, the Polish Constitution of 1791 was adopted. This document,

like our own, was born of a battle for independence fought against overwhelming odds. Unfortunately, Russian arms duplicity deferred the cherished hope that Poles might govern themselves as freemen.

Today, in Poland, freedom-loving citizens again are resisting Russian domination and are drawing deep inspiration and hope from the celebration of this significant anniversary. May they be strengthened in their determination by the knowledge freemen everywhere sympathize with them in their struggle.

It is fitting that we commemorate such glorious moments of history so we may preserve the noble traditions of democracy which are the heritage of every American and the goal of repressed peoples.

Russia's Claims Debunked

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. WILEY. Mr. President, during a brief lifetime, the United States, by adoption of a free enterprise system and a political climate of freedom for its people, has created the greatest economy and the highest standard of living in world history.

Today, the Soviet Union, under communism, is challenging our system. Particularly, they brag about surpassing us in production of industrial, agricultural, and consumer goods, as well as military and scientific accomplishments.

Experience has taught us, of course, that it is extremely difficult to get authoritative, factual information out of the Soviet Union in order to make a realistic comparison of the two systems.

According to information with the greatest credibility, however, we have learned that the Communists' "ability to brag" far exceeds their "ability to produce."

We recognize, of course, that the spirit of braggadocio may well be, and probably is, inspired by propaganda purposes at home and abroad.

Time after time, however, Khrushchev's boasting about surpassing America has fallen short; in effect, their "great leaps" forward have, instead, been "short hops."

Unfortunately, the climate of an election year encourages individuals, particularly those with high political aspirations, to deprecate and downgrade the progress of our own system for political gain, hoping that it will unfavorably reflect upon the current administration.

Constructive criticism serves, of course, a useful purpose. Conversely, destructive criticism can be a disservice to the American people.

Currently, presidential aspirants, for example, are going around the country calling us, or inferring that we are becoming, a second-class nation—in effect, giving credence to the boasts of Mr. Khrushchev, the leader of the Communist system.

According to some of these predictors of doom and gloom, the American people, perhaps, should be looking out the window to watch the Soviet Union whiz by us—and, as Khrushchev says, see him "wave goodby" to us.

Well, the truth contradicts these distortions.

The American people, I believe, deserve the facts, not only because of their fundamental right to know the truth, but also to enable them to make a realistic appraisal of the challenge confronting us.

Recently, the U.S. News & World Report published an informative article, entitled "Russia's Claims Debunked."

The comparative picture presented in the article illustrates that, despite Soviet claims to the contrary, Russia is substantially behind us in almost all major fields, as follows: In steel, 19 years.

In electric power, 16 years.
In production of trucks and buses, 36 years.
In production of autos, 49 years.
In production of meat, 52 years.

In petroleum, 30 years.

In production of meat, 52 years. In production of shoes, 23 years. In production of milk, 19 years.

Overall, I well recognize that we are in a serious struggle for survival, and this includes competition of our economic system with communism.

As we attempt to prove—as I am confident we will—that our system is superior, however, I believe that, insofar as possible, our people are entitled to the truth; and, secondly, that there is absolutely no excuse for selling our economy short.

Believing that the article, "Russia's Claims Debunked," contains valuable information for the Congress and the American people, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From U.S. News & World Report, May 2, 1960]
RUSSIA'S CLAIMS DEBUNKED—THE TRUE STORY

OF AMERICA'S RIVAL

What about the boasts of Nikita Khrushchev? Is Soviet Russia really the colossus that it pretends to be?

Khrushchev, latest dictator of the U.S.S.R., paints his country as the world's greatest power and communism as the wave of the future. He claims that Russia will pass the United States soon as the land of plenty and prosperity.

What are the facts?

All of a sudden, a Western world that had tended to swallow the Khrushchev line is beginning to question it. The drabness and poverty that actually exist inside the Soviet Union have just been pictured in British newspapers. Tourists of many nations, visiting Russia in growing numbers, are seeing for themselves how Russians really live.

Russia's Communist-controlled radio is broadcasting telltate complaints about the poor quality of goods sold to Soviet consumers, about faulty construction, about breakdowns in economic planning, and about acute shortages of workers. Soviet officials are admitting new concern about food yields of state-run farms. A revolt by farm youths in Kazakhstan has recently come to light.

Even in space, where Russia was considered ahead, Americans are finding that their

own satellites now outnumber those of the

Some of the wind is coming out of Khrushchev's boasts. When the wind comes out, what truth remains?

The graphs and charts on these pages Rive you some of the facts.

"Nineteen hundred and thirty" in Russia. What these facts reveal is that, essentially, Soviet Russia is in a stage of development about 30 years behind the United States.

Last year Russia's gross national product-total production of goods, and services-was estimated at \$200 billion. The United States was producing that much 30 years previously, if you compute the value of 1929 output in 1959 dollars.

Compare last year's figures, and you find the U.S. producing at the rate of \$484 billion a year, which is nearly two and a half times the Soviet rate.

Another thing to keep in mind when you look at Russia's production figures is this: To obtain a production total that is far smaller than that of the United States, Russla has to use more workers than the United States-and then the goods produced must be divided among more consumers.

Result is a living standard in Russia that primitive by Amercan standards, After financng his country's huge military establishment, the average Russian receives only about \$430 worth of consumer goods and services per year, while the average American enjoys consumer goods and services Worth \$1,770 a year-more than four times as much.

What the record shows. But what about Khrushchev's specific boasts? How do they stand up when set side by side with facts?

Take space, for instance-

Here the Soviets got a head start. They Were the first to put an artificial satellite in orbit around the earth. Khrushchev has bragged that Soviet missiles could "literally Wipe off the face of the earth" any country that dared to attack the Soviet Union.

The world has been led to believe that the United States was larging far behind Russia in space rocketry. But look at the record, set out in the chart. This shows that the United States has fired more successful satellites into space, has more of them in orbit, and, from all evidence, is obtaining more information about space for future exploration than the Russians.

T. Keith Glennan, Administrator of the U.S. National Aeronautics and Space Administration, sizing up the space race on April 3, said:

"I think there is no question but what We're ahead."

When it comes to military missiles, Russia is generally conceded this edge: It has more long-range missiles ready to fire than the United States. But the United States has humerous short-range missiles that can reach Russia from bases overseas or from submarines plus a powerful fleet of longrange bombing planes.

The so-called missile gap is now being described by military experts as more Soviet boast than actual fact.

In space, Russia was first, but United States

The score	Russia	United States
Parth satellites launched Satellites still in orbit around earth. Lunar and solar space probes, Planets" now in orbit around sim. Biggest satellite put into orbit, Information obtained about space.	3	18. 9. 4. 2. 1,700 pounds. Lots of data, thousands of photos.

T. Keith Glennan, Administrator of U.S. National Aeronautics and Space Administra-"I don't think tion, said on April 3, 1960; "I don't think we're behind the Russians. I have to admit that in the thrust of their rocket systems they have a substantial edge . terms of the long-range benefits, in terms of the solid accomplishments * * * I think there is no question but what we're ahead."

Education under fire. Take schools: Here in another field in which the Soviet Union has been claiming a lot of credit-and the United States has been getting a lot of criticism. The Soviet system of education was credited with turning out more and better scientists, engineers, and mathema-

Yet, all at once, you find the Soviets changing their educational system, shortening their hours of classroom instruction, putting more emphasis on vocational training. Under the new system, most Soviet youngsters will finish their formal schooling at 15, then go to work. Only a comparative few of the most gifted and "politically reliable" will go on to college.

The U.S. Commissioner of Education, Dr. Lawrence G. Derthick, recently made a week tour of the Soviet Union, studying its schools, and came back with a critical report. SOME CLAIMS ABOUT SOVIET SCHOOLS-AND SOME

PACTS-FROM A REPORT TO CONGRESS BY DR. LAWRENCE G. DERTHICK, U.S. COMMISSIONER OF EDUCATION, ON A 4-WEEK TOUR AND SUR-VEY OF APPROXIMATELY 100 SCHOOLS IN

Claim: Soviet schools stress academic training, instead of vocational work.
Dr. Derthick: "The emphasis on work ex-

perience or training is one of several vital changes being made in the Soviet changeover from a 10-year to an 11-year school system. Their new emphasis on what they call polytechnical training is apparently similar to the changes we made here shortly after World War L."

Claim: Russian students do better on tests than U.S. students.

Dr. Derthick: "In our own country, some very weak schools have high paper requirements and administer formidable tests. We also know that each Russian student has the opportunity to study the test questions in advance. These factors caused Henry Chauncey, president of the Educational Testing Service, who reviewed the Soviet tests and our own college-board examinations, to make the following comment:

"The college-board system, requiring the candidate to attempt all of somewhat over 100 questions which are not published beforehand, would seem to require a broader, surer knowledge even if it does not go quite

so deep.'

"You may be interested to know that in January 1958, the famed Russian Mathematics Olympiad examinations were administered to 32 students in two of the Cincinnati high schools. These were not the ordinary examinations required of all Soviet students, but were tests used in their national competition to select students who are to receive prizes from the Government. The University of Cincinnati mathematics professors who reviewed the tests rated the performance of our students on these tests as excellent."

Claim: Soviet schools are run without an "excess of administrators,"

Dr. Derthick: "Our study showed exactly the reverse to be true. We were astonished to see in a single school medical, supervisory, administrative, and service personnel, in addition to classroom teachers, that in numbers and variety are far beyond what one finds on the central staff of many of our good-sized school districts."

Claim: Soviet schools minimize athletics. Dr. Derthick: "Actually, we found athletics to be one of the chief interests of the Soviet people. When we visited the superintendent of schools in Moscow, for example, we found his outer office filled with cups, trophies, and other awards earned in competitive athletics with the schools of other

Here's another Khrushchev boast: That Russia has already passed the United States in milk and butter production and will overtake this country in meat production by 1963.

American experts on Soviet agriculture concede that Russia's claim about butter may be true, since Americans use large amounts of margarine. But these experts challenge Khrushchev on the milk claim. They say Russia's statistics include milk fed to calves and milk produced by goats, camels, and other livestock besides cows. If 1959 Russian production is figured on the same basis as that of the United States, the experts place it at a total of 109.8 billion pounds, or 521 pounds per person, compared with total U.S. production of 121.2 billion pounds, or 684 pounds per person.

Travelers report that it is almost impossible to buy a glass of milk in a Soviet res-

On meat, the record shows this: The average American consumes about 198 pounds of meat per year. The average Russian gets about 90 pounds a year—less than half as much.

WHERE RUSSIA STANDS: YEARS BEHIND THE UNITED STATES

In steel: Russia is 19 years behind the United States, Russia produced 66 million tons in 1959. The United States produced that much steel in 1940.

In petroleum: Russia is 30 years behind the United States. Russia produced 142.7 million tons in 1959. U.S. production passed that figure in 1929.

In electric power: Russia is 16 years behind United States. Russia produced 264 billion kilowatt-hours in 1959. U.S. electrical output hit that figure in 1943.

In trucks and buses: Russia is 36 years behind United States. Russia produced 370,500 trucks and buses in 1959. United States pro-

duced more than that in the year of 1923. In autos: Russia is 49 years behind United States. Russia produced 124,500 autos in 1959. United States produced more than that in 1910.

In shoes: Russia is 23 years behind United States. Russia produced 389 million pairs of shoes in 1959. U.S. shoe production had passed that figure by 1936.

In radios: Russia is 30 years behind United States. Russia produced 4 million radios in 1959. United States was producing that many by 1929.

In television sets: Russia is 10 years behind United States. Russia produced 1.3 million television sets in 1959. U.S. production leaped far past that figure in 1949.

In refrigerators: Russia is 31 years behind United States. Russia produced 426,000 refrigerators in 1959. United States production topped that by the year 1928.

In meat: Russia is 52 years behind United States. Russia produced 9.5 million tons of meat in 1959. United States was producing that much meat by the year 1907.

In milk: Russia is 18 years behind United States. Russia produced 110 billion pounds of milk in 1959. U.S. milk production passed that figure by year 1941.

Behind the figures. But isn't Russia supposed to be gaining rapidly on the United States in almost every type of production? Since 1950, the Soviet Union has doubled

its gross national product, more than doubled its steel output, almost tripled its production of electric power.

In percentages, such Soviet gains appear huge, look larger than American gains.

Yet examine the figures, and you discover: In that same 1950-59 period, the U.S. increase in total production was larger than Russia's gain in actual amount, even though smaller in percentage. This is because Russia started from a much smaller base.

A 100 percent gain in production for Russia between 1950 and 1959 meant an actual increase of only \$100 billion worth. For the United States, a 70-percent gain in the same period meant an actual increase of \$199 billion

Net result, in 9 years of widely heralded Soviet growth, was a widening of the gap between the rival nations. The United States was further ahead in 1959 than it was in 1950.

How, then, has Russia become such a great military power, able to frighten the rest of the world?

Figures give part of the answer. The Soviet Union spends as much for arms, armed forces and arms development as the United States spends for them—\$46 billion a year.

Statistics alone, however, do not reveal Russia's greatest military strength. That strength is a dictatorship that is able to regiment all the Soviet people with ruthlessness. Whatever is needed for the military is obtained by taking it from the civilian consumer.

Under this dictatorial system, Russia devotes 23 percent of her total national energy to military forces. This leaves only \$154 billion for civillan uses.

The United States, by contrast, devotes only 9 percent of its national effort to arms. This leaves \$438 billion for civilian purposes.

Let the United States devote a comparable effort to arms, and Soviet Russia would drop far behind in the military race. Here's what it would mean: If the United States spent 23 percent of its production for arms as Russia does. American military expenditures would total \$111 billion a year—more than twice as much as Russia's. And the United States would still have \$373 billion left for the civilian economy—again more than twice as much as the Soviets have now.

Geography lesson. Look at the Soviet Union on a map, and you see part of the reason why that country has come to be regarded with awe by many people.

It is a huge country, in area—more than twice the size of the United States, including Hawaii and Alaska. What is not generally realized is that much of the Soviet area is frozen wasteland. Most of the U.S.S.R. lies north of Quebec. Leningrad is as far north as the southern part of Alaska.

Barely one-sixth of the Soviet land mass is suitable for farming. Winters are long, growing seasons short. About a fourth of the total area is badly lacking in moisture. Almost nowhere are warmth, moisture, and soil fertility—the three requirements for successful farming—found together in the same place. There is nothing in all the Soviet Union to compare with America's Corn Belt.

To link its far reaches of area, the Soviet Union has only a third as many miles of rall-road as the United States, only 6 percent of the U.S. highway mileage, less than 2 percent as many cars, one-third as many trucks.

The Soviets have milked a lot of propaganda out of their fancy jet planes that transport high officials on trips abroad. Yet the total volume of passenger travel by air in Russia is about one-tenth that in the United States.

TAKE A CLOSE LOOK AT RUSSIA AND YOU SEE

Two hundred and twelve million people; 26 million more women and girls, about 6 million more men and boys, than in United States.

More than 100 nationalities; many speaking different languages, often resenting domination by Russians, who make up about half of the population.

Eight million and six hundred thousand square miles of area; more than double the 3.6 million square miles of the United States. But seven-eights of Russia lies farther north than Quebec, Canada. Huge areas are frozen wilderness. Most of the people live in the western one-fourth of the country.

Total national product of \$200 billion a year; less than half that of the United States, which produces \$484 billion a year, with fewer people.

Fifty million women workers; about onehalf of the Russian labor force. United States has 23 million women workers, about one-third of its labor force.

Four hundred and thirty dollars a year living standard; about one-fourth the amount of consumer goods and services available to U.S. people, on a per-person basis.

Seventy-six thousand miles of railroads; one-third the mileage of the U.S. system.

One hundred and forty-seven thousand miles of highways; 6 percent of the U.S.

One million cars; when the United States has 59 million.

Four million telephones; or one for every 50 Russians. The United States has 67 million, or one phone for about every 3 persons.

People and problems. In population, the Soviet Union also is big. It has 212 million people, about 33 million more than the United States.

Analysis of the Soviet population, however, shows that only about half the Soviet people are actually Russians. The others are of more than 100 different nationalities, speaking dozens of languages—and most of them resent having been conquered by the Russians. Moreover, about 55 percent of the Soviet population are females. This means the U.S.S.R. has only 6 million more males than the United States.

Examine the Soviet labor force, and you find this: The Soviet Union has 37.3 million more workers than the United States, yet has a labor shortage.

The way the Communists run their farms, it takes 52 million workers—47.5 percent of the labor force—just to grow food. And still food shortages are a recurring problem.

In the United States, only 5.8 million workers—8 percent of the labor force—are employed on farms. With the modern farming methods employed here, each American farmer grows enough to feed himself and 30 other people—with huge surpluses left over. Each Russian farmer produces enough to feed only three people besides himself.

Then there is the military taking another big bite out of the Soviet labor force. Russia's armed forces contain 3.6 million men, U.S. Armed Forces 2.5 million.

Take out the farmers and soldiers, and the Soviet Union is left with a smaller labor force for other occupations than the United States has, with its smaller population. The figure: 54 million in the Soviet Union; 64 million in the United States.

To give you an idea of the comparative efficiency of Soviet and American workers: Twenty million workers in Soviet factories supply only the barest of essentials for modern living to the Soviet people, virtually nothing for export. But 17.6 million Americans working in factories not only supply the United States with the world's greatest abundance of goods but also create large surpluses for export.

Why Soviet industry is short of manpower
[In millions]

	Russia	United States
Russia's labor force outnumbers that of United States. But, Russia, with inefficient farming methods, uses nearly 10 times as	109.6	72. 3
many people as the United States to do farmwork. Russia also has larger armed forces. Result: Russia has fewer workers for	52, 0 3, 6	5. 8 2. 8
industries, trades, services, other types of work	54.0	64.0

Where Russia stands today. Add up the facts, and this conclusion emerges:

Soviet achievements that have impressed the world are mostly in a few narrow fields—such as weapons and heavy industry—into which tremendous effort has been poured by a ruthless dictatorship.

Outside these fields, the Soviet Union emerges as a backward nation—years behind the United States and far short of Khrushchev's boasts.

There Can Be Labor-Management Peace in Steel

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in a speech I gave last September which was placed in the Record October 2, 1959, by Representative Bob Wilson, pages A8495-A8497, I stressed the value of the private enterprise system which ultizes the free market place to reach economic decisions instead of political bureaucracies or economic oligopolies. I pointed out that this was the equivalent in the science of economics and related social sciences of the laboratory technique developed to test ideas and truths in the physical sciences.

Three basic things are needed to preserve the free market place as a laboratory to test economic decisions. First-Fair and adequate antitrust laws. Second. Strong and independent laborations responsive to their membership. Third, Fair foreign trade.

I have felt that in America we were blessed with labor leaders, by and large, who believed in the private enterprise system and who understood why it was preferable to economic systems where decisions were made by small groups of men, however, benevolent, and whether their selection to power came from the field of politics or the field of economics. I am placing in the Record a speech made by such a labor leader, Mr. David J. McDonald, president of the United Steelworkers of America. He has challenged management to be equally understanding.

THERE CAN BE LABOR-MANAGEMENT PEACE IN

(By David J. McDonald, president, United Steelworkers of America)

A noted statesman once said: "Out of every catastrophe comes something good."

Those of you who remember the long gruelling crisis that enveloped the steel industry for 116 days last year will wonder what good, if anything, could possibly emerge from that regrettable breakdown of labor-management relations. What possible benefit could accrue the workers, the management, or the Nation from the longest and costliest steel dispute our country has ever seen?

I am not going to minimize the hardship and suffering endured by a half million of our members during their spirited fight for justice. Nor can anyone flippantly disregard the economic loss encountered by the stell industry, the workers, and companies in related industries or the Nation as a whole throughout that lengthy work stoppage.

And it certainly is not my intention to crow over the final terms of settlement which, after an unprecedented struggle, not only preserved for the steelworkers of America their basic job protections but gave them a fair measure of deserved economic improvement.

No, the principal windfall from this lamentable experience which was thrust upon us is one that, hopefully, may redound to the everlasting profit and gain of all Americaincluding the workers and the companies. I am referring to the far-reaching steps taken by both sides to help establish lasting peace

by both sides to help establish lasting peace and harmony between workers and management in this industry after the realization by all concerned that such industrial warfare can and should be prevented in the future.

You should know about this important development. It is a refreshing demonstration that reasonable men, if they want, can find a way to resolve their differences through free collective bargaining. But perhaps, even more important to you, it holds the promise of permanent labor-management peace in an industry where a collective bargaining war can vitally affect your economic well being—even if you are not directly connected with it.

Let me tell you what has happened and explain why I think this change in our industry is so important to you. But first allow me to point up the general problem, its essential elements and why it took the union and the management so long to find a better way

to live with one another.

During the 23 years of our union's existence, we have had a checkered pattern of relations with the steel companies.

Over the past 20 years, sometimes accompanied by conflict, we have laboriously created a relationship in which each party has respect and understanding for the day-to-day problems of the other and in which neither attempts to demonstrate that it is the master and that the other must bow.

It is and always has been the union's desire to maintain this kind of relationship. Both management and our union will readily agree that once the economic and contractual issues between them were resolved, there was a healthy period of stability for the duration of the contract term.

It is perhaps inevitable, though regrettable, that the companies and the union have had differences as to the appropriate terms of their labor contracts. Under our system of free collective bargaining, failure to resolve these issues has led to strikes on some occasions.

The principal ingredient lacking in our relationship has been an instrument to avert the turmoil and uncertainty which arises when new contracts must be negotiated. Industry and labor have not yet found a way to make an orderly transition from one contract to the next without sacrificing the interests and equity of either or running the risk of a shutdown.

Negotiating a new contract is infinitely complex and the factors involved, even in a harrow area of activity, are without number. Moreover, such collective bargaining is a social process. It involves people emotionally. Each side slugs and claws for temporary advantage and both fashion themselves into a fighting army determined to win what each deems valid points.

Our problem has centered on the fact that we of the union and the representatives of management have not had the opportunity to discuss or attempt to resolve our economic and contractual differences in a climate that lends itself to rational and objective solution. We faced our major problems and issues only when the contract deadline pressures had been built up. Then, it was sometimes too late and a crippling dispute flared up.

Our experience of last year was the climax. A5 a trade union, the United Steelworkers of America has long opposed governmental

interference of any kind with free collective bargaining. Accordingly, we proposed a variety of devices to settle our differences including some which would enlist the assistance of neutral, impartial persons.

In advocating a formula for industrial peace, we searched for a way to make disastrous disputes obsolete while preserving the precious freedoms that have made our country the best of all time in which to live and work.

On October 26, 1959, an historic agreement was consumated with the Kaiser Steel Corp. which set the pattern for somewhat similar agreements by other steel firms.

The significant thing about this settlement is that it—for the first time—included a serious program for achieving industrial harmony along the lines that we have been advocating. It called for the creation of a tripartite committee, including public representatives, to work out a method whereby workers and the public could share with stockholders in the fruits of industrial progress.

Through joint human relations committees we will sit down together and study out some of the problems that contribute toward a breakdown of good labor-management relations.

Here are new, practical and largely unexplored means for both workers and employers to conduct a search for truth. It could lead to the first honest assessment of our contractual relationship and the correction of our inadequacies when we meet to negotiate new agreements.

There are those, of course, who will tell you that there will always be shutdowns, that there will always be industrial conflict.

We of the union cannot foresee the future, naturally. But we have made a contract and we intend to keep it.

We have entered a contractual relationship in good faith and I hope the steel industry has done the same. I feel confident in my heart that if we apply all the skill ingenuity and social understanding possessed by the leadership of both sides, we will succeed in putting our house in order.

If we do find a way to amicably resolve our differences with consistency, the rewards will be phenominal not only for those of us in the industry but for every man, woman and child in our great country.

It could bring our Nation a new era of economic stability. The companies will be assured of steady, profitable production. The workers will have the promise of continuous work and high earnings, as well as decent conditions of employment. And for our Nation, it will insure a satisfactory and steady flow of a vital commodity produced by workers who are not only happy but can make their rightful contribution to economic prosperity of our land through their great purchasing power.

I regard this new effort as a sober and critical process to locate the truths by which we can establish the kind of relationship which all America will endorse. We can and must transform conflict into cooperation. We must strive to bring predictability and peace of mind to one of our greatest industries and its workers.

The ultimate goal is to remove problems of labor and management from the arena of long and costly economic warfare and project these differences into a common meeting ground which will preserve free collective bargaining and prove its worth in our democratic society.

Ours is an industrial civilization. People spend a large part of their lives in the mines, mills, and plants of America contributing their best at their machines or in their offices. America's promise of "life, liberty, and the pursuit of happiness" will mean little to them if their lives in industry are fraught with conflict, tension, and frustra-

tion. If we can build a better way of life within our industry, we will have gained the inner satisfaction of discharging one of the heaviest social responsibilities of modern man.

Giving labor a recognized partnership in those affairs of industrial society which affect workers, management and the general public will go far to change the old psychology of conflict to one of mutual understanding and respect.

I am confident that if this new effort to bring industrial peace is successful in steel, it will set a pattern of progress for all American industry. If it does, the sacrifices of steelworkers and the economic losses of the companies and the Nation in the longest shutdown in history will be turned to the advantage of all the American people.

Has the West Saved Its Good Earth?

EXTENSION OF REMARKS

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, last week we celebrated the 25th anniversary of soil conservation work in the United States. This significant occasion caused the Denver Post to publish an excellent article by Roscoe Fleming. The work of this program in our own State of Colorado is a tribute to the wisdom of Congress 25 year ago. I invite the Members' attention to Mr. Fleming's report of April 24 in the Denver Post:

HAS THE WEST SAVED ITS GOOD EARTH? (By Roscoe Fleming)

It began not primarily to save soil, but to save people.

This was in the dark days of the early thirties, when the "black rollers" were devastating the plains, and the eroding American earth was running off to sea at the rate of half a million good acres yearly.

Secretary of Interior Harold Ickes, charged with the duty to get millions of jobless people back to work, created the Soil Erosion Service, in September of 1933.

The division so proved its worth that Congress unanimously made it a permanent division of the Department of Agriculture as the Soil Conservation Service.

Secretary of Agriculture Henry Wallace formally proclaimed it April 27, 1935; so this week we are observing its 25th anniversary.

There are 40 men still in Congress who voted for it, including Senators Carl Hayden, of Arizona; Joseph C. O'Mahoner, of Wyoming; James E. Mueray, of Montana; and Frank Carlson, of Kansas; and Representatives Sam Rayburn, Wright Patman, and George H. Mahon, all of Texas.

Succeeding years have seen the Service take on one duty after another until its 25th birthday finds it a sort of national handyman in conservation.

The total of present SCS responsibilities often surprises people who think they are familiar with it, particularly in the West.

Its most important function is to supervise the original national program of soil conservation through local soil conservation districts run under State laws by elected boards of soil district residents.

But SCS also directs the important soil classification project of the Department of Agriculture, and carries out that Department's responsibilities in watershed protection and flood control.

This latter job entails supervising 11 large watershed pilot projects under the Flood Control Act of 1944; hundreds of small watershed projects started or planned by local districts under an act of 1954; and the special \$150 million Great Plains conservation program authorized in 1956.

The Service also gives technical help to farmers and ranchers, under various parts of the general farm program, including the

soil bank conservation reserve.

SCS is in general charge of the enormous winter program of measuring snowpack and water content on the western mountains, so vital to every western water user and agency; and more lately it has been assigned to measure fallout contamination of the soil.

Its accumulating files of permanent data are valuable in many unthought-of ways; for example the Colorado Highway Department is now studying SCS soil-classification maps of eastern Colorado to find suitable

gravels for road concrete.

Statistics show how big a job it is to help farmers and others to save topsoil, and to put it in shape to hand down to future generations unimpaired-all after a century of "mine it out and move on" which began to end with the conservation crusade of Theodore Roosevelt and Gifford Pinchot a halfcentury ago.

As of 1960, there are 2,865 soil conservation districts organized under State lawssome significantly call themselves soil and

water districts.

They have nearly 2 million members, and a lively national organization, regionally represented in Denver by Robert S. McClelland.

Soil within districts now totals 1.7 billion acres, including more than 90 percent of all

privately owned rural land.

All such land within 21 States is now included within SCS districts, including Kansas and Nebraska; no State has less than 70 percent included.

But the task of total conservation is so enormous that as yet, even after a quartercentury, only about 20 percent of all eligible land has received full conservation treatment.

This, generally speaking, is at the expense of the landholder or tiller, who receives technical assistance and approval from SCS through his local district.

About 1.7 million basic plans have been prepared by people desiring soil help, but only a fraction have been completed, the rest waiting their turn.

Even so the accomplishments so far are Herculean.

They include 990,000 farm ponds and 32,000 larger reservoirs, for flood control and irrigation; 34,000 miles of windbreak; 1.1 million miles of terracing, and 36 million acres contoured; 6.3 million acres planted to trees.

The face of America is being changed. Any air traveler can see the beautiful resulting patterns from above and can also see the enormous areas yet to be treated.

The SCS plans are not the only such programs, of course.

Uncle Sam's own acres are being conserved by such agencies as the Forest Service, the Bureau of Land Management, and the National Park Service.

The difficulty here is that Congress appropriates meagerly. Senator GALE McGEE, of Wyoming, recently complained that at the present pace it would take 75 years just to replant burned-over forest.

The Soil Conservation Service also is in general charge of the next necessary step in rural conservation.

Erosion doesn't stop at fence lines. Groups of farmers and perhaps others have to get together, to check it throughout the watershed in which they live.

This obvious need was met by the Small Watershed Project Act of 1954, through which farmers and others can jointly apply for SCS assistance.

By last March 1 more than 1,200 applications had been received covering more than 90 million acres, and some 200 projects were

actually underway.

Those in Colorado include Wray, Klowa, Cherry Creek, and Big Sandy. Applications from five others in Colorado are being processed, and many others are on the way.

Colorado has 96 soll conservation districts with a strong State association. These districts cover 49.5 million acres, tilled by 18,356 cooperating citizens. The 13-State Rocky Mountain empire has about 560,000 coop-

SCS also handles the special \$150 million Great Plains drought-proofing program authorized by Congress in 1956 just at the end of the disastrous drought of the 1950's.

Under this program, any Great Plains farmer or rancher within an area covering parts of 10 States, may get a Federal grant-in-aid to improve his "spread" so that it will better survive the inevitable next drought.

This didn't actually get a good start until 1958, but by now about 4,100 farm-and-ranch plans have been approved, with another 3,000 applications on file. The apother 3,000 applications on file. proved plans cover more than 11 million acres.

The average of accepted "Great Plains" plans runs about 2,700 acres, and the significant thing is that the total program calls for putting about 30 percent of crop acreage back into grass. In other words, it is a partial return from crop farming to grassland

The Federal Government is by now obligated for about \$20 million, and with increasing acceptance of the program, SCS hopes Congress will appropriate \$25 million a year, so as to get the whole program done by 1966 and before the "black rollers" come again.

So far the program is only a scratch on the Plains, since the 422 counties included in its area have 386 million acres.

All of eastern Colorado is included right up to the mountains, with about 26,000 eligible farm-and-ranch operations. (All this of course, is in addition to normal SCS assistance through the districts, and to the small watershed program, beside other pro-

grams of other agencies.)
No one can say Uncle Sam has been niggardly or backward in this matter of saving the soil. New ground has been broken, in the way of governmental aid without governmental dictation.

Politics in the partisan sense has been largely absent; and, as has been said, we have something entirely new and encouraging here in the way of cooperation between people, and all levels of government.

So, how are we doing? Can we fold our hands and let momentum carry the job? Not by any means, according to SCS Administrator Donald Williams, speaking to Colorado SCS district members here early in 1960.

He said that new soil destroyers have taken the place of the old.

We have cut water and wind erosion perhaps by half, although we are still losing the good topsoil at too rapid a rate.

But new destroying influences are man-

Some way it seems that the plans of suburban developers and of industry gravitate naturally toward the best farm soil on the outskirts of cities.

They are covering several hundred thousand acres yearly, putting the soil out of crop-production as effectively as if it had been destroyed by wind or water

Then there are the superhighways, devouring monsters which chew up many acres per mile of right-of-way, and with their cloverleafs that swallow perhaps 50 acres each.

Every highway department finds one of its most difficult and expensive tasks is to cover and maintain these raw scars with healing vegetation.

Then there are new pollutants that poison soil and water alike—the increasing load of human and industrial wastes, of new chemicals like detergents, of radioactive substances in some areas.

Sad examples are the radioactive contamination of irrigation water by uranium mills, now being ended; and the recent revelation of poisonous discharges from the Rocky Mountain Arsenal which had spread underground for several square miles.

Soils within this area have been as effectively put out of production, at least for years, as if they'd been blown away or

for years, as it taley a countries carried down a river.
Gladwin Young Assistant SCS Administrator, speaking at Durango in early April, told Colorado cooperators that the present state of "surplus crops" is one that will vanish ere we know it.

At present farm production rates, he said. the Nation will require another quarter-billion acres within 40 years, yet there are only 63 million new acres in sight with all development, including more extensive irrigation in the West.

Both he and Administrator Williams feel there is waste and inefficiency in rooting up good citrus groves, truckfarms, and dairy farms near cities, to substitute poorer soli far away. They both bespeak closer cooperation at all levels between soli conservation districts and similar organizations, and city and rural zoning boards, developers and their associations, and so on-The need is also emphasized at Colorado State University and elsewhere.

Soil conservation has taken its Jumps at times. One example was the action of the Colorado Legislature in 1945, in rescinding all SCS rules within Colorado, and giving the districts only 45 days to reinstate them and then by a three-fourths vote.

This was caused because some eastern Colorado districts whose resident members remembered with horror the "black roller" days of the thirties ("I think I'd commit suicide before I'd go through that again." 5 veteran of it once said) had attempted rigid soil-use zoning, to prevent another plowup 'blow' soils.

But land speculators all over the Nation had bought Dust Bowl soil cheaply to hold it for a rise, and the gangplow operators from elsewhere were all poised to move in and plow up thousands of acres again for wheat which was in demand because of World War II.

Voting by proxy, since a nonresident owner has as much right to vote as residents, they overwhelmed the local veterans of the "black roller" days, and threw the land open to the plowup.

We all remember what happened when the rains ceased to come in the early fifties of if you don't, the disaster was almost as com; plete as in the 1930's, despite all the talk of 'never again."

But the general principle of conservation now seems to be accepted.

What will another quarter century bring? Some people have the vision of a completely conserved America, with every acre brought to its highest use or uses, to feed and otherwise serve the people with recrea-tion and beauty, as well as with food and fiber.

Hustisford, Wis., Describes 1960 Farm Economic Problems

EXTENSION OF REMARKS OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. KASTENMEIER. Mr. Speaker, the current May 9, 1960, issue of U.S. News & World Report presents a profile of Hustisford, Wis., a community located in my district. The interviews set forth clearly the problem of today's family farmer and the community which serves his needs. This description of the situation in Dodge County faithfully documents the problems facing farmers throughout Columbia, Dane, Jefferson, and Waukesha, the other counties in my district. It is obvious that present farm policies are driving the family farmer off the farm. This refuge for independent-thinking individuals is being lost to the highly mechanized and highly financed corporate farms. Homesteads are being sold since the sons to whom the farms would normally pass have turned to other jobs. Rural villages find they must compete with shopping centers in the cities where the ex-farmer now works. It is clear from this article that a way of life is passing from the American scene. Twenty or more of my colleagues and I have seen this trend and have introduced the Family Farm Income Act of 1960, a comprehensive agriculture bill designed to raise the income of the family farmer, which is based on the belief that an economically healthy family farm unit is necessary to a healthy agriculture and healthy agricultural community. I submit the views of my constituents as evidence of the ailments of our present agriculture economy and its closely related community.

WHY FARMERS ARE TROUBLED-A FARM Town's Answers

(This is the farm problem, stripped of statistics and politics, and told in terms of people. To get this story, a writer-photographer team of U.S. News & World Report visited the farm community of Hustisford in southeast Wisconsin, one of the Nation's top dairy farming areas. Farmers and men who do business with them were interviewed. In their words, you learn how the farm problem is affecting life in a typical dairy farming community. The picture that emerges: Farmers selling out in droves. Sons that "don't want any part of farming." Remaining farmers caught in a price squeeze, yet living "fairly well, with no frills." A changing rural community, with ex-farmers commuting to jobs in cities.)

"MARGIN OF PROFIT ISN'T ENOUGH"-W. E. KOHN, CASHIER, HUSTISFORD STATE BANK

Question. Mr. Kohn, what is happening to

American farmers these days?

Answer. There's been quite a movement the farms. This spring has been the climax. I think the worst of it is over, be-Cause there aren't too many small farmers

Question. Is it the young fellows or the older farmers who are getting out?

Answer. Both, but the young fellows are hurt the worst. Take a fellow who doesn't have too much debt: He's able to get along

on today's prices. But the young fellow who started on a shoestring has tough sledding.

It takes a lot of money to start farming these days. Just to give you an idea: There was a farm sale the other day. The man's line of machinery wasn't anything special. He had 25 cows. The auctioneer told me the sale total ran close to \$20,000.

No, if a young fellow comes in as a tenant these days-doesn't own his land-he needs at least \$20,000 in livestock and machinery.

Question. Do farmers live pretty well? Answer. I would say so, but certainly no frills. They do a little on their homes each year. Most have running water. They all have big lockers (freezers). Several drive new cars, but I haven't seen any with Cadillacs. It's mostly Fords, Chevvies, Olds, Pontiacs, Mercurys, a Buick here and there.

Question. What about the cash-income

Answer. I don't think the income picture is too bad. The milk price could be a little higher, but hog and beef cattle prices are pretty fair now. The big trouble is the cost of machinery and equipment.

Question. If prices for farm products stay at present levels, will farmers be satisfied?

Answer. I don't think so. The margin of profit just isn't enough. They need higher prices for their milk and other products to come out on this machinery pinch.

"FARMING SITUATION LOOKS BAD"-ALVIN WILL, A FARMER WHO HAS JUST SOLD OUT

Question. Why did you decide to quit farming, Mr. Will?

Answer. All I was getting was exercise. was farming 340 acres and milking around 48 cows. That's a good-sized operation, but by the time I paid a hired man there wasn't

anything left for me.

I got two boys, but they've gone to town, and I can't blame them. With the wages they get in town, they'd be foolish to be farming. One of them's a carpenter. He gets \$3.73 an hour, 8 hours a day, 4 days a week. On the farm you work 12, 13 hours a day, 7 days a week, and you don't get anything like that. No, sir; you've really got to love farming to stick with it, when you look what you can get in town.

Question. You're not optimistic about the future for farmers?

Answer. I tell you, this farming situation looks bad. Machinery prices are way out of line with farm prices. During the war, we got \$5.25 [per hundredweight] for milk, and a tractor cost \$1,400. Now the tractor costs \$3,200, and last year the average price I got for milk was \$3.35. I bought a car back then, too, for \$1,250—a Ford. Now, just the other day, I bought another Ford and it cost me \$3,150.

Any number of farms are standing idlemaybe renting out a little land. The guys. who are trying to hold on, they chase 'em off with taxes.

Question. Don't they have to pay taxes. even if the land is idle?

Answer, I mean personal property taxes. That's the big item. A guy sells out his cows and machinery. What happens? Taxes move across the fence to the man who's still

"MACHINERY SALES 'OFF 40 PERCENT' "-A. H. WITTENBERGER, DEALER IN FARM MACHINERY AND AUTOMOBILES

Question: Are farmers buying much machinery, Mr. Wittenberger?

Answer. Our business is off about 40 percent compared to last year. What farmers do buy, they don't want to pay you anything for. I just came back from up in the country, trying to sell a plow to a farmer. He tells me he can buy it from another dealer for \$7 less than my cost.

Farmers are hurting a little too much. You hear people say they're always griping, but right now they've got a good reason.

They were promised a raise in the price of milk, but it so happened they didn't get it. Question. You hear a lot of farmers are

Answer. We've had auctions here, at least one a day, sometimes three or four in a day, ever since the 1st of February. I'd say about 50 percent more farmers sold out this year

than in past years. The farmer who sells out usually is the

one who doesn't have modern machinery. If he had new machinery, he could make it if he's a good manager. But, before he'll spend \$8,000 or \$10,000 to get what he needs, he'll quit. These sales are mostly junk, as far as machinery goes.

Question. Farmers have been living off depreciation, haven't been replacing their ma-

Answer. That's exactly the way it is. Now they've either got to replace it or get out, so they'll sell out, put the farm in the soil bank and to hell with it.

Question. What happens to your business

as farms get fewer but larger?

Answer. The little farmer who has this cruddy machinery hasn't bought anything to speak of in 10 or 15 years. When he goes out of business you lose a customer, but not much of one. If his land is taken over by a big farmer with push, he'll step out and buy the bigger machinery, and that helps the machinery dealer.

Question. What is a farmer quits and puts

his farm in the soil bank?

Answer. That hurts considerable. All he needs then is a cheap tractor and a mower to keep the weeds clipped, and, more often than not, he rents them from a neighbor. That farm is out of circulation. That takes money out of our pocket.

Question. How do you feel about the

future?

Answer. I'm fairly optimistic. This situation right now ought to improve. Last fall we had the steel strike and no cars to sell. Then we had a bad winter. Now farmers have been beat out of the milk raise. I look for things to wash themselves out by July or August, and everybody will be in a better mood.

Question. Who's your choice for President in the election next autumn?

A. That man from New York

Question. Governor Rockefeller of New York?

Answer. That's right.

When the Republicans see how poor NIXON ran out here [in the presidential primary]. they'll go get Rockefeller. He's big business, but I think that's good. He's got brains. He'll know how to run the country.

"OUR BUSINESS IS HOLDING UP"-HERB MAD-SEN, OWNER OF A GENERAL STORE

Question. How is your business, Mr. Mad-

Answer. We can't complain. Our business is holding up all right. Last year was the best we've had since we came 9 years ago.

Question. All these farmers selling out hasn't hurt you?

Answer. No, we don't seem to lose any customers. They quit farming, they go into something else and they still have to eat. We have a lot of people here that commute to Watertown and Hartford and Beaver

" 'THE LITTLE FELLOW' IS GETTING OUT"—WILLIE KAUL, AUCTIONEER AND REAL ESTATE DEALER

Question. Mr. Kaul, they say you've been handling a lot of farm sales in this area-Answer. We sure have. The little fellow just isn't going to be around any more—that seems to be the trend. I can take you

to a road west of here where we've sold out nine farmers in a row in the last 4 years. Question. What happened to their land?

Answer. Some of it was bought by neighbors. Some of it is rented by neighbors. Some of it has gone into the soil bank. Cows are being milked on only two or three farms of the nine.

Question. How big were the farms?

Answer. They would average around 100 acres. I can give you plenty of examples of what's going on. I listed a farm for a sale farming. They had 137 acres. The son's older farmer and his son decided to quit farming. They had 13 7acres. The son's going to work for a canning factory. The place was bought by a neighbor—a father and his son who already had 320 acres. The boy's 19. They'll handle the whole thing themselves. They have the big equipment you need to do the job-three big tractors and a line of implements to go with them.

Question. With all these sales, what's hap-

pening to the price of farmland?

Answer. I'd say it's up about 5 percent and it looks like it will keep on going up. So many people are after land. Not only farmers, but people want it for subdivisions. Then there's all these new highways. And the soil bank tends to force prices up, too.

Question, You mean they're subdividing land way out here in dairy-farming country?

Answer. Sure. We have about 55 people in Hustisford working in other towns—Watertown, Juneau, Lebanon, Neosho. There are people living on the lake who drive 45 miles into Milwaukee every day.

Question. Do you find that it is mostly

young farmers who are selling out?

Answer. Young and old. A lot of young fellows just couldn't make it. Some of the older farmers decided to retire. A lot are like Alvin Will—their boys just don't want any part of farming.

"FARM WON'T SUPPORT TWO FAMILIES"—MILTON RICE, SR., COLLECTOR FOR A FARM-AUCTION-ING SERVICE

Question. Do you find most of the young fellows leaving the farm, Mr. Rice?

Answer. Unless they get a lot of good help from Dad. One thing's for sure-two families can't live off one farm any more, unless

it's a mighty big one.

Question. You're a collector for an auctioneering service. I thought farmers paid

cash at auctions.

Answer. They do-hard cash or by check, but we get quite a few rubber checks. I had \$2,500 worth handed to me at the office this morning. I've got \$700 of it back.

Question. You mean they buy something and write a check that's no good?

Answer. That's right. Usually, when you show the check to the farmer and it's marked "no funds," he digs the cash out of his pocket. We get most of it in the end. We don't repossess very much stuff.

Question. Are more farmers writing rub-

ber checks this year?

Answer. I'd say we're getting about 25 percent more this year.

"WE JUST BROKE EVEN LAST YEAR"-MARVIN BISHOP, DAIRY FARMER WHO OPERATES AROUND 1,000 ACRES WITH HIS SON, LARRY

Question. How big is your milking herd, Mr. Bishop?

Answer. We milk 93 here and 42 on one of the other farms.

Question. Do you plan to make your oper-

ation any bigger?

Answer. Not right now, but you've got to operate big in farming today. The small guy doesn't have a chance. When I started farming in 1927, we milked 36 cows-by hand. After the war, we got up to 45 cows, and we've been adding more every year. I started with 171 acres in 1927. Eight years later, I bought 136 acres more. Then, 15 years after that, I bought another 240 acres.

Question. What do you figure your investment in machinery and equipment will run?

Answer. Fifty thousand dollars, at least. You've got to have tractors, combine, field choppers. We grind our own feed, so we have feed grinders and mixers.

Question. Are many farmers selling out around you?

Answer. I've never seen anything like it. There've been times this spring when we would have three auctions in 1 day within a radius of 12 miles. A lot of these fellows just can't cut 'er. It isn't in the books when you have to hire help and machinery is so high.

Question. How much do you pay for help? Answer. I have two hired men. They each get \$300 a month along with a house, all their milk, part of their meat, a garden plot,

Question. Can you make money with the

price you get for milk now?

Answer. I just got my income tax back from the fellow who figured it. We just broke even last year, but, man, we sure handle a lot of money. No, sir, something has got to happen. We're just farming for has got to happen. We're just farming for exercise out here, with the milk price the way it is. There's no reason why we can't get a decent price for milk. With milk at 25 cents a quart in town, that means the dairy companies are getting \$12 a hundred-weight for milk we sell to them for less than \$4 a hundredweight. That look fair to you? Question. Why do you keep on farming?

Answer. The only reason a person keeps on farming is that he's got kids growing up and he feels there ought to be a future ahead for them. You keep hoping, but, if the kids don't want to farm, then there isn't much reason to stay with it. Question. Is there anything farmers can

do to get better prices?

Answer. Farmers have got to organize some way, but it's hard to organize a farmer. He's such a stubborn old mule you can't do anything with him.

Question. Who is your choice for President

next November?

Answer. Truthfully, I'm not sure. I don't think it makes a lot of difference which party is in as far as farm prices go. They promise you everything, but, when they get in there, it's a different story. I think Nixon will probably be the next President.

Polish Constitution Day

EXTENSION OF REMARKS OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. COLLIER. Mr. Speaker, today 7 million Americans of Polish descent are celebrating Polish Constitution Day. I know all Americans join with them in the hope that someday the people of Poland will again live under the free spirit in which the Polish Constitution of 1791 was conceived.

Judged by any standard and measured by any yardstick, that historic document remains as one of the most liberal, democratic, and quite progressive instruments of government of the 18th century. The Polish constitution made real landmark in Poland's political history and it also had great significance in Europe's constitutional history.

By that constitution Poland overhauled its old and unwieldly governmental structure and not only brought it up to date, but it also strengthened the country internally by uniting all classes of the people behind the rejuvenated government. Poland became a limited constitutional monarchy, with a cabinet type of government responsible to parliament. The popularly elected legislative chamber was vested with real legislative powers, and the basis of the electorate was considerably broadened. Townsmen were given considerably more share in the government, and many class distinctions were abolished. Religious toleration was guaranteed. With these and many progressive features the constitution of 1791 was justly hailed by all liberals and lovers of ordered democracy. Of course, we are painfully aware that the Poles never had the chance to live under this constitution because of the destruction of their country by their rapacious neighbors, but they fervently cherished the fine spirit embodied in that document, and on this 169th anniversary celebration they still cling to that spirit.

The American Role in Pacific Asian Affairs

EXTENSION OF REMARKS OW

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a clear, comprehensive, convincing restatement of what U.S. policy is in the Far East and Western Pacific-and why. Events in that part of the world are proving the wisdom, the farsightedness and the effectiveness of the firm. sound, and patient position our Government has consistently pursued there despite much misunderstanding and even misrepresentation.

The address was given some weeks ago before the Wisconsin Bar Association meeting in Milwaukee, by the Honorable J. Graham Parsons, Assistant Secretary of State for Far Eastern Affairs:

THE AMERICAN ROLE IN PACIFIC ASIAN AFFAIRS

I. INTRODUCTION

Mr. Chairman and members of the Wisconsin Bar Association, I wish to express my great appreciation to you for inviting me to be present as a speaker on foreign affairs. It is a privilege to be here before you to present the Department of State's case on matters which concern us all. We in the Department welcome such evidence of interest in the problems we deal with and value the opportunity of discussing with you some of the more pressing of these problems. our part, we are ever mindful of the fact that "our business is your business," and that the way we handle this business is your business is your business to all of us and to our children. We vital to all of us and to our children. also realize that if the policies we advocate and the actions we take do not have the understanding and support of the American people, we may not carry them forward but must find other courses which do have public support.

II. THE NEAR WEST

The problems I deal with have to do with the Far East as your chairman made clear in his introduction. It is a misnomer, however, for us in North America to speak of the Far East. We Americans, who border on two great oceans, should more properly speak of the Far East as the Near West. Actually in the shrinking world of today, it is near. You can board an airliner hereabouts and be in Tokyo in 20 hours or so.

Apart from being 180° off course, there is another strike against the term 'Far East." It is a European term and it reminds Asians of the colonial past. That era is gone. Of the 11 Asian countries with which our Bureau in the Department deals, 8 are newly independent, while for the 3 who Were sovereign before World War II-China, Japan, and Thailand-the circumstances are also vastly different from prewar days. free peoples of Asia are determined to eliminate the remnants of colonialism which is still a recent, unhappy memory and a sensitive subject. They may not express to us an aversion to the term "Far East" but I mention this as a reminder that the new and promising relationship we have with Asian peoples requires a continuing sensitive adjustment on all fronts-political, economic, social, and psychological.

III. THE COMMUNIST THREAT

It is an unfortunate fact that the free countries of Asia have been born—or rein-carnated—at a time of crisis in the history of mankind. Nationalism, that is to say, the aspiration of peoples to be themselves, is threatened by its antithesis, international communism. The threat is compounded of course by the Communist propaganda pretense of being the friend and benefactor of nationalism and the foe of "colonialism and imperialism." And yet in the postwar period it is the Communists who have taken over 12 countries and the former colonial powers who now have sovereign equal relations with 33 countries, former dependencies.

Like all new things, these new countries were weak at birth. When our own country adopted its Constitution in 1789, it was no exception. We are all familiar with the difficulties our Founding Fathers faced in knitting together a united Nation from 13 individual colonies. But we were protected by oceans and distance and had plenty of time at our disposal.

In contrast, a glance at a map will show us that the free countries of East and Southeast Asia are all islands or peninsulas dispersed around the central land mass of Communist China whose aim is to dominate and communize them. This is the fateful central fact with which our policy toward the region must deal. It explains why our China policy is intimately bound up with their political and economic futures and with the right of the peoples of this vast region to work out their destinies in freedom.

I have said that many of the new countries were weak at birth. Between them and Communist China there is an obvious imbalance of power which, if not redressed, renders their prospects precarious. This is a matter of great significance for the United States, and it led us to the conviction that our first task in the region is to assist the survival of these countries. That is why there is emphasis on military aspects in our aid programs and posture in the area. Security is the basic essential. First, as a necessary deterrent to Communist attacks, we maintain bases and seapower in the region from which our strength may be quickly projected to meet a variety of situations. Also to promote security we render assistance to local forces through our military assistance program so that these countries may increasingly guard against subversion within and interference from without. In addition we have concluded bilateral mutual defense treaties with some of these countries, including Japan, Korea, the Philippines, and the Republic of China. Finally, just as we and others joined NATO to provide collective

security in the Atlantic area, so have we joined with seven other countries to form the South East Asia Treaty Organization.

It is sometimes argued that our policy is thus provocative to Communist China. Actually, the exact reverse is true. Our collective security structure was developed only after unprovoked Communist aggression against Korea. Our Mutual Defense Treaty with the Republic of China was drawn up only after Communist China's attacks on Quemoy in 1954. SEATO came into being only after the fall of Dien Bien Phu, when Communist armies were threatening to overrun all of Southeast Asia.

Going even further back, we were aware of the Chinese Communist hostility toward ourselves and the free nations of Asia even before the Peiping regime came to power in 1949. For example, an article written on November 1, 1948 by Liu Shao-chi, Commu-nist China's Chief of State and second most powerful leader after Mao Tse-tung, de-clared that the world was divided into two mutually antagonistic camps—the so-called "anti-imperialist" camp headed by the Soviet Union and containing the so-called "peoples democracies" of Europe and Asia, and the "Imperialist" camp made up of the United States and its "stooges." Declaring that these two camps were in "intense conflict" and that neutraltly was impossible, he called on the so-called "peoples democratic forces" in all countries to unite with the Soviet Union in order to "defeat the American imperialist plans for world enslave-This statement reveals clearly not only that Communist China was implacably hostile to ourselves and to our friends and allies, but that the Peiping regime wanted us out of the western Pacific area so that our presence would not block its plans for future expansion.

There has been no change in Communist China's views. During the Taiwan Strait crisis of 1958, Mao Tse-tung said to a Communist news correspondent that it was the task of the people of the world, and particularly the peoples of Asia, Africa, and Latin America, to put an end to what he called "the aggression and oppression perpetrated by imperialism, namely, the U.S. imperialism." Repeatedly Peiping radio called upon us to leave the Western Pacific.

Despite longstanding Chinese Communist hostility toward us, we did not automatically adopt a similar policy of hostility toward them. When they came to power and in an attempt to sound out Peiping's intentions toward us, we left our diplomatic and consular representatives on the China mainland until they were driven out by deliberate Chinese Communist persecution. On January 5, 1950, President Truman made it clear in a public statement regarding Formosa that the United States would not use its Armed Forces to interfere in the situation and would "not provide military aid or advice to Chinese forces on Formosa." In a press conference on the same day, the Secretary of State said: "We are not going to get involved militarily in any way on the Island of Formosa." It was not until after the Communists began their aggression in Korea in June 1950 that President Truman sent the 7th Fleet into the Taiwan Strait area to protect the flank of the United Nations forces. Military aid to the Republic of China on Taiwan was begun only after the Chinese Communists' intervention in Korea.

This, then, is the origin of the so-called military preoccupation of the United States in East and Southeast Asia. Out of the fires of Communist aggression in Korea and elsewhere we have forged a protective shield for ourselves and for our free Asian neighbors. It has served them, and us, well these past 5 years. We cannot afford to put it down until the threat to freedom abates.

IV. IMPROVING THE LIFE OF THE PEOPLES OF THE REGION

While our first task is contributing to the survival of these new countries, their peoples, like people everywhere, demand more than survival. After ages of relatively static, albeit highly developed, societies, they now have new horizons and they aspire to a better material, cultural, and spiritual life. As they succeed in this objective, both with our help and that of others similarly motivated, so will they consolidate the foundations of their national existence. Therefore, as our second major objective, we seek to promote self-sustaining economies to enable the free countries to achieve the rate of progress they desire without sacrificing human values as do the Communists. To the extent that we succeed in helping to promote the healthy growth of these new countries, the objectives of the international Communists become more difficult to

The Chinese Communists recognize this and seek to prevent stabilization. It is for this reason that all along their borders truculence, aggressiveness, and constant military, economic, political, and psychological pressures, are their order of the dayas for instance, their probing action in the Taiwan Strait in 1958, their support for the Communist attacks in Laos in 1959, their political and economic pressures against Japan in 1958 and 1959, and their incursions along the Indian border in 1959. This is normal Chinese Communist behavior, which experience has taught us to expect regardless of any propaganda from Peiping about "peaceful coexistence" and the "Bandung Spirit" and regardless of successive zigs and zags in their tactics of the moment.

A byproduct of such Communist Chinese activities is a growing awareness among Asian peoples of Communist China's motiva-Out of these disillusioning Communist acts and our contrasting positive assistance has come a better understanding of our own motivations, of our willingness and ability to live up to our obligations, and of the contribution U.S. power makes to the security of each Aslan nation threatened with Communist aggression. The wellknown news correspondent, Ernest Lindley, recently wrote following a tour of free Asia that a pronounced trend is developing there toward a more realistic appreciation for and understanding of the United States and its role in deterring Communist aggression. If such a trend has developed, it could not have happened without the stimulus of policies and actions which we have initiated in the last decade.

V. WHAT OF THE FUTURE?

You may agree that "so far so good," but point out that no real solutions of our problems are in sight. Communist China exists and is growing stronger. We cannot afford to Ignore, or turn our backs on 600 million Chinese. You may suggest we must therefore have a new policy.

fore have a new policy.

Let us take a look at that proposition. First of all I think that one of our better qualities as Americans is the restless driving urge we seem to have for finding something better. On the other hand, when we are faced with a particularly stubborn problem, we must not let this urge lead us to advocate change just for the sake of change in the wishful hope that all will turn out for the best. Nor should we turn to a new policy on the mere assumption that since the problem is still with us, the old policy must be ineffective. Before a group of lawyers such as this, I do not need to labor that point. However, having made it, I would like to go on and say that we would be derelict in our responsibility if we did not welcome constructive thinking from whatever quarter, did not search for new and promising ideas,

did not keep our minds open, ready to agree when some new policy or course of action was demonstrably better adapted to serve the broad national interest. It is in that spirit that we try to approach his very vital problem of China policy.

VI. A NEW CHINA POLICY?

During the last few months there have been a number of widely publicized proposals from various sources for a new China policy. Here with you I would like to take a look at one or two which are both carefully prepared and which represent a variant of an often-proposed solution known as the "two Chinas" policy.

The proponents of the "two Chinas" solu-

tion argue somewhat as follows:

"United States-China policy has as its primary objective the containment of Communist China by isolating it from the rest of the world. Such a policy, they say, is un-realistic in that it ignores Communist China's rapid growth into a strong economic and political force in Asia which cannot for long be held back by anything we do from assuming an important international role; it cuts off all contacts between the 600 million people on the China mainland and the people of the United States; it precludes any chance of arriving at a modus vivendi with Communist China in which major issues separating Communist China and the United States may be settled by negotiation; and it is unpopular with our friends and allies. conclude that the United States should abandon this policy, which, in their opinion, by its inflexibility only drives the Chinest Communists closer into the arms of the Soviet Union, and should explore more dynamic alternatives aimed at the establishment of a basis for negotiating at least some of our dif-ficulties with the Peiping regime. In the meantime, since our support for Taiwan is one of the major sources of tension between Peiping and ourselves, the critics suggest that we should seek to create a situation in which we can maintain our commitments toward Taiwan as Taiwan, not as the representative of China, and in which Communist China can be accepted by us as the spokesman of the people on the China mainland."

I would like now to discuss this line of argument, point by point. First, we do not ignore Communist China's growth into a strong economic and political force; as a matter of prudence we must accept this fact and our policy seeks to deal with it. Indeed, it is imperative that all Americans understand that in this new decade of the sixties Communist China may well grow yet stronger and the threat it poses to its neighbors may become still more dangerous. Faced with this prospect our policy must continue to promote the development and strengthening of the free countries.

Parenthetically, let me note here that the draconian measures adopted by the Peiping regime to speed its industrialization campaign have unquestionably caused widespread resentment among the Chinese people, especially in the countryside where most of the population dwells. Although the regime appears to be firmly extrenched, the possibility cannot be ruled out that the pentup animosities of the people, especially if they should infect the armed forces, might bring about the violent destruction of the regime from within. We have seen before that police states can be brittle, hard without, but rotting within, However, the point is that our China policy is not grounded in an expectation of collapse. It would be folly to base our policy on such calculations.

But simply because we cannot prevent Communist China from increasing its power in absolute terms does not mean that we should therefore abandon a policy which seeks to offset such growth; far less should we adopt measures which might abet it. So long as Peipin is dedicated to using its growing strength for aggressive purposes, we

must adhere to measures designed to cope with that strength.

To saddle our policy with the responsibility for cutting off contact between the people of mainland China and the people of the United States is simply to ignore the record. I have already recalled that the United States retained its Embassy and principal consular establishments on mainland following the imposition of Communist rule but that after some months we were compelled to withdraw them. At the same time many hundreds of private American citizens who had remained on the China mainland after the Communist takeover also found themselves systematically harried until they left, and American-supported institutions were liquidated or taken over by the Communists. Several dozen American citizens were imprisoned and many others were subjected to other harassments. In short, the Peiping regime from its inception pursued a deliberate policy of obliterating contacts between the American and Chinese people which had been built up over a century. By the fall of 1950 we were engaged in bloody combat with so-called volunteer Chinese Communist forces in Korea. Under these circumstances it was the duty of your State Department to prohibit American citizens to travel in Communist China where they could obviously enjoy no semblance of protection.

In the summer of 1957 the Department announced that it would validate passports for travel to Communist China for a substantial group of journalists. This move was made on an experimental basis. While under our laws the reciprocal admission of an equal number of Chinese correspondents cannot be guaranteed in advance, we have made it clear that the Secretary of State would be prepared to ask the Attorney General for waivers in individual cases. No Chinese Communist correspondent has applied for entry into the United States, and with one exception, no U.S. correspondent with a validated passport has been granted permission by the Chinese Communists to enter mainland China. It is clear that the whole issue was a typical Communist propaganda hoax and that the Peiping regime was not and is not really interested in an exchange of journalists with us. This, of course, is but one of many indications that the Chinese Communists do not relish objective inquiry nor do they want contacts except on their terms.

The charge that our China policy precludes any chance of arriving at a modus vivendi with Communist China on major issues through negotiation again turns matters upside down. We have negotiated or attempted to negotiate with the Chinese Communists ever since 1953-or since 1951 if you include the protracted Korean armistice negotiations at Panmunjom. We have had since 1955, 95 meetings in Geneva and Warsaw at the ambassadorial level. Our experience with these negotiations has demonstrated that the only modus vivendi that could be worked out with the Chinese Communists would be one based on surrender to their terms. These terms, when defined in their simplest form, are that the United States get out of the west Pacific and leave the countries of east and southeast Asia to cope with Peiping as best they can, separately and alone. Considering the vast disparity in power and resources between Communist China and the other countries of the region, such a retreat from responsibility on the part of the United States would be fatal. Yet this, in essence, is what Peiping offers us as a basis for negotiation.

I will not deny that our China policy—at least some fundamental aspects of it such as our opposition to seating the Peiping regime in the United Nations—has been unpopular in some countries. I do deny that differing views on China policy, for example with India, have been a significant stumbling block in our relations with such countries. Of much greater importance is the fact that countries in east and southeast Asia, who have felt and continue to feel threatened by Chinese Communist power, do not ask us to change our policy. In fact, any hint or rumor that we might retreat from it is a source of profound disquiet to such countries. It is significant, furthermore, that in the area with which my bureau deals 10 or the 13 countries do not recognize Communist China. Only one has recognized that regime since 1950. On the other hand, as I have already noted, understanding and appreciation of our China policy has greatly increased in the area, particularly in the past year and a half, as a result of the growing awareness among its governments and peo-ples of the threat posed by Chinese Communist policy.

The claim that the Government of the Republic of China cannot adequately represent 600 million people on the mainland from whom it has been almost totally cut off for nearly 10 years is a plausible one. On the other hand, the Chinese Communist regime took power by force of arms and maintains itself by the highly developed and ruthlessly applied techniques of a police state. It is the Republic of China which adheres to the traditional values and culture of the gifted Chinese people and even today I venture to say that it is more representative of the feelings and thoughts of the mass of the people than is the regime in Peiping. Indeed, the very bitterness with which Peiping assails Taipei is evidence of the value of an alternate and truly Chinese focus of loyalty to Chinese everywhere, on the mainland, in southeast Asia and overseas. It so happens that only 3 days ago in his message on the mutual security program the President referred to the vigorous and skilled population on Taiwan which through economic reform and development has achieved a standard of living in Asia second only to that of Japan. Under its leadership, which is derived from all parts of the country, the Republic of China has the potential, as the President noted, for a pace and degree of development in excess of that under totalitarian methods.

I would like next to deal briefly with the proposition that U.S. policy has driven the Chinese Communist regime into the arms of the Soviet Union. Again the record refutes the charge. Long before our present China policy was evolved, the Chinese Communists lined themselves up solidly with the Soviet Union. This relationship was formally established by an alliance between Pelping and Moscow concluded in February 1950. At that time we were still maintaining consular establishments on the maintain and had publicly declared a hands-off policy with regard to Formosa. We had no prohibition against travel and no embargo on trade.

The Sino-Soviet alliance was a logical and inevitable consequence of a policy often proclaimed even before the Communists came to power. Mao Tse-tung (as well as Liu Shao-chi) had declared that the world was divided into two camps, Socialist and imperialist, and that China would join the Socialist camp headed by the Soviet Union. This fundamental decision of foreign policy (which, I repeat, long antidates the current China policy of the United States) springs from Mao's deep-rooted Marxist-Leninist convictions. The Chinese Communist Party was organized in 1921 with a Comintern agent named Maring playing a leading role. As late as 1927 directives to the Chinese Communist Party emanated from the Soviet Legation in Peiping before it was closed by the Chinese authorities. The party has ever acknowledged Moscow as the head of the So-

cialist camp, it has ever opposed what it calls imperialism, and it denies flatly that a third or neutral road exists.

It is true that recently we have seen some algns of differences between Mao Tse-tung and Khrushchev over interpretations of Communist doctrine and foreign policy tactics. Yet there has never been any convincing evidence that Mao has considered any other course than that of solid alinement with the Soviet Union, which each partner believes to be of great political, military, and economic advantage for his own purpose. In recent years, especially since the first Soviet sputnik in 1957, Mao has talked not just about in-evitable Communist victory but has declared that the Communists are even now winning, or, to use his language, "the East wind is prevailing over the West wind." Mao's confidence that the tide of Communist victory is now rushing in cannot be reconciled with any expectation that he is prepared to abandon a policy of alinement with Moscow if an acceptable modus vivendi could be worked between Communist China and the United States. Any U.S. effort to this end would inevitably be regarded as evidence of weakness and would be exploited to the utmost.

This brings me to the final argument advanced by these critics of our China policy, namely, that we should create a situation in which we can maintain our commitments to Taiwan as Taiwan, and accept Peiping as the spokesman for mainland China. Offhand many people find this idea attractive, be-cause it appears to reflect the situation as it actually exists, with the territory of China for 10 years now divided between two hostile They therefore suggest the best way groups. out of the dilemma, and the danger, posed by this situation is to work out an agreement which formalizes and accepts the status quo under appropriate guarantees. A basic weakness of this suggestion is that the two-China concept in any way, shape or form is totally unacceptable both to the Republic of China and the Chinese Communist regime. It is in fact the one issue on which they agree. Ironically, one of Peiping's principal propaganda themes is that the United States is attempting to im-pose just such a solution. The Chinese Communists have made it repeatedly clear in every conceivable way that they will have nothing to do with such a proposal; yet it is constantly put forward by critics of our China policy as though it were a practical basis for negotiation with the Peiping regime. To propose as a serious basis for negotiation with Peiping a concept which it has repeatedly and vitriolically rejected and to which our ally, the Republic of China, is bitterly opposed, is merely to expose ourselves to ridicule by the Communists and to mistrust by our ally. We should also stop to consider the principle involved. Despite the disparity of its components, China is a divided country just as is Vietnam and Korea. Do we wish to advocate a similar solution repugnant to these allies too?

What we have done, and are doing, with regard to the Taiwan Strait problem, recognizing its inherent dangers, is to concentrate on mitigating them. To this end we have made it clear to Peiping we will not tolerate the solution of the problem by force. When Peiping forced a crisis in late August 1958 in the Taiwan Strait, it saw that we were firm and it left off further probing. At the same time in the Warsaw negotiations, we have called upon the Chinese Communists to cease fire, to renounce force, and to seek a peaceful solution. On the other hand, by means of the joint communique issued by President Chiang and the late Secretary John Foster Dulles on October 23, 1958, the Republic of China made it clear that it would pursue its policies in the area primarily by political rather than military means.

This brings me to my conclusion in regard to China and the Far East (or Near West). It has two parts.

First, I share the conclusion of the Rockefeller Brothers Fund report on U.S. foreign policy: "toward mainland China the alternatives of policy are, for the short-run, lacking

in creative possibilities."

Second, I am convinced that our China policy is not a thing which can be dealt with in isolation because it is intimately related to the future of the whole area. Viewed in this light it has demonstrated very real creative possibilities. Under the policy which we have followed, there has been survival, consolidation and growth in the free countries of Asia, including the Republic of China. Communist aggression in Korea and Indochina has not again been attempted. Com-munist terrorists no longer run riot in Burma, Malaya, Indonesia, and the Philip-pines. Communist probes in the Taiwan Strait and Laos were damped down. This has permitted the work of creation to go on in the new countries and the work of sound re-creation to go on in Japan. Our policy and presence has redressed the balance in this great area in the critical and turbulent decade of the 1950's. We must take care now not to unsettle the balance by other alternatives of policy which could under present circumstances have only disastrous possibilities for the cause of freedom.

Finally, under the present alternative of policy, there are further and great creative possibilities for all of these free countries if, in our relations with them, we continue also our policies of collective security, of mutual assistance, of warm and sensitive appreciation of their aspirations and their problems, and of sympathetic understanding of their views of us. To believe less-to believe that a policy which has helped so much to take them and us this far will not take us further-is almost to deny faith in the capacity of free peoples to build their own lives under a free system. However, a great responsibility still rests upon us to endure, to be strong, to be patient and to devote the resources required to meet this crucial and persistent challenge. I am sure that our country which has done so much will not falter.

Polish Constitution Day

EXTENSION OF REMARKS OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. WEIS. Mr. Speaker, it is indeed a privilege for me to join with my colleagues in the House and Senate in paying tribute to the brave people of Poland on their Constitution Day.

Today, it is a sad fact that Poland is forced to suffer under the yoke of the barbaric and tyrannical forces which rule all of Eastern Europe from behind the walls of the Kremlin, But despite constant Communist pressures and renewed efforts to re-Stalinize the Government, the faith of the people of Poland has not been shaken and I am confident that no amount of religious and political persecution will ever destroy the will of the Poles to be again free and independent.

In 966, a full 500 years before the

discovery of America Poland accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture. I am not disposed to believe that the transitory power of a godless dictatorship such as that which now prevails in Russia will long alter the course of Polish history.

However, the present plight of the Poles is a difficult one, and we who cherish freedom as they do must grasp every opportunity to demonstrate to the people of Poland that we are their friends, that their lot is not a matter of indifference to us, that their cause stirs our minds and

This session today will serve to assure the Polish people that Americans have not forgotten their pledge to help Poland and enslaved peoples everywhere regain their freedom and independence, and I am proud to be able to participate.

The United Democratic Leadership Team Plan for the Democratic Party and Workers in Upper Manhattan, New York City-This Team Is Composed of the Elected District Leaders Representing 167 Election Districts, 1,300 Trained Workers, and 121,000 Registered Voters

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following material:

THE UNITED DEMOCRATIC LEADERSHIP TEAM PLAN FOR THE DEMOCRATIC PARTY AND WORKERS IN UPPER MANHATTAN, NEW YORK CITY-THIS TEAM IS COMPOSED OF THE ELECTED DISTRICT LEADERS REPRESENTING 167 ELECTION DISTRICTS, 1,300 TRAINED WORKERS, AND 121,000 REGISTERED VOTERS

SECTION L MEMORANDUM OF PURPOSE

(By Borough President Hulan E. Jack, chairman, the United Democratic Leadership

Down through the ages New York City and the Borough of Manhattan have always successfully opened its arms to emigrants who were offered great opportunities to develop in continuous growing environment of democratic principles.

These emigrants came from all parts of the world and fully participated in the benefits of this society. Finally, they were absorbed and integrated into the total life of our city.

More recently migrants came from the South to Manhattan to seek opportunities. They too settled here with the hope and the determination to participate without handicap and gain full acceptance in the life of our society.

As these various national groups came, their natural foliage of security was to move into areas where relatives, friends, and members of their racial or national minority resided. In order to participate, they regis-tered and cast their votes to help elect the local officials, city, State and National candidates for office.

The zeal to have a voice in the affairs of the community took many of the given minority groups to the polis. Their homogenous relationship, born out of the desire to be together, yet a part of the whole, introduced the political identification of these minority groups.

Each of these minority groups is comprised of individuals who are linked to-gether through ethnic and cultural ties. This is the historical background of the growth of minority groups within the political structure of our city.

As the result of participation of these minority groups, a formula was developed in the political structure which is known as the method of assuring each minority a fair

share of benefits.

Therefore, in the spirit of continuation of this policy; and in order to strengthen the minority group of which the undersigned Democratic leaders are members; and, as well as to encourage the fullest participation in the total political life of our city, we now embark on a united program of action.

As elected Democratic leaders working within the framework of the New York County Democratic organization, we are fully cognizant of the political growth of our community. We are responsive to the wishes of our constituents that unity is desirable. We, therefore, have answered affirmatively in order to accord greater service to the community. Further to deserve the confidence of the people, we will work diligently to expand the channels of opportunity for all of our citizens without regard to race, creed, color, or national origin.

We recognize that the churches have given inspiration to the great progress made through the years. They are continuing their great influence in helping to shape the future of our citizens in the community by promoting the civic, social, political, and economic welfare. We hail these spiritual leaders and assure them of our wholehearted cooperation. We will also seek to solicit and attract various civic and social leaders as well as citizens possessed with technical knowledge to work with us in advisory capacities as well as develop pro-

We earnestly advocate that qualified persons of integrity be given job opportunities on a basis of full equality of opportunity. We will engage in a program to stimulate our constituents to continue to prepare them-selves through education, specialization and training to qualify for job opportunities on a competitive basis free of discrimination at all times.

To encourage the upgrading of deserving, loyal and hard working career civil servants without regard to race, creed, color or national origin to positions in the executive and administrative strata of governmental agencies.

To advocate the eradication of slums and to promote rehabilitation by construction of residential facilities at the rentals that our great reservoir of middle- and low-income people can afford to pay.

To give of our energies to promote programs that will be a part of the master plan for the better life of all of our citizens in the various interrelated neighborhoods and to achieve a more perfect understanding among all of our citizens. In this way no community will be neglected.

We are aware that all the hopes and aspirations of a people, a minority or a group rest in the strength of the political structure. For it is the platform of the political party that attracts the voter and elects the public officials to promote the programs essential to the progress through improvements which the people want.

We, therefore, deem it our profound duty, since we believe that concentrated effort rather than disorganized, will aid the common good, to unite within the framework of the New York County Democratic Organization for the achievement of these aims.

Several committees have and will be formed to implement the programs advocated by the United Democratic Leadership These will include the economic development, housing, democratic political action (register and vote), health and hospitals.

It is in this spirit of togetherness, operation, and teamwork among the many neighborhood Democratic district leaders that a greater measure of service can be rendered on behalf of the total program for the welfare of all of our citizens alike in this great Borough of Manhattan.

We, therefore, pledge to abhor racism as against the best interests of our Democratic ideals and, feeling that God has given America the role of inspiring man everywhere with the yearning for freedom, for understanding among men, for a better life and for peace, we are joined to help achieve these glorious

SECTION II. ECONOMIC OPPORTUNITIES

(By Hulan E. Jack)

In our struggle for equality, there are many areas where we of the united democratic leadership team will be concentrating our efforts. I would like to make a few remarks about our goals and our fight for economic

and financial equality.

Out of the national market of \$1 billion which Negroes spend yearly in buying, we spent about a half a billion locally another half a billion in downtown stores. This figure is mainly in retail stores and does not include rent and other services just across the counter sales,

We spend more than \$150 million a year in food stores, yet there is not a single Negro salesman for bread, milk, and many other products. We have been able to get some of our people selling in these stores, but not

selling to most of these stores.

On another area, Harlem spends more than \$60 million in the whisky business, but Negro salesmen receive only token orders from the big white merchants who own most of the bigger stores. Already your united democratic leadership team has gone on record as supporting the fight of the liquor action committee. We will support our liquor salesmen in their endeavor to get a fair share of the sales business regardless of the stand taken by the retailers, the industry, or the union. They can rest assured that in their fight for justice we are supporting them and I am appealing to all you tonight to spread the word-don't spend that dollar for beer, whisky, gin, rum, or any other alcoholic beverage where Negro salesmen are not given the same treatment as white salesmen. Many of us have relatives or friends in this struggle and we must campaign unitedly to make things better for them and our future generations.

I could go on and on pointing out that in nearly every field where selling is involved, we are not getting our fair share of jobs in our own community, not to bring up the point that outside of Harlem, we don't even get a peak in.

All of us know here that in the political arena we are getting nothing but token jobs, and this is also true in many white-collar office and professional jobs. Part of our office and professional jobs. fight in the coming months will be not only to see that our children are preparing themselves to take jobs in a completely integrated society, but to urge and to stress the use of our voting and purchasing power wisely that we, as Negroes, support those who support us by giving us equality of opportunity.

The subject of economics and finances has also a deeper significance in terms of those

of us in the community of Harlem, one which we should feel somewhat ashamed.

It is important to all of us that this community become organized economically as well as politically, and we will make a real effort to organize in this community its financial institutions, its contractors, and the entire business community—all to be mobilized for the benefit of the whole.

We have a savings and loan association which could be a great bulwark of economic stability if it were supported as vigorously

as it should be supported.

The Carver Federal Savings & Loan Association is a \$10 million institution and can be made into a \$100 million institution by proper support.

I am not saying that the Carver has not grown, for its assets have increased by \$400,000 in the last 3 months, and it has lent to people in this community a sum of half million dollars in the same period.

We intend to seek out trained and qualifled young people and help them prepare to be leaders equal to meet the competi-tion in an integrated society. We shall seek to organize small real-estate and finance companies in our own groups to support our local community businessmen who are pressured by the major chains. We intend to work together, forgetting petty differences, not thinking selfishly, but for the good of the whole and of our community toward opening up opportunity for Negro business and of seeking your support in keeping these businesses thriving.

These are just some of the challenges that face us economically. I have only scratched the surface, but I am pretty sure you get some of the ideas of what I am talking about.

A recent national survey pointed out that the average Negro family has an income of only about \$2,300, while the average white family has an income of about \$3,400. While these figures are based on a national average, they hold correspondingly true for use here locally.

This is why in all of our discussions as

a united community team of political leaders, we of the United Democratic Leadership Team will strive to erase any difference in this raio and bring to our fellow citizens

a greater economic standard.

We are tired of tokens, we now want steak or the ability to buy steak. We want it for every family in Harlem. We feel that through greater registration and voting, through pooling wisely the finances of the citizens of this community, by militant and positive fighting to open new avenues of opportunity for your youth, and by all of us, you and I, ignoring individual differences, and looking at the greater objective, we can bring the economic standard of this community equal to that of any other group.

To deviate a bit, up here we have a great deal of freedom while down South much of our freedom is curtailed. The team wants it known that they are supporting the sitins of the southern students and advocate the picketing of the variety chains that refuse to serve people on a nonsegregated basis.

Thus, I feel, we are entering a new horizon in the struggles all of us here in Harlem have fought for over the years. We now set our sights on breaking the economic stranglehold on our community. I, for one, and I have already received the assurances of all of the team that we are united in this, will not cease in this battle. We ask only your unqualified support in this fight for yourselves and your future generations.

SECTION III, REPORT ON HARLEM MEDICAL CENTER

(By Mark Southall)

There is no need to remind you of the number of years we have been struggling to get an up-to-date and modern Harlem hospital center. As you know, the board of

estimate on July 23, 1959, authorized the acquisition of the privately owned property in the westerly portion of the block be-tween West 135th and West 136th Streets for the new hospital. Title to the site vested last year. In November of last year, the board of estimate authorized a contract for the services of the architects, Ferrenz and Taylor, for the preparation of complete drawings for the new 500-bed hospital and expansion of facilities at a few of \$875,000.

This is known as phase I and is comprised of the new 500-bed hospital which will be a 19-story building. The 500 beds will be allocated as follows: 230 for surgical and aurgical specialties; 100 for gynecology; for obstetrics: 70 for rehabilitation. will be educational facilities for 250 student nurses with classrooms and laboratories, administrative and instructors' offices, offices and rooms for nurse-anesthetists schooling. In addition thereto, there will be a medical and nursing library, and a 400-seat auditorium. Over and above the 500 beds in the hospital building there will be 34 beds in the admitting division. This new hospital building will be fully air-conditioned, will have new staff quarters for interns and will have the usual ancillary facilities to serve the entire hospital center, such as administrative offices, central sterile supply, pharmacy, surgical suites, pathological laboratories, radiology, and radiation therapy, central kitchen, and dining facilities for house staff and hospital personnel, etc. The estimated cost of phase I alone is \$17,025,000. It is expected that the preliminary plans for this new building will be finished by the end of May. By late summer, authorization for the preparation of the final plans should be processed or approved. These final plans must be completed within 12 months thereafter. Construction on the new building should start not later than January 1962, although they are pressing for an earlier date. The bureau of real estate is scheduled to start moving tenants from the site in the fall of this year.

Phase 2 of the overall improvement will be started on the completion of the new building. It will provide a new nurses residence building with 250 bedrooms and with appropriate lounge, kitchenette and laundry facilities. It will also contain physical education and recreational facilities such as gymnasium, swimming pool, game and club rooms. There will be a student nurse infirmary and health facilities. There will be two suites for staff supervisors of residence and educational program.

The new nurses residence building will be erected on the site of the old Lenox Avenue building. Other parts of the second phase include alterations to the major portion of the existing women's pavilion to provide geriatric services. The kitchen and dietary services will be modernized in the women's pavilion, pediatric building and the general care building. Premature nurseries in the existing pediatric building will be air conditioned. Parking and/or garage facilities will be provided for approximately 250 cars. Recreational facilities will also be provided for doctors and student nurses.

It is estimated that phase 2 will cost an additional \$7 million.

When redevelopment of the Harlem hos-Pital is complete, there will be a total capacity of approximately 1,200 beds.

When completed the city will have spent about \$35 million on Harlem Hospital.

SECTION IV. REPORT ON HOUSING

(By J. Raymond Jones)

For many years New York City has been pushing its public housing and slum clearance program. Today, New York City is the unquestioned leader in the construction of low-rent public housing and so-called middle-income housing under title I of the Federal Housing Act. In recent years the middleincome housing program has been supplemented by the Mitchell-Lama law designed to encourage limited-profit housing, renting around \$25 a room. New and more unique attacks on blight and deterioration were commenced by the urban renewal program which is still in the pilot project stage and the community conservation program designed to arrest the deterioration of property by alteration, renovation, and relocation of families from overcrowded areas.

What is the objective of each of these programs and how effective have they been in

meeting our housing needs?

Public housing legislation was first enacted in New York in 1939. The stated objective was not only to eliminate unsanitary and substandard housing but also to provide housing for persons of low income which would not be overcrowded, and provide proper light, air, and open space. housing necessarily operates at a loss in supplying a housing need which private enterprise admittedly cannot meet.

Once started, public housing construction moved forward by leaps and bounds. By 1959, there were 109,000 apartments in public housing projects accommodating 440,000 persons. When all such projects presently in construction or planning are completed, about 600,000 persons will reside in public housing. This is almost as many people living in the entire city of Buffalo, the second

largest city in the State.

Title I Housing was designed to provide so-called middle income housing for persons ineligible for public housing but enable to afford the high rents of unsubsidized private housing. Under this program the Federal Government and the city share the loss incurred in writing down the cost of land which is sold to private housing companies for the purpose of building apartments which will rent at reasonable rates. There are 16 title I projects completed or nearly completed and eight additional projects have moved into the advanced planning stage. When these 24 projects are completed they will total 40.242 apartments. Unfortunately, too many of them are beyond the financial means of the average family in our com-

munity.

The Mitchell-Lama limited dividend and limited rent housing program has two phases, one administered by New York City and the other by the State. Thirteen projects have been approved under the State program for New York City with \$61 million ear-marked their construction. The balance of the \$150 million State funds for limited profit housing has been allocated to communities outside New York City. New York City has also made \$150 million available for construction of limited profit housing. Twelve projects have been approved and 10 additional applications are now being processed.

The Urban Renewal program is essentially in the planning stage and cannot be expected to move beyond the pilot project area which covers the area 87th Street to 97th Street from Central Park West to Amsterdam Avenue for many years.

The community conservation program during its short existence has active programs going in Chelsea, Lower Manhattan and Downtown Brooklyn. A fourth program is scheduled to get underway in East Harlem in the near future. However, it must be remembered this is a conservation activity which strived to reduce population density as one of the means of stemming further deterioration of buildings deemed worthy of saving, thus no gain in housing units will be realized.

Certainly, New York City has a forward looking and comparatively vigorous housing program. But, as residents of the Harlem community, it is of urgent concern to us the extent to which our community is sharing in and benefiting from each of these pro-

There can be no argument as to the sufficiency of the public housing in our community. One must stop to reflect whether the amount of public housing is not out of balance with the overall needs of the community. Since the construction of Harlem River houses, one of the first two public housing projects built in our city, giant low and medium rent public housing projects have continued to rise into the skyline of Harlem. Today, there are at least 10 such projects completed or under construction in our community and at least four others are in advanced planning.

We have no quarrel with this effort to pro-

vide decent housing for those of us whose incomes have failed to keep pace with the constant rising cost of living. But, you know as I do, that our community also has many hardworking persons who are ineligible for public housing and who require privately owned housing with apartments renting from \$19 to \$30 a room per month. This we must have if we are to stem the flight to the suburbs of the many families who economically have long been the backbone of our

community.

The Polo Grounds is being sought by the Housing Authority for another public housing project. This vacant land offers an excellent opportunity for the people of the Harlem community to sponsor and construct limited profit housing at a rental that persons ineligible for public housing can afford. A possible approach to housing on this site is a combination of public housing and limited rent, private housing. This would be a giant step toward the desirable goal of balance housing for the Harlem community.

To provide the kind of housing that the families of Harlem need and demand and at rents they can afford we must look to those programs designed to encourage and make it economically feasible for private enterprise to construct housing at reasonable rents. The title I and Mitchell-Lama laws were enacted to accomplish this specific goal. I have pointed out the enormity of these programs in our city, now let us take a close look to see to what extent our community has benefited from them.

Of the 16 title I projects completed or nearly completed in New York City two are squarely in the Harlem community. two are: Lenox Terrace and Delano Village. Lenox Terrace actually resulted in a loss of 352 dwelling units, while Delano Village resulted in a net gain of 646 apartments. net gain of 294 apartments from these two projects do not begin to make a dent in the continuously growing demand for housing by our middle-income families. Nor do their average cost per room of \$45 meet the re-

quirement of our community. Of the 25 Mitchell-Lama projects that have been given the green light in New York City not a single one is yet earmarked for the Harlem community. Through the efforts of the united Democratic leadership team two sites are now being processed in mid-Harlem, one of which has advanced to the preliminary planning stage, and we expect final approval by early summer. The other requires further helpful assistance by departments of city government. In this connection we request the city planning commission to rezone the areas as specified in our recent report to the commission, from a M-3 and M-1 zone to a R-8 zone. In addition, we urge the board of estimate to expedite the removal of the department of sanitation garage from its present site adjoining a developing residential area. These actions will make available an excellent site for our second proposed Mitchell-Lama development.

Housing is a human problem but housing is also an economic problem. A large number of our friends and neighbors through hard work and frugal management have acquired and improved many of the most desirable parcels of real estate in our community. The ownership of land has during the memory of men been one of the principle symbols of stability and status in the community. The advent of the blockbusters and massive housing appear to be tolling the death knell of extensive individual ownership of real property in Manhattan. Does this mean that we are destined all to become itinerant tenants in our community?

It must not come to this. The tools of government have been designed to enable men of foresight and with modest means to take the leadership in the redevelopment of their communities. However, these tools will be of little use without a sympathetic and helpful attitude of the officials in whose custody they have been placed. What good to us is a forward-looking program if it is administered in a manner that overlooks our community?

It cannot be done by a few. For a few voices crying in the wilderness cannot gain the constant attention of active and busy city officials. Housing development in Harlem is not only of vital significance to the community-it is vitally important to the entire city. Ways of moving ahead constructively and sensibly is to utilize committees of Harlem residents. A housing committee made up of competent and knowledgeable members of the community would serve as an effective instrumentality to conduct surveys, compile facts, and to present and pursue meaningful and constructive programs before responsible city officials. A finance committee headed by a man of finance and with members learned in the affairs of finance would be of invaluable assistance in working out arrangements whereby funds would be made available to responsible community groups for the purpose of constructing private rental or operative developments in the community.

The proposed housing and redevolpment board which is scheduled to take over and administer the combined functions of title I, Mitchell-Lama, Urban Renewal, and Community Conservation should utilize the wealth of professional and technically skilled persons of our community in policymaking, administrative, and technical positions. In this connection we urge Mayor Wagner to consider our recommendation that he appoint to this board the Honorable Robert Weaver, one of New York's outstanding citizens and a housing expert of the greatest

ability and highest integrity.

The community conservation program should at the earliest possible time extend its operation into the Harlem community as an aid to the homeowners in restoring and improving the many structually sound brownstones which predominate our community. These homeowners will be found to be excellent partners in conservation for they are constantly striving not only to maintain their property but to improve their entire neighborhoods.

Finally, any construction program should emphasize the use of uneconomic commercial and vacant land first. By so doing additional housing units will be available to families that will have to be relocated at some future time.

The desires and goals of the people of Harlem does not differ substantially from those of any other community. We are a community with varied incomes, varied interests and varied needs. We desire to retain the physical and economic roots which we have sunk so deeply into the Harlem community. We desire a balanced community. Public housing for those who need and desire it, private, middle-income housing for those who can afford it, and conservation of the many good and sound buildings that warrant it. But, most of all, we want to play a major part in that development. If those charged with the responsability of coordinating the redevelopment of our city will remember this and will tap

Harlem's abundant reservoir of brains, skill, and expert experience they will reap a broad base of support and goodwill from which our entire city will benefit.

SECTION IV. JOBS

(By Congressman ADAM C. POWELL)

These are the indisputable and incontrovertible facts of rank discrimination now being practiced in the city of New York.

For some reason or other, a 6 percent quota seems to be reserved exclusively for Negroes holding appointive jobs in the city of New York. They hold 6 percent of the combined commissionerships and board memberships. They hold 6 percent of the judgeships.

Yet, Negroes constitute a thumping 21 percent of the voters in New York County—121,000 registered Democratic voters.

Of the 116 commissioners, deputy commissionerships and board members that run the city's 33 major departments, only seven are Negroes—6 percent.

Of the 192 judgeships in five courts where vacancies are filled by the mayor, only 12

are Negroes-6 percent.

In the five commissions which deal primarily with the city's development, real estate and the handling of money, not a single Negro is a member.

In special sessions court where over 75 percent of the defendants are Negroes, there is not a single Negro judge in the group of 24 judges. Special sessions courts handle misdemeanors.

There are no Negro judges in the court of special sessions, county courts, surrogates court, court of appeals, court of claims, nor the supreme court.

3. Two Negro judges now sit in the court of general sessions.

 One Negro sits in the appellate division of the supreme court.

5. Negroes do not fare much better when it comes to commissionerships. There is only one Negro commissioner in the city's departments. He is welfare commissioner.

6. There are two deputy commissioners: department of hospitals and the department of correction.

7. The four other Negroes who serve on the city's boards and commissions include: board of education, board of water supply, civil service commissioner and parole commissioner.

Polish Constitution Day

EXTENSION OF REMARKS

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. CAHILL. Mr. Speaker, I am happy to be able to join my many colleagues in the House of Representatives in noting this day of May 3 as one of hope for all Polish people throughout the

world.

This country which is marking the anniversary of their May 3, 1791, Constitution is now more determined than ever to rid themselves of the tyrant of communism and once again return to the free world as a peace-loving nation.

The Polish people throughout the world are to be commended for their fervent fight and continued hope in this struggle against the imperialistic powers of the Soviet Union, which have constantly since 1939, schemed to envelop

this country in so-called peace treaty maneuvers.

As the Representative from the First District of New Jersey, I send hope and courage to these people who are ceaselessly endeavoring to throw off the yoke of suppression and wish to let this day stand as a constant reminder to those of us here who enjoy democracy and peace of the evils and pitfalls of the Communist regime.

The Tariff Quota's Effect on the Small Businessman

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter sent to me by M. I. Cushing, of New York, a textile importer and stylist. Mr. Cushing discusses the serious problems caused by the wool tariff quota to the small business importers of higher quality fabrics, and to the small manufacturers of garments using such fabrics.

There being no objection, the letter was ordered to be printed in the REC-

ORD, as follows:

PIERRE IMPORTS, INC., New York, N.Y., March 7, 1960. Hon. Jacob K. Javits,

U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR JAVITS: Protectionist interests are now attempting to find new ways to undermine or ban U.S. trade with the world. To my mind they need go no further than to adapt the tariff-quota system that has since late 1956 been imposed on imported woolen textiles pursuant to the "Geneva Reservation." The tariff quota has with great effectiveness thwarted orderly trade development, injured importers and caused widespread dislocation through the textile-apparel industry.

I can testify to the way the system—"protection by chaos"—works. As an American importer employing 15 persons and meeting a yearly payroll of more than \$100,000, I know at firsthand the damage that this procedure has done. And I know that the tariff quota has had an equally devastating effect upon a much broader economic segment, too, severely disrupting the normal purchasing practices of the clothing manufacturers who must depend on foreign textiles for their high-quality lines. Even so, these heavy penalties have not perceptibly bolstered the domestic woolen textile manufacturers. While they have enjoyed high profits during the current boom, the displacement of wool by manmade fibers continues and will not, surely, be much affected by waxing or waning of imported fabrics.

One very recent incident from my personal experience may illustrate the sort of misadventure to which the tariff quota exposes the businessman.

Like most people in the textile-apparel industry, my associates and I have been anxiously awaiting the "breakpoint," the moment at which the import quota (which equals about 5 percent of domestic woolen textile production) is used up. After the breakpoint, the tariff soars 80 percent—to 45 percent ad valorem. At that level it is

almost impossible to bring in high-quality fabrics.

In consequence, there is great pressure to bring in as much poundage as quickly as possible. Quite naturally, therefore, the breakpoint has come earlier and earlier in each succeeding year. In 1959, for instance, the industry was shocked when the breakpoint came as early as May 19; normal trading of imported woolens and worsteds for the year had ended in just 4½ months.

It was almost immediately evident this year, however, that the 1960 marketing year would be absolute pandemonium; that the break point for 1960 would fall sometime early in March—if not before. As of January 30, for instance, some 6,015,603 pounds had cleared customs. In 1959, the somewhat comparable figure of 6,884,547 was not reached until April 4. Similarly, 9,471,323 pounds were received as of February 20, this year, against 9,845,451 that arrived as of May 2, 1959.

Against this background, my associates and I were glad to receive news that we could on February 29 clear some 180 bales of high-quality Japanese-made textiles through the New York Custom house. Our representative appeared at the customhouse, learned that the shipment had been duly cleared and was informed that, as we had anticipated, the duty at 25 percent ad valorem (not counting the additional, specific customs charge of 371/2 cents per pound) amounted to approximately \$31,000.

As we prepared our check for delivery to the customhouse, word flashed through that the customs officers had changed their minds. They would clear 105 bales at 25 percent ad valorem, but would require the last 75 to pass at the postbreak point figure of 45 percent. The reason; The local officials had decided that break point, was imminent and that they should begin to collect the higher duty forthwith—even without prior instruc-

tions from Washington.

Let me emphasize that the decision to hike the tariff 80 percent on that Monday afternoon was purely a local one. I have no idea of what sort of a divination—or whim—may have prompted the local customs officers. I know for a fact, however, that they anticipated by 2½ days the national decision to impose the higher tariff; the Daily News Record for March 4 states that customs "collectors were notified by telegram (from the Bureau of Customs in Washington) Wednesday night that the 1960 quota of 13.5 million pounds was very close to be filled and to impose the higher duty."

Whatever the cause of the New York officers' stand, its impact was clear and simple: without any warning or prior notice it was necessary for our supplier, on March 2, to pay over an additional \$9,650 in duty, which in turn is our obligation to our supplier.

To understate the case, I am sure you will agree this hardly provides the climate in which the relatively small businessman can prosper—or even survive. And the injury was double, for it is impossible to "pass on" the higher impost; the fabrics had been previously sold on the basis of a 25-percent duty. The \$9,650, then, came off the top of our potential return on the cloth and, I can say, represented considerably more than our expected profit.

I am not attempting to question the legal right of the New York customs officers in, upon their own initiative, requiring me to pay the 45-percent ad valorem duty. Instead, I report this incident only as an example of the way the tariff quota precipitates business uncertainty and, apparently, invites any degree of official capriciousness—however inimical to business operations.

To be fair, I must note that it now appears probable that we shall receive a refund for the extra tariff payment of March 2; the Daily News Record of March 7 re-

ports the breakpoint was not actually reached until sometime in the afternoon of March 3.

That's small comfort to the bulk of the textile importing industry, however, and the important business elements in transportation, factoring, promotion, and merchandising with whom they work. It must be clear that an industry cannot operate in a marketing year of 63 days.

The tariff quota is equally disastrous to the apparel manufacturers. Developments in style, color, and texture are so rapid in textiles that the clothing manufacturer is reduced to guesswork when the workings of the tariff quota compel him to place his orders as much as 16 months in advance of delivery.

Why, then, don't the apparel manufacturers exclusively rely on U.S.-made textiles? The answer is simple enough; the domestic woolen textile producers are unable to supply the high-quality needs of the U.S. clothing market. A good part of the Nation's woolen textile imports, accordingly, are made up of high-priced fabrics upon which great amounts of craftsmanship and artistic inventiveness have been lavished. The bulk of U.S. production, on the other hand, is in staple fabrics.

The shipment of 180 bales from Japan, which I mentioned earlier, is an example. The fabrics included gabardine 272, 2-ply, both ways; tropicals 266, 2-ply, both ways, and iridescents 260 and 266, 2-ply, both ways. These varieties are simply not made here in the United States in the same quality. And yet these are the sorts of textiles upon which clothing manufacturers must depend for their lines of suits in the \$100 to \$125

U.S. mass production techniques also have the effect of stimulating woolen textile imports. Very few U.S. producers are able to manufacture, or can afford to sell, in lots of one or two pieces (each piece is approximately 75 yards in length). It is upon such quantities, however, that the custom tailor relies. Imports, therefore, are again indis-

pensable.

bracket.

Not all imports, to be sure, are aimed for the top quality market. There has, for instance, been a great outpouring of cheap, reprocessed wool textiles from the Prato area of Italy during the last 2 years. But it does not appear that these fabrics compete with U.S.-made woolens and woolen worsteds, either. Instead, these Prato manufacturers have apparently gone into competition with the cheapest manmade fabrics made here in the United States.

Manmade fabrics, in fact, are the key to the admittedly difficult problems the domestic woolen textile industry has at times faced (but in a flux of high profits is not now facing) since the end of the lush postwar Consumption figures tell the story clearly; per capita woolen textile consump-tion here in the United States stood at 4 pounds per person during the 1945-49 period. It fell to 2.7 pounds per person during 1955-58. Meanwhile, manmade fiber consumption (including rayons and acetates, as well as the new noncellulosic fibers) bounded from 6.1 pounds (1945-48) to 9.2 pounds Du Pont now estimates that U.S. (1955-58). noncellulosic production this year will reach 896 million pounds, well over twice as much as the anticipated production of woolen textiles.

The domestic industry's problem has been compounded, of course, by the necessary rationalization of a plant that by the beginning of the 1950's was seriously obsolescent and by the accompanying departure of many firms from the Northeast to the South.

No objective examination of the facts can demonstrate, however, that the industry's problem arises from the natural postwar increase in imports. Any attempt to correlate the two trends will not stand scrutiny; the industry's rationalization and switchover to blends of woolens and manmade fibers was all but complete when in 1954-55 woolen textile imports first began to have any significance.

Nor can it be argued that the foreign producers have attempted to inundate the U.S. market. Japan, for instance, has over the last few years exported less than 12 percent of its production to the world and only one-third of that to the United States. Its sales to the United States have been remarkably stable, 7.110,000 linear yards in 1957, 5.686,000 in 1958, and an estimated 5.694,000 in 1959.

Are the low wages paid abroad, placing the U.S. manufacturer at a disadvantage? Most of the propagandists who so belabor this bogy should, of course, understand that it is not the wage rate that determines manufacturing cost but the amount of labor, and its cost, required for every unit of production.

In terms of economic reality, therefore, Japanese woolen textiles certainly do not have an unfair advantage. Compare worker productivity: during the first half of 1959, the average U.S. worker was producing at an annual rate of 5,982 linear yards—his Japanese counterpart at an annual rate of 1,413 yards. Only where mass production, itself, is not conducive to a textile effect do the more craft-like foreign producers gain an advantage. It is for that reason that the bulk of our imports of British, Japanese and French woolen textiles are in those high-quality lines that require the time and labor impossible in true mass production.

I have, I know, only touched the surface of these arguments. Each of the points I have mentioned—and many more—can be found in voluminous detail in the hearings and reports of the Office of Civilian and Defense Mobilization, the U.S. Tariff Commission and various congressional and Department of Commerce panels.

These heavy volumes should be read.

These heavy volumes should be read. While I believe the domestic interests could have better invested in research and promotion programs, the hundreds of thousands of dollars they have spent in their unceasing demands for ever more confiscatory tariff rates and impenetrable quota entanglements have helped produce a printed record of inestimable value.

What most impresses me, however, is that the skilled economists whose responsibility it has been to determine national policy from this evidence have again and again rejected the domestic industry's clamorings.

ODM in January, 1958 found no danger that imports threatened the domestic industry. The agency's successor, OCDM, reported the same conclusion in February, 1959.

Now it appears that the U.S. Tariff Commission has also turned down the domestic interests. The Journal of Commerce's tariff and trade expert, John F. King, reported on March 7 that the Commission has rejected the domestic industry's bid to fix the "peril point" above the present (pre break-point) level of 25 percent ad valorem. As a result there will be no "automatic" escape clause hearings on woolen textiles and the renegotiation of the Geneva Reservation (which set up the tariff-quota system) can now proceed.

The administration deserves great credit for its courage in pushing renegotiations forward. A new and sane system for permitting imports of woolen textiles will, I imagine, strengthen our position with our friends, Britain, France, Italy, and Japan, More than that, on the basis of the 36 years I have spent in every phase of the textife-apparel industry, I know an end to tariff-quota chaos is sure to be of genuine benefit

to every part of the industry—including the domestic manufacturers—as well, of course, to the consumer.

But strong forces are pitted against the administration's policy and aim to prevent a return to orderly market conditions. I write to request that you, both in the interest of New York—its importing and textile communities—and the Nation as a whole, take every step possible to aid in the specify and successful renegotiation of the Geneva Reservation.

I am,

Sincerely,

M. I. CUSHING, President.

Conference on Multiple Use of Forest Lands

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. WILEY. Mr. President, the preservation of our forests, as well as other unspoiled out-of-doors areas, continues to be a major challenge—if we are to conserve an adequate amount of these resources for the generations of the future.

In designing programs to preserve this area of our natural heritage, there are, of course, conflicting viewpoints as to just what kind of policies should be adopted in terms of utilization, management, and conservation.

As we know, the so-called wilderness bill, S. 1123, currently is pending before the Senate Interior and Insular Affairs Committee. Generally, the bill would designate specific areas in the United States to be preserved as wilderness.

Over the years, extensive hearings have been held to iron out difficulties raised in relation to this proposed legislation.

A particularly controversial issue has been whether or not there should be single or multiple use of forest land and the areas of outdoor heritage.

Recently, a conference was held at Northern Michigan College on the question of "multiple use of forest lands." I was privileged to receive an analysis of the proceedings by Loren S. Woerpel.

The analysis reflects the thoughtful review given by the conference to the question of multiple use of forest lands; and I ask unanimous consent to have the analysis printed in the Appendix of the

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

An Analysis of the Proceedings of Conference on Multiple Use of Forest Lands

(By Loren S. Woerpel)

April 15, 1960. The conference was called for the purpose of discussing the problems and obligations that private forest managers have within the multiple-use concept of natural resource management. It was to serve as a focal point around which management can work to improve the conditions of today in relation to forest land use by bringing into perspective points of conflict through discussion.

The conference was held on April 12 and 13, 1960, using the campus of Northern Michigan College as a centrally located meeting-place. The sponsoring organizations were: Michigan College of Mining and Technology, the Timber Producer's Association, and Northern Michigan College.

Following are the subjects and authors of the presentations at the conference.

"Achieving Full Use of Forest Lands," M. B. Dickerman, director, Lake States Forest Experiment Station.

"Forest Taxation and the Concept of Multiple Use," Bruce Buell, forester, Marathon

"The Public's Benefit From Multiple Use on C. & H. Timberlands," John C. Noblet, Goodman Lumber Division—Calumet & Hecla, Inc.

"Recreation and Tomorrow's Timber Today," Dr. Gene A. Hesterberg, Forestry Department, Michigan College of Mining and Technology.

"Recreation & Commodity Development of Nonurban Lands," Bernard Orell, vice president for public affairs, Weyerhaeuser Co., Tacoma, Wash. Committee member of the National Outdoor Recreation Resources Review Commission.

"Economics in Multiple-Use Management,"
Abbott Fox, president, Abbott Fox Lumber

"Forest Game in Michigan's Club Lands," Casey Westell, American Boxboard Co.

This report is not intended to be a news account of each speech embodied in the conference, but is rather an attempt to reconstruct a complete concept of the problems and solutions to the multiple use principles as asserted by the whole spirit of this conference. In this way I can bring into the picture not only the words that were presented in the auditorium but also the ideas expressed in the lobbies and across a coffee cup during the intermissions.

One of the first things that we have to do when talking about the words, "multiple use" is to define the term. Each speaker gave his definition but the predominent connotation, in the words of Mr. Bernard Orell of Weyerhaeuser Co., was that, "Multiple use is the management process by which lands may be devoted to all possible uses in a given area." It was emphasized that this does not mean that we will have every use on every individual acre of land. Dr. M. B. Dickerman called it the ultimate of land use.

What brings on this concern for the full use of our lands? The current expansion of our human population has caused much alarm in many quarters of administration. It affects the resource manager because it has resulted in a phenomenal need of the public for increased recreation room. At the same time he is faced with problems of increased future needs of forest products. Dr. Dickerman stated that by the year 2000 we will require 50 percent more hardwoods and even more conifers in the commodity market of forest products.

Mr. John C. Noblet pointed out that land is a fixed quantity. It was commonly expressed that only by intensive multiple-use management of our land can we meet both recreational requirements and commodity requirements in the future. This concept is not new in the field of resource management, for it is the principle by which Europeans are meeting their needs at the present

Given that land is a fixed quantity, then what are the variables? Population is one. With increased population comes increased demands on the land. Quality of land is another. For example, Mr. Bruce Buell stated that only one-fourth of the upper Michigan forest land is high-quality producing land. The remaining three-fourths is at the present low quality. The industrialist relies on this one-fourth to sustain his operation. The recreationalist also needs

quality lands to provide for his needs. Mr. Orell pointed out that withdrawals of commercial lands result from three main sources; expansion of urbanization; highways, transmission lines, military uses and air bases, etc.; and recreational lands that exclude commodity uses. These have resulted in the loss to the commodity market of one-fourth of the total commercial forest lands and one-third of the average annual production of forest products. He gave an example of this problem in the Weyerhaeuser holdings. On one of their 100,000-acre tree farms a total of 5,000 acres were necessarily taken out of production for the purpose of erecting transmission lines through the area. The recreationalist, too, finds his available recreation lands withdrawn for singlé-purpose use.

The most obvious conflict is that between recreational uses and commodity uses. At just what point do they conflict? recreationalist is concerned with the preservation and the ability of our forest lands to meet his requirements. He recognizes that, at the present time, by far the bulk of land in the United States is privately owned. He isn't satisfied that private owners will manage the land to the benefit of recreational needs. On the other hand, the private landowner points to problems of fire protec-tion, trespass, debris, vandalism, and liability when he welcomes the public on his land. Mr. Buell emphasized the tax problems that the forest owner has. Mr. Noblet para-phrased the problem by saying, "They relax, we pay the tax." Mr. Abbot Fox declared that when the private landowner opens his land to recreational use he must accept the total burden of support of that recreation, in both maintenance and acceptance of liability of his guests. The question of liability came up frequently. Dr. Gene A. Hesterberg said that there has not been any good test case of the matter and until then the law people will not commit themselves as to the degree of liability when private land is open to public recreation.

Where does a solution lie? Mr. Orell said that we will recognize that we need our National Park System as a strong part of our recreational facilities. He pointed to the progress of Mission 66 (the Forest Service's recreational development program in national forests.—Editor), but at the same time declared that State and local governments should augment the national efforts by intensifying their use of what they have.

Dr. Hesterberg stated in the Upper Peninsula of Michigan alone, with more intense use, 50,000 campsites could be made available on present State-owned land and adding the national forests to the picture this number could be increased to 150,000.

Mr. Orell emphasized that the multiple-use principle (as defined previously) should be applied wherever recreational use is compatible with other uses. This does not mean that there should not be areas where commercial cuts should be restricted or excluded. It depends on the purpose and significance of the area. Mr. Noblet's company manages 300,000 acres under the multiple-use principle. All their lands are open for all kinds of public recreation. They have over 1,000 miles of roads open to the public and no fee is charged. Last year they provided 2,000 specially made maps of their holdings to sportsmen who used their areas. Only four men wrote a "thank you" card. Besides this, they have leased and granted lands to both public and private agencies for recreational developments. They feel that recreation and commodity development are compatible, for all of their lands are under sustained yield silvicultural practices. The only thing that they ask is that the public should not abuse the right to use these lands.

Dr. Hesterberg charged industry with the prospect of either managing their lands more intensively under multiple-use principles of

continue to face public distrust. Along with this, he displayed a large wood "welcome sportsmen" sign which he said that he would like to see on our private lands if the liability laws were changed to protect the owner who

welcomes the public.

Casey Westell pointed out that the forester is dealing with a living forest community, not just trees. If the forest is not properly managed the whole community will suffer. He said that foresters are often accused of being too much "board-feet and fiber men." The forester must endeavor to understand the ecological relationships in the forest community. Game harvest is one means by which we must help maintain a balance in this community. Mr. Westell is working With private hunting club lands and managing the aspen for pulpwood productions under his company program. He finds that reproducing aspen after a silvical cut is vir-tually impossible without control of the deer herd. He says that we could carry twice as many deer on our lands with intensive management of both the forest and the game. In his management program he has increased the carrying capacity of the land and also the average weight of the deer killed from 100 pounds to 136 pounds in 4 years. He claims that this will continue to increase on his managed lands. He says, "Let's face it, the hunter is the only legal means by which we can control the deer herd and insure reproduction of the managed forest lands. Let's turn recreation into an asset, not a liability." On the other hand, burning or cutting our forests again is the only way we will be able to maintain our high populations of deer, A well managed, sustained yield forest is a much more agreeable method of doing the same thing and at the same time allowing other compatible uses. Mr. Westell maintains that the problem of liability, taxes, and cost of mainte-nance of recreation can be worked to benefit both the public and the private land-Owner if positive action is intensified rather than both sides reverting to defensive complaining.

That opening their lands to intensive recreational use is a public relations asset is exemplified by Weyerhaeuser Co. and Calumet & Hecla, Inc., at this meeting. companies have enhanced their public relations program by bearing the cost of developing recreational facilities on their Weyerhaeuser's efforts to benefit the recreational public are well known. C. & H. realize their asset and have gone so far as to not allow any billboard advertising on their lands that are adjacent to public wayfares in order to maintain the scenic value of their land. Thousands of travelers enjoy their scenic lands while traveling the Keweenaw peninsula in upper Michigan. It could be pointed out here that all of these lands usually observed by the traveler in the copper country as being quite wild, are, in fact, being intensively managed under the selective cut sustained yield method without their apparent knowledge. Other efforts by C. & H. have been reported previously in this report. Mr. Noblet says that industry should make their efforts better known to the public to insure a better understanding.

Summary: It is obvious that because of an increasing population, there are increasing demands on a fixed quantity of land. The solution is to intensify the variable, that is, gain fuller benefits from the available resources on that land. That the American people need increased recreational room is not an opinion but a fact. The same holds true for increased demand on the forest for commodity products. Both sides of this conflict between recreational room use and commodity use are going to have to throw aside their emotional prejudices and begin to try to understand each other's problems and needs more thoroughly. We must understand that just as there is an ecological relationship within the forest, there is an ecological relationship between man and his environment. Both recreational interests and commodity interests are going to have to give ground, so to speak; ever, they will be moving toward an ultimate, a utopia, to a point where both recreational needs and commodity needs of America can be satisfied.

History of the Polish Legion of American Veterans

EXTENSION OF REMARKS

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Tuesday, May 3, 1960

Mr. BUSH. Mr. President, in the last session of Congress, I introduced Senate Concurrent Resolution 40, which would provide for Federal recognition of the Polish Legion of American Veterans, U.S.A. This organization, often referred to by its initials, PLAV, is the largest organization of American veterans of Polish ancestry in the United States. Its membership includes over a million veterans of World War I and II, and has departments in 14 States. including Connecticut.

I have received a communication from Mr. Theodore S. Holtz, national commander of the PLAV indicating that his organization will hold a national convention in Chicago, from September 2 through September 5, and supplying me with an outline of the history, aims, and ideals of the Polish Legion of American Veterans. This outline is most in-formative and will be helpful to those Members of the Senate who are not yet familiar with this worthy organization.

I ask unanimous consent that the history of the Polish Legion of American Veterans be printed in the Appendix of the RECORD.

There being no objection, the history was ordered to be printed in the RECORD. as follows:

HISTORY OF THE POLISH LEGION OF AMERICAN VETERANS

At the termination of World War I, various groups of American veterans of Polish descent of that war, throughout the United States, formed organizations and clubs to give service to the veterans and their families.

Most prominent in this activity in the early 1920's were the Alliance of American Veterans of Polish Extraction, with national headquarters in Chicago, Ill., representing Illinois, Wisconsin, and Ohio. A similar organization with the same name was organized in Michigan, with headquarters in Detroit, Mich. The third organization was in the East, consisting of New York and New Jersey, under the name of Polish Legion of the American Army, with national headquar-

ters in New York, N.Y.
In the year of 1930, the Alliance of American Veterans of Polish Extraction, with headquarters in Chicago, Ill., delegated their national commander, Stanley A. Halick, to the national convention of the Polish Legion of the American Army, for the purpose of consolidating all three organizations into one strong organization of Veterans of Polish

The three organizations met in Cleveland. Ohio, on September 5, 1931, at a convention forming the Polish Legion of American Veterans. At this convention all three organizations were equally represented by their fully entitled delegations.

The three national commanders of their organizations gave a pledge assuring cooperation and unity to the new organization known as the Polish Legion of American

The three commanders then placed a convention wreath at the monument of Thadeusz Kosciuszko, a soldier who fought in the Revolutionary War, for freedom, the basis of our American Constitution, and made their pledge for unity in the presence of all those assembled.

The ladies auxiliary was formed to advise and assist in every possible way, the Amer-ican veterans of Polish extraction and their families, to perpetuate the memory of the hero's who died in the great struggle for

democracy.

The first national convention was held in Hamtramck, Mich., in 1932, electing Mieczyslaw Glod as national commander. The sons and daughters of the members of the organization were urged to organize and adopt the Military Order of Fleas as an auxiliary organization. At the sixth national convention, The Military Order of Fleas was accepted as an auxiliary unit of the Polish Legion of American Veterans.

Due to the state of war and by unanimous consent of all the State departments, the next national convention was held in abeyance until the cessation of hostilities. True to their love of freedom, Poles fought for this freedom all over the world, with the auxiliary units working in hospitals and raising funds for the needs of the veterans everywhere.

At the convention of September 1946, in deference to many World War II veterans that attended this convention, the emblem of the organization was changed to embody the "Ruptured Duck."

On September 3, 1948, during the ninth annual convention, the adoption of the Gold Star Mothers as an auxiliary unit was confirmed, a new constitution and bylaws were adopted.

The first newspaper came off the prein 1956, which was to be known as the Polish Legion of American Veterans National News, edited by Theodore S. Holtz, commander. Today the newspaper is better known by the abbreviation PLAV News and tells of the workings all over the country.

In the years following the major conflicts of our country, The Polish Legion of American Veterans and the ladies auxiliaries have strived hand in hand to provide entertainment and small necessities for these veterans.

It is a blessing to some of these veterans, many who are a long way from home, confined for great lengths of time, to have an organization such as the Polish Legion of American Veterans, aid and ease their present welfare. Race, creed, color or nationality, have no bearing when we visit and entertain these various institutions. In a pot pourri of people as great as ours, organizations which go to these various institutions cannot single out their people.

As a living monument to over 1 million Americans of Polish extraction who served in World War I and II, in the Armed Forces of the United States of America, and to the many thousands who have made the supreme sacrifice, the Polish Legion of American Veterans aims and ideals are to maintain and preserve a true spirit of freedom and patriotism, and giving evidence of such, by support, and cooperation both moral and material, and as the preamble of the Polish Legion of American Veterans reads:

"To maintain an active interest in all manifestations and demonstrations of a patriotic nature that the glory and the security of American ideals, institutions, and liberties may be forever preserved.

liberties may be forever preserved.

"To combat the destructive propaganda of communism and all other influences alming to destroy or weaken our American institutions or Government.

"To disseminate a true conception of Americanism and all the love and understanding of American ideals, hopes, and

aspirations.

"Imbued with unbound and unrestrained loyalty to America and her institutions, yet proud of the traditions and achievements that inspire a deeper understanding and practice of loyalty, the Polish Legion of American Veterans to furtherance of such loyalty and militant service is dedicated."

Principles for Area Redevelopment Legislation

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks. I include an article on the principles for area redevelopment legislation written by Mr. Solomon Barkin, executive director, Area Employment Expansion Committee, New York City. This article makes a plea for the development or redevelopment of distressed and underdeveloped areas in the United States and Mr. Barkin points out that the goals expressed in the Employment Act of 1946 will be realized when the vast pockets of unemployment and the pools of underemployed will be eliminated by such a development program, as set forth in the area redevelopment bill passed last year by the U.S. Senate and now pending before the House of Representatives. The article follows:

PRINCIPLES FOR AREA REDEVELOPMENT LEGISLATION

(By Solomon Barkin)

(This article makes a plea for the development or redevelopment of distressed and underdeveloped areas. There is legislation in Congress to implement such a program, and Mr. Barkin points out that the goals expressed in the Employment Act of 1946 will be realized when the vast pockets of unemployment and the pools of underemployed will be eliminated by such a development program.)

The human, social and private waste in America resulting from unemployment, underemployment and low living standards in distressed and underdeveloped areas presents a challenge to the American people which we can no longer avoid. All but the committed economic standpatters have joined supporters of area redevelopment legislation.

There is a widespread consensus that these areas and the people within them need outside help to convert their moribund and contracting community economies into flourishing ones. The current high level of national unemployment will not be taken down to the irreducible minimum unless we vigorously attack the pockets of unemployment and underemployment located in these

The distressed areas in this country at one time represented the backbone of the American economic structure. We cannot list communities such as Lawrence, Mass.; Amsterdam, N.Y; Scranton, Pa.; Durham, N.C.; Detroit, Mich.; Portland, Oreg.; and those of southern Illinois without recalling their days of economic glory. Their present distress was brought about by vast economic changes in American industry, which witnessed the substitution of oil for coal; a rise in productivity to unprecedented new heights; changing consumer and producer demands; substitution of new processes, products and raw materials for old ones; and the growing impact of imports.

These changes have brought new economic growth and riches to the country as a whole. They have spelled the blossoming of new areas. But they have brought problems to many older areas and to their inhabitants. In some, they have meant economic disaster

and continuing reverses.

The fate which has befallen these communities might well become the destiny of many other areas now enjoying the peak of their economic growth. Economic and technical changes are continuing; they will, in the future, alter the position of many areas. No group is protected from the ravages of this highly turbulent and dynamic economy. The prosperous ones of today may tomorrow be flat on their backs.

These cycles of economic growth and decline are not new; they will continue into the future. What is new is the realization that we can no longer afford to stand idly by and let these cycles be reenacted without seeking to stop their ravages and the ac-

companying economic decline.

The proposed area redevelopment legislation seeks to help urban areas adversely affected by change. In some cases new innovations may rekindle the forces of growth. But where changes spell long-term decline, the new legislation desires to provide machinery to nip the contraction at the start and to help local areas reassess their problems, redesign their communities and plan for their ultimate renaissance. The purpose of the legislation is to provide the machinery for shortening the decline and hastening the renewal of the local economies.

In April 1959, there were at least 267 labor market areas in the United States with a labor surplus in excess of 6 percent of the civilian labor force. Of these, 147 labor markets had had a substantial labor surplus for 18 months or more during the 2 preceding years. The chronic nature of these labor surpluses is indicated by the fact that in April 1959, the above-mentioned labor markets had had continuing substantial labor surpluses for the following numbers of months: 18 months, 71; 22 months, 7; 24 months, 2; and 25 or more months, 67. Forty-seven of these distressed labor markets have had substantial labor surpluses at least since January 1955.

A considerable number of labor markets with substantial labor surpluses will probably be added to the distressed category this year. Even if unemployment were to continue to drop to the most optimistic figures which have been offered to date—to a seasonally adjusted level of 3,500,000—the number of distressed areas would be increased, leaving new significant pockets of chronic distress. Most of the new distressed communities will come from the north-central States, arising from the contraction of employment in the durable consumer-goods industries, particularly the automobile industry; the changes in military procurement, and the marked rise in productivity.

The setback in the Western lumber industry will also create permanent distress in the labor markets which have been built around this industry.

In defining "distressed areas," the writer has followed the criteria contained in the Douglas-Payne area redevelopment bill of 1958 and the House Banking Committee bill

of 1959. They identify as distressed, areas in which there has been unemployment of 6 percent or more in at least 18 of the immediately previous 24 months, 9 percent during at least 15 of the immediately previous 18 months, 12 percent during the immediately previous 12 months or 15 percent during the immediately previous 6 months. The conviction underlying this distinction is that the labor markets with such persistent levels of unemployment are generally suffering from structural defects in their economy. deficiencies are subjecting them to an intensive level of unemployment. To overcome these shortcomings, the areas must redevelop their economic structure and promote the establishment of new nuclei for economic

A contrary position has been espoused by others who have insisted that aid should be granted only to communities which, over several years, have had a rate of unemployment at least 50 percent higher than that prevailing in the Nation as a whole. The theory behind this presentation is that only distressed areas which have suffered more intensely than has the country as a whole need Federal assistance. The primary purpose is to limit the Federal Government's liability.

While area-redevelopment legislation does not seek to correct the overall national economic trends which result in unusually high levels of unemployment, it can help communities reconstruct their economic structures so as to benefit from a business upturn and thereby accelerate their rehabilitation. By restricting assistance to the extremely chronic areas, the alternative program will not be of aid to communities which can more easily improve their situation and thereby forestall the aggravation of their people's plight. The sponsors of this more restrictive definition do not deny that most communities included in the preceding group are truly distressed. They are, however, hopeful that improvements in the national economy will graduate some of them out of the distressed classification and thereby reduce the number which would be eligible for financial assistance. They want to limit the benefits to the most aggravated areas rather than to distressed labor markets generally. In approving technical assistance to one-industry communities, irrespective of the level of unemployment, they are conceding that preventive or early action can be con-structive. But they are moved to restrict the beneficiaries in order to hold down Federal expenditures for this objective.

REDEVELOPMENT ECONOMICALLY SOUND

The redevelopment of distressed areas is imperative on both humane and economic grounds. We cannot abandon these communities, as we were prone to do with the older mining sites, and permit them to become ghost towns. Modern communities are no longer makeshift arrangements. They represent large-scale public and private investments in which thousands of people have made tremendous contributions, and in which extensive permanent private and public improvements have been erected. investments made by individuals, corpora-tions, and public institutions and organizations exceed tens of billions of dollars. They reflect the efforts and savings of decades. At a time when we are faced with stupendous financial burdens to develop our military strength, to help underdeveloped foreign areas, to create the physical plant for our expanding population, and to complete the facilities required by our bulging metropolitan areas and suburbs, we cannot afford to overlook existing plants, homes, and community investments. It would be poor national economy. We must help make the most of these existing assets.

The human associations with existing sites are so profound that even in periods of great distress people are reluctant to move

from them. The advocates of out-migration and increased commutation tend to over-look the high rate of physical movement already existing in the United States. Among western countries it is one of the highest. Moreover, the high rate has been steadily maintained. We have seen some major shifts in population among regions, within States, and from distressed and declining zones. The incentives for migration exist and have been adequate to get people to move

people to move.

Despite their breadth and significance, these movements are in themselves insufficlent to solve the problem of the distressed communities. To realize this goal would require a movement many times the current rate of migration, which would involve a staggering cost for this country. Second, many communities to which people would have to move are not prepared to receive them and would not have the facilities to absorb them. Third, people are themselves unwilling to migrate and break up their lifetime of associations. Many are also vital to a healthy, balanced development of the older communities. Furthermore, the outmigrants and commuters tend to return to their native communities whenever they experience economic reverses in their new employments and areas, thereby aggravating

the plight of the depressed areas.

There are many forces currently at work facilitating labor mobility. These include company transfers of workers to relocated plants, housing and resettlement arrangements, companywide seniority rights in union agreements, widespread dissemination of information on new job opportunities among the employment offices, and interstate agreements on the payment of unemployment insurance benefits. While the introduction of travel allowances and more widespread agreements on company and industrywide transfer rights would be helpful, they are unlikely to change the problem substantially. Migration and commutation can be increased, but will hardly play a more vital role in solving the problems of the currently distressed areas.

The continuance of distress in these areas is intolerable on human grounds. To allow them to fester without hope or plan for recovery or without assistance for definitive reconstruction is to permit human beings to deteriorate and to be demoralized and to sink to levels of abject poverty and destitution and dependence upon public support which must become more meager with time, as well as to deprive them of an opportunity for constructive, dignified participation in society. The distressed area is a malignant social cancer which brings social difficulties and problems and is costly to the individuals and the community. It is a pathological economic state which breeds costly deficiencies in our society. They cannot be neglected without damage to the greater social matrix.

Distressed economic areas tend to become less and less capable of self-assertion and initiative as their condition is prolonged. It is for this reason that early assistance in redevelopment is essential. The lowered capacity for economic growth is due not only to the spirit of resignation Which ultimately suffuses a community that continually fails, but also to the outmigration of the young and ambitious, leaving behind the older and less mobile persons. As the distress continues, the graduates of the school system move out, making for a more unbalanced population. Community income drops and the quality and quantity of public services deteriorate so that the services and inducements necessary for attracting modern industry become fewer in number.

URBAN REDEVELOPMENT—FOURTH APPROACH TO ECONOMIC GROWTH

The redevelopment of distressed areas and the modernization of their facilities can save our Nation billions of dollars, hasten our rate of growth and bring nearer the day of adequate public facilities for all. If we neglect these areas, we shall have to duplicate these resources afresh in the new areas into which people will move—a truly costly process. By helping to rebuild the older communities we are sparing human and capital values and preventing unnecessary duplication.

Economic growth has hitherto been experienced primarily through expansion. We have employed more people, new land, and more capital. These traditional forms of growth have been successfully supplemented by the newer arts of scientific management which have helped to raise productivity without necessarily using any more of the above-mentioned resources. Recently, organized scientific discoveries have supplemented the processes of growth by adding new ideas and approaches.

Now we are realizing that there is a fourth approach to growth which supplements the three preceding methods. As we have increased our investment in human beings and our factories, plants, and communities, we have learned that we can grow most easily if we use, rather than scrap, our past investments. The principle has been most systematically adopted in the case of human beings. We now practice individual rehabilitation to help prolong the vocational usefulness of individuals. We have found that many a rehabilitated person has become socially and economically more productive, in addition to being happier, after he has undergone this rehabilitation. The practitioners have shown abundantly that individual rehabilitation more than pays for

The same principles have now been applied to urban slum areas. Entire sections of a city have been cleared of slums and been rebuilt through the construction of new housing units. As experience increased, it was noted in some areas that districts could be renewed through selective clearance and general redevelopment. The process of urban renewal is now helping to rebuild many of our large cities. The process has been slow, but the advantages have been abundantly illustrated.

A similar movement is now under way with declining industries. Many business leaders are seeking the help of research and scientific study to revitalize declining industries. In agriculture, research is not only increasing productivity but opening up new markets for old crops or creating new crops for areas seeking substitutes for older ones. The paper and pulp industry became a growth industry through the use of research after having suffered great reverses. Now research is being conducted in the coal industry to achieve a similar goal. Government promotion of research in the textile industry is the object of a new interagency committee recommended by a senatorial investiga-The investments in these industries are huge; the advantages to be obtained from investments in redevelopment are too promising to miss on these opportunities to enhance the value of existing capital, skills, and know-how. Successful industry is the object of a new interagency economic progress with minimum national cost.

The program for area redevelopment follows these same general principles. It stresses the economy of investment in redevelopment as compared with the cost and human suffering from neglect of existing sites and the shift of millions of people to newer communities. The plan is built on

the same outlines as those followed in the program for urban renewal. As for the responsibility, it is to be placed in the hands of the local areas. They must carry the ultimate burden. State planning bodies must be the primary group for helping these areas in organization and planning. Only where there is no State body or where local initiative is completely absent and there is a transcending national interest in economic rehabilitation, will the Federal Government step in and try to stimulate the formation of local bodies which then will carry on the responsibilities.

In defining the geographical area for such bodies and redevelopment, the scope must be broad enough to encompass a true economic region. One of the major shortcomings of current local developmental bodies is that they have tended to limit themselves to pre-existing political boundaries. Economic areas do not necessarily follow such limits. Development has often been frustrated by reliance upon older political boundaries. Unnecessary competition has been engendered by these anarchistic and uneconomic programs for development. They have induced an emphasis on appeals for location through subsidy rather than real economic advantage. Therefore, the boundaries must coincide with true economic areas.

The next task facing the local group is to construct its program of economic development. The aim is not merely to find an occupant for a building which may already exist or which will be built. It is not enough to attract a single industry and create a new pattern of distorted economic growth. The purpose must be to develop a program of balanced and continuing economic expansion built around one or more economic growth nuclei and locational advantages.

In the past we have built communities on the basis of trade routes, resources or markets. Now we can develop new locations through imaginative uses of sites and the exploitation of the positive attributes of an area. We no longer need wait for "natural forces." The enterprising community develops a program, explores its assets and builds around them, and seeks businesses to advance the area.

Economic growth demands integrated physical and community planning so that specific locational advantages must be high-lighted and developed. It therefore demands careful study, planning, promotion and integrated efforts.

After a plan of economic growth has been evolved, the community must evaluate its physical resources and determine which are obsolete, what its handicaps are, and what gaps in services and facilities exist. These must be corrected, advanced or filled, either through public or private enterprise.

As for the public facilities, the community needs a long-term program for construction, modernization and improvement. Without such a plan many communities will be unable to attract or stimulate new industries into being within their areas. One of the attributes of modern industry and its employees is desire for modern facilities. Adequate community provisions for schools and for recreational and cultural opportunities are needed. There must be sufficient water, a modern sewage system, good housing, adequate transportation arrangements, and other elementary physical facilities. Insofar as housing, continental roads, airports, flood-control canals, water reservoirs, forests, and similar projects are concerned, varying amounts of help can now be obtained from the Federal Government. But where these are not now available, communities must rely solely on their own resources. Many will also need to clear industrial or residential siums to prepare the way for new industrial sites, but will not have the funds nor the resources to tax for these purposes. It is at this point that the distressed communities are handicapped. They have usually been left economically stranded so that their financial resources, are inadequate. Any legislation designed to help the chronically distressed communities must, therefore, provide funds for public facility grants to the impoverished communities and low-interest loans to the remaining distressed communities. Provision must be made for commercial and industrial building slum clearance in the manner in which the Federal Government now provides for residential slum clearance in urban areas.

Second only to the program for physical rehabilitation must come the program for the upgrading of human resources through schooling and retraining of the unemployed. The skills of many persons have become obsolete and must be redirected to newer occupations. Many older persons may not have had adequate schooling and, therefore, are not prepared for new jobs and the demands for newer employments. These can be achieved through a program of vocational training and subsistence grants for people during the training program. These programs should supplement continuing efforts to improve the existing school systems for children and adults so that they can overcome their educational handicaps and advance their vocational proficiency.

These undertakings are designed to prepare the communities for the practical problems of redevelopment. They will provide the plans and blueprints for future lines of economic growth. The tasks which lie ahead of the various communities will vary in scope. Some will have to initiate major projects, while redevelopment in others will require more limited undertakings. Many communities have already made substantial progress in preparing their practical programs and are ready to push ahead on implementation of the work plan. Some have made valiant efforts to correct their own distress and have been limited primarily by their lack of resources and the modesty of the program which they had hitherto promoted. They are prepared for a more ambitious program of economic renaissance.

Distressed communities are generally eagerly seeking the immediate enactment of Federal legislation which will assist them in planning, provide them with loans and grants for public facilities, grants for vocational training and subsistence, and loans for industrial and commercial structures.

PROGRAM FOR URBAN AREA REDEVELOPMENT

Considerable controversy has arisen concerning the practical provisions for implementing the above principles. The congressional majority passed a bill, in 1958, which was vetoed by the President. In the 1959 session, contrasting bills have been submitted by the liberal promoters of this legislation and the administration. The latter's bill is, as already indicated, more restricted as to the areas likely to qualify for benefits and it allows for a more modest and limited program. The former seeks a measure which will help more communities with more funds and in more varied ways.

One issue dividing the groups is that of administration. Both agree on local responsibility. But the congressional sponsors of the legislation advocate an independent agency rather than the assignment of the responsibility to the U.S. Department of Commerce, which has hitherto served as a modest information center on industrial diversification in local communities. The congressional group has feared that the department would subordinate this activity and place it in the hands of a group out of sympathy with the program and with little experience with large-scale developmental activities.

In the 1958 Douglas-Payne bill, the sponsors agreed to assign the program to the Housing and Home Finance Agency, which has many similar functions to administer under the urban-renewal and community-facilities loan laws.

All groups have agreed on the need of a Cabinet-level advisory group to coordinate existing Federal services. The congressional group has also included a citizens' group which would follow the administration of the act and provide the Administrator with direct access to people vitally interested in the promotion of the program. In addition, the congressional bill authorizes the Administrator to provide for ad hoc committees for industries primarily responsible for unemployment in distressed areas, to encourage them to embark on programs to broaden the activities of these industries, thereby hoping to minimize the adversities which have been causing communities to become depressed.

As for the public facilities, the congressional committees provided for grants and loans to depressed communities where such were needed for redevelopment. Where the communities would be unable to borrow money for public facilities to make the areas attractive for economic growth, grants would be provided. Loans up to 65 percent of the project for 40 years are to be arranged where such loans cannot be secured from other sources on equally favorable terms.

The administration took the position that no such special facilities were necessary. Its bill allows only for priorities for depressed communities under existing communityfacilities loan programs with no new funds or procedures. The funds under this program are limited and no outright grants are provided. The congressional group has counted among its members many prominent sponsors of the community-facilities bill who were ready to substitute the latter, if approved, for the provisions for loans in the area redevelopment bill, but have continued to insist upon the retention of a provision of grants to distressed areas which are unable to raise funds or carry the cost of the loans. The Senate version of the bill provided for a revolving fund of \$100 million for loans and an appropriation of \$75 million for grants. The House bill reduced these sums to \$50 million and \$35 million, respectively.

All parties are in agreement that provisions should be made for loans for industrial and commercial structures. agreement exists on the amount of the funds and the terms. The Senate 1959 bill proposes a revolving fund of \$100 million each for industrial and rural areas; the House version proposes \$75 million each; the administration bill specifies \$50 million each. The latter sets the maximum on Federal participation at 35 percent; the congressional groups set the limits at 65 percent. The administration bill calls for a minimum 15 percent local contribution, which would be subordinate to Federal claims; the congressional bill asks for only 10 percent, and the Federal share would be subordinate to all other loans. The congressional bill requires a 5 percent private participation; the administration calls for none; 30 rather than 25 years is proposed by the congressional group as the maximum period for loans. The congressional group allows for funds to cover machinery and equipment; The congressional group allows for the administration group excludes these.

Most significantly, all groups are agreed upon qualifying the distressed areas with populations of 25,000 or more for planning grants under the urban planning provisions of the Housing Act of 1954. There is similar agreement on the principle of qualifying the distressed areas for assistance under the urban renewal program not only for residential areas, but also for predominantly commercial and industrial areas which can

be redeveloped for these latter purposes. Under the Senate bill this new exemption is added to the existing two exempt groups; they are all entitled to share in the 10 percent of the total amount of capital grants authorized for urban renewal purposes. The House bill provides that up to 10 percent of the new funds authorized for the 1959 urban renewal programs may be used for this program, since most of the existing funds have already been assigned to specific renewal projects.

One principle agreed upon by most sponsors of redevelopment legislation is the desirability of a lower rate of interest to reduce the cost of the redevelopment projects. The Senate bill provides for a rate equal to the current average yield on outstanding U.S. obligations of comparable maturity plus onequarter of 1 percent. The House bill retains this formula for all but public facility loans, for which the rate proposed would be equal to the average annual interest rate on all interest-bearing obligations of the United States plus one-quarter of 1 percent. Under present conditions the likely rate for the first class would be 4% percent and the latter, 2% percent. The administration bill, on the other hand, provides for the administration to fix the rate, which the congressional group fears would tend to be high and costly.

The various bills provide that the Federal

The various bills provide that the Federal Government may give advice and technical and financial assistance to State agencies in supplying vocational training facilities. The House bill assigns a specific annual fund of \$1.5 million for this purpose. Subsistence payments are also established in the congressional bills for 13 weeks of retraining to unemployed not getting unemployment compensation. An annual ceiling of \$10 million is set in the House bill for this purpose

Other provisions have been dropped over the course of congressional consideration during the past few years, largely because the sponsors have recognized that the particular proposals aroused special types of opposition or seemed incongruous to the major stress on redevelopment. Provisions for special accelerated depreciation allowances have been omitted primarily because the authority of the banking committees to handle tax matters was called into question. Allowances for out-migration appeared too difficult to support in face of the emphasis on local redevelopment. Generalized retraining of the unemployed was considered too ambitious an undertaking in light of the vague-ness of the targets. The proposed program was ultimately restricted to retraining for the new jobs brought into the areas through redevelopment programs.

RURAL REDEVELOPMENT

Equal in importance to a program of urban redevelopment for areas distressed by industrial, commercial, and economic changes is a program for relieving the poverty and economic backwardness of rural areas. The size of this problem has made it one of preeminent national importance, but only most modest programs have been undertaken to correct this weak sector of our national economy. This country, which contributes so generously to the amelioration of rural distress in other countries, has failed to adopt a similar program for domestic rural poverty. The continuance of this sore is due to an inexcusable blindness to our own challenges. Without seriously trying to solve these difficulties at home, we cannot give proper guidance to efforts in foreign

One out of every three commercial farms in this country had in 1954 gross sales below \$2,500. One quarter of the farm families had an annual income of \$1,000 or less. In comparison to the American average farm level of living in 1954, there were 52 counties in the United States in which living

standards were less than half this level. The great predominance of the counties in which people are chronically underemployed and living at such low standards of living are to be found in the Southern States, particularly in Alabama. Arkansas, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. Some clusters of counties with extreme economic problems area also to be found in Florida, Illinois, Michigan, Minnesota, Missouri, and New Mexico.

Basically, the population increases have outrun local resources. Even where there has been outmigration, the volume has not been sufficient in these instances to improve conditions for those who have remained behind. The farms tend to be small and capital to be inadequate for developing modern farm ventures. Managerial experience is limited and many are cultivating crops which are not profitable. These are counties in which nonagricultural employments are scarce. Even though the supply of men and women in their prime of life is abundant, they have little opportunity for a fully productive contribution to the economy.

There have been many efforts to develop the farm economy in these areas. But they have been limited in scope, inadequately financed or not sufficiently bold in scope to deal with the problems of regional and personal economic redevelopment. Those who have looked to outmigration as the solution have seen many move, but population growth has offset these losses. Migration is not easy though millions of low-income farmers have joined the movement. There are many who have been deterred from this bold undertaking through lack of knowledge of outside opportunities and funds with which to move themselves and their families.

If the movement of people out of the areas can play some part in a program of economic rehabilitation, it must be looked upon primarily as a supplement to a more Positive plan tending to create thriving economic centers where none now exist. The first part of this plan must be to rebuild the farm economies. There is need for capital and managerial advice. Unfortunately, most of the effort to date has been directed toward helping the more successful, rather than the low-income, farmers. A new emphasis on the latter is essential. To be successful in this venture, Federal facilities must be developed for intermediate-term farm credits and farm management counseling.

Important to the realization of a rural redevelopment program, however, is the creation of new nonfarm jobs in the immediate rural areas or nearby urban centers. The creation of sound farms often means the merger of existing small ones. This is possible only if the persons giving up farming have alternative local nonfarm jobs. Such employments within the area will attract many who have desisted from moving greater These jobs have the added virtue of providing local employment and creating more local income for improving public services, stimulating new demands for local agricultural products, encouraging new service industries and, ultimately, also creating new capital to be used in part for agricultural purposes.

Such nonfarm employments must be an essential part of a permanent program of redevelopment along with the promotion of more profitable farming and outmigration in areas where there is a real excess of population. Disagreements exist, however, on the best methods of effecting these ends. The administration has contended that the present rural redevelopment program is sufficient. It provides for the coordinated effort of local private business and govern-

mental agencies in 117 pilot counties to study the causes of local underdevelopment, undertake projects necessary to remove the deterrents to growth and stimulate new enterprises through voluntary efforts and the use of local resources. The Federal funds provided for this program in the 1958-59 budget was \$15 million for the Farmers Home Administration for additional local authorizations in the pilot counties, or about \$150,000 per county, and \$2.6 million for the special services and research activities by public agricultural agencies assisting in this program.

Many students of the farm problem, farm organizations, and administrators of the above program have criticized it as inade-The principal target is the underlying assumption that local resources are sufficient to remove rural poverty. While modest projects have been undertaken they can hardly have any broad significance or effect. Moreover, the limited scope of the participants makes for narrowness in point view. There has also been excessive emphasis on local phases of redevelopment, when the solution demands a broad, gated program. The Agricultural Committee of the National Planning Association has recenlty declared that "to place exclusive emphasis in the rural redevelopment program on private initiative and local leadership is unrealistic and self-defeating. If a century and a half of dependence on local initiative has failed to eliminate America's low-income rural regions, it seems futile to depend only upon such initiative to solve the same rural poverty problems still before It concludes that the problems are far too vast and deep seated to be solved by the present rural development program. Thie view is shared by the National Grange, the National Farmers Union, and by economists, publicists, and spokesmen for farm opinion.

Those most interested in redevelopment have underscored the need of building up existing distressed farm areas. They have called for outside capital and experience to come into these areas. They have been suspicious of the present development program because they have seen many areas come under the dominance of large local farmers who have resisted projects which would stimulate outmigration and industrial development as well as credit facilities to assist the low-income farmer. The large farmers have been charged with impeding the outmovement to assure themselves an abundant supply of cheap local labor.

The program has also faltered because of the difficulties of creating a voluntary coordinating agency without funds or resources to implement worthy projects. Others have found fault with the entire structure, for it allows for no easy way of extending operations from the pilot counties to the broad expanse of needy farm people.

The criticisms have led many devoted to the solution of the problem of rural poverty to join the ranks of those advocating rural redevelopment for all distressed and underdevelopment for all distressed and underdeveloped areas. All are interested in reconstructing economies which are no longer prospering. In the latest administration proposals, some recognition has been given to this point of view by providing an annual fund of \$1.5 million for technical assistance to help in the program of industrial diversification of one-industry towns and rural industrial low-income areas.

But the administration has objected to the remainder of the area development program for farm areas projected by the congressional group. The latter insist that it is not enough to plan redevelopment. It is essential to provide funds to enable communities to improve their public facilities and to build industrial and commercial structures which would attract nonagricultural employments. The congressional bill, therefore, provides that rural redevelopment areas,

defined to include the low-income counties, consisting of a minimum of 663 counties under the House bill may share in the funds for loans and grants for public facilities and in the funds for vocational training and subsistence grants to trainees. Provision is made for a special fund for industrial and commercial structures in rural areas comparable in amount to that established for urban distressed areas, namely, \$100 million in the Senate bill and \$75 million in the House bill.

CONCLUSION

The realization of the objective of employment, production, and purchasing power laid down in the Employment Act of 1946 demands that the vast pockets of unemployment and the pools of underemployed be given opportunities for full-time gainful employment. There is no such possibility while distressed urban and underdeveloped rural areas abound in this country. Unfortunately, out-migration from these areas will not solve the problem, though it may help individuals to find better opportunities. On the contrary, such an exodus can greatly inhibit the possibilities of economic redevelopment by stripping the area of its young and trained people.

The constituent elements of a venture to rehabilitate sick areas in the United States have been agreed upon, but there are differences about the extent to which the Federal Government should finance or provide loans to local agencies for these purposes. Legislation to grant such benefits to local areas was passed in 1958 and vetoed by the President. Similar legislation is being considered by Congress in the present session. Those interested in initiating constructive efforts in this field are hopeful that a bill acceptable to the divergent points of view can be adopted so that work may proceed to redevelop our own distressed and underdeveloped areas.

"Polish Constitution Day

EXTENSION OF REMARKS

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. HOLLAND. Mr. Speaker, the Poles are a great and gifted people, and they have great deeds and accomplishments to their credit. They are known not only as diligent and conscientious workers, but they are also admired as accomplished and great masters in the arts and the sciences. They are no less famous as brave and courageous warriors for great human causes. We can easily testify to this when we recall the role played by Kosciusko and Pulaski in our War of Independence. And they have also been great improvisors of institutions and governments. The Constitution of 1791 is a case in point.

Late in the 18th century when their country was under threats of aggression, and they were about to lose their independence, Poles did a splendid job in remodeling their governmental machinery. They then hoped that by such important and impressive changes, they could strengthen their government and thus be in better position to resist the aggressors. This constitution made Poland a limited monarchy, and introduced a responsible cabinet system of govern-

ment. Parliamentary representation was expanded, and the many class distinctions were wiped out. At the time, and even in later years, this constitution was regarded a liberal, democratic, and progressive document, the first of its kind adopted in any country in central and eastern Europe. As such it marked a great step in Poland's political history.

We know that the Poles did not have the freedom and the privilege to live under the provisions of this Constitution. Soon after its promulgation Poland was invaded by its aggressive neighbors, and then partitioned among them. Polish independence was gone, and the spirit of the Constitution of 1791 lived in the hearts of the Polish people. It was the working of that spirit which recreated the Polish Republic in 1918, and we can confidently hope, on this 169th anniversary celebration of that historic document, that through the working of that same spirit Poles will regain their full freedom and independence once more.

Budge Seeking Sixth Term

EXTENSION OF REMARKS

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. ALGER. Mr. Speaker, an editorial, appearing in the April 10 edition of the Times-News, published in Twin Falls, Idaho, has come to my attention.

The first paragraph of the editorial

It is good news that Representative HAMER H. BUDGE will be a candidate for reelection as Congressman from Idaho's Second District.

Mr. Speaker, in those words I heartily concur, as I do with the balance of the editorial which praises the gentleman from Idaho for his unwavering stand for the principles in which he believes; for his integrity, and for his statesmanship.

I am sure the gentleman's constituents also recognize his outstanding qualities, and will return him to the 87th Congress. From where I stand, this is good news for the entire Nation.

The editorial follows:

[From the Twin Falls (Idaho) Times-News, Apr. 10, 1960]

BUDGE SEEKING SIXTH TERM

It's good news that Representative Hamer H. Bungs will be a candidate for reelection as Congressman from Idaho's Second District.

A Republican who has made an outstanding record during his five terms as Congressman, Budge is the type of representative in Washington of whom everyone should be proud. He stands out in sharp contrast to some of Idaho's unfortunate experiences with representatives in public office.

Of course, there are those who will disagree with Representative Burgs along purely partisan lines, on such issues as Government spending and foreign aid particularly. But no one can question that he has

the courage of his convictions and is highly respected in Washington.

That he is a member of the House Committee on Rules, the first Idahoan to serve on the committee and the only present member from any of the Western States, attests to his ability, experience and the high regard in which he is held generally.

It is characteristic of Budge, in announceing his candidacy, that he makes it crystal clear he will campaign on his "record of

strict economy."

He knows the free spenders hate that word "economy," he is well aware that organized labor will be out to get his scalp, but he continues to call spades spades, and the voters of Idaho's Second District continue to send him to Congress.

With the whole country suffering from inflation, racketeering, and unreasonable demands by certain segments of organized labor, and Government spending that's wrecking our economy, Idaho should be proud that we have a Representative in Washington who fights all that sort of thing.

One has the feeling in talking with Congressman Burgs that he comes the closest to being a statesman of anyone representing Idaho in an official capacity in a long time.

It's refreshing to know that we have such a man in Washington—one who does not doubletalk, vacillate or pull his punches for political reasons. In fact, on numerous occasions, he has taken a firm stand on nighly controversial issues, which no opportunist politicians would dare to take.

The Times-News makes no apologies for

The Times-News makes no apologies for its frequent and enthusiastic praise of Mr. Budge. We have far too few of his type in public office any more, which is one of the main reasons for inefficiency and irresponsibility in government all the way up and down the line.

Those who uphold the type of government to which Congressman Buncz is dedicated should praise and support him at every opportunity.

Salute to Israel

SPEECH

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mrs. KELLY. Mr. Speaker, I am delighted to be afforded the opportunity to pay tribute to Israel on the occasion of its 12th anniversary of statehood.

Looking back we can all remember the hurdles which stood in the path of Israel's independence. We all remember the joy of the day on which the United Nations debate was completed and the final vote guaranteed statehood. Israel's problems did not, however, cease with the granting of statehood. This was only the formal act of creating an independent nation—the job of building the nation remained.

In those early days, Israel, with enemies on all sides, found itself in a most precarious position. But as the numbers and strength of her people increased, Israel's strength also grew. What was lacking in numbers and the material things was more than made up by the sheer determination of the people to carve out and defend a modern and progressive nation.

In but 12 short years, the entire world has witnessed, often with amazement, strides which were never before thought possible. This again, can only be attributed to the unremitting toil and determination of the people of Israel.

We must not lose sight of the conditions which prevailed in Israel 12 years ago. Israel was, from the standpoint of economic and industrial development, little different from the other nations of the Middle East. For the most part, it was little more than a sandy, arid wasteland. There was no housing and little industry. Educational facilities were at a minimum, adequate sanitation facilities were almost nonexistent, and agricultural methods dated back to the Middle Ages. The battle for survival and advancement was not an easy one.

But these matters belong to history and, while we must never forget them, I would rather speak of the present and, if I may for a moment attempt to be a prophet, look to the future.

Israel today is a strong and vibrant nation whose people have proven themselves, not only by their visible accomplishments but also by the successful defense of their homeland. While danger still exists from without and the saber rattling continues, we are all hopeful that the border clashes will soon stop and that Israel's Arab neighbors will accept her statehood as a fact of life.

Even in face of the military problem, Israel continues to grow. Its Mediterranean coast is to me a thing of beauty. Its cities are as modern as those anywhere else in the world and, most important, the bare white desert is being turned to green.

I choose to look upon Israel as the picture window of the Middle East. Unfortunately it is a reflective window but I hope the achievements will be adopted by the other nations in that region. When the other nations of the Middle East are developed, when modernization and a higher standard of living become universal to the area, then will the world realize the tremendous contribution made by the people of Israel. Those who devoted and gave their lives toward the creation and building of the State of Israel will thus be richly rewarded.

Theodor Herzl

EXTENSION OF REMARKS

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, the 100th anniversary of the birth of Theodor Herzl is commemorated this year, and Members have joined in tribute to him and to Israel's 12th anni-

versary.
So it is appropriate to include as part of my remarks a thoughtful and sensitive appraisal of Dr. Theodor Herzl and his life's work written by Rabbi Joseph S. Shubow, of Temple Bnai Moshe, in

Brighton, Mass., which appeared in the Boston Herald of Monday May 2. Rabbi Shubow has for many years been a respected and influential religious and civic leader of greater Boston.

THEODOR HERZL'S CENTENNIAL TODAY

On May 2, 1860, there was born to Jacob and Jeannette Diamant Herzl a male child whose name has become a household term to millions of Jews and to all those who admire and revere the spirit of genuine national rebirth and service to humanity. That child was named Theodor, a gift from God. In the Hebrew he was given the names Benyamin Zeev. He grew to manhood in an aristocratic, highly cultured Budapest Jewlish family.

He died at the age of 44 in the year 1904 and achieved world renown and unquestioned immortality. He was educated for the law in Vienna but his heart was set on journalism and literature. His early years indicated no special association with the

people of his origin.

He early realized that he could not advance as a lawyer and would never be elevated as a judge because of the prejudice and bigotry then prevalent in Vienna. Having been spared the local distinction of being an Austrian judge, he became truly a Biblical judge

and prophet of his own people.

Having a natural gift for literature he was designated as a correspondent for respectable and influential Viennese publication called die Neue Freie Presse (the New Free Press). This periodical was read by all the statesmen, diplomats, and crowned heads of Europe as well as by all members of the intelligent class. As a correspondent for this periodical, he covered the debates on the Dreyfus Affair in the French Parliament.

Until that extraordinary episode occurred, his mind delighted in writing feuilletones, plays, literary articles on numerous topics, especially on matters of State. But when the Dreyfus case broke and when he himself witnessed the terrifying exhibition of antisemitism in liberty-loving France, in highly cultured Paris he experienced a revolution of heart and mind which was tantamount to beholding a revelation. In a flash it became evident to him that the Jewish people who for centuries had suffered degradation, humiliation, and frustration, must be reborn, must refashion their destiny and must create a state that would become a member of the family of nations.

He saw the gallant Captain Dreyfus hooted, ridiculed, and jeered at; he saw his sword broken, his epaulettes and buttons torn from his uniform; he heard the mob rage and cry in its horrible wrath for vengeance against Dreyfus and his people. Herzi became a transfigured personality, newly born; all his past seemed to be as nothing compared to the prophetic vision that he now beheld.

He retired to his hotel room and wrote a remarkable little book called "Der Judenstaat," The Jewish State. When Herzl's friends heard of the new turn of his mind and pen they said: "What a pityl Herzl has became insane." He was heartbroken to see his beloved France only a hundred years after the Declaration of the Rights of Man turn back to incredible racial and religious hatred.

Dr. Herzl directed his booklet to the powerful and rich philanthropists, Baron Maurice de Hirsch and Baron Edmond de Rothschild. His appeal fell on deaf ears. Baron de Hirsch was interested in Argentina and Baron de Rothschild was frightened at first. But let it be said to his eternal glory that Baron Edmond de Rothschild later was one of the stanchest and most dedicated supporters of the struggling and suffering early colonies of Palestine.

Dr. Theodor Herzl in his disillusionment in those early years ridiculed mere philanthropy as uniting the lazy rich and the lazy Poor. He, therefore, found it necessary to turn to the great masses who hailed him as a royal scion of the house of David and because of his regal appearance and natural majesty regarded him as the Messiah.

PRACTICAL STEP

But Dr. Herzl never tired endeavoring to remove from the minds of the people all possible Messianic pretensions concerning himself and his work. His Jewish State appeared in Vienna on February 14, 1896, and was soon translated into all the languages spoken by Jews all over the world. In this way, Dr. Herzl created the Zionist movement. His first practical step was to call an assembly of Jewish leaders. It became known as The World Jewish Zionist Congress.

The first Zionist Congress attracted 204 leaders to Basle, Switzerland, August 29–31 after Munich Jews refused to be hosts. The situation seemed desperate. A helpless people were torn between the excessive zeal of some to assimilate and disappear, and the insistence of others to wait for the Messiah and for divine intervention for redemption. The great mass, loyal to the ancient traditions and to the sacred Hebrew tongue, were crying in agony in the Ghettos of the Czar for immediate hope and practical help.

FIRST IN CENTURIES

This was the first real Jewish national assembly that had been held in the Diaspora for centuries, except of the Sanhedrin called by Napoleon in 1807. At this first Zionist Congress it was decided to seek to create a Jewish state that would be "publicly recognized and legally assured."

An appeal was issued to Jews all over the world who still cherished their ancient traditions and followed their old prayers that petitioned for the restoration of Zion. As a mark of their devotion and constancy, they were asked to pay a shekel, a minimum contribution to manifest their loyalty to the ideal of Zion restored and Jerusalem rebuilt.

Dr. Herzl thus personally helped to launch the Zionist movement and to give the Jewish people a new hope; it was a God-given spirit that infused a new life into the dead dry bones of a people that seemed helpless and forlorn. He thus opened a new chapter in the long history of the people of Israel.

Casting aside personal concern, neglecting himself, his family, the life of ease, and comfort from which he came, Dr. Herzl gave the Zionist movement every ounce of his strength. He turned to the crowned heads of Europe for assistance. Through his good friend the Grand Duke of Baden, he met the German Kalser William the Second in Constantinople and Jerusalem. Dr. Herzl requested the Kaiser's assistance and influence with the Sultan of Turkey, whom he met several times. Later Dr. Herzl said of the Sultan Abdul Hamid: "I gained the conviction that the Jewish nation has a friend and well-wisher in the reigning Khalif."

In 1899 Dr. Herzl established the Jewish Colonial Trust in London, for he had great faith in England; in fact, he arranged the meeting of the Fourth Congress for London. At the Fifth Congress in 1901 he established the celebrated source of income known as the Jewish National Fund.

FORESAW FUTURE

In 1902 the Sulton offered Herzl opportunities for a Jewish settlement either in Anatolia or Mesopotamia or Syria, but not in Palestine. During these years of negotiations he sought a charter which would officially and publicly recognize Jewish rights to the Holy Land. This hope was fulfilled 13 years after Dr. Herzl's death. A new leader, Dr. Chaim Weizmann, obtained the Balfour Declaration on November 2, 1917. It was confirmed by the League of Nations in the San Remo decision of 1922. It is significant that in 1902 Herzl wrote a beautiful utopia called Altneuland (Old New Land), depicting the future of Palestine 20 years later. In this beautiful romantic dream, he coined the immortal expression, "If you will it, it is no legend."

On July 7, 1902, Dr. Herzl appeared at the invitation of the British Government to present evidence before the Royal Commission on Alien Immigration. It led to friendship with Joseph Chamberlain, then Colonial Secretary of State.

Negotiations were carried on for the settlement of Jews in El Arish in the Sinai Peninsula, not far from the Holy Land. The effort failed but the British offered Herzl

British East Africa or Uganda.

In 1903 the Sixth Congress in Basle rejected the Uganda offer, even though only a few months before there had taken place a pogrom or massacre in Kishinev, Russia. Dr. Herzl had a remarkable capacity for winning over all dissident groups and even though the Russian Zionist delegation had left the Congress as a block, he regained their confidence because of his own high seriousness and utter consecration.

In 1904 further efforts were made to convince the Sultan to grant the Zionists a charter for part of Palestine, but without success. During that year he had an audience with King Victor Emanuel III of Rome who kept Herzl's picture on his desk as long as he ruled. He also was given an audience with Pope Pius X, who was gracious and courteous. The last Congress that Herzl was to attend took place in Vienna in April 1904; and there he made a great confession when he stated: "I was the supporter of a Jewish state anywhere, but I inevitably I learned to understand that the solution to our problem was to be found only in Palestine."

VISION FULFILLED

Usually the Zionist Congresses were held in the mid-summer, but Dr. Herzi must have had a premonition that the end was near, for on July 3, 1904, he breathed his last. He had written in his tagebuch (diary) in 1897 after the First Zionist Congress as follows: "At Basie I founded the Jewish state. If I were to say this today I would be met with universal laughter. In 5 years, perhaps, and cerainly in 50, all will see it."

It is indeed fantastic that in November 1947 the United Nations recognized the partition of Palestine and inevitably confirmed the emergence of the State of Israel. This is incredible and fabulous fullfillment of the prophetic vision of one of the most remark-

able men who ever lived.

Dr. Herzl manifestly is one of the greatest of the nation builders in the history of humanity. To be sure, he had the indispensable assistance of the gifted Dr. Max Nordau and other men of genius, but the Zionist movement and the ideal of a Jewish State in modern political terms were essentially his creation, the product of his own amazing genius and divine vision. He is to be ranked with Washington, Simon Bolivar, Giuseppe Mazzini, and Cavour, Juarez, Eamon de Valera and all the great national heroes of the last hundred years. He was apparently an idealistic dreamer, but indisputably a realistic builder, for he and his spirit helped rebuild the Jewish Nation and restore the State of Israel. The celebration of Dr. Herzl's centennial thus takes on a universal significance.

"Edmund Burke and Ireland"—by Dr.
Thomas H. D. Mahoney

EXTENSION OF REMARKS

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
- Tuesday, May 3, 1960

Mr. O'NEILL. Mr. Speaker, I am very proud at this time to bring to the atten-

tion of my colleagues in the House a new book entitled "Edmund Burke and Ireland," authored by my very close personal friend, Dr. Thomas H. D. Mahoney.

Tom and I were boyhood chums and were classmates up until our graduation from Boston College. Tom went on in his chosen field of history; received his master's degree from Boston College, and his doctorate from George Washington University here in this city. He is very well known both as an instructor and a lecturer; is the author of several books, and a contributor to many magazines. At the present time he is associate professor of history at the Massachusetts Institute of Technology.

His latest book is published by the Harvard University Press and the following is a review of "Edmund Burke and Ireland," written by Prof. William H. Mulcahy, of the Cardinal Cushing Col-

lege, in Boston.

I am sure that everyone will find both the book and the review of great interest:

REVIEW OF "EDMUND BURKE AND IRELAND," BY THOMAS H. D. MAHONEY

(By Prof. William H. Mulcahy)

Professor Mahoney has adopted a new approach in his presentation of the life and time of the great 18th century parliamentarian, Edmund Burke. This definitive study brings into focus for the first time the deep concern and lifelong interest which the Irish born, British statesman always had for his native land. The "Memoirs" published in London in 1798, 1 year after his death, was followed by other studies during the 19th and 20th centuries, but all either ignored completely or passed over briefly this important phase of Burke's career.

One need only to examine a standard encyclopedia to note that Burke is always referred to as a British or English statesman with a brief mention of his Dublin birth. There is never a word in all that follows of his abiding interest in the land of his

ancestors.

In preparation of this study, Dr. Mahoney, professor of history, Massachusetts Institute of Technology made several trips to England and Ireland where he worked on the several manuscript collections, utilizing particularly the unpublished source material on Burke that only recently was made available to scholars. The book can be read with interest and profit by the scholar of the 18th century and by the general reader with only a superficial knowledge of the period.

Professor Mahoney brings out in a penetrating manner the careful approach of Burke to the problems of Ireland. The statesman did not believe in precipitate action. A slow, deliberate but continuous correction of the injustices to Ireland was the method he advocated. As the author points out, Burke believed, "that time and circumstance were all important in determining when principles should be applied," and that nothing ruined great causes as much as that people have treated the beginning as if it were the end.

Burke was born of a Protestant father and a Catholic mother, but was reared and always practiced the religion of his father. Although a champion of the oppressed Catholics he was a faithful follower all his life of the Established Church. For his selfless work and efforts in alleviating the lot of the Catholics he was subjected during his lifetime to continual abuse and vilification. He was accused of being an agent of the Pope and a Jesuitical intriguer.

Burke constantly asserted that England had nothing to fear from the Pope and ridiculed those who charged that the Catholics

owed a temporal allegiance to the pontiff which took precedence over their loyalty to their own country. In 1793, Burke advocated the establishment of formal diplomatic relations between Great Britain and the papal states.

To Burke, the laws against the Irish Catholics, a people constituting the great majority of the inhabitants of their own homeland, were unlike any system of religious oppression which had ever existed in the history of the world. This statement starkly points out the fallacy and the hypocrisy of one of the great myths of all time; "the glory and the grandeur of English law and English justice."

Readers of this book who will examine the appendixes of the volume, giving excerpts from the penal laws, will recoil with horror at the brutality and savagery of these examples of English law. Burke played a large part in the passage of the Catholic Relief Act of 1778 and 1782 which partially ameliorated some of the harsher features of the penal laws.

In spite of Burke's unceasing efforts to improve the lot of Ireland and especially that of the Irish Catholics he was never in favor of complete Irish independence. Burke's hope was that Ireland would always remain within the Empire, but with full control of her internal affairs, a control in which both Protestants and Catholics would participate equally. Under Professor Mahoney's skillful treatment, Burke is shown as the enlightened imperialist, who believed the best policy for the British Empire was to keep all of its parts, including Ireland, but to keep them all, strong and content.

Had Burke's selfless plans for Ireland been followed there is little doubt that Ireland's long and dreary history during the 19th and 20th centuries would have occurred. And it is more than probable that if the great stateman's plans had been followed, Ireland today would be numbered among the galaxy of nations comprising the British Commonwealth.

The Sanctity of Life

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of May 3, 1960:

THE SANCTITY OF LIFE

Though it has extinguished his life, the State of California is hardly rid of Caryl Chessman. "I think there should be great relief now that this long situation has terminated at last," the warden of San Quentin prison said to newsmen immediately after the execution. We think he is profoundly mistaken. Only Chessman's ordeal is ended. California's lies ahead.

For whether Chessman was guilty as charged—and he died denying it—his conviction was not accomplished with that fullness and fairness of legal process which is the due of any man whose life is to be taken by the State. The 12 years that elapsed between Chessman's conviction and execution reflected, perhaps, a scrupulous regard for all his legal rights, but also an uncomfortably guilty sense that there was an ineradicable infirmity in the procedure of his trial. No matter how many times that trial was reviewed, it was never certain that the review-

ing courts had a full and accurate record before them.

And a still more troubling doubt will assail Californians. Even if they convince themselves that Chessman was guilty beyond a reasonable doubt, they must begin to wonder whether there occurred in him a redemption which they had no moral right to reject. Unlike most men whose lives are taken by the State, he was articulate. "A man like Chessman," said Dr. William F. Graves, a former physician at San Quentin prison, "in every sense is the prodigal son. * * * Chessman will not allow us to escape the fact that he is a human being."

A criminal, yes. A wicked and dangerous man, no doubt. But withal, a human being. He was not a very good human being by accepted standards and sooner or later, of course, he was bound to die anyway. But his fellow men were not wholly without responsibility for making him what he was. And the world will ask why he should have died when he did and as he did—an exemplar of man's contempt for the sanctity of human life. When that question is at last given a sober and reflective answer, capital punishment will be ended.

It's Your Government

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. IRWIN. Mr. Speaker, there has been brought to my attention recently a copy of Christopher Notes, a publication of the Christophers, which clearly outlines some of the problems confronting governments of the free world and which points up the only solution to guarantee good government.

With the unfortunate and indeed regrettable suppression of individual political activity in some nations and consequent results causing turmoil in both Western and neutral nations, it is well to reexamine our own attitudes in the light of the principles upon which our Govern-

ment was founded.

Under permission previously granted, I include the following article:

IT'S YOUR GOVERNMENT

Do you remember the story of the Paris housewife who helped bring out a record-breaking vote in France a few years ago by coining this dynamic slogan; "You are the state, Prove it."

state. Prove it."

Her simple challenge reminded countless apathetic people that in the last analysis the very survival of free government depends on how each of them fulfills their individual

responsibilities as citizens.

Once enough persons like you also realize that good government is your responsibility as much as anyone's, your God-given imagination and initiative are bound to find ways to promote efficient, honest, and economic policies in government.

Just remember "To whom much has been given, much will be required." (Luke 12:

48.)

Part of the answer to the great problems of running government,—local, State and Federal, is in your hands.

The following considerations may help you assume the role that you alone can play in renewing and refreshing every facet of government:

1. GOVERNMENT IS YOUR BUSINESS

Self-government necessitates self-participation. William Penn emphasized this point nearly 150 years ago when he said:

"Governments, like clocks, go from the motion men give them, and governments are made and moved by men, so by them they are ruled also. Therefore, governments depend upon men rather than men upon governments.'

At home, at work, in school, and every other place, keep emphasizing this simple fact: either you run your government, or government runs you.

2. PENALTY OF NEGLECT

"The punishment of wise men who refuse to take part in the affairs of government is to live under the government of unwise men."

This terse warning, made by Plato 2,400 years ago, carries a strong lesson today when hundreds of millions have been deprived of the precious blessings of freedom.

When those who enjoy the benefits of freedom tire of governing themselves and abandon their duties as free citizens to the incompetent or malicious, they become un-witting accomplices in promoting the very tyranny they dread.

A cursory glance at history reveals over and over again that free governments have been weakened or eliminated because of neglect.

3. POLITICS-GOOD OR BAD-YOU HELP DEGIDE

A young lawyer in the Philippines recently wrote: "Many well-intentioned individuals warn us young aspirants to stay away from politics. 'Politics are dirty,' they say and we should not soil our hands."

But he went on to say that the Christopher emphasis on personal responsibility was principal reason for going into politics and trying to raise the tone of public life."

Another young man in Connecticut ran into much of the same reaction.

"I have been told I'm being naive in thinking that politics can be run by decent, moral men and women," he said. "My father, my friends, and especially my wife are against it."

It is a strange paradox that often those who might be best fitted to right the wrongs in public life simply bemoan inefficiency, graft or corruption-yet fall to do anything constructive themselves.

4. POPULARIZE THE TRUE MEANING OF POLITICS

The dictionary defines "politics" as "the science dealing with the organization, regulation, and administration of a state in both its internal and external affairs."

Three centuries before Christ, Aristotle stressed its high aim when he said: "The good of man must be the purpose of the science of politics."

However, politics by its very nature, presents many temptations for those who would use it as a selfish steppingstone to power, prestige, or worse still, as a means of fraud and corruption.

Yet it invariably falters and decays when deprived of the moral and spiritual force that only persons like you can inject.

John Morley, the great English statesman, Wisely said: "Those who would treat politics and morality apart will never understand the one or the other."

5. EXAMINE YOUR OWN CONSCIENCE

Because the strength or weakness of government is partly in your hands, you might care to do a little soulsearching on these

- 1. Are you a registered voter? Do you vote in every election? Primaries, too? Do you encourage others to do the same?
 - 2. Do you study issues? Candidates?
- 3. Do you know the names and voting records of the Congressmen, Senators, and

other officials who represent you? Do you let them know your convictions?

4. Do you support loyal and honest public Do you remind them that the ervants? higher their dedication and purpose, the greater good they will accomplish? Or do you focus attention only on the few who betray the trust placed in them?

5. Do you serve on a jury when called? (At one important criminal trial not long ago, 637 men and women asked to be ex-

cused.)

6. Do you help the party of your choice to "get out the vote" by ringing doorbells, typing, distributing literature, giving talks, correcting misunderstandings or raising funds?

7. What are you doing to improve the methods of selecting candidates? To correct outmoded election laws? To insure effi-

ciency and honesty at the polls
8. Do you impress on young people that
they should prepare for a practical participation in self-government by discussing present issues and helping to get out the vote?

9. Are you doing anything to correct the false impression that, as Robert Louis Stevenson well put it: "Politics is perhaps the only profession for which no preparation is thought necessary."

10. How many persons with high ideals and competence have you encouraged to take

up a career in government?

11. Are you highlighting the true and noble meaning of politics and thus offsetting the harm caused by those who take a despair-ing, cynical attitude?

12. Do you promote a respect for just laws on the principle that "there is no power but

from God." (Romans 13: 1.)

13. Do you know the important distinction between State and Federal government and what steps can be taken to maintain a balance that will prevent extremes on either

14. Could you explain to others why the Founding Fathers put four references to God in the Declaration of Independence?

15. Do you pray for those in low or high Government positions? If they are already doing a good job, they need your prayers. If not, they need them all the more.

6. RECOGNIZE THE PRIVILEGE OF VOTING

The word "vote" comes from the Latin term "votum" signifying "vow, wish, or will."
The dictionary defines it as "a formal ex-

pression of will or opinion in regard to some question submitted for decision.

It took centuries of tireless effort to make it possible for individuals like you to exercise the human right to vote.

Your conscientious, intelligent, and continued use of this blessing will show that you appreciate it and are anxious to protect it for others.

Hundreds of millions now deprived of the freedom of choice would be the first to urge you never to miss an opportunity to vote.

7. STIR UP OTHERS TO VOTE

You can do a valuable missionary service in the following ways:

1. Remind individuals that they have a God-given power to exercise their freedom of choice, wisely, and in every election.

- 2. Point out what a mighty howl would go up if only 1 out of every 10 eligible voters were allowed to vote at primary elections. This is the actual numerical proportion who
- 3. Impress on everybody that bad politicians are elected by good people who don't vote.
- 4. Stimulate one and all to put true welfare of the country above the interest of a particular party, group or individual.

B. ONE IN SIX HAS GOVERNMENT JOB

Nearly 11 million men and women (or 1 in 6 employed Americans) staff all phases of local, State and Federal Government, including the Armed Forces.

Take an intelligent, sympathetic interest in both the number and quality of the people who staff your government. Make sure they are neither too many nor too few. Support those intent on doing a capable, conscientious tob.

9. YOU PAY FOR EVERY SERVICE

The average citizen constantly demands bigger and better services from government. It seldom occurs to him that sooner or later he and others like him must pay for these advantages.

When members of a school board proposed building a swimming pool on the grounds of a new school, only one woman was against

the project.
"But why," they asked her. "After all the State will pay for it."

"And who is the State?" she demanded.

"Everybody, of course."
"And that everybody includes you and ie," the woman retorted. "And I for one

me. will not be able to afford the additional taxes."

She won her point. The idea was dropped.

10. TAKE AN INTEREST IN COSTS

The following considerations may remind you why the spending practices in all aspects of government should be a concern for you:

1. Enormous bill: It's costing taxpa over \$130 billion a year (or about \$11 billion a month) to run the Federal, State and local government. Equally, divided, it would cost every man, woman, and child \$722 annually.

 Quarter of your earnings: The average taxpayer earns \$5,183 a year. About one-fourth or \$1,296 goes to the Government. In 40 working years, this would total over

\$50,000—or 10 years of a worker's earnings.

3. It's your debt: It is now nearing the \$300 billion mark. This means a debt of \$1,700 hangs over the head of yourself and every other individual in the Unted States

4. It's your money: Government has no inexhaustible bank account. The money comes out of your pockets just as surely as the butcher's or milkman's bills.

In making Government finances your business, avoid extremes. Seek sensible ways to keep costs down, but take care not to advocate superficial economies which can cripple, instead of strengthen essential functions.

11. KEEP IT "THIS NATION UNDER GOD"

In the Declaration of Independence, our Founding Fathers deliberately specified why we, as individuals, have rights:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Based on the concept that rights of every individual man, woman, and child over the earth come from God, not from the state, they enunciated that the purpose of gov-ernment is is to protect the God-given rights of the human being.

The totalitarian theory is diametrically opposed to this. It claims that the individual has no rights except those parceled out by the state. And even these few can be revoked at the slightest nod of a tyrant.

The Habrew Psalmist still reminds us: "Unless the Lord keep the city, he watcheth in vain that keepeth it." (Psalms 126: 1.)

12. YOU HAVE PART OF THE ANSWER

Shortly after the Constitution was signed in Independence Hall, Philadelphia, on September 17, 1787, a woman asked Benjamin Franklin:

"What have we got, Dr. Franklin?"

"Madame," he replied, "we have a republic, if we can keep it."

Nearly a hundred years later a somewhat similar question was put to James Russell

Lowell, then American Minister in Great Britain.

"How long," Lowell was asked, "will the American Republic endure?"

Lowell's answer, like Franklin's, was crisp and to the point: "As long as the ideas of the men who made it continue to be dominant."

The very survival of our Nation depends on what you personally do to see that those "ideas" are respected in theory and practice.

GOP for Farm Controls

EXTENSION OF REMARKS

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I wish to include the following editorial which appeared in the Des Moines (Iowa) Register on April 28, 1960.

This editorial concerns itself with the farm policy resolution passed last week by the Republican State presidential convention:

GOP FOR FARM CONTROLS

The Republican State presidential convention last week passed a farm policy resolution which said, "We urgently propose concrete and effective legislation limiting production."

That is a commendable goal. Unrestrained production has been a heavy burden on farmers in recent years. Output continues to rise, year by year, faster than markets for farm products are increasing—even with considerable Government subsidization of exports.

So it makes sense to try some new ways of keeping output in check. Experience of the last 25 years shows that control of farm output is not easy—nor is it painless. Many farmers would object to controls except at a time when they are suffering severe losses in income due to overproduction.

Rollo Bergeson, Republican candidate for U.S. Senate, took issue with the convention of his own party on this production control matter. He argued that it was not possible to control output and, besides, he wants to use the surplus farm products for helping other countries.

We agree that every effort should be made to increase effective use of farm surpluses overseas, and we are sure that much more can be done than has been done in recent years. Long-range planning and cooperation with other exporting nations would help to put more U.S. wheat and corn to use in the poor countries.

But even doing the most possible overseas probably would leave a considerable oversupply in American markets. So we agree with the Republican convention delegates that production control is needed. Once output is brought into line with demand, it could be gradually expanded to the extent that an excess over domestic needs and commercial exports was needed for foreign aid purposes.

In trying to blame the farm problem on the Democrats, however, the Republicans alipped a cog. They said the Democratic Congress in the last 5 years had "failed to enact remedial farm legislation." Did they forget that the Congress passed at least two pieces of farm legislation which the President vetoed?

Rock and Roll Music

EXTENSION OF REMARKS

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. O'NEILL. Mr. Speaker, on March 31, 1960, under leave to extend my remarks, I inserted in the Congressional Record a copy of a letter which I had addressed to the Honorable Frederick W. Ford, Chairman of the Federal Communications Commission, concerning the broadcasting of rock and roll music and its effect on our teenagers. In that letter I advised Chairman Ford that his response would also be included in a future issue.

Accordingly, I present for the attention of my colleagues the reply which I received last Friday:

FEDERAL COMMUNICATIONS COMMISSION, Washington, D.C., April 28, 1960.

Hon. Thomas P. O'Neil, Jr. House of Representatives,

Washington, D.C.

DEAR CONGRESSMAN O'NEILL: This is with further reference to your letter of March 31, 1960, in which you express your views concerning the impact of "rock and roll" music on the minds of teenage radio listeners and request certain information in connection with the Commission's inquiry into unannounced sponsorship of broadcast material contrary to the provisions of Section 317 of the Communications Act.

Initially, I should like to point out that no information has been brought to the attention of the Commission which would enable it to determine with any degree of certainty whether any relationship whatsoever exists between the popularity of "rock and roll" music and payments made to disk jockeys or other broadcast personnel by record manufacturers or distributors.

As you may know, a liaison agreement relating to the exchange of information concerning false or misleading advertising has existed for a number of years between the Federal Communications Commission and the Federal Trade Commission. This agreement was recently broadened in scope so as to provide for the exchange of information between the two agencies in connection with "payola" and related matters. Based upon this agreement, the Federal Trade Commission has thus far advised the Commission that employees of 110 radio and television broadcast stations have received some form of cash payments from record manufacturers and distributors. This information was obtained on the basis of investigations by the FTC field staff throughout the United States. In advising the Federal Communications Commission of the information thus obtained, the Federal Trade Commission emphasized that its investigation does not constitute a finding that illegal payments were made to the individuals to whom checks were made payable.

We have reviewed the responses filed by these 110 stations in answer to our letter of inquiry dated December 2, 1959, and have found that 69 of them state that they have been unable to uncover any instances of payola in connection with their stations' operations. All of these responses are currently being reviewed and compared with available information in the FTC files by a staff of Commission attorneys, with a view toward the expeditious institution of whatever further investigation or formal proceedings may

be appropriate in each individual case. may be interested in knowing that on January 21, 1960, the Commission issued a public notice (83333) in which it stated that (1) it proposed to initiate rulemaking designed to require licensees to adopt internal controls to prevent unannounced sponsorships of broadcast material; (2) the replies to its December 2 inquiry would be considered in processing applications for broadcast authorizations; (3) unless said replies were complete, processing of the licensees' applications would be deferred; and (4) where Federal Trade Commission data was available, action on renewal applications would be deferred pending a study of such data.

The manner and degree of internal control of its operation by each of these licensees varies considerably from station to station. Most of them have thoroughly acquainted their employees with the requirements of the Communications Act and the Commission's Rules in the matter of sponsorship identification of broadcast material, and have threatened immediate dismissal for any violations thereof. At many of the stations, the licensee or management selects all music which may be played on the air. Some have inserted a "morals" clause in their employment contracts to permit them to take legal action against employees who accept surreptitious payments for broadcasting certain program material.

The Commission recognizes that the type of controls needed for licensees to responsibly and effectively supervise the programing operations of their stations will vary from station to station, and that any attempt by the Commission to prescribe one set of controls or procedures for adoption by all stations may have the effect of placing an unnecessary burden on many stations while still proving ineffective at some stations because of individual differences in their organizational and operational structures. Accordingly, the Commission, on February 8, 1960, issued a notice of proposed rulemaking looking toward placing the responsibility on each licensee for adopting appropriate pro-cedures to prevent the broadcasting of any commercial matter unaccompanied by a sponsorship identification announcement. The proposed rule reads as follows:

"All licensees and operating permittees shall adopt procedures to prevent the broadcasting of any matter for which service, money or other valuable consideration is, directly or indirectly, paid or promised to, or charged or accepted by, any officer, employee or independent contractor of the station, unless at the time the same is so broadcast it is announced as being paid for or furnished by such person."

Comments on the proposed rule filed by interested parties are now being studied by the Commission's staff.

Should you desire any further information in connection with this matter, please advise me and I shall endeavor to supply it.

Sincerely yours,

FREDERICK W. FORD, Chairman.

American Hungarian Federation Will Salute Mrs. A. B. Vajda of Milwaukee

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. REUSS. Mr. Speaker, I am delighted to announce to the Congress through the RECORD the high honor that will this year be bestowed on one of my fine constituents, a great Milwaukeean and a great American, Mrs. A. B. Vajda.

The American Hungarian Federation has announced that, this fall, it will pay tribute to Mrs. Vajda for her outstanding and tireless work in helping new citizens adjust to life in the United States. Mrs. Vajda has assisted some 20,000 new citizens in this way, and has founded the Americanization League of America and originated ceremonies on Citizenship Day.

We in Milwaukee are proud of Clara Vajda. I know of no person who more

richly deserves such an honor.

Mr. Speaker, to describe more fully the dedicated efforts of Mrs. Vajda, I submit for the Record the following article from the Milwaukee Sentinel:

HUNGARIANS WILL HONOR MRS. VAJDA

Mrs. A. B. Vajda, who has helped an estimated 20,000 new citizens adjust to American ways here in Milwaukee, will be saluted for her work by the American Hungarian Federation of Washington, D.C., at ceremonies next September, it was announced Saturday.

A gold-framed certificate will be presented to her, citing her particularly for founding the Americanization League of America and for originating ceremonies on Citizenship Day. Many noted Hungarians are expected to be in Milwaukee for the award ceremony.

The announcement was made by the Reverend John Szucs, pastor of the Hungarian Evangelical and Reformed Church, 2644 South Pine Street, and the Reverend Hippolyt Geza Ferenczy, pastor of St. Emeric's Catholic Church, 1017 North 17th Street.

SYMBOL OF MANY

The Reverend Mr. Szucs and Father Ferenczy head a committee of Wisconsin Hungarians planning the presentation ceremonies.

In a joint statement, they said:

"Mrs. Vajda symbolizes all the fine Americans of Hungarian extraction who have distinguished themselves and left their imprint on America in their various fields of endeavor.

"Particularly have Hungarians been vital to the American work in atomic energy and in the Nation's culture—especially in mu-

sic, the theater, and movies.

"Mrs. Vajda, too, has been a strong influence in her chosen work—that of bettering citizenship among Americans of all races, creeds, and nationalities. Because of the example she has set for all Hungarians, we are proud to help present this award."

Mrs. Vajda, who lives at 2620 North Lake Drive, was born in Hlohovec, formerly Austria-Hungary, and came to the United States in 1923. She and 32 others of foreign extraction formed the Americanization League at a meeting in the Milwaukee Public Library in 1930.

The league organized the Citizenship Day observances and also promoted the erection of the 6-foot replica of the Statute of Liberty in the John of the city but

erty in the lobby of the city hall.

For many years, Mrs. Vajda has published
a paper, the Melting Pot, from offices at 630

North Van Buren Street.

AID TO THOUSANDS

She has also personally helped thousands of immigrants to find jobs and homes, to apply for citizenship and to learn the English language and American customs.

Her work has been repeatedly recognized through the years—by the common council in 1931, by the Congressional Record in 1941, by Unico National in 1954, and by the Wisconsin Legislature in 1955, and by Mayor Zeidler in 1959.

She is the widow of Dr. Adalbert B. Vajda, physician and surgeon, who died in 1946. Her children are Mrs. Ella Seng, of Shorewood, and a son, Emil, now working for his doctorate at the University of Chicago.

New York Times Editorial on National Defense

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert an editorial on national defense appearing in today's issue of the New York Times. I regard it as a very constructive, unbiased, and nonpartisan editorial which should be read by everyone interested in the problem of national defense, and that means every American.

As a Member of the House Committee on Science and Astronautics, I am particularly impressed by the fact that the editorial points out the magnitude of the space program and warns us that "our imagination, our concept, must approach the magnitude of the task." The editorial also emphasizes the experience gained during the International Geophysical Year through the exchange of information between scientists of the possible benefits to be derived from such mutual efforts.

It is further hoped that the United Nations Permanent Committee on the Peaceful Uses of Outer Space, of which I have the honor to be a congressional adviser, seek ways and means of extending the peaceful cooperation of all nations to make greater conquests and explorations into space which will inure to the benefit of all mankind.

Mr. Speaker, the editorial mentioned above reads as follows:

THE NATIONAL DEFENSE-I

The House of Representatives is scheduled to begin today debate on the national security budget for the next fiscal year. To this critically important subject we propose to devote three editorials—the first of which, dealing with the space program, we publish today.

SPACE-THE BALANCE SHEET

Any nonpartisan evaluation of U.S. space accomplishments will find reasons for pride and some for sorrow.

From a standing start we have forged into a clear-cut scientific lead in the race for space. The United States has launched successfully 18 earth satellites and 2 other deep-space probes; 11 of these are still in orbit, plus a reentry capsule of another satellite. The Soviet Union has launched a total of six satellites or deep-space probes; two are still aloft. Despite the far greater weight of the Soviet space vehicles the United States has gathered far more scientific information from space. In instrumentation, communications, electronics, reliability, and guidance U.S. space vehicles have made giant steps; in these aspects of space exploration we need

fear no comparisons with Russia or any other nation.

However, in awareness of the political and psychological importance of space achievements, Moscow has been far more perceptive than Washington. Our greater proficiency in the accumulation of scientific data has been more than offset in world opinion by the Russian "firsts": first sputnik; first deepspace probe; first picture of the dark side of the moon; first rocket to hit the moon. Moreover, the Soviet space program excels our own in the greatly superior thrust of the Soviet booster rockets.

In organization and administration of the space program-a problem which has confused and slowed our efforts-the United States at last seems to be making order out of disorder. The National Aeronautics and Space Administration—the civilian agency must work hand in hand with the Pentagon and with the Atomic Energy Commission if maximum utilization of the Nation's scientific and technological resources is to be insured. After much pulling and hauling and shifting of subsidiary agencies, some interagency teamwork seems to be evident in Washington, and the once acid space rivalry in the Pentagon has now been controlled-or at least dampened-by recent organizational changes. The present organization with authority for the space program divided among several agencies, is far from ideal. But it can be made to work, and there are signs that it is working.

This review of past achievements and present position gives some cause for pride but none for complacency.

SPACE-THE FUTURE PROGRAM

The exploration—and particularly the exploitation—of space will be expensive. Dr. T. Keith Glennan has estimated that the NASA budget alone will require about \$12 to \$15 billion over the next decade. The Pentagon is now budgeting at the rate of almost half a billion annually for space projects, and the Atomic Energy Commission, which is developing nuclear power for space vehicles, absorbs added millions.

These are large sums—so large that there is no room in our space program for ill-conceived projects, for unnecessary duplication, for wasteful rivalry or for schemes that are more costly than they are worth. The suggested military base on the moon would seem to fit into the category of the functionally useless, if indeed, it should ever be technically feasible. Nevertheless, the exact shape of our future space programs must be approached with an open mind, for no one knows today what we shall find in the infinite.

We can see a short way ahead, and for these next few years our planned program is sound, with one current exception. NASA space budget for the 1961 fiscal year requested, as submitted to Congress, \$915 million. The House, despite all its vocal protests in the past about our standing in the space race, has cut almost \$39 million from this amount. This cut is pennywise and pound foolish. It is all the more inexplicable, in view of a reduction imposed by Congress last year in the current year's appropriation for NASA, a reduction which has slowed the overall program, and which the President is now seeking to have restored. The new cut could well delay Project Mercury or force the elimination of important scientific experiments. Even if the full amount requested is funded, NASA will not have enough money in 1961 to provide back-up boosters for space projects that may fall at takeoff. The administration budget, indeed, pares the space budget al-most too fine. If we accept the fact that we are in a space race, as we should, we must act accordingly, and the Senate should

crease it.

For the more distant future, we can only feel our way. There are two principles which should serve as guidelines. The first is that our imagination, our concept, must approach the magnitude of the task. We are literally trying to plumb the infinite; the closed or blased mind, the little man, the preconception, have no place in such a program. The second principle must complement the first. Our space program, while reaching out into the infinite, must be keyed to specific goals—scientific, military, political, and psychological goals, to goals that are economically feasible and that are in balance with the higher priority needs of our own environment.

There is a third point—derived from our experience with the International Geophysical Year and our explorations in the Antarctic. During the IGY-and more particularly in the Antarctic-scientists and technicians of the United States and Soviet Russia exchanged information, and in some few instances worked side by side to plumb the mysteries of nature. Our future space program should, whenever possible, exploit the possibilities of such mutual effort. Science and exploration can serve as a bridge between peoples, and the international con-quest of space might help to shatter the Iron Curtain.

Administration Not To Rename Connole to FPC-White House Decides Against Commissioner Known as Defender of Consumer

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. DINGELL, Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional RECORD two articles appearing in the St. Louis Post-Dispatch. The first is a news story appearing on April 19 and the second an editorial appearing on April 20, chronicling how Commissioner William R. Connole is to be dropped from the Federal Power Commission. In the midst of weak company he has been the one representative of the consumer and the one member on the Federal Power Commission in favor of honest and proper regulation. While other members of that body achieved a questionable reputation of looking after industry interests and of strong disinterest not only in real regulation but in the very job which they were paid to do, Mr. Connole has distinguished himself for his vigorous courage and intelligence. The President is reported to have said the other day "he could find a better than for the job." This statement is highly questionable since it appears that the administration is more interested in finding a better man for the gas and oil industry and a worse man for the Commission and the consumer. The two articles follow:

increase the NASA budget, rather than de- [From the St. Louis Post-Dispatch, Apr. 19, 1960]

> ADMINISTRATION NOT TO RENAME CONNOLE TO FPC-WHITE HOUSE DECIDES AGAINST COM-MISSIONER KNOWN AS DEFENDER OF CON-STIMER

(By James Deakin)

Washington, April 19 .- The White House has decided not to reappoint William R. Connole to the Federal Power Commission, the Post-Dispatch was told today. Connole is known as the principal defender of consumer interests on the FPC.

The administration's present plans are to name Harold I. Baynton, chief counsel of the Senate Interstate Commerce Committee, to succeed Connole. Baynton is a Democrat. Connole lists himself as a political independent.

The decision against giving Connole another 5-year term on the FPC could provoke a sharp fight on Capitol Hill. Some Democrats are known to believe that he is being dropped because of his votes in favor of the consumer in several important natural gas cases.

These Democrats, many of whom have charged the FPC favored large natural gas companies at the expense of the public, have nothing against Baynton, who is considered an able official.

UPHELD BY SUPREME COURT

They are understood to think, however, that the FPC can ill afford to lose Connole, whose dissenting opinions on behalf of the consumer have been upheld at least twice by the Supreme Court, notably in the controversial Catco Gas case.

Interest in the Connole matter has been heightened by recent disclosures of private contacts and social fraternization between some FPC members and representatives of natural gas companies subject to Commission

Connole, who was general counsel and chief legal officer for the Connecticut Public Utilities Commission from 1950 to 1955, was appointed to the FPC by President Eisenhower in 1955. His term will expire next June 22.

The decision not to reappoint him was relayed to Senator PRESCOTT BUSH, Republican, of Connecticut, by David W. Kendall, special counsel to the President, the Post-Dispatch was told.

STATEMENT BY BUSH

Bush issued a statement which said in part: "The first thing I heard of Connole's failure of reappointment to the Federal Power Commission came to me when Presidential Assistant David Kendall called me on the telephone and told me that Connole would not be reappointed, that he had already so advised Connole and that the decision was final."

Bush's administrative assistant, David S. Clarke, told a Post-Dispatch reporter that this information was relayed in a telephone call from Kendall to the Senator January 15. Bush was in Hartford, Conn., at the time.

Clarke said he did not know what reason Kendall gave, but it was considered likely that the White House may be seeking to quiet Democratic protests over the FPC's conduct by the appointment of a Democrat to the Commission.

The law specifies that no more than three of the five members of the FPC may be of the same political party. There are now three Republicans on the Commission, so that any future appointees by the Eisenhower administration must be either Democrats or independents.

Kendall, who is vacationing in Delray Beach, Fla., could not be reached for comment.

CONNOLE'S COMMENT

Connole declined to discuss the issue beyond saying, "Whether I am reappointed or not is a matter between the White House and Senator Bush."

It was learned, however, that members of regulatory commissions in six New England States have urged Mr. Eisenhower to reappoint Connole. A letter to this effect was sent to the President March 23 by the New England Conference of Public Utilities Commissioners.

It said Connole was "the most preeminently qualified person in New England in the field of regulation," and it added that he should receive another term "out of concern for the consumers of this Nation."

"Forthright and vigorous stands such as Mr. Connole has taken," the letter continued. "do more than anything else to give the FPC stature when a possible nominee possesses the expertise, the integrity and the self-confidence to resist intimidation, surely he deserves a chance to serve a new term.'

PRESSURE REPORTED

Electrical World, a trade publication, declared last week:

"Natural gas producers are creating pressure on the administration to avoid reap-pointment of Federal Power Commissioner William R. Connole. It remains to be seen whether business interests can do to the politicians what they're not supposed to be able to do to the FPC itself."

One of Connole's most important dissenting opinions came in the Catco natural gas Democrats in Congress have pointed to this proceeding as illustrating the need for consumer interests to be represented on the FPC.

In September 1956 a combine known as Catco applied to the FPC for a certificate to sell natural gas from submerged fields in the Gulf of Mexico off the coast of Louisiana. The proposal involved the largest amount of natural gas ever sold at one time.

The combine was composed of the Cities. Service Production Co., the Atlantic Refining Co., the Tidewater Oil Co., and the Continental Oil Co. The gas was to be sold to the Tennessee Gas Transmission Co. of Houston, Tex., a pipeline firm.

IN RECENT DISCLOSURES

Tennessee Gas Transmission figured in recent disclosures of private "ex parte" contacts between FPC members and company representatives.

Thomas G. (Tommy the Cork) Corcoran, an attorney for Tennessee Gas talked pri-vately with three FPC Commissioners, including Connole and FPC chairman Jerome K. Kuykendall, about a pending pipeline case involving a subsidiary of Tennessee Gas.

The Catco combine proposed to sell gas to the pipeline firm for 22.4 cents a thousand

cubic feet, with a 2-cent increase in the price every 4 years. Altogether, 1% trillion cubic feet of natural gas was involved.

The highest price that Tennessee Gas Transmission Co. had paid previously for gas from the same area was 17.5 cents a thousand cubic feet.

On April 22, 1957, the FPC issued a temporary certificate permitting the sale of the gas but remanding the case to an examiner to determine what the initial rate should be.

The Commission said it was "abundantly evident that in the public interest this crucial sale should not be permanently certified unless the rate level has been shown to be in the public interest."

Catco moved to modify this order, saying that economic factors made it necessary for the combine to have definite assurances of a 22.4-cent rate and that otherwise it would not go through with the sale.

On May 20, 1957, the FPC issued a second order setting a rate of 18 cents, but permitting the combine to apply for an increase to cents the day after it began selling gas to Tennessee Gas Transmission.

Normally, such rate increases cannot be put into effect, under FPO regulations, until 5 months after the application for an increase is filed.

Catco, however, said it still was not satisfied, and a rehearing was held in which the combine pressed for an FPO order with no conditions on the initial price of 22.4 cents.

On June 24, 1957, the FPC issued a third, permanent certificate agreeing to this. Connole dissented from this decision, but lost

COURT BACKS CONNOLE

The case was taken to the Third Circuit Court of Appeals in Philadelphia. In a decision on June 30, 1958, the court agreed with Connole saying:

'It was only after the threat of withholding the gas from the interstate market that the commission retreated from his previous position and granted the certificate without rate conditions.

"Impressed with this threat, the Commission issued its order of June 24, 1957, in which it granted permanent certificates the Catco applicants without any conditions affecting the initial price of 22.4 cents. On June 22, 1959, the Supreme Court up-

held the appeals court's decision, also in effect agreeing with Connole. The unanimous decision was written by Associate Justice Tom C. Clark of Texas.

SETTING A "FLOOR"

The Court noted that enormous reserves of natural gas were involved in the Catco deal and said that whatever price was set Would in effect become the "floor" for future prices on gas from these fields.

Unless controlled, Clark said in his decision, the price could result in "exploitation

at the expense of the consumer."

The same argument had been advanced by Connole in his dissent from the FPC order. He pointed out that the Catco combine had not made a case for the higher rate, but instead wanted the FPC to approve it without Justification.

Connole noted that the two earlier FPC orders had said that no evidence had been presented to justify the higher price, which eventually would be passed along to the con-

WRONG MAN TO DROP

The decision to drop William R. Connole from the Federal Power Commission is a sorry commentary on the Eisenhower administration and on its conception of the FPC. Mr. Connole, a Connecticut political inde-pendent, was one of the FPC members who had an ex parte talk with Thomas G. Corcoran, a gas company representative. Other-Wise, Mr. Connole not only has a good record on the FPC, but also has a record of defending consumer interests that is almost solitary.

One example of his dedication to the public was the Catco case. A combine of oil companies sought a rate almost 5 cents a thousand cubic feet higher than rates which a pipeline had previously paid for natural gas from submerged Gulf of Mexico fields. The FPC eventually granted the rate with only Mr. Connole dissenting. Last year the Supreme Court upheld his minority view, Warning of "exploitation at the expense of the consumer.'

The lines about Mr. Connole's reappointment were clearly drawn. He had won the enmity of gas producers and the support of consumer groups. Moreover, members of regulatory commissions in six New England

States urged President Eisenhower to reappoint him as "the most preeminently qualified person in New England in the field of regulation."

How could the administration seek to drop a strong man from a weak Commission? The answer is that the administration has had anything but a strong attitude toward regulation of natural gas. It supported bills to deprive the FPC of regulatory power over independent gas producers. The FPC itself tried to evade such regulation until the Supreme Court ordered it to get busy. cently, the administration has seen nothing improper in disclosures of friendly ex parte contacts with gas industry men by FPC members, or the use by three commissioners

of a pipeline company plane.

The dubious sense of public ethics displayed there is bad enough, but the dubious sense of public interest displayed in the Connole case is more dangerous to the consuming public which the FPC is supposed to protect. If anyone deserves to be dropped from the FPC, it is not William Connole.

Third Meeting of Canada-United States Interparliamentary Group-Joint Press Statement

EXTENSION OF REMARKS OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mrs. KELLY. Mr. Speaker, last week it was the honor and pleasure of the United States to serve as hosts to the Canada-United States Interparliamentary Group. Under the terms of the authorizing resolution 24 legislators from each of the two countries comprise the group. For the United States 12 members are from the House and 12 from the Senate.

It is my privilege to serve as chairman of the House delegation. But I must state that my work was made easier by the splendid cooperation of the chairman of the Senate delegation, Senator GEORGE D. AIKEN, of Vermont. He always was available for guidance and assistance no matter how pressing his other commitments.

The steering group of the House, in addition to myself, included Hon. Frank M. COFFIN, of Maine, Hon. CHESTER E. MERROW, of New Hampshire, and Hon. WALTER H. JUDD, of Minnesota.

I want to express my appreciation to the other members of the House delegation-Hon. WAYNE N. ASPINALL, Colorado; Hon. Sidney R. Yates, Illinois; Hon. LEONOR K. SULLIVAN, Missouri; Hon. Frank Ikard, Texas; Hon. GERALD R. FORD, JR., Michigan; Hon. W. R. POAGE, Texas; Hon. Don L. Short, North Dakota; and Hon. Thaddeus J. Dulski, New York. Hon. MELVIN PRICE, Illinois, also participated. Senators also participated to the extent their time permitted. Both bodies had heavy floor schedules last week. Despite that, par-ticipation by U.S. members was excellent.

The staffs of the Committee on Foreign Affairs and of the Committee on Foreign Relations as well as Canadian staff members handled the maze of details that contributed to the success of the meetings.

Secretary of State Herter spoke informally at the opening plenary session. Other members of the executive branch also devoted time to background work. To all of them I say, "Thank you."

Our former colleague, Mr. Wigglesworth, now our Ambassador to Canada, made a special trip to Washington with Mrs. Wigglesworth to attend the final dinner. Both the United States and Canadian delegates were more than pleased by the presence of Ambassador and Mrs. Wigglesworth.

The luncheons and the dinner on Friday evening were attended by other Members of the House. To all I want to extend my appreciation for taking part in making our guests feel welcome.

The Washington meetings were followed by a trip to SAC headquarters in Omaha and to Norad headquarters in Colorado Springs. The latter is a joint United States-Canada command for the defense of North America. The com-manding officers of both commands, Gen. Thomas Power and Gen. Laurence S. Kuter, together with their staffs, provided the members of the group with a splendid presentation of their respective responsibilities.

The Speaker of the House of Commons, Hon, Roland Michener, and the Speaker of the Senate, Hon. Mark R. Drouin, together with colleagues from both bodies, actively participated in all the discussions and functions. One of the delightful sides of the meetings with our Canadian opposites is the pleasant air of informality that pervades them. There are no difficulties of communication or bothersome details of protocol.

The meeting was divided into three panels-one on boundary problems, one on economic problems, and one on defense. Delegates from both countries exchanged their views and contributed to the education of the others. We explored the nature of the particular subject in an endeavor to understand better these mutual problems and related ideas. It is surprising how in-formal talks corrected misunderstand-

To make known to my colleagues the range of discussion, under unanimous consent I insert at this point the press release agreed to by all the delegates at the conclusion of the Washington meetings:

THIRD MEETING OF CANADA-UNITED STATES INTERPARLIAMENTARY GROUP-JOINT PRESS STATEMENT

The Canada-United States Interparliamentary Group, composed of 24 members of the Parliament of Canada and 24 Members of the Congress of the United States, today concluded 2 days of discussion on matters of common interest in the two countries.

The group continued its procedures of having informal, off-the-record discussions and refrained from making recommendations, leaving it to each national delegation to make such reports and recommendations to its respective authorizing institutions as it determines.

The group met in plenary sessions on Thursday morning and Friday afternoon and held two sets of committee meeting on Thursday afternoon and Friday morning. Committees discussed the following subject

areas: (1) Defense cooperation and disarmament, (2) boundary problems, (3) economic problems of common concern.

The Committee on Defense discussed certain aspects of defense policy, and the use of North American productive facilities for defense purposes, which have implications of mutual importance to the United States and Canada. The Committee also discussed the prospects for disarmament and the need for planning that will facilitate an orderly transition from military production to production for peaceful purposes, including public works.

There was general agreement that while seeking with all vigor for an understanding with the Communist bloc based on mutual trust and confidence, the West must maintain adequate defenses until the Soviet camp accepts an inspection and control system of sufficient scope and efficiency to justify the commencement of active measures of disarmament.

The Committee considered the changing character of the threat to North America and the effect of this on the operations of the North American Air Defense Command (Norad). It was recognized that in addition to the military problems which will have to be faced during the next few years, the adoption of new weapons systems and concepts of defense will cause local economic readjustments which in some areas may be severe.

The Committee noted that during the last year there had been considerable progress in the program of defense production sharing between the United States and Canada. This was reflected in the fact that Canadian industry in 1959 received U.S. defense contracts valued at \$96.3 million; it was noted, however, that Canadian defense equipment purchases in the United States in the same period amounted to \$116.6 million. The Canadian members of the Committee expressed the view that the progress achieved to date was in no small measure due to the consideration given to the problem by the Interparliamentary Group at its meeting in June 1959. There was general agreement that a continuing effort was needed in both countries to achieve and maintain an adequate balance in defense purchasing between Canada and the United States.

After deciding which subjects should be discussed, the Boundary Problems Committee came to the following conclusions, which it approved for transmittal to the plenary

session:

- 1. Passamaquoddy tidal power project: It is important to determine whether the Passamaquoddy project is economically feasible. Meanwhile, judgment should be reserved awaiting further stuides by the International Joint Commission. The committee feels that this topic should be retained on its agenda.
- 2. Hudson-Champlain-Richelieu Waterway: Now that the St. Lawrence Seaway is in operation the two Governments should consider referring to the International Joint Commission the question of the economic feasibility of further development of this waterway, taking into account the possible increase in trade between Canada and the United States which might result.
- 3. Columbia River Basin development: The Canadians welcomed statements by U.S. delegates that no particular project of interest to the U.S. delegates should be allowed to stand in the way of a treaty on this subject based on the principle of optimum development of the Columbia River Basin with mutual sharing of the benefits. Once this principle has been adopted by the two Governments particular projects will fall into their appropriate order.
- 4. Chicago diversion: This subject was again thoroughly and vigorously discussed and no change of the positions of the respective delegates emerged. The Canadian

delegation appreciates the waste disposal problem facing Chicago.

5. Pollution in the Great Lakes: Both delegations expressed concern about increasing pollution both from lake cities and shipping. It was agreed that it would be useful for the two Governments to study remedial measures.

6. Yukon-Alaska problems: Canadian delegates expressed concern that a proposed high dam at Rampart, Alaska, may prejudice maximum development for the benefit of both countries of the Yukon River power potential. Canadian delegates raised the questions of some form of free port facilities for Canada in the Alaska panhandle and corridors across it. U.S. delegates suggested that additional information about these matters be furnished to them before the next meeting of the group and that they be placed on the agenda for the next meeting.

The Economic Problems Committee ap-

proved the following summary for trans-

mittal to the plenary session.

1. COMMON TRADE PROBLEMS, ESPECIALLY WITH WESTERN EUROPE

The Committee agreed that economic progress abroad and the changing pattern of trading relations in Europe were creating new opportunities and serious problems for Canada and the United States. It was recognized that the interests of our two countries diverged to some extent in the face of these developments, partly because of political considerations and partly because of the greater dependence of Canada on international trade and the narrower range of its exports.

The merits and demerits of solutions based on different methods of computing tariffs and of tax relief were briefly explored. No firm agreement was reached concerning the respective cases for the "Inner Six" and "Outer Seven," but a consensus did appear on the need for the United States and Canada to cooperate closely and to work toward new arrangements with their European allies on a North Atlantic basis.

2. BILATERAL PROBLEMS

(a) The Canadian oil problem

Attention was drawn to the difficulties being experienced in the Canadian oil industry (particularly in Alberta) due to lack of markets for increasing oil supplies. Canadian delegates described various possible solutions, notably that of increasing domestic consumption, recognizing that some of these have foreign policy implications. Reference was also made to recently issued Canadian regulations governing oil and gas exploration in the Yukon and Northwest Territories.

(b) Metals and minerals

The Committee recognized the intimate and important relationship between United States and Canadian production and markets for such commodities as lead and zinc, aluminum, copper, nickel, and uranium.

A U.S. delegate described the depressed lead and zinc condition in his country and foresaw no significant change in conditions over the near future in respect of either production or importation.

The delegates then considered the uranium and aluminum situations. In view of recent developments, the discussion on uranium was mainly in terms of the prospects which might emerge in a few years time, which did not now appear very auspicious for producers. On the other hand, the outlook for aluminum was regarded as more promising.

A U.S. delegate drew general attention to the increasing significance of Latin American markets for both Canada and the United States, and to the implications of prospective competition from expanding Latin American production of commodities such as oil, gas, and iron ore.

(c) Wheat

There was considerable detailed discussion of the surplus wheat problem confronting both the United States and Canada. No new approach was advanced for the problem, and there was general agreement that current arrangements, unsatisfactory though they might be, were still the best available in the existing situation. Both delegations were anxious to insure continuing close bilateral consultations in order to avoid damage to established foreign commercial markets; Canadian delegates expressed their gratification at the way in which this consultation had developed.

At the first plenary session, U.S. Secretary of State Herter welcomed the Canadian delegates and wished the meetings success. In the plenary sessions recommendations by delegates from both countries laid stress on the necessity for the people of each country to learn more about the other. The suggestion was made that the educational systems in the United States and Canada might well

take account of this need.

The Canadian delegation extended an invitation to the U.S. delegation to visit Canada sometime during the month of August 1960, and to visit industrial and mining areas.

On Saturday and Sunday, the Group will fly to the U.S. Strategic Air Command Headquarters at Omaha, Nebr. and to the Joint Canada-United States Air Defense Command at Colorado Springs, Colo., to receive briefings and make inspections at these installations, and will return to Ottawa and Washington Sunday evening.

These meetings of the Canada-United States Interparliamentary Group help to promote a unity of purpose, a unity of thought, and a unity of spirit, to the end that our Western way of life and government is preserved for future generations.

War Tax Rates

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the resolution of Local 119. Brewery, Soft Drink, and Distributors, AFL-CIO, 534 Haverhill Street, Lawrence, Mass.:

RESOLUTION REQUESTING THE U.S. CONGRESS TO ALLOW THE AUTOMATIC RATE REDUCTION ON CERTAIN EXCISE TAX RATES

Whereas Federal excise taxes were substantially increased to the war tax rate on many manufactured items by the Revenue Acts of 1943, 1945, and 1947; and

Whereas these rates were even further increased by the Revenue Act of 1951 for the purpose of a temporary Korean wartime

emergency; and

Whereas all excise rates were reduced to prewar tax rates by the Excise Reduction Act of 1954, with the exception of alcoholic bev erages, gasoline, diesel fuel, cigarettes, and motor vehicle chassis, which products continued to be taxed at the highest rate, but were scheduled for automatic reduction on March 31, 1955; and

Whereas the Revenue Acts of 1955, 1956, 1957, and 1958 continued to postpone the automatic reduction on these items; and

Whereas the Revenue Act of 1959 once more postponed the rate reduction date on selected items from July 1, 1959, through June 30, 1960; and

Whereas the wartime emergency which occasioned the imposition of the additional excise on these selected items now no longer exists; and

Whereas war tax rates are so high as to substantially reduce sales in a peacetime market; and

Whereas the excessive taxation of these selected products has restricted wages and job opportunities for organized labor in the particular industries manufacturing these goods, and has prevented business expansion in these businesses because they could not keep pace with less highly taxed items. Now therefore he if

items: Now, therefore, be it

Resolved, That Local 119, Brewery, Soft
Drink, and Distributors, AFL-CIO, 534
Haverhill Street, Lawrence, Mass., representing 125 workers and members, hereby goes
on record as favoring the reduction of these
oppressive excises and respectfully petitions
the Congress of the United States to permit
these war tax rates to expire on the scheduled
date of June 30, 1960.

Adopted at meeting on April 21, 1960.

JOHN J. SILVA,

Secretary.

Role of the Seaport

EXTENSION OF REMARKS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, I am happy to include in my remarks an editorial from the Daily Commercial News, the oldest business newspaper on the Pacific coast. It is the official publication of the Marine Exchange, Inc., and the Propeller Club, port of San Francisco.

The editorial is entitled "Role of the Seaport" and is based on a panel discussion held in the Sheraton-Plaza Hotel in connection with the New England Trade Week Conference and extensively quotes from a speech made by Mr. Ralph E. Casey, president, American Merchant Marine Institute.

I think this is a fine editorial and I commend it to all of you:

ROLE OF THE SEAPORT

A single ship calling regularly at a port for 1 year can increase direct expenditure in the port by more than a milion and a half dollars annually, the New England World Trade Week Conference was told last week by Ralph E. Casey, president of the American Merchant Marine Institute.

Casey spoke on "The Role of the Modern Seaport in Industrial Development" at a panel discussion held in the Sheraton-Plaza Hotel. Pointing out the close interdependence of port and industrial development, he said that a primary responsibility of port authorities was the two-fold task of convincing "each individual industry in the immediate area of the importance of the port to its overall success" and of keeping National, State, and local governments aware of the problems involved in port development "to grow and keep pace with the national economy."

Shipping, he said, "is not only allimportant to a port area but it is vitally concerned with the growth and activity of the port." He noted that U.S. waterborne trade had increased in the past decade by 27.7 percent, to a 1959 total of 935,114,400 long tons. Some idea of what the over-the-dock movement of this commerce means to the economy of the port areas through which it passes is indicated, he added, by figures on direct revenue generated by specific categories of cargo. Direct dollar expenditure produced by the loading or unloading of a single long ton is as follows, for the classifications indicated: general cargo, \$15.51; crude oil, including refining, \$10.50; tanker cargo, other than crude oil, \$3.60; coal, \$2.48; grain, \$5.80; ore, \$2.88; raw sugar, including refining, \$44.91.

The importance of our export and import trade to everyone in the American business community, Casey continued, is shown by the fact that, over the past 10 years, U.S. exports averaged 8.6 percent of all our production of movable goods—a production which now totals \$225.6 billion—while imports essential to our prosperity and security include 90 percent of our asbestos, 86 percent of our bauxite, 100 percent of our hard fibers and natural rubber, 89 percent of our manganese ore, and 68 percent of our sugar. A recent study by Delaware River ports showed, he said, that "more than 1 job in every 10 in manufacturing industry and in wholesale and retail trade in the 11-county Delaware River port area depends upon the availability of materials and merchandise received through Delaware River ports." For manufacturing alone, the figure is one job in five.

The maritime spokesman said that in order to keep pace with modern transportation demands the American-flag steamship industry is now engaged in a large-scale and costly fleet replacement and modernization program. Noting that mechanization and automation may be the key to our future, he added, "The port that keeps pace will undoubtedly be the one that will benefit by modern vessels employing modern techniques. New industry will locate in the areas where service and adequate facilities prove most economical." Similarly, a vessel will go where there is cargo and where it can be loaded most economically.

As an example of the great stimulus given to area economies by port modernization, Casey cited the development of gulf ports, which has been credited with having changed the South from its dependence on an agricultural economy and opened the way for its industrial development. Some gulf ports, he said, have increased their tonnage twofold and threefold, while the Nation as a whole was recording a 28-percent increase in cargo shipments.

Casey referred to a recent prediction by the president of the New York Stock Exchange that our gross national product might reach \$700 billion by 1970, an increase of 46.9 percent over 1959. If transportation of goods holds its present ratio to gross national product, he foresaw a tremendous rise in port and shipping requirements in the next decade. "On the decisions made now," he concluded, "will depend whether or not the port of Boston and the State of Massachusetts gain their fair share of the predicted increase."

Point to Acadia Parish

EXTENSION OF REMARKS

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, in view of the concern about

the mounting grain surpluses and the criticism of the price support program and of our farmers for continuing to overproduce, causing the Government to take surplus produce into the Government loan program, I wish to include in the Record an editorial from the Crowley (La.) Daily Signal relative to the rice price support program in Acadia Parish, one of the eight parishes of my district.

Louisiana is not adding any appreciable amount of rice of any variety to the surplus stockpile of the Federal Government. Nearly 100 percent of the rice raised in our areas is sold on the market and not placed under Government loan. The Nato variety of rice was developed in the rice experiment station at Crowley and it has become a very popular rice because it is clean and has a high milling yield.

The editorial follows:

[From the Crowley Daily Signal, Apr. 20, 1960]

POINT TO ACADIA PARISH

If the farm price-support program throughout the United States had any resemblance at all to the rice price-support program in Acadia Parish, it would be a workable, practical program instead of the gulping dollar monster it has become.

Whatever the criticism is elsewhere, we take this opportunity to say that Acadia Parish has clean skirts, and we understand from reliable sources, that the picture is pretty much the same throughout all of the rice-producing parishes of Louisiana.

During the 1959 crop year, the Acadia Stabilization and Conservation County Committee issued 55 warehouse loans on 270,813 hundredweight of rice with a value of \$1.290.674.

All of it was redeemed. The Government did not have to take over a single grain of

The ASC Committee also issued seven farm storage loans on 11,594 hundredweight of rice with a dollar value of \$52,198. Going to the Government as surplus rice was 1,157 hundredweight at a value of only \$4,787. That figure represents the loss to the Government in Acadia Parish. Of course, this rice will probably be handled by the Commodity Credit Corporation and a part of this sum will be saved.

Two of the rice-growing States are not raising rice for the U.S. Government to store and handle. They are Louisiana and California. Surplus rice is going into storage at a high cost to taxpayers from Texas, Arkansas, and Mississippi.

It has been estimated by the Committee for Constitutional Government, Inc., that nationwide each rice farm with an allotment of 100 acres or more cost the Govarnment and the taxpayers \$10,000 last year.

We want to point out that while this may be true on a national basis, it is not true in Louisiana, a historic rice-producing State. In Acadia Parish, the cost was \$4.787 on one—and only one farm, and we are at a loss to say just how many farms have 100 acres or more of rice in the parish.

Acadia's rice is obviously going into the normal free market channels. It means we are definitely not overproducing rice. It means rice is bringing a fair price on the open market, and it means that our farmers are not the ones causing a drain on the public pocketbook. It also means that because of our normal free marketing of rice in Acadia Parish, our farmers are justified in having more rice acres to plant—and those acres ought to come from other States

who have been guilty of raising rice to be sold to the Government for the price-support figure. Areas who are using trade channels on the open market for their rice should receive a premium for their efforts. Those who are deliberately raising rice to increase the Government glut should be penalized.

The next time you hear arguments on rice support, point to the Acadia Parish picture as one of the healthiest in the United States.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

who have been guilty of raising rice to be LAWS AND RULES FOR PUBLICATION OF sold to the Government for the price-sup-

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in -point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified; the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.
- 5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections.—The permanent Recorn is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided jurther, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

Appendix

Address by Hon. Theodore Francis Green, of Rhode Island, at Breakfast Group Meeting

> EXTENSION OF REMARKS OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. STENNIS. Mr. President, it was my privilege this morning to be present at the breakfast group meeting in the Vandenberg Room of the Capitol when the distinguished senior Senator from Rhode Island [Mr. GREEN] delivered an address which was timely, wise, inspirational, and elevating. I believe it is worthy of wider publication; therefore, I ask unanimous consent that the remarks of the Senator from Rhode Island be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

> ADDRESS BY SENATOR GREEN THE TIME IS NOW

Shortly after I accepted the invitation to lead this breakfast group, I received a brief note from our chairman, Senator JOHN STENNIS, which simply read: "I am sure you will have something interesting and worth while for us." In all the long years which the good Lord has seen fit to allow me, I do not recall a single challenge which made me

feel more lonely or unworthy.

What wise message could I leave with you here this morning? What was there about my life that could set me apart from the rest of you-all schooled in the same Christian tradition? Then a hard but obvious fact disturbed my meditation. I have lived longer than any of you and much longer than most. However much I might Wish it otherwise, I am what might be called-but I hope respectfully-an old man. The whole concept of time engulfed my thoughts and I was reminded of the eloquent message from the Gospel by John: "Work While it is day, for the night cometh when no man can work."

There is a story told of three devils who met to formulate the strategy they might best employ to ensuare the souls of men. The first devil advanced a plan that they roam throughout the world and proclaim that there is no God. The other devils discouraged him saying that men were too intelligent and the wonders of creation too convincing for men to accept that hypothesis. Then the second devil said: "I have the answer. We will go forth to all mankind and teach that the Bible is false: That it is nothing but a fraud." The other devils reproached him saying that man would never submit to that tactic because for centuries men had believed and loved and lived in testimony of the truth of Holy Writ. Then the shrewdest of all the devils offered the winning solution. "There is one sure way to capture the souls of men. We will simply tell all the inhabitants of the earth that 'there is plenty of time.' "

If I have learned one thing well in my long years it is that there is never plenty of time. As the good book tells us we know not the day nor the hour of our calling. The time for the lay apostolate is now.

It is more than conincidence that I, a Rhode Islander, should be asked to speak to you on this day, the 4th of May. On this date, in 1776, the colony of Rhode Island and Providence plantations, by action of its general assembly and on the motion of my great-great-grandfather, declared her inde-pendence from Great Britain, 2 months ahead of all the other American colonies thus making her the oldest sovereign State in the whole Western Hemisphere. In her love for freedom, she threw off the shackles of an unwise parent who had forgotten that there were some things in life more precious than life itself. Those proud forebears of mine had the fortitude generated by faith in Almighty God, faith in each other and faith in the worth of their cause. They were true to the heritage of Roger Williams, the young refugee clergyman, who, 140 years earlier, founded our State and dedicated it to the principles of religious liberty and civil free-In the face of overwhelming odds, the world stood aghast at this gallant little band of patriots from the smallest colony of all.

The great archaeologist, James Breasted, reminds us that man became the first implement-making creature not later than the beginning of the ice age, probably a million years ago. At the same time he became the first weapon-making creature. Yet it is perhaps less than 5,000 years ago that man's conscience began to become a potent social

Today we are met at a fork in the highway of history. We who claim to be Christians and especially those of us privileged to serve as elected representatives of the people have a solemn duty. In our own country, we must covet no privilege for ourselves which we are not willing to share with every other citizen. In the worldwide clash with totalitarianism, at the very time when the sophisticated systems of modern warfare contain the capacity for mutual annihilation, we must pray for guldance. We must exert every positive peaceful influence within the of our conscience and capabilities to save the world from those who would ruin it by their inhumanity, their injustice, and their immorality. Unless each of us con-scientiously meets the political realities of the present, it may be later than we think for all of us.

As we ponder the restlessness about us today and search, each in his own heart, for his moment of destiny, let us recall some of the beautiful words from the first few verses of chapter III of Ecclesiastes:

"To all a season, and a time to every in-

clination under the Heavens:

A time to be born, and a time to die; a time to plant, and a time to pluck up the planting:

A time to kill, and a time to heal; a time to break down, and a time to build:

A time to weep, and a time to laugh; a time to mourn, and a time to dance:

A time to rend, and a time to sew; a time to be silent, and a time to speak:

A time to love, and a time to hate; a time of war, and a time of peace."

A few minutes ago, I introduced myself as one of the older generation. I make no claim however to the wisdom which is sometimes associated with age. Yet there lived many years ago an old man who was very wise and blessed. I refer to the Apostle Paul, who as a prisoner awaiting execution in Nero's Rome, wrote a letter to some friends in the little church at Philippi, in Greece. In his letter, Paul wrote: "And this I pray, that your love may abound yet more and more in knowledge and all intelligence."

It is my hope that in the years remaining to us here, united in this Christian fellowship, the love of God will help us know our problems, give us the intelligence to perceive what should be done about them, and the courage to act accordingly, all in good time.

Is Prisoner of War Collaboration a Myth?

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an article which appeared in the April 16, 1960, issue of the Army-Navy-Air Force Register and Defense Times, entitled "POW Collaboration Charges Exploded."

Mr. Speaker, I think this article should be read by every Member of Congress and by all Americans. It is a well-substantiated review of a controversial subject. I am glad to note that it has been published in the oversea edition of the New York Herald Tribune and in the

Rome, Italy, Daily American. The article follows:

POW COLLABORATION CHARGES EXPLODED

(Much of the documentation for this article was obtained from Albert D. Biderman, senior research associate at the Bureau of Social Science Research, Inc., in Washington. Through his studies of captives over the past 8 years, he has developed extensive knowledge prisoner-of-war problems and a large collection of materials on the subject. Biderman was project scientist for the study of Communist exploitation of USAF prisoners of war conducted by Air Research and Development Command and the Air University from 1953 to 1597. Since then his studies of prisoner problems have been sponsored by the Society for the Investigation of Human Ecology-a New York research foundation. the Air Force Office of Scientific Research, and the National Academy of Sciences-National Research Council. In collaboration with Dr. Herbert Zimmer, a Georgetown University Medical School psychologist, Biderman has just edited a volume that will challenge many popular notions about "brainwashing." In this book, seven prominent scientists examine recent speculations on how science might be used to make men behave against their will. The book, "The Manipulation of Human Behavior," will be published this year by John Wiley & Sons.)

Newly compiled facts prove dramatically that Americans captured by the Reds in Korea have been the victims of a widely believed myth that they collaborated in wholesale numbers with the enemy.

A collection of more than 100 scientific studies of the behavior of military men explodes the collaboration myth and provides stark proof that the Americans behaved as well as military men taken prisoners in any other war.

Newspapers, magazines and books have contributed to the falsification, mostly unwittingly, which during the past 9 years has led Americans to question the moral fiber of the younger generation.

BLATANT CHARGE

One of the most blatant charges against the POW's was that "one man in every seven, or more than 13 percent, was guilty of serious collaboration."

According to Eugene Kinkead in his book published last year, "In Every War But One" this was the statement of a top-level civilian official of the U.S. Army.

The book sold only about 15,000 copies, but it was widely quoted in the United States. Kinkead wrote similar material earlier for the New Yorker magazine, circulation of more than 400,000

Another article syndicated by a major New York newspaper had similar data. It quoted an Army psychiatrist as saying that one out of every three of several thousand Army POW's collaborated with the Communists to some extent.

In fact, only 425 cases were selected out of about 9,000 for consideration for possible court-martial. It was finally decided that trial was warranted for only 82 of these. Then a reviewing authority approved only 47 of these for court-martial.

Of these, only 14 were ever tried and only 11 convicted. Only 10 were convicted of offenses involving collaboration with the enemy. The offenses of which these were convicted were in some instances judged by the court so slight or so mitigated by circumstances as not to warrant severe punishment.

Although none of the forms of misconduct by prisoners of war was unique to Korea, the Korean war was the only war in which former POW's have been tried by court-martial for misconduct while a prisoner, with the exception of one case following World War II. Previous practice had been trial by civil courts for treason or other appropriate criminal offenses.

Of course, the criteria used to judge whether a man was a collaborator or not is vital in any such judgment. Apparently the authorities responsible for the prosecution of collaborators did not think the criteria used by those who claim one out of every three collaborated were legally valid.

ESCAPES

There has been almost unending criticism of POW's because they supposedly did not escape from their Communist captors. The "no escapes" charge leveled is qualified by critics with the statement that there were no escapes from "permanent prison camps."

The use of this distinction is important.

Actually 647 men did escape after being captured by the Communists, but before they were interned in the maximum security camps.

It is also interesting to note that these 647 men—many of whom witnessed the Korean war's most hideous atroctites—were never included in the studies conducted by officials on the behavior of POW's.

Actually, it would be fair to state that at least 5 percent of the POW's in Communist hands escaped. MISCONDUCT

There have been repeated "misconduct" condemnations of POW's who gave captors more information than the time-honored "name, rank, and serial number only" details called for in military law until recently.

Long before the Korean war began, military officials had realized that prisoners in World War II (American, German, Japanese, and virtually all other nationalities) had given captors far more information than required by international agreement. The officials had demanded that this restriction be lifted.

It was lifted—late in the Korean war. Too late to affect many of the prisoners who had been taken by the Communists in the early stages of the conflict. It is interesting to note that the change was approved by Congress following testimony on collaboration by American prisoners with the Germans and Japanese to the detriment of their fellow soldiers.

The Code of Conduct for Prisoners adopted August 17, 1955, says that prisoners are bound to give only name, rank, service number, and date of birth, and pledges the prisoner to "evade answering further questions to the utmost of my ability."

If tortured or coerced a prisoner "will endeavor to avoid by every means the disclosure of any information, or the making of any statement or the performance of any action harmful to the interests of the United States or its allies or which will provide aid or comfort to the enemy."

This is no carte blanche dismissal of responsibility from the name, rank, serial number restriction—but it is a relief from it.

How about the charge that Americans captured in Korea behaved worse than those captured in any other war?

When the Department of Defense Advisory Commission on Prisoners of War looked into this one, this is what they found. In the American Revolution the United States established the death penalty for those prisoners who after capture took up arms in the service of the enemy.

service of the enemy.

Eventually amnesty was granted to all deserters except those who joined the enemy.

In the Civil War about 3,170 Federal prisoners joined the South and about 5,452 Southern Army men joined the Federal Army.

In World Wars I and II, as indicated previously prisoners frequently gave more than name, rank, and serial number despite the Geneva Conventions. The criteria for judging the prisoners has changed with the wars.

ARMY PRISONERS

Army men, who represented the averages in American manhood, according to critics of the prisoners, were the arch collaborators while Marines, Air Force men, and other nationalities had a much better record.

Space does not permit a complete rebuttal of this sorest of all points. It can be noted briefly, however, that the Army men in the POW ranks were captured in the earliest stages of the Korean war and were subjected to the atrocities, the inhuman treatment, and actual torture. In addition, they were of lower mental caliber than the Air Force and Marine components since the Army at this point in U.S. history was dependent upon a lower grade selective service program,

The bulk of the Air Force and other nationality captives involved in POW studies were taken captive later in the war and were not subjected to threats on their lives, but rather given different treatment carefully blended with "brainwashing" overtones. In a careful analysis—which has been made several times over by some of the best social-habit students available today—the record of the general run of the Army men involved is as good, and probably better, than that

of the mentally hardened veterans of a generation ago.

TORTURE

There have been charges that no American prisoner was tortured to force him to collaborate, or as "a means of indoctrination."

Robert S. Bird in an article printed widely quotes Maj. William F. Mayer, an Army psychiatrist as saying that there was "no documented case found after the war of any Army prisoner being starved to death, beaten to death, tortured to death, or otherwise executed for resisting brainwashing or indoctrination."

We can't interview the dead. But there is the case of a 24th Infantry Division officer who made a propaganda broadcast for the Reds.

This act was called unthinkable by a high civilian Army official and an absolute violation of the Army training rule that states specifically that no ald or comfort of any sort be given to the enemy.

Actually, according to all reports of the incident, the officer in question resisted making the broadcast demanded of him in the face of threats that he himself would be killed, and complied only when convinced that this was the only alternative to seeing the surviving members of his command shot. While it is a relatively simple decision to determine when it is preferable to die rather than comply, judging the wisdom or the morality of this officer's choice cannot be dismissed so lightly.

The example of the Americans captured in Korea has often been cited as proof that the average American male of today is a cowardly weakling and representative of a society that distrusts him as a person and that American society is coming apart at the seams.

NAVY CHAPLAIN

Recently a Navy chaplain told the White House Conference on Children and Youth that "It is not necessary to expatiate on evidence of cowardice and self-seeking which have brought a blush to the face of American manhood." The chaplain told the Register his remarks were based on the actions of U.S. military men in Korea. He admitted that he was not a POW there and sald that he based his statements on various writings and reports. Apparently, these were the same reports that have made the American public believe that our soldiers let us down in Korean prison camps. It isn't so.

Address by Hon. Winston L. Prouty, of Vermont, to the Maine State Republican Convention

EXTENSION OF REMARKS

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mrs. SMITH. Mr. President, last Friday the distinguished junior Senator from Vermont [Mr. Proury] made to the Maine State Republican Convention a stirring and memorable keynote address which inspired very deeply those who heard him.

What he said so eloquently is worthy of study; and I ask unanimous consent that his address be printed in the Appendix of the Congressional Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE SPEECH BY SENATOR WINSTON L. PROUTY, OF VERMONT, AT THE MAINE STATE REPUBLICAN CONVENTION IN BANGOR, FRIDAY AFTERNOON, APRIL 29, 1960

I am happy to be here. Thank you for inviting me back to the great State of Maine. I say "back to Maine" because as a young man in high school I spent several summers in sawmill and logging operations in the woods of this beautiful State as well as in my own.

Those months among the tall timbers of your State and my State helped to form and shape the personal philosophy which places me today in the ranks of the Republican Party. And I suspect that it is for similar reasons that Maine essentially is a Republican State.

Woodsmen, as you know, are rugged, selfsufficient, independent characters. They love freedom. They abhor dictatorship. They are by training and instinct conservators, and not wastrels, of the land's resources. They believe in being practical and putting to the people's use that which God and man have made possible. They know that while only God can make a tree, man can saw logs into lumber with which to build homes for

So thank you again for inviting me back to the root and source of my personal and political beliefs and for giving me this opportunity of expressing those beliefs in this congenial and enthusiastic atmosphere of Maine Republicanism.

You have honored me by requesting that I make the keynote speech at this State convention. I can give you the keynote in two words: the key is confidence, the note is harmony. Confidence in the rightness of our position, in the superiority of our candidates, will unlock the door to victory in the coming elections. With harmony in our ranks, we cannot lose. And if we do not lose, America will win.

I say America will win because I believe in the correctness of our Republican position; because I believe our cause is in the best interests of the great majority of the American people. The campaign ahead of us is not a battle for boodle. We do not fight to place Republicans in office simply because they are in our party. We believe they belong in positions of public trust because they subscribe to a policy and creed which is morally honest, basically sound, realistically effective, socially constructive, politically progressive, economically conservative and now, and in the long run, best for 180 million Americans.

Now, I am no believer in the devil theory of responsibility and I am not going to claim that all Democrats are devils and all Republicans angels; that no Democratic administration has ever done anything good and no Republican administration anything bad. We are all of us, God willing, only human with human weaknesses, human failings, and human limitations. But being human we have the power to think and with that power we form concepts of government and political philosophies. And it is the Political philosophies and practices of the two parties that I am talking about.

The Democratic Party, judged on the basis of its record in office, believes in the Great White Father theory of government. Father, sometimes known as Uncle Sam, knows best. Don't worry, child, father will tell you what to do and how to do it. If you don't do as father says, father will spank. If you are an obedient child, father will put his hand in his pocket and give you a nickel for your piggy bank. He does not bother to tell you that the nickel came out of your piggy bank in the first place.

Now all this attention may make life with father very comforting for a child, but is it any way to treat adults? Is it any way to strengthen self-reliance and moral fiber? Is it any way to build a republic of free men? Is it any way to run a country in this second half of the 20th century?

Personally, I believe it to be not only an ineffective but, also, a dangerous manner in which to conduct the affairs of our country during this critical period. Perhaps I shall be accused of treating the Democratic Party unfairly. Nevertheless, judged by its actions in office, I believe the shoe fits.

Now, wherein does the Republican Party

Republicans believe that this is a Nation of free, mature adults, capable of self-government, self-sustenance, and self-discipline and that the Government ought to meddle in the daily affairs of individuals only to the extent necessary to help them do those things they cannot do for themselves or cannot do for themselves as well.

I like the way President Eisenhower put it to Shirley Jean, the 21-year-old housewife from Arvada, Colo., who asked him to explain what the Republican Party stands for:

"Republicans insist," he told her, "that the personal, political, and economic freedoms of the individual are his most precious possessions and are inseparable. If any one of these is lost, eventually all others must disappear. Never should a citizen transfer any of his own rights and responsibilities to government, except in those cases where necessity clearly demands. Indeed, the first and most sacred responsibility of government is to help people protect their inalienable individual freedoms."

Vice President Nixon recently elaborated: "A fundamental tenet of Republicanism is the belief that the way to achieve America's goals is by the free choice of millions of individual consumers, by the productive efforts of free management and free labor, and by local and State action wherever possible—supplemented when necessary, but not supplanted, by the Federal Government."

It is true, as the President pointed out to Shirley Jean, that the Government has to do many things which, individually, we cannot do for ourselves. He listed such things as: strengthening national defense: managing Federal fiscal and financial affairs so as to prevent the debasement of our currency, thus helping to protect the citizens' savings, pensions, and insurance from erosive inflation; assisting in developing water power and atomic power; cooperating with States and institutions in education; relieving hardships in areas where individuals are not able find employment; supporting medical, agricultural, and scientific research; helping to eliminate human and material blight imposed upon many of our communities by conditions beyond local control, and many other things.

Now that is the theory; how have we practiced it? How well have we lived up to our Republican principles? First, let us go back to the beginning, to the first Republican President, Abraham Lincoln. During his and succeeding Republican administration, involving two-thirds of the time since then, these things were accomplished:

The Union was preserved.

The slaves were freed.

The equality, rights, and privileges of all citizens were declared by the 13th, 14th, and 15th amendments to the Constitution.

Women's suffrage was established by the 19th amendment.

The Department of Agriculture was established to help the farmer do those things he couldn't do for himself.

The land-grant colleges and State universities were established as the result of an act authored and promoted by a Republican

Member of Congress from my State, Justin Morrill.

Republicans started the homestead program in 1862, opening land to all who would develop it and aid in the growth of the West.

Republican administrations stimulated the development of American industry and agriculture by a series of tariff acts appropriate to their period.

When the Nation's economy began to come

When the Nation's economy began to come of age and American industry could not of itself secure the needed raw materials and foreign markets, Republicans launched the first true reciprocity policy in 1890 to expand our international trade.

When big business left the small businessman helpless, Republicans were responsible for passing the Sherman Antitrust Act.

And many other things to help the individual citizen do those things he could not do so well for himself were accomplished.

Now let us come down to present times and see what a Republican administration has accomplished.

Under President Eisenhower, segregation has been prohibited in the Armed Forces, in veterans' hospitals, in interstate railroad travel, in the Nation's Capital, in Government employment and in labor-management relations on Government contracts.

During the last 7 years, our country has become the strongest power on earth, both militarily and economically.

Because of our deterrent power, there is no war today and Communist military expansion has been thwarted.

During the last 7 years of Republican administration the American people have made more progress in building schools, in building hospitals, in raising the relative income of 65 million workers, than they did in any 7 years in the history of our country. In the first quarter of this year, our gross national product—the total value of goods

In the first quarter of this year, our gross national product—the total value of goods and services produced—reached a yearly rate of \$498 billion, and before the year is out it is expected to reach half a trillion dollars, a fantastic rate never before achieved anywhere. This means that more Americans are working than ever before, that they are taking home more pay for their work, and that they are able to provide themselves with more things they want for the money they earn.

Now let us compare this record of accomplishment with the record of inaction of the Democratic Congress during the same period.

The Democrats control both branches of Congress by virtual 2-to-1 majorities, yet they falled to act affirmatively in many vital areas while at the same time pushing adoption of certain programs and policies which are unwise, unnecessary, or both.

Let the tiniest scratch or pimple appear on the national economic body and in rush the big spenders with the Federal aid "band-aids." At last count, Democrats had introduced in this Congress new spending proposals calling for additional Federal outlays of \$325 billions over the next 5 years. Such spending would inevitably touch off a round of inflation. And the hardest hit victims, as always, would be the very people they claim they want to help.

So fierce is the competition among the spenders to provide something for every special group, that they have developed more remedies than there are ills. They have an elixir-for every elector and a pump for every prime issue.

Another thing about the Democratic Party: It is incapable of accomplishment because it is deeply and forever split.

The division goes deeper than civil rights. This produces a paralysis, a stand-off, an intraparty stalemate that effectively prevents a Democratic Congress from coming to grips with the big issues.

The present Congress has been in session over a calendar period of more than

200 days and until last week not a single one of the President's 166 legislative proposals had received final action. It was only last week, after more than 3½ months, that the civil rights bill—which contains some but not all of what the President asked—was sent to the White House.

asked—was sent to the White House.

Even Senator Proximer, a Democrat of Wisconsin, conceded that the record of the 86th Congress was shameful when he said, "Extraordinary efforts will be necessary throughout the remaining weeks of the session if Congress is to avoid the risk of a 'do little' label on the eve of a national election."

In comparison to this miserable record, it may well be asked: What would a Republican Congress do? How would it meet today's challenges? In what respects would its approach differ from that of the Democrats?

The broad answer is that a Republican Congress would work with the President to meet the Nation's real military, economic, social, and fiscal needs without further centralization of power in Washington and without further assaults upon the solvency of the country.

A Republican Congress would be sensibly conservative with the people's money, responsive to social welfare needs and dedicated to an enlightened world outlook.

It would do this because the only special interests of the Republican Party are the people's interests.

What would a Republican Congress do in specific areas of need?

It would:

Eliminate such educational system weaknesses as inadequate classrooms and flabby standards.

Assure progress toward equality of opportunity for all Americans.

Develop effective programs to remedy chronic unemployment areas.

Find more adequate methods for protecting the aged, the unemployed, and the disabled.

Develop effective means of dealing with disputes between labor and management so that the public interest may be more adequately protected but without controls which would stifle the productivity of our free enterprise system or deprive labor of its basic freedoms.

We Republicans believe that our Nation will be more secure militarily if the defense decisions of 1960 are made by the President, the Commander in Chief, and his military and civilian advisers, rather than by those new "experts" the Democratic presidential hopefuls in quest of delegates to their political convention. Despite their political propaganda the facts prove we are not a second-rate country, with a second-rate military strength. We are the most powerful Nation on earth, spiritually, militarily, and economically. We will maintain our superior position.

No aggressor in the world today can knock out the deterrent striking power of the United States and its allies. We know it. The Democrats should know it and what is more important, Mr. Khrushchev knows it.

In foreign policy a Republican Congress would follow the lead of a Republican President in continuing relentlessly the search for pathways to peace.

Despite great obstacles, President Eisenhower, assisted by Vice President Nixon and Secretary of State Herter, is pursuing every possibility of avoiding the universal devastation which would result from an all-out war of modern weapons.

Without illusions as to the probabilities, and without appeasement, but confident in the force of our moral and military strength, this administration is doing all which can be done to prevent the outbreak of shooting war. The next Republican President and the next Republican Congress will be

just as conscious of the Communist danger and just as diligent in their efforts for peace.

With such a Republican record; unequaled in the history of our Nation, why do some Republicans approach the coming political campaign on the defensive?

I will tell you why. Because they have become victims of their opponents' Madison Avenue propaganda. That is why.

Ever since the self-styled New Deal, the high-priced professional imagemakers hired by the Democratic Party have sought to paint Republicans as "static" and Democrats as "dynamic." The truth is just the reverse.

They have tried to picture the Republican Party as the party of "business" and the Democrats as the party of "the people." The truth is just the opposite.

They have tried to pin on the Republicans the label of "rich man's party" while the Democrats have been pictured as the party of the workingman and the downtrodden poor. (As poor as JACK KENNEDY, STUART SYMINGTON, and LYNDON JOHNSON flying around the country in their \$500,000 airplanes.)

What could be further from truth?

Like "Big Brother" in George Orwell's famous book "1984," they have attempted to turn the world upside down and sell the people on the idea that black is white and white is black. And to a certain extent their hocus-pocus has been successful.

Despite the incontrovertible evidence of the superiority of our product, through catchwords, slogans, and Madison Avenuemanufactured "impressions," many voters have been brainwashed into believing the "big lie" of the Democrats.

It must be admitted that giveaway programs make a popular appeal to those who think they can get something for nothing. But have we worked hard enough to expose this politically cynical fraud of the Democrats?

Surely with our faith in the good sense and intelligence of the people we can demonstrated that every "something for nothing" out of Washington is paid for out of the pockets of everybody back home through taxes and inflation.

Perhaps some may think, as has sometimes been claimed, that the tax burden does not have to fall on the rank and file of our citizens; that our Federal expenditures could be financed by taxing only the rich.

The falsity of this contention becomes glaringly obvious when we look a few facts in the face.

Now, certainly an income of \$10,000 does not make a person a rich man. Yet, for the sake of argument, let us take this figure as the threshold. Were the Federal Government to confiscate through taxation all individual incomes over \$10,000 per year, it would bring in only \$5.6 billion, only enough to operate for 1 month. Since our budget for the coming year is almost \$80 billion, the rest of us taxpayers would have to raise the balance of \$74 billion, about 10 times as much.

I am not pointing this out to protect the wealthy; I am only demonstrating that Federal expenditures must be paid for by all of us; our workers, our farmers, our small businessmen, our white-collar people, our retired employees—everybody has to fork over to pay the bill.

It is bad politics to seem to be merely against—even against inflation and reckless handling of the people's money. We must turn the inflation issue around. Instead of merely opposing the abstraction inflation (as such) we must speak out loud and clear in concrete terms on behalf of the personal interest of every man and woman in a sound dollar. It means bread and meat on the table, payments on the home mortgage, college education for the children, and retire-

ment in later years free from worry and anxiety.

Instead of seeming to be always the old meany, arguing for penny-pinching, surely we can demonstrate that our programs for reduction of wasteful and nonessential Government spending mean genuine tax cuts, which mean dollars in the pockets of every citizen. We Republicans did it, for the first time in a generation, in the 80th and 83d Republican Congresses and we will do it again if we are given the opportunity.

Because, as Republicans, we believe that freedom is not only the essence of the American political tradition, but the key to our economic prosperity, we must stand up on every street corner in the land and shout out that a free economy will work wonders of growth and expansion which no amount of Government subsidization and control can ever match. Freedom will build and promote our economy; wild spending and infiation will wreck it.

It is our duty as good citizens to make this clear to everyone. Not only is it the best kind of public policy to do this; it will also win elections. For the common people have commonsense. Not only do they know which side of the bread is buttered; they also know that bread must be earned by the sweat of the brow. Our appeal, unlike that of the Democrats, is not to the citizen's most acquisitive instincts but to his finest, most unselfish, and most patriotic responses.

Okay. We are agreed that the Republicans have the best program and the best record and that we can convince the voters of this.

Now what about our candidates?

I am proud to say that never before in the entire history of our country has a political party been able to offer the electorate such an experienced, knowledgeable, and well-prepared candidate to fill the awesome office of President. And never before has the office demanded so much experience, knowledge, and preparation on both domestic and international issues.

The candidates for Congress which you Republicans in Maine will offer to your voters are of equally high caliber. Senator MARGARET CHASE SMITH is not only the most beautiful Senator, she is one of the most able, conscientious, and hard working of all 100 of us. In the entire history of the Senate, hers is the most complete voting record: 792 consecutive rollcall votes without a single miss. This not only proves her dedication to her job; it also shows that she is willing to stand up and be counted on all issues, no matter how controversial. you well know, her moral courage is matched only by her independence of thought.

Few Senators can equal her record. And few Senators are as much admired, not only in the Senate and in her own State, but throughout the country and, indeed, the world. It is no wonder that the Gallup poll has several times selected her among the 10 most admired women in the world and that she has been picked by the press as one of the best of the Senators.

Your Representative in Congress, CLIFFORD MCINTER, is one of the most highly respected and efficient Members of the House of Representatives. I know because I served with him in the House. Believe me, and I know I do not have to tell you this, he is irreplaceable.

Your young and able Governor, John H. Reed, has made an unbeatable record during his short term in office. You know that record better than I do and I do not have to tell you how he picked up the ball and ran to a touchdown with it.

With candidates like this, I ask you, how can we miss?

We New Englanders have a very special reason for supporting Republican candidates. Under the seniority rules of the two Houses of Congress when the Democrats are in power, the major committees of both the House and Senate are in the control of Democrats from the Southern States because they are smart enough to keep reelecting their Congressmen. As a result, they have been able, through manipulation of legislation and appropriations and through influence in the executive departments, to make it possible for the South to kidnap many of the industries from New England.

There are many towns all through New England, including, I'm sure, your own State of Maine, where factory buildings stand idle and people are out of work because industries have been lured to the land of grits and chitlings, not only by low-wage scales,

but by laws favoring the South.

Every Democrat sent to Congress helps to put the southerners in control of Congress and its important committees. Every New England vote for a Democratic candidate to Congress is, in its effect, a stab in the back of our own New England.

I said at the beginning of my talk that our keynote must be confidence and har-

The record of your party and the demonstrated ability of your candidates should give you the necessary confidence. The harmony, you must produce yourselves.

Take a lesson from my State of Vermont. In the last election the Democrats sent one of their number to Congress for the first time in over a century and they almost elected a Governor. This sad state of affairs was not brought about by the Democrats; but by the Republicans. We have no one but by the Republicans. We have no one to blame but curselves. After a bitter primary fight, we were split into factions and We failed to get together and support the Republican nominees. Believe me, we have now learned our lesson the hard way. This year we are determined that, once the primary elections are over, every Republican will go out and work for the nominees of our party.

Without complacency or overconfidence, we can agree with the man the Democrats have chosen to head up their platform committee. Congressman CHESTER BOWLES practi-cally conceded victory to the Republicans when, a few months ago, he said: "Indeed, if the situation continues as it has over the past several months, the chances are strong that the year 1961 will once again find a Republican in the White House and, at best, with reduced Democratic major-

ities on Capitol Hill."

Despite this augury of victory we cannot afford the luxury of intraparty squabbles after the primaries. Vice President Nixon has warned us: "The day of 'safe' States for either party is over. We Republicans do not intend to concede any States to our opponents or to take any usually Republican States for granted. If we are to outvote our opponents, we must outwork, outtalk, and outfight them in the precincts. If our cause is as great as we believe it to be, it deserves the most intensive campaign in American political history and we must all pledge ourselves to that kind of an effort."

I cannot conclude without pointing out that in the context of the present world situation-beset by communism and endangered by the possibility of atomic and hydrogen war-the outcome of the next election can decide the fate, not only of America,

but of civilization itself.

Should that election place the conduct of our foreign and domestic policies in the hands of reckless freewheelers, our children and grandchildren may not live to enjoy the freedoms we inherited from our forefathers.

To preserve and promote the progress we have made, to preserve and promote the prosperity we now enjoy, to preserve and promote the peace we have so carefully nurtured, we must preserve and promote, and get out and elect, the candidates of the Re-Publican Party.

New York Times Prints Protest by Birmingham Groups

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 21, 1960

Mr. HUDDLESTON. Mr. Speaker, in the New York Times edition of today, Wednesday, May 4, 1960, there appears a statement submitted by the Birmingham Chamber of Commerce and Birmingham's Committee of 100 in protest to the two recent articles written by Times reporter Harrison Salisbury on Birmingham. This statement seeks to correct the grave injustices done our great city by the Salisbury articles and to present an accurate picture of the community. This it does very effectively.

In the subsequently reported statement of managing editor Turner Catledge of the Times, he naturally refuses to admit that reporter Salisbury's articles did not constitute good journalism. Nonetheless, he did allow the Birmingham groups' statement to be presented on the pages of the Times and we now await a complete retraction of those scurrilous articles on Birmingham:

ALABAMA GROUPS PROTEST TO TIMES—CRITICIZE
ARTICLES ON RACIAL TENSION IN BIRM-INGHAM

At the invitation of the New York Times, two business-civic groups of Birmingham, Ala., have submitted a statement expressing their criticism of, and replies to, two articles by Harrison Salisbury on racial tension that appeared in the Times on April 12 and 13. The two groups are the Birmingham Chamber of Commerce and Birmingham's Committee of 100, a business organization of long standing, formed for the purpose of attracting business and industry to the Birmingham area.

The text of the statement follows:

Two articles concerning Birmingham, Ala., written by the New York Times reporter Harrison Salisbury appeared on the front page of the Times' issues of April 12 and 13, 1960.

The stories presented to the readers of the Times as factual and purported presumably to give a fair appraisal of Birmingham, were in fact biased, warped, and misleading. The facts as adduced by Mr. Salisbury to support his attack were in most cases either outright misstatements or, which is worse, halftruths.

The people of Birmingham, shocked by a pointless attack particularly in a newspaper of the prestige and stature of the Times, deeply deplore the false image given of them.

Birmingham's complaint is based principally on a sincere belief that your reporter, who was in the city less than 48 hours, apparently seeking sensationalism, used a few obvious cases involving violence and thereby presented a blased, unbalanced image of this thriving Deep South metropolis.

The Times reporter made unqualified as-ertions that "every channel of communication, every medium of mutual interest, every reasoned approach, every inch of middle ground has been fragmented by the emotional dynamite of racism" "telephones are tapped or there is fear of tapping" • • • that "mail has been inter-cepted and opened" • • • that "the eavesdropper, the informer, the spy have become a fact of life." This is the way Mr. Salisbury made our city appear. Your readers could only conclude, on reading these distorted statements, that it is dangerous to live in Birmingham, which is certainly not true.

We do deny vigorously that the image presented by Mr. Salisbury is true, because it distorts and telescopes instances covering many prior years in an effort to provide a picture of the moment-a picture that is not true, even reasonably true.

is submitted that Mr. Salisbury made careless assertions and misstatements of facts regarding individuals. For instance, he took some innuendoes used in political campaigns against one of our city officials and treated them as facts. Indeed, the public official referred to has been a firm, effective police commissioner and the record conclusively shows that he does maintain law and order. He has also stated publicly that he will or-der the arrest of either white or Negro who makes moves likely to set off a racial inci-

Other examples of exaggerated reporting could likewise be pointed out. To do so would serve no useful purpose and could

only create strife and discord.

Birmingham people do not see themselves in the image Mr. Salisbury has drawn of them. We have a community where people, regardless of race, creed, or color, live a good life. Certainly we have extremistsbut what city does not have? Yes, we have isolated cases of violence—but what city does not have such? Why do the New York Times articles generalize on the actions of a few? This cannot be the true story of any city-be it Birmingham or New York.

The bridge of communication between Birmingham whites and Negroes, nurtured so carefully for so many years by men of good will of both races, is being destroyed by attacks by many of the media of national communication. The great majority of Birmingham citizens deplore such unwarranted attacks and feel they can only aggravate a difficult situation. They ask, "What does

Mr. Salisbury seek to accomplish.

Birmingham people, reacting strongly to this nationally drawn portrait, are people who stand in honor and willingly concede fault. They are not prepared to admit that the half-truth is the whole truth. are not prepared to admit that some faults present the whole picture. They have asked, and they are asking, that all citizens everywhere who may be influenced by such distorted articles as those appearing in the New York Times have the opportunity to obtain the facts about our community.

Apparently, Mr. Salisbury did not look for the facts set out below or, if he did, he failed to credit our community with them.

Negro citizens in Birmingham have moved forward rapidly and steadily. Negro citizens have access to better than average educational, recreational, and housing facilities. Also, it can be shown that 50.6 percent of the Negroes in Metropolitan Birmingham own their homes. These statistics were compiled by the annual consumer analysis survey by the Birmingham News and the Birmingham Post-Herald for 1959.

The 1950 census showed Birmingham with the highest Negro family income in the Southeast. Since 1950 Negro family income has increased rapidly; over 10,000 Negro families now earn \$4,000 or more annuallyonly 2,320 Negro families did so in 1950. Since 1950 the number of Negro families in this bracket has increased over 300 percent.

All but a fraction of 1 percent of Negro homes in Birmingham have electricity and last year 75.5 percent of them had natural gas, compared with 20.7 percent in 1950. Only 14.6 percent of Negro families owned automobiles in 1948, but 44.2 percent owned cars last year. Mechanical refrigerators were owned by 98.2 percent of Negro families last year, compared to 30.9 percent in 1948. TV set ownership amounted to 84.7 percent in

In 1948 15.1 percent of Negro families in Birmingham owned washing machines and in 1957 this ownership had Increased to 76.2 percent, or a 500 percent increase.

Birmingham schools for Negroes have progressed with the growing economic ability

of the community.

A Negro high school principal in Metropoli-tan Birmingham, in the publication of his thesis for his graduate degree at Columbia University, New York, states, "Upon exami-nation of the overview of secondary education for the Negroes as revealed in this study many interesting and sometimes startling facts are shown. * * * "the origin and development of secondary education for Negroes in Metropolitan Birmingham, Ala., seems like a fairytale rather than reality * schools, when taken together, had graduated approximately 35,980 students from 1900 down through 1959."

He further stated in his thesis, "Aside from graduating students, these schools rendered a great service to quite a large but unknown number of persons in providing for them the only formal training which they received. This fact is reflected in the steady increase in literacy among Negroes in Birmingham and Jefferson County. Another contrast was that secondary education was available to Another contrast was every child, and was compulsory and practi-

cally free."

Since 1942, salaries for Negro and white teachers are on equal basis. Actually, the average salary per Negro classroom teacher this year is \$4,583 for a 9-month term, com-

pared to \$4,485 for white teachers.

Each year these teachers are invited to visit Birmingham businesses in a day set aside as Business-Industry Day. This nearly 1,000 city Negro teachers will visit 40 companies owned by white businessmen. The annual event is designed to create a closer understanding between the fields of industry and education. Here are comments from Negro teachers regarding previous visits: "Through the years I have had many enjoyable tours, but none more en-joyable than the one * * * with you. Tour joyable than the one * * with you. Tour guides at the United Nations, Gettysburg, Philadelphia * * were not as polite and well informed as you were." "We are grateful for the invitation, hospitality, and courtesies." "The experience gained will do much in helping us as teachers to give our boys and girls information about the opportunities that are available to them and the very fine contribution the businesses and industrial concerns are making to our community."

Like most cities, Birmingham has spent millions in new school construction since 1945. Three school building programs since that date allotted \$11,881,660 to Negro schools and \$13,007,630 to white schools. This means that 47.5 percent of all school building funds were spent for Negro schools. Negro children make up 44 percent of the school popu-

lation within the city.

Negroes actively and willingly participate in campaigns for United Appeal, Red Cross, Community Chest, and other civic endeavors. All Negro agencies are fully supported by the United Appeal.

Birmingham can point with pride to the opportunities for advancement offered to all races here. Could Negroes, or anyone else, for that matter, have made such rapid progress under conditions such as those described by Mr. Salisbury?

With equal introspection, most people of Birmingham recognize that problems abide In this community as problems exist in every community. They are working on these problems. They ask to be allowed to con-tinue work on these without the fanning influence of distorted imagery and misunderstanding by those who could not hope to understand the situation as it exists.

Birmingham people ask only for objectivity. They ask for an open-door policy between national publications, such as the New York Times, and the South.

They have faith that, given the chance to present the true picture, they will find those who are able to see. Nothing more than this, but nothing less, either, is due the city of Birmingham. We are proud of Birmingham, its past, and we look with con-

fidence to its future.

WILLIAM P. ENGEL, Chairman, Btrmingham's Committee of 100. MORTIMER H. JORDAN, President, Birmingham Chamber of Commerce.

MAY 2, 1960.

MANAGING EDITOR'S STATEMENT

Following is a statement issued last night by Turner Catledge, managing editor of The New York Times:

The articles complained of by the chamber of commerce and Birmingham's committee of 100 were written by Mr. Harrison Salisbury, one of the ablest and most perceptive reporters of The New York Times. Salisbury has a background of many years as an outstanding newspaper man. recipient of the Pulitzer Prize award for 1955 for his reporting from the Soviet Union.

The controversial articles were based on interviews and observations he made in Birmingham and other parts of Alabama over a

span of 51/2 days.

Furthermore, he was aided in his re searches by news items previously published

in Alabama newspapers,

The New York Times has every confidence that Mr. Salisbury reported the situation as he saw it through the eyes of an objective newspaperman. He did not go to Birming-"seeking sensationalism" or anything else but the facts in a situation that involves Birmingham as well as other cities. We are only sorry that his findings had to be unpleasant to anyone.

The two articles did constitute a story of tension. As I said in a statement on April 27, the articles did not stress the obvious fact that an overwhelming percentage of the citizens of Birmingham lead happy and peaceful lives in a growing and prosperous

community.

Neither did they stress the fact that this substantial element of the citizenry deplores any lawlessness that may exist and is working in its own way to correct and reduce such tensions as do exist.

The New York Times intends to continue to cover the race situation in the South and elsewhere to the best of its ability. I also repeat from my statement of April 27: If in the further investigation of this situation the Times should find any statement in Mr. Salisbury's articles to be incorrect, or inaccurate in any respect, it will publish an appropriate correction.

A Promise We Must Keep

EXTENSION OF REMARKS

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address delivered by Mr. Douglas A. Grandgeorge, of Somonauk, Ill., in the

1960 American Legion high school oratorical contest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PROMISE WE MUST KEEP

(By Douglas Arthur Grandgeorge, Somonauk, III.)

In the 2,000 years since the birth of Christ, over 200 billion people have lived on this earth. Of those 200 billion, fewer than 1 billion have in any way known political freedom. In other words, over 991/2 of all the people who have lived on this earth in the last 20 centuries have been the slaves or subjects of someone else. In this respect, you and I are unique people. It is easy for us to see what a privilege it is to live a free life, but we Americans have the added distinction of being the freest of all the free people ever to have lived on earth.

It seems to me that we who are so privileged need to ask ourselves some basic questions. How did we get our freedom? is our responsibility in maintaining it?

In the Philadelphia State House, 173 years ago, a group of men met together and made a solemn promise. In this same building where the Declaration of Independence was written and signed, the representatives of the several States met to form a better government for the new nation. The Constitution of the United States, which was the result of this convention, was the greatest political document ever written and as Gladstone put it "the most wonderful work ever struck off at a given time by the brain and purpose of man." We are told that the delegates themselves were awed by the greatness of their work. On the last day of the convention, Benjamin Franklin said as he looked at a sun resting on the horizon, "As I have been sitting here all these weeks, I have often wondered whether yonder sun was rising or setting. But now I know it is a rising sun."

It took great men with a good deal of courage to write that document, but it took even more courage to make the promise which they made. For these men made a promise to their fellow countrymen to protect and defend their newly won liberty, a promise to God to uphold the dignity and worth of His creation, and a promise to all men of all lands to prove to the world that man deserved his freedom. In making this promise, they declared to the world the worth of man and put their trust in the common people. In this sense, the men of the Constitutional Convention of 1787 made a promise for the future. They put their trust in us, the people of this Nation, to carry on the ideals to which they were dedicated and to use of freedoms to prove to the world the wisdom of liberty. We have the solemn responsibility to preserve our priceless heritage and to work for the liberty of all people. So, we, too, have made a promise,

In countless ways, Americans have kept this promise. There is not a country on earth which has so pronouncedly as America defended the rights of her people. The citizens have the opportunity to be creative, to find happiness, and to share in a democratic way of life. And America's Lady of Liberty beckons to people of all the world saying, "Send me your tired, your poor * * * I lift my lamp beside the golden door." Yes, America has kept her promise.

But in another sense, the promise to defend and protect the rights of men has been broken time and time again. The Little Rock incident and the many racial riots throughout our country do not give the impression that Americans are dedicated to equal opportunity. The limitation of housing—and even voting—to certain races does

not speak well for the way in which we have used our freedom. During World War II, We Americans sent our men into a foreign land to die if need be to protect our way of life. It is not to our credit, then, is it, that today we find the dreaded swastikas painted on the doors of some American homes and hear of the bombing of synagogues throughout our land which defy the very freedoms we have dedicated ourselves to preserve? Moreover, the amount of crime and immorality in our Nation is very great. We have recently been made aware of rigged TV shows, police scandals, payola, and many

of us do not seem to care.

In some way, we have violated nearly every freedom which we have been given. We have turned our freedom of speech into slander and derogatory remarks about the members of races and religions and countries different from our own. We have used our freedom of the press constructively, yes, but We have also used it to turn out public-to our young people and childrenunheard of obscenity and filth. We have even abused our precious freedom of religion by taking it for granted and by denying people of minority faiths equal opportunities. Many of us do not even vote.

It is time for a change. It is time for us who have been given the unique privilege of freedom to make ourselves worthy of the trust of our forefathers. It is time that we began to take seriously that promise which we made when we first began to live a free life-a promise to preserve our freedom and to work for the liberty of all people.

The task ahead of us is a great one. Never before have a people had so little time in which to do so very much. The forces wishing to destroy our way of life are greater now than at any other time in our history. Our freedoms are being opposed mightily both from without and from within. The late President Franklin Delano Roosevelt Wrote in an address which he ironically did not live to give, "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with a strong and active faith."

It will take every dedicated American Working to the highest of his potential to combat the forces of evil an indifference which threaten to destroy our democratic way. We must begin now to work for an equal opportunity for all people and to use the freedoms which we have inherited not for the good of one, but for the greatest good. We have promised to God and to posterity to protect and defend the precious heritage which our Constitution has preserved for us.

We have a promise we must keep, and in this we shall not fail.

Congress Pressed Again To Deepen Harbors

EXTENSION OF REMARKS OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Buffalo Courier-Express, on April 29, 1960. I wholeheartedly support this effort which embraces my position with respect to Buffalo Harbor improvements: CONGRESS PRESSED AGAIN TO DEEPEN HARBORS

Once again the effort to prod Congress into authorizing harbor improvements on the Great Lakes is going forward in Washington. Buffalo's stake in the current undertaking is a \$2.35 million project to deepen to 27-foot seaway depth the south entrance channel and part of the outer harbor.

Appearing as president of the Council of Lake Erie Ports, Executive Director John A. Ulinski, of the Niagara Frontier Port Authority, told a Senate Public Works Subcommittee that an economic loss is being charged against the ports because they lack 27-foot draft channels. The subcommittee is con-sidering an omnibus rivers-and-harbor measure which would give congressional authorization to harbor improvements amounting to \$61.8 million. The House already has approved projects that include the Buffalo Harbor proposals.

Authorization is necessary before funds are voted by Congress. As matters now stand, the authorization proposal is exactly it was when the 85th Congress adjourned last year—the House authorized the projects but the Senate adjourned without

In view of the Senate's failure to act in 1959, Great Lakes ports have reason to argue that besides authorizing the harbor-deepening undertakings recommended by the Corps of Engineers, Congress should appropriate at least some of the money necessary to get the work underway. Normally funds are not voted at the same session at which projects are authorized.

Seaway depths in harbors like Buffalo's obviously are necessary if the economic po-tential of the seaway is to be realized. It makes little sense to have a waterway that accommodates ships too large for berthing at the Great Lakes ports.

Status of Alaska Today-And What It Means to You

EXTENSION OF REMARKS

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. BARTLETT. Mr. President, many Members of Congress will remember having met C. W. Snedden, of Fairbanks, Alaska, during the period when Alaska statehood was under legislative consideration. Publisher of the Fairbanks News-Miner, farthest north daily under the American flag, "Bill" Snedden came to Washington on many occasions at his own expense and will be long-remembered for his public service lobbying activities as a particularly well informed, persevering, persistent, and logical advocate of a cause. "Bill" Snedden moved to Alaska from Portland. Oreg. So it was especially appropriate that he should have been invited to be the guest speaker April 18 at the annual Alaska Day meeting of the Portland Chamber of Commerce. There he gave an address which contains so much information about present-day Alaska and about the prospects for the future that I desire to present it here for an even wider audience.

I ask unanimous consent to have these remarks printed in the RECORD, notwithstanding that the Public Printer informs me that the cost of printing it in the RECORD will be \$243.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

Whenever I have the pleasure of being in Portland, friends in my old home city have questions about Alaska. The questions are varied, of course, and concern many subjects. However, I noticed on my last visit here a few weeks ago, repetition of several questions by different Portland businessmen. Most often asked, and in about this order.

"How is the new State government coming along?

"What are present economic conditions in Alaska?"

"Are you ever going to establish a basic economy besides military construction and military expenditures?"

"What is going to happen in Alaska in the

next few years?"

And last, but certainly not least from the standpoint of the Portland Chamber of Commerce, "What effect are happenings in Alaska going to have upon us down here?"

I am going to attempt to answer these questions in general terms. I would be happy to answer each one in detail, but I am afraid you would not have the patience to bear with me.

Before we start answering these questions, I believe it is appropriate to set forth a little background on Alaska for the benefit of those present who have not in the past been familiar with our activities up north. will try and keep this brief, and not bore you with long and detailed repetition of statistics which I am sure the majority here have heard before.

I am sure that those of you who have visited Alaska have been impressed with the size of our State.

Now I have been just as bored in the past. as I am sure many of you have been, listening to residents of an area close to the Mexican border brag about the size of State in which they live. I do not wish to be included in the category of those who seem to feel a mere 267,000 square miles constitute a very special State. In fact, some natives of that area seem to consider it a separate empire.

However, sheer physical size and a geo-graphical area of 586,400 square miles is a pertinent factor in many, if not most, of the problems confronting Alaska today. In order that you obtain a factual picture, comparison seems to be the most practical answer. If you should cut up a scale map of the 50 States, you would find you could place the Pacific Coast States of Oregon, Washington, and California within boundaries of Alaska, and still have room for a certain southern State.

Another comparison, which is reasonably precise, is one put forth by one of our restaurant operators in Fairbanks. In this particular restaurant, in recent weeks, the menu includes: "Soup, regular-size bowl, 50 cents—Texas-size bowl, 20 cents."

Alaska has an estimated population of only 220,000 today, including military. This is a population density of less than one-half of percent of the average in the other 49 States. If we were to divide the State up equally, each man, woman, child and infant could have more than 21/2 square miles as his own personal domain.

Being the largest State has certain merits, but when combined with sparse populacommunication and transportation problems are compounded.

Perhaps the question occurs to you which was often directed to us back in Washington: When Alaskans were attempting to convince Congress we should become a State, many Congressmen asked, "If there is any potential for development hidden under the ice and snow in Alaska, why have not more people moved in and developed the country in the 90 years since we purchased it from Russia?"

Until Alaska was granted statehood, more than 99 percent of the land was held by the Federal Government. Furthermore, much of the most accessible and desirable areas were contained within Federal reserves established by various governmental branches. Only since January 1959, with the official inauguration of statehood status, did Alaskans receive the right to almost one-third of the land area—103 million acres. We have 25 years to select these lands, a complex job which only in the past few months has gotten underway. This program, incidentally, is under the capable direction of a former Portland resident, and a former member of your Chamber Forestry Committee, Mr. Roscoe Bell, now Director of our Division of Lands.

Just one more point on background information: People unacquainted with Alaska automatically place us in igloos in which we hibernate through the long cold winters. Climate is considered so severe that many class it as suitable for only penguins and Eskimos. This is a myth which has been perpetuated by many writers, who seek colorrather than factual background for stories on the North country.

It is true that winters in northern Alaska, where my home city of Fairbanks is located, However, it is a dry cold, no more are cold. uncomfortable than the winter climate in many Northern States of the lower 48. Southeastern Alaska enjoys a climate with considerable liquid content, very similar to Portland.

I would like to point out: On the other side of the world, in roughly the same latitude, the Scandinavian countries of Sweden Norway, Finland and Denmark, comprising only about 73 percent of the area of Alaska, support approximately 20 million people. incidentally, Scandinavians enjoy a standard of living second only to the United States and Canada.

Now to answer the question as to how Alaska's new State government is getting

This question is difficult for me to answer objectively. Unfortunately, my political beliefs are not shared by the political party now in power in Alaska. That is a conservative statement. In fact, Democrats occupy 48 of the 60 seats in our State legislature, the Governor's office, and his entire cabinet. Cabinet officers, incidentally, are all appointed by the Governor and are not elected. Not a single Republican occupies a position in the State court system of seven superior and three supreme court judges, all of whom are also appointed by the Governor. Alaska is unique in this respect, being the only 1 of 50 States where all judges are of 1 political party. One State superior court judge remains to be appointed. Perhaps a miracle may occur, and a Republican will find his way into our State court system when this last appointment is made.

Now I am aware that some chambers of commerce do not consider partisan politics a proper subject for discussion at chamber meetings. Were it not for that, I would like to comment further upon the present political situation in Alaska. I do think it is proper, however, to point out that there is no truth to the rumor the Republican Party in Alaska is seriously divided by factions. Just last week, at a State caucus, platform planks were adopted by unanimous vote. All three of us voted "Yes."

Perhaps it is appropriate to point out here that Alaska is not the first State government to be controlled by Democrats. tion has occurred previously in older States, and they have survived and prospered.

Just 100 years ago, as Oregon embarked on her second year of statehood, you may re-call that your own State was controlled by the Democrats, with John Whiteaker as Governor.

Republicans were charging that Governor Whiteaker and the Democrats were forcing slavery upon residents of Oregon. The Weekly Oregonian was urging the new Republican Party "to steer clear of partisanship and remain loyal to its principles." At the same time, the Oregonian charged: "The Democrats are apathetic about the necessity of a transcontinental railroad, which is vitally needed, and will help fill up Oregon's open spaces and promote general progress.'

In addition to opposing the Democrats' policy regarding the slavery issue, Republicans were accusing the Democrats of mishandling public moneys that had been set aside for a capitol. The Oregonian maintained that of the "\$100,000, more or less, for public buildings, the Democrats have not

constructed one building."

From the foregoing, it seems apparent that the new State of Oregon was not without its problems as it entered its second year of selfgovernment. A similar situation prevails in Alaska today, as we struggle with problems

in our second year of statehood.

Obviously, not all Alaskans are happy with the actions of our new State government, which a few weeks ago concluded the second session of the State legislature. recent article, a New York writer stated, "Most Alaskans are maladjusted, and not happy with actions of the State govern-ment." The writer may be factually correct. I certainly hope so. Under the American system of government, any time the people are pleased with their government, they become disinterested and lose the desire to improve. Alaskans undoubtedly "agree to disagree" as often as any group of Americans in our country.

Basically I believe this is a healthy condition. The philosophy might be expressed in the slogan of a milk company, which imprints each one of its milk containers with, cows are not contented. They are anxious

to do better."

Alaskans are anxious to do better, and

we are going to do better.

I do not wish to give you the impression that all is complete chaos and confusion in Alaska. I do not wish you to think, that is my opinion, the State government is doing everything wrong and nothing right. This is not the case. It is always easy to be a "Monday morning quarterback," and a different thing entirely to be in the game carrying the ball.

By and large, our State government is doing a creditable job. Problems are many and complex, and solutions are not always easy. Even with the capabilities of some very able men in our State administration, the right answers are difficult to ascertain. Solutions to our troubles are compounded by the fact that Alaska is having to do in months what other States accomplished over a period of years.

It has been more than four decades since the last State joined the Union prior to the admission of Alaska. During that time government at local, State, and Federal levels, has become many times more complex than our comparatively simple lawmaking ma-chinery of the early 1900's—before such items

as income taxes were devised.

Alaskans do not lack for problems inaugurating self-government at every levelfrom unincorporated communities right up to the State capitol. Many of the problems we had as a Territory are compounded many times in our new status as a State.

For example, 10 years ago my hometown of Fairbanks did not have what could properly be termed a basic utilities system. Electric power generation capacity was woefully inadequate. Our water system encompassed only a couple of city blocks, serving 120 customers. Our telephone system operated from surplus Army switchboards, with private business lines nonexistent. Our sewer system was a not-so-humorous joke. Industrious fireflies would have outshone our street lights.

We formed a municipal utilities system to cope with this utilities problem. Today we have electrical generation facilities in a modern steam-turbine plant, good water and sewer systems, and telephone service comparable to any city in the country. utilities plant investment at the present time is approximately \$13½ million. We have already retired \$4½ million—about one-third of this investment.

While we have now established a modern utilities system which is paying its own way, we are faced with continuing problems. Additional bonding is required to finance acutely needed increased capacity in all departments of the utilities system.

This is a story which can be told, with minor variations, in all Alaska cities.

It might be said there is a shortage of virtually everything in Alaska today in the way of urban needs. Since the advent of statehood new residents are arriving Alaska in sizeable numbers. Each new family requires basic necessities of today's modern way of life. Shortage of retail outlets forces time-consuming shopping by mall order. Most service businesses cater only to a select clientele. An appointment with the plumber is more difficult than with the doctor.

Housing is perhaps the most acute problem we are confronted with at present. The situation in Fairbanks is typical of several other Alaska cities. If 500 new homes were completed next week, they would in all likelihood be occupied the following week. Two months ago the military stopped issuing travel authorizations to dependents of military personnel coming to Alaska on rota-tion. This will mean 500 to 700 families during the next 90 days will not be authorized to move to Fairbanks. RCA technicians who will staff the electronic equipment to be installed at Clear this summer need at least 350 to 400 new homes in Fairbanks for their families.

The problem in housing is reflected in school facilities. During the past 5 years the Fairbanks School District has structed at least one new school building each year to accommodate a 100-percent enrollment increase during that time. Two additional school buildings must be constructed this summer if students are to be accommodated this fall without all being on a shift basis.

Development of the new State was delayed during the first year of State operation. A labor-management dispute halted all construction activity from April until the middle of September in 1959. To the many projects which were to be inaugurated or completed last year, we now have added all the scheduled construction projects for 1960. The result is that many construction jobs will be working around the clock this coming summer, providing sufficient skilled craftsmen can be found. Work is getting under full swing right now at the new Clear defense installation 80 miles south of Fairbanks-a long-range missile interceptor station which will total about \$275 million when completed. Contracts totaling about \$70 million have been let for construction of other defense installations of a classified nature at varied installations in the Fairbanks area.

Now it is readily apparent these projects are all national defense—and a military economy should not be the economic base for an entire State. What is private industry doing?

In Fairbanks approximately \$91/2 million in private construction is already slated for 1960. Other Alaskan cities have private construction programs this year of comparable scope.

Throughout the State development of our natural resources is gaining momentum. In Ketchikan, the Ketchikan Pulp Co. ended 5 years' operation of its \$62 million pulpmill with a very satisfying financial report. Net profit for the year 1959, before taxes, amounted to more than \$7 million.

The outstanding success of this operation inspired Japanese interests to construct a similar mill at Sitka, which started operations in December. Another large company, Georgia-Pacific, with offices here in Portland, has options on timber rights for another large pulp operation being considered for the Juneau area. Another Portland-based operator, Pacific Northern Timber Co., is now getting operations underway on a large sawmill installation at Wrangell.

With ample timber available for perpetual operation, Alaska can support several additional similar installations on a sustained-yield basis. Indications seem firm that pulp and timber will contribute to a sound economic base on a stable year-round basis in

southeastern Alaska.

In western and northern Alaska petroleum exploration and development is rapidly coming to the forefront, overshadowing Alaska's traditional gold mining and fishing operations. Since the first oil well was brought in on the Kenai Peninsula in July 1957, 29 million acres have ben leased for petroleum exploration in the State; 32,612.079 acres are now under Federal lease plus 101,369 acres of State lands. Lease revenue flowing into the State treasury from this source totaled \$10,-106,000 on December 31, 1959.

It is estimated that during 1960 an additional 3 million acres will be leased, bringing another \$5 million in revenue to the State.

The statement has been made that development of petroleum resources in Alaska will parallel events following the discovery of gold in California a century ago, and that oil will do for Alaska what gold did for California. Present indications lend credulence to this statement.

At present there are seven producing oil wells in the Kenai area near Anchorage. Standard-Richfield, joint developers of the field, recently announced construction of a \$4.5-million pipeline to tidewater this summer.

Last ctober. Union and Ohio Oil companies brought in a large natural gas well in the same area, and by December completed two additional wells. Plans are now underway to pipe natural gas into the Anchorage area.

Active petroleum exploration and development is accelerating. Only five wells were spudded in during 1957 and only four in 1958. The number of new starts increased to 16 during 1959. Last year 18 oil companies had a total of 36 geological field parties operating in the State. At least 21 companies have indicated they will have a minimum of 43 crews in the field this summer.

During 1959 petroleum exploration expenditures totaled \$16,714,000, while drilling and producing costs amounted to \$13,-940,000.

New State oil and gas leasing regulations became effective last September. The State's first competitive lease sale followed in December, and included 88,000 acres of offshore areas. Offcrings averaging \$51.66 per acre were received on 77.831 acres, amounting to \$4.021,031 new revenue to the State.

Oil reserves combined with large known deposits of natural gas are also known in the Gubik-Umiat area north of Fairbanks. Colorado Gas & Oil Co. has acquired the majority leasing acreage in the Gubik structure and has now moved two drill rigs in place.

The Colorado Co. has announced intention to start full-scale operations in developing the field and construction of a pipeline to the Fairbanks and Ralibelt area. This project will get underway just as soon as contract arrangements can be finalized with the military for use of natural gas at military bases adjacent to Fairbanks. This \$40 million development by private industry will save the taxpayers a minimum of \$500,000 per year in the energy requirements of the Ladd and Elelson Air Force Bases.

The significance of the large natural gas discovery at Kenai, together with development of the Gubik gas deposit is difficult to realize at first glance.

In my opinion, development of the natural gas will open an entire new phase of economic development in the State.

Oil can be easily transported to refineries located in the smaller States. However, gas reserves can only be most efficiently utilized within the State. We will now have an abundant supply of cheap fuel, and the energy to reduce our metallic and non-metallic minerals to finished or semifinished form so that transportation will be feasible. Resources which have not been practical to develop in the past because of transportation costs, would appear now, in some cases at least, to be economically feasible.

All appearances indicate that gas and oil development will shortly become an everincreasing factor in the economy of Alaska.

A few moments ago I mentioned that Japanese interests had financed installation of a \$60 million pulp mill at Sitka. Responsible Japanese industrialists have shown a keen interest in other Alaska potentials and have been making an intensive and continuing study of several resources during recent years.

The Japanese have been financing exploration surveys on coking coal deposits located on the Bering River, above Cordova, for the past 2 years. Quality assays have been made, and the product has proven superior to their present sources of supply, located at a much greater distance. Japan is now using about 3½ million tons of coking coal a year in their rapidly expanding steel industry, and expect to reach 9 million tons within the next few years. If exploration studies show sufficient quantity, it is expected a \$40 million development program will be launched at the Bering River field in the near future.

Japanese industry is also greatly interested in several Alaska iron ore deposits. Presently feasibility studies are being conducted on large deposits at Klukwan and Snettisham, both located on tidewater in Southeastern Alaska, and easily accessible.

Just last Tuesday Dr. Katsuhiko Sakakura, chief geologist, Mitsubishi Mining Co. of Tokyo, offered a proposal to Alaska in a paper given at the fifth annual mining, minerals, and petroleum conference held at the University of Alaska. Dr. Sakakura proposed a joint venture of Japanese and American capital in developing Alaska resources, pointing out that Alaska appears the logical source of iron, coal, copper, oil, and other mineral products which are in short supply in Japan.

Dr. Sakakura proposes a 10-year program to explore and inventory Alaska resources on an annual budget of approximately \$3 million each year.

With the successful development of the Sitka pulp operation as a precedent, there appears to be considerable merit in Dr. Sakakura's proposal. Alaskan ports are considerably closer to Japan than are seaports in other Pacific Coast States. The distance from Anchorage to Tokyo, for example, is 3,613 miles as compared to Tokyo to Los Angeles, which is 4,839 miles—a difference of 1,200 miles.

It is becoming increasingly evident that Alaska's economic development will be greatly accelerated by close ties with the Orient, particularly Japan.

The foregoing may have been of interest to you. I hope it has been. However, no doubt many of you are saying to yourselves about now, "This may be interesting—what is happening, or may happen, in Alaska and in Japan. But what effect can it have here in Portland?" After all, Portland is a considerable distance from Japan and not exactly close to Alaska.

Alaska in the past has been termed a sleeping giant, a giant who would awaken when the bell of statehood sounded. I believe this rather flowery terminology is acurate. Our giant has not yet fully awakened, but he has begun to stir and to fiex his muscles. Very shortly his growth is certain to occasion wants which will multiply on a continuing basis.

Many of the wants, of course, must come from the smaller States. Logistics indicate everything possible to produce in the Pacific Northwest which is needed in Alaska will have a competitive edge over products of areas at more remote distance.

Alaska has more timber than Oregon and Washington combined. However, a great deal of our lumber is not desirable construction grade. Construction materials of all kinds will be in increasing demand in future years.

For many of our other needs we must depend upon you down here. We must look outside Alaska for virtually all types of finished hard and soft goods. Supplying the tools and needs for Alaska's development will very certainly create an important additional market, a market which will amaze you with its voracious appetite in a few short years.

A large share of this market can be served by Portland manufacturers, Portland businessmen, Portland wholesalers, and others in your wonderful city alert to new opportunities incident to development of our farthest north State.

Will Portland be serving a large share of this fast-growing new market? The answer must come from you.

Progress Report on Dresden, America's First Large Scale, Privately Owned Atomic Power Reactor

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. PRICE. Mr. Speaker, this is the fifth letter in a series of periodic background reports on the startup of the Dresden Nuclear Power Station. Dresden, located near Morris, Ill., was designed and constructed by General Electric's Atomic Power Equipment Department (APED), San Jose, Calif., for Commonwealth Edison Co., Chicago, and the Nuclear Power Group, Inc.:

The Dresden Station has completed its initial power production run on both single and dual cycle. During this period, the station produced nearly 25 million kilowatt-hours for the Commonwealth Edison system. Maximum electrical power reached was 90 MW.

This run was part of the extensive startup program of the huge station, and is designed to develop all of the information necessary to check design and performance calculations

for the plant. A report has been submitted based on this information requesting a license to proceed to full power operation. The present AEC license limits operation to one-half power.

To date, the system has proved exceptionally stable and power distribution has exceeded the best calculated estimates. Minor steam leaks and other miscellaneous maintenance items became apparent and will be adjusted during the shutdown period.

The reactor has been operated at a continuous steady state condition at half power for over 9 days to establish the reading in the reactor and the gamma scan. The gamma scan at the end of this run will provide the flux distribution information necessary for establishment of operating criteria at higher power. The testing program will proceed after scans are completed, adjustments are made and the head is replaced.

Mr. Speaker, Dresden, when it reaches full power soon, will be the world's largest electrical power reactor with all its energy being produced by a single reactor.

The Farm Problem-How To Maintain a Productive and Efficient Agriculture

EXTENSION OF REMARKS OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. CARLSON. Mr. President, Gladwin E. Young, Deputy Administrator of the Soil Conservation Service, U.S. Department of Agriculture, delivered an outstanding speech on the farm problem at the annual meeting of the La Plata Soil Conservation District, Durango, Colo., on April 1.

Mr. Young has had many years of service in behalf of agriculture, as is evidenced by the excellent speech he

made on that occasion.

For many years he was in the regional office in Nebraska, and while there rendered outstanding service in the field of soil conservation and the control of water runoff. Our area and the Nation are indebted to him for his excellent leadership in both of these fields.

I ask unanimous consent that this speech be printed in the Appendix of the

RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

THE FARM PROBLEM-HOW TO MAINTAIN A PRODUCTIVE AND EFFICIENT AGRICULTURE

(By Gladwin E. Young, Deputy Administrator, Soil Conservation Service, U.S. Department of Agriculture, at the annual meeting of the La Plata Soil Conservation District, Durango, Colo., Apr. 1, 1960)

This is a special occasion for me and a very pleasant one. I do not often have an oppor-tunity to attend annual meetings of soil conservation districts.

A few weeks ago I received a very cordial invitation from Mr. Raymond D. Farmer to attend this annual meeting of the La Plata Soil Conservation District, and to visit with you about soil and water conservation problems.

I am sure Mr. Farmer did not expect me or anyone else from the Washington Office of the Soil Conservation Service to give you much help on specific soil and water conservation problems with which you as soil conservation district cooperators are work-You can count on Ken Chalmers, J. P. Sexton, and Eugene McGuire for that kind of

Although I am not going to talk much about Colorado or your soil conservation district specifically, I do want to say that you can be proud of what you have done and are continuing to do in your soil conserva-Ken Chalmers has shown me tion district. your annual reports and I share his pride in what you have done.

THE FARM PROBLEM

Mr. Farmer did not assign a specific topic for my talk, therefore, I am going to talk about "the farm problem."

The reason I chose this subject is that a lot of folks nowadays are talking and writing about the farm problem as though it were a simple arithmetic problem in subtraction-

how to cut down farm production. The farm surplus problem, of course, is a tough one that will be with us for a long time. It is so prominently and widely advertised that it is little wonder that most folks refer to it as "the" farm problem. But in fact it is only one part of the farm problem and not by any means "the farm problem".

The farm problem I want to talk about is not very often referred to as a problem at all. Yet in my opinion it far overshadows farm surpluses as a major factor in the Nation's economy and security-both now and in the future.

I am referring to the problem of maintaining a productive and efficient agriculture and naturally this means a profitable agriculture.

ABUNDANT AGRICULTURAL PRODUCTION AN ASSET-NOT A LIABILITY

The preoccupation with farm surpluses has created an impression in the minds of the nonagricultural population that farmers have contributed to some kind of national deficit-some kind of millstone around the

neck of the Nation's economy.

It took a boastful foreign visitor—our biggest competitor-to tell the American public that no other sector of American economy stands out so far in advance of worldwide competition as does our agriculture.

Farmers of America were given a new status of respectability in the public eye when boastful Mr. Khrushchev conceded that his country lagged far behind the efficient and productive farmers of America. In his country 45 percent or more of the population is required to produce their food. America, 12 percent or less of our population produces food in abundance for the other 88 percent. If our farmers were no more efficient in the use of manpower than Russia, 50 million additional people would now be on farms and we would be losing the productive work of that many people.

You can see why Mr. Khrushchev seeks to attain the equal of our farm efficiency. You can also see why this Nation's attitude toward our own farmers must not be allowed to deteriorate further.

A productive agriculture is one of the Nation's greatest and most basic assets. As an asset, it far outweighs the liability of having to deal with agricultural surpluses. The fact that there has been a continuing surplus problem and the fact that there yet has to be found ways of dealing adequately with this overabundance is not a reflection on farm families.

Above all, the surplus problem cannot be solved by inducing inefficiency in farming or dissipating productive farmlands. withhold or withdraw from farmers scientific, technical, and educational services would have the serious consequence of increasing

the cost to the Nation for agricultural products by inducing inefficiency. It is imperative that we continue to have an agriculture that is capable of producing surpluses. In the present state of the world we dare not have a deficiency. National safety requires at least some surplus. Farmers should not be penalized by asking them to carry the Nation's cost of having an abundance.

In all fairness to farm people, we, the rest of us, should recognize two important things. First, that without the phenomenal increase in productivity and efficiency in farming the tremendous economic growth in the United States would be impossible; and second, that even if we add the cost of taking care of agricultural surpluses to the Nation's grocery bill, we still eat cheaper and better than at any time in our history when measured

against expendable income.

Our abundant agricultural capacity is not fust happenstance. Nor is it merely the result of our tremendous endowment of fertile soil and favorable climate. What we have is the product of skillful, resourceful farm families motivated by their own freedoms of choice under private ownership. In the hands and in the minds of these farm families are the contributions of our educational system and our system of agricultural research and services that make scientific advances the everyday working tools of farmers.

The farm problem that I am talking about is the farm problem of maintaining this capacity to produce abundantly-of keeping resourceful farm families on productive farms—of continuing to provide scientific advances and technical services that permit them to use their land productively and profitably. I am talking about the farm problem of maintaining abundant produc-tion for an expanding economy and an exploding population. I am talking about the farm problem of continuing the kind of farming that can be done by farmers rather than by "supermen" and gigantic financial organizations. I am talking about the rural development problem and the tremendous contribution that solid rural communities make to the strength and security of this Nation

These are problems not merely of subtraction. These are problems of addition, multiplication, and division—which is just my way of saying that farm surpluses are not by any means the major agricultural problem confronting this Nation any more than the surplus of military materials is the major problem of defense of this Nation. (And by the way, military surpluses are now 10 times greater than farm surpluses.)

The real problem is to keep an efficient, productive plant manned with competent and resourceful people to meet any need that may arise. That goes for our farm plant that turns out our food and fiber just the same as for our industrial military plant that turns out our rockets and satellites.

Now, if this is anywhere near the right perspective of what the farm problem really is we need to take a look ahead to see what the soil conservation districts of this country can do about it. What part do they have to play?

FORESEEABLE DEMANDS ON LAND

Let's take a look at the demands that are going to be placed on productive farmland. In recent months the Department of Agriculture has been asked to make some estimates of the demands that are likely to be placed on agriculture to meet the tremendous rate of expansion in population.1 Estimates are that population may double by the year 2000—just 40 years from now.

One of those requests came from Senator

KERE as chairman of the Senate Select Com-

² Committee print No. 12, "Land and Water Potentials and Future Requirements for

mittee on National Water Resources. Senator Krar asked for estimates of needed agricultural production by the years 1980 and 2000 and what demands would be made on land and water by that time.

From this report and other similar reports prepared by the Department of Agriculture we can get some insight into the greatly increased demands that will be placed on our land and water resources.

By 1980 we will need 50 percent more agricultural production. This is equal to production from about 230 million crop acres with present yields.

By the end of the century our population will have doubled. We will then need 120 percent more production, more than twice as much. This is equivalent to production of another 550 million acres of land with current yields.

But we won't have another 550 million acres of land from which to feed twice the number of people we now have.

In the early history of this country we doubled our agricultural production by doubling the amount of land brought under cultivation. Obviously this cannot be done to meet the situation that lies ahead. Our land resources have been culled over pretty hard. We are now using about 460 million acres of cropland in the United States. The Department of Agriculture's best estimate is that we will have only about 523 million acres of cropland in the year 2000.

This means that 40 years from now we will need the production of 550 million more crop acres at present yields—but will have only 63 million acres even after irrigating, draining, and clearing all land suitable for cropping. For example, we now irrigate about 30 million acres. In 40 years the maximum we could irrigate would be only about 55 million acres.

Demands for land for nonagricultural uses will increase tremendously too. Gitles, highways, military installations, parks and the like now use about 110 million acres. By 1980, 150 million acres will be used for these purposes and by 2000 a total of 191 million acres will be needed.

What this boils down to is that to meet the demand for twice as much agricultural production in 40 years, we will have to get it essentially from land and water already in agricultural use.

SOIL AND WATER CONSERVATION MUST BE GIVEN FIRST PRIORITY

With such an outlook, soil conservation and the conservation of water must be given first priority in the farm program. There will be no substitute for productive agricultural land.

Productive farmland will become more and more important, not less important in our total economy. To neglect the conservation of productive soils now in the hope that technological advances in machinery, fertilizers, or biological improvements will make land relatively unimportant would indeed be gambling with the Nation's security.

The point I am emphasizing here is there is nothing more important to the security and strength of this Nation than maintaining an efficient, productive, and profitable agriculture.

There is no more effective force to maintain and improve the kind of agriculture this country must have than the soil conservation districts, their leaders, and their cooperators.

The progress you have made in your own soil conservation district is good evidence that the job can be done. You are literally changing the face of the earth. The pioneers who cleared the forests and plowed the plains probably changed the face of the earth a little quicker than you have in your soil conservation district. But each soil conservation district supervisor since the

beginning of this great movement has been no less a pioneer and perhaps has served with similar rewards as the pioneers that first settled on farmlands. A good many of our pioneer forefathers had to take their rewards from satisfaction of building farm communities for a better life ahead. The fact that they sometimes managed their land and water badly was often due to lack of knowledge of how to do better. We are still working at the job of how to do better. We will be working at the same job when our grandsons take over.

There is always the challenge to soil conservation district supervisors and to those of us in technical conservation work to speed up conservation on our lands. The job of speeding application of conservation on our farms and watersheds rests primarily in each soil conservation district. Never before in the 22 years of leadership over the country have soil conservation district supervisors had the job of pulling together such a wide variety of conservation programs. Never has it been more important to see that soil and water conservation plans contribute substantially to lowering costs and giving stability and assurance to income and efficiency of farms and ranches. EFFECTIVE SOIL AND WATER CONSERVATION THROUGH COMPLETE FARM AND RANCH PLANS

As soil conservation district supervisors, you have been asked why your district program puts so much emphasis on a conservation plan for the entire farm or ranch. As cooperators of the soil conservation district many of you have asked this question and answered it to your own satisfaction. But this is a question that needs answering over and over.

From the very beginning of the Soil Conservation Service we have emphasized the fact that soil and water conservation can be carried out effectively by farmers and ranchers only if a sound and practical conservation plan is made for the entire farm or ranch unit. This is based on the fact that individual conservation practices applied without consideration of capabilities of the land and without relationship to other needed practices are likely to fail to do what is expected. In some cases they can be detrimental and costly.

We in SCS are concerned that soil and water conservation make a positive contribution to helping farmers and ranchers make a better and more satisfactory living. We are not thinking of soil conservation as merely something that saves the land for somebody's benefit a generation from now, although, of course, that benefit is bound to result and is an important reason why public funds are made available for the nationwide soil conservation program.

Protecting, improving, and making profitable use of soil and water resources is a special kind of job that must be worked at in a special kind of way. It isn't something that automatically happens as a byproduct of "good farming." It is in fact the basis on which good farming is built.

Just preventing decline in productivity of soil is not what soil conservation has come to mean in the more than 2,800 soil conservation districts in the United States. It means using soil and water productivity, profitably, and efficiently. It means a whole system of soil and water management practices fitted together in a practical and workable system for the entire farm or ranch. It means using land and water so unit costs of production are reduced. It means using land and water for farm products that have the best chance of making a profitable farm or ranch unit.

Soil and water conservation for a farm or ranch cannot be treated in fractions or in fragments with any genuine hope of permanent success. A conservation plan that uses land within its capability must be based on the entire farm or ranch as an operating unit.

The truly great improvements in farming have come about, not through the dramatic effect of one or two practices, but through the combined effect of several practices, each supporting the others. Only through a plan is it possible to fit all the soils, practices, and enterprises into the most efficient system for sustained production.

Soil conservation district supervisors and the Soil Conservation Service staff have a continuous task of helping cooperators to see the advantage to themselves and to their community to plan and carry out soil and water conservation. It is important that new cooperators understand that conservation plans contribute to improved efficiency and income—not only now but give assurance to a continuous and stable income. We all know the disaster of short-lived income from irrigating land that should not have been irrigated, plowing land that should not have been plowed, overgrazing ranges or overcutting woodlands.

If a conservation farm or ranch plan starts with an adequate unit, and if sound economic alternatives are chosen for the use of land within its capabilities, the kind of conservation practices chosen to carry out the plan will have good chance of being effective and profitable. But if conservation practices are applied without consideration of the adequacy of the ranch or farm to provide a living for the family, then fallure is invited from the start.

Soil conservation district supervisors can make a tremendous contribution to improved soil and water conservation by advising younger and less experienced men about combinations of land and water resources needed for successful, profitable units. The tremendous adjustment now taking place in numbers of farms, increasing size of farms, and shifts in land use may offer soil conservation district supervisors a special opportunity to lend a helping hand. If a farm or ranch does not have the potential productivity, even under good man-agement, to provide a living for the family. it will, of course, be impossible to adopt a sound system of soil and water conservation on that unit. The soil conservation district program, therefore, has a direct interest in helping in every way possible to see that those who may be setting up new operating units or making major shifts in land use, have the benefit of advice from experienced farmers and bankers in the district.

The emphasis placed on adopting a conservation plan to the capabilities of the soil should not overlook the the capabilities of the farmer and rancher, and his family. Any successful conservation plan must be tailored to the family who carries out the plan. For this reason, a farm or ranch plan must be the farmer's or rancher's own plan. It must serve as his record and guide for a systematic schedule of practices he plans to apply. This schedule and plan must be tailored not only to the physical capabilities of the land, but must be tailored to the managerial ability and special interests of the operator and his family.

Before I conclude I should like to mention briefly that competition for water will increase by leaps and bounds the same as competition will increase for land.

This is important to agriculture because agriculture is the largest user of water in the United States. It is now estimated that 195 million acre-feet are stored and diverted for irrigating approximately 30 million acres. By the year 2000 approximately 55½ million acres may be irrigated. This increased irrigation would require 307 million acre-feet unless improvements are made in water conservation practices on irrigated lands.

The report made to the Senate Select Committee on National Water Resources by the

Department of Agriculture estimates that there will be improvements made in irrigation practices so that irrigated acreage can increase from 30 million acres to 55½ million acres with practically no increase in total water requirement. This means that present irrigation methods are terrifically wasteful of water.

If agriculture is to retain the use of water against the competition from nonagricultural uses, it must be able to do so on the basis of economic competition. In the long run, the use that can pay most for water will buy

it away from other uses.
With this outlook, it is imperative that water conservation practices be used for irrigation, stock water, and all other uses. Thirsty water users are going to complain louder and louder about wasteful water uses.

Watershed projects can make a substantial contribution to efficient use of water supplies. In many irrigated areas damages are high from flash floods coming from surrounding uplands. Such floods not only increase cost of maintenance of irrigation facilities but are wasteful of water. We need to make sure that all watershed projects contribute to improved use of water as well as the watershed lands themselves.

I know that I need not spend more time discussing watershed projects, conservation farm plans, or improved irrigation.

If I have made my point that the farm problem about which the people of this country should be most concerned is the problem of maintaining an efficient and productive agriculture, then I shall be satisfied.

If I have made that point and if you agree with me, then you also agree that the job of soil and water conservation and productive use of our land and water resources is one of the most important jobs confronting this country.
That's your job.

Observations on the Forthcoming Summit Conference

EXTENSION OF REMARKS OF

HON, VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of a letter addressed to Secretary of State Christian A. Herter by Mr. Constant Mierlak, national president of the Byelorussian-American Association.

Mr. Mierlak's letter contains some verv sound advice on the eve of the Big Four summit conference this month. I feel sure that the Secretary of State and his advisers in the Department of State will take due note of the views expressed in this letter. It reads as follows:

APRIL 29, 1960.

Hon. CHRISTIAN A. HERTER,

Secretary of State.

Department of State, Washington, D.C.

DEAR MR. SECRETARY: On the eve of the summit conference which will take place in Paris on May 16, 1960, the executive national committee of the Byelorussian-American Association wishes to take the opportunity to express certain observations and ideas which it believes deserve consideration to attain a strong position at the summit.

Our views are based on the firm knowledge that the cold war techniques of Khrushchev are essentially those of his totalitarian predecessors. Nuclear blackmail threats of an East German treaty and many other diplomatic stratagems have their substantial precedents in the arsenal of imperial Russian diplomacy. This arsenal served to build an unprecedented empire which the Red czars have conserved and extended.

The very occurrence of a summit at this time symbolizes a victory for the pressing propaganda and diplomacy staged by Moscow these past 2 years. The peace-at-noprice attitude shown by Moscow toward the summit indicates in itself the manner by which it seeks to exploit this given opportunity. The carefully calculated game of bluff and bluster has reaped for another summit and Moscow's objective now is to exploit it fully.

1. We believe that Khrushchev's overrid-

ing objective is Western assent and acquiescence to his empire. His emphasis upon disarmament seeks to deflect Western attention from basic subject: freedom for all men

and nations.

We strongly urge that our Government seize every opportunity to insist upon this crucial subject as a major point of summit discussion. Fallure to do so would be, in effect, an accommodation of Moscow's empire and a victory for Khrushchev. We would be bolstering the security of the Russian colonial system and undermining our most powerful allies; namely, the captive non-Russian nations in the Soviet Union. The very implication of an assent to the status quo would make mockery of the Captive Nations Week resolution passed by the Congress and proclaimed by the President

last year.

2. We believe that the cold war issue is a corollary objective of the above, and Khrushchev's additional aim is the curtailment of a free world propaganda directed at his empire, which shows how Moscow did away with the Hungarians in 1956 or with 5,800,000 Byelorussians in the last years of Stalin and in the Khrushchev administration.

3. We believe that the disarmament issue

is in essence a secondary one. It is usable for Moscow as a diversionary technique. Only to a minor extent is Moscow stress on it attributable to the necessities of empire control and consolidation. As a deflector from the real issue it will serve Moscow's purposes well.

Bearing in mind the record of broken Russian treaties for the past 40 years, a disarmament or other treaty with Moscow would signify a trained neglect of historical

experience.

4. We believe that the practical step toward better understanding of nations and to stress on the multinational composition of Soviet Empire it would be establishment of diplomatic relations with non-Russian republics in the U.S.R. The idea that deserves very serious consideration is the creation of diplomatic relations with Byelorussia and Ukraine, both charter members of the U.N.

5. We believe that the monolithic myth of the U.S.S.R. is groundless, because of the multinational structure of the Soviet Union. Myths, such as the Soviet nation or the Soviet people hardly bespeak the power of understanding which can draw the respectful attention of even the Russian colonial-

Mr. Secretary, we and countless Americans earnestly hope that we will not compromise on those principles enshrined in our own Declaration of Independence—principles which continue to make our Nation great.

With kindest personal regards and best wishes for a firm stand on our convictions at the summit, I am,

Sincerely yours,

CONSTANT MIERLAN, National President, Byelorussian-American Association.

Visits by F. C. Christopherson to India and Lebanon

EXTENSION OF REMARKS

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles by Mr. F. C. Christopherson, written under the title "The Editor's Notebook," in the Sioux Falls Argus-Leader, giving his impression about a visit to Lebanon, Calcutta, and India as a whole.

There being no objection, the articles were ordered to be printed in the RECORD. as follows:

[From the Sioux Falls Argus-Leader, Apr. 21, 1960]

THE EDITOR'S NOTEBOOK-HOMELESS SLEEP ON CALCUTTA'S STREETS

(By F. C. Christopherson)

Calcutta, India.—Our introduction to Calcutta, India's largest city, was startling. It was about 3 a.m. and we were on our way in a bus from the airport to the Grand Hotel in the heart of the downtown section. Soon we noticed sprawling forms on the sidewalk—at first a few, then many. These, we were told, were people—the homeless residents of Calcutta.

At first it was actually difficult to accept the sight our eyes were presenting—the sight of people huddled in old blankets or sheets and sleeping on the bare sidewalks and along the edges of the buildings. Intermixed were

cows, also sleeping quietly.

It would be different, we assumed, as we reached Chowringhee Road-the city's best avenue. What we were seeing at first was probably in the slums, we conjectured. But not so. The sidewalk sleepers were more numerous on Chowringhee and there were many of them even a few steps from the entrance of the Grand Hotel, Calcutta's best.

OUR CATTLE LIVE BETTER

The picture thus presented to us of Calcutta was one of misery. Here were men, women, and children-entire families with all of their meager possessions about them—sleeping on the hard walks. A few late pedestrians scrambled in and around their forms. It was a scene perhaps duplicated nowhere else in the world and surely one that was shocking to American eyes.

No Americans, even in our worst slums, live as these people do. Farm cattle in Minnehaha County live in quarters that are

palatial by comparison.

Indian leaders sought to explain that many of these persons weren't really homeless and that they slept in the streets because they were cooler.

"But," an American told Mr. Christopherson and myself, "you should see their homes—perhaps a box in an alley or a dugout under a porch. Actually most of them don't have homes of any kind."

No one could give us a specific estimate of the total of homeless in Calcutta. Perhaps 100,000, said one person. Another said 300,000 to 500,000. Nobody actually knows because they've never been counted and there's no way of counting them.

Many of the homeless are Hindu refugees from East Pakistan, an area separated from India in 1947. It is largely controlled by Moslems and the Hindus, at first badly mistreated, moved out. And most of the refu-

gees came to Calcutta, complicating this city's problems.

A CITY OF SADNESS

What Mrs. Christopherson and I saw subsequent to that early morning ride served primarily to supplement our first impression.

Here in Calcutta and suburbs are some 8 million people. Those who are employed receive niggardly wages—20 to 60 cents a day. But literally hundreds of thousands are unemployed. The streets are alive with beggars, some of them misshaped persons. Little children with eves full of sadness ask for a coin. It isnt' easy to say no, but if you give to one, you'll soon be surrounded by a grabbing and grasping mass of humanity. So, in self defense, you're compelled to be

Parading up and down the streets are these throngs of people with nothing to do and nothing to spend. They wander aimlessly and seem like a people who have lost purpose and hope.

Such obvious human misery is depressing and there's a desire to leave Calcutta and to forget about it. But this city is a part of the world and these people are human beings.

NOTHING PLEASANT

It's always more pleasant to write something nice about a place one visits-to search through and above the flotsam and jetsam and find a ray of sunshine.

But I can't find it in Calcutta. It's a city of distress and despair and, as well, a dirty city. The garments of the people seem unclean. Even in the Grand Hotel, some employees wear white clothing that shows no visible sign of having been in a laundry for Weeks. This is no city for a tourist, who is seeking the more attractive things of life, to Visit.

[From the Sioux Falls Argus-Leader, Apr. 22, 1960]

THE EDITOR'S NOTEBOOK-INDIA AN ODD AND CONFUSING LAND

(By F. C. Christopherson)

CALCUTTA, INDIA.—The story of India is so peculiar and confusing that it would be presumptuous of me to say that I have learned it. But I do have impressions and I'll relay them for whatever they may be worth.

India is an odd land-a country of some 400 million people. Only 15 percent of this number is literate. Outside of the larger cities, the people live in an atmosphere of Virtual isolation.

"Consider this fact," said a well-informed American, "when you try to analyze India. Perhaps most of the people of this country never knew that President Eisenhower was here last December. And there's no way of reaching them because they can't read they can't write. They aren't anti-American or pro-American. They just don't know anything about the United States. Many don't even know that there is such a country as ours."

STILL THE CASTE SYSTEM

It is a country of queer habits. Though the caste system has been legally abolished, it is almost as much alive as ever.

"They'll never get rid of it in a thousand Years." said an employee of the American sald an employee of the American Government who has been working with the people in the areas outside of the cities. It's a part of their life and of their character and it's just about inflexible. You belong to one caste and there you are, law or no law."

There's agreement, however, that the untouchables have become a bit more touchable as the result of pressure exerted by Prime Minister Nehru. But the castes in general remain

COWS AREN'T SACRED BUT-

And there's the matter of the sacred cows—somewhat a misnomer, by the way.
Actually they don't regard the cows as sacred. Rather they treat them as they would a member of the family and they would no more think of slaughtering a cov for beef for sale than they would killing a child for that purpose. The Hindus do not eat beef.

"The cow is respected and loved," ex-ained an Indian, "because it is the giver plained an Indian, "because it is the giver of life through its milk. But the bulls are even more respected because of their role in reproduction.

There's one sect of the Hindu group that will not kill any form of life-not even a mos-This stems in general from the supposition that all living creatures have souls

and a spark of divinity.

The dominant religion, by the way, is Hindu, accepted by about 85 percent of the peo-ple. Some 10 percent are Moslems. About 2 percent are Christians. And there are no indications here of the movement away from religion that was so prominent in Japan and, to a lesser degree, among the Chinese in Hong

SHARP CONTRAST

Wages are as a rule miserably low. The waiter who served us in the Grand Hotel said he received \$12 a month for a 60-hour week and tips are limited through a management rule against them. Unskilled day laborers as a rule are paid 40 cents a day.

Yet capitalists here make much. And still in existence are the fabulously rich mahara-

One of them—wealthy enough to wear emeralds as coat buttons, thought the world was coming to an end because he had been forced to increase the wages of some workers to two rupees-40 cents-a day.

All of which leads to the conclusion that the Communists may be able to do in the villages here-representing 85 percent of the population-what they did so easily in China.

LIBRARIAN FROM MADISON, S. DAK.

A pleasant feature of our visit here was an opportunity to see Miss Ruth Krueger of Madison, S. Dak., who is the director of library service for the U.S. Information Service in this area. She has been here 2½ years. She asked, by the way, that we extend greetings to Librarian Lora Crouch of Sioux Falls.

Asked directly whether or not she thought American information was reaching the people of India, Miss Krueger said: "Well, I know we're reaching many students and professors and other educated persons. There's a constant demand from them for American literature and, as you can see, our reading room is crowded But I must admit that it is almost impossible to make much contact with the illiterates in the villages. Our informative motion pictures, however, are helpful."
My conclusion? I don't know. This is a

land of ignorance and superstition, frightening in a sense because the people are so numerous and know so little.

[From the Sioux Falls Argus-Leader, Apr. 23, 1960]

THE EDITOR'S NOTEBOOK-BEIRUT IS MIAMI OF MIDDLE EAST

(By F. C. Christopherson)

BEIRUT, LEBANON.—Compared to squalor, filth, poverty, and heat of Calcutta. this beautiful Arab city on the Mediterranean is like a vision of paradise.

Just as it was hard to say something nice about Calcutta, it is difficult to say something that isn't nice about Beirut.

As I type this on the balcony of a room in an ultramodern hotel, I look out upon the sky-blue waters of the sea. The air is stimulatingly fresh. In the distance to the left

are snow-covered mountain peaks. Below me are youngsters swimming happily in the gently rolling surf of the sea. Along the shore is a four-lane highway.

Beirut, says the local chamber of commerce, has everything. At the moment, I'm inclined to accept its appraisal.

A BOOM IN PROGRESS

When Mrs. Christopherson and I entered Beirut early yesterday after an early morning flight from Calcutta, it is fair to say we were amazed. In these older cities-actually as old as history—one expects to see that which is ancient. But here we approached a seaside area that is as modern as Miami's waterfront with new buildings by the dozens lining the coast.

The hotel in which we are staying-the Carlton—has been open only 4 weeks. Everything about it, of course, is new—even the help. Our room—a spacious twin-bed one with a delightful balcony—costs \$12 a day. And there are more hotels such as this under construction because the demand for quarters is so heavy.

IT'S PARIS AND MIAMI

What makes Beirut click? Why is it booming in a fashion comparable to a thriving American city in a region where patterns of development are usually well and long established?

"The reason," a veteran American news man told me, "is that Beirut is both the Paris and the Miami of the Middle East. Here is the place to which the people of means from all of this region flock for holidays, pleasure, and shopping. And don't forget that some of the richest men in the world live in Beirut. Several oil-rich Arab shelks are putting their money to work here. One bought a Beirut hotel just so he'd have a place of his own in which to stay while visiting Beirut."

It sounds a bit like Texas. There's a difference, though, in that the rich men are richer and fewer. And, of course, as every-where in the Middle East, the poor are extremely poor and also very numerous.

Yet I've seen here more standard-sized American cars of recent make than in any city so far visited. Beirut shows evidences of prosperity observed nowhere else on this There are more well-dressed people on the streets, more restaurants of the better type and signs of a more abundant

CITIES THAT ARE REALLY OLD

But it would be wrong to leave the impression that all Beirut is as new as to-It is, of course, one of the world's morrow. ancient cities. Back home we celebrate centennials. Here, if they were so inclined, they could celebrate their 5,000th or 6,000th anniversaries, perhaps even their 7,000th.

Areas of downtown Beirut are typically crowded and congested. Streets thronged with men and women in Arab dress-and many women, by the way, wear Yet modern dress is common. a blend of the old and the new. And there is here, as elsewhere in the East and Middle East, a striking contrast between the rich and the poor. But Beirut seems to have in the process of development a fairly large middle class.

Beirut has a population of about 600,000 and that of Lebanon is about 1,600,000. The entire country, lining the Mediterranean, is small-120 miles long and some 30 to 35 miles in width. Fit that slice into eastern South Dakota and you'll get an idea of its

It is a productive country—a land described as one of milk and honey. Produced here are some of the world's choicest

Notable so far is the fact that I haven't been approached by a beggar on the streets the first foreign city to record that mark in its favor. Though there are people who seem obviously in need of help, apparently they haven't acquired the habit of begging.

Yes, I like Beirut and it's a pleasure to report to the many residents of Sioux Falls who have a Lebanese ancestral background that they may well be proud of the progressive strides being made in the capital city of their old homeland.

Congressman Minshall Announces Poll Results

EXTENSION OF REMARKS

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. MINSHALL. Mr. Speaker, for the past 6 years I have had the privilege of representing the 23d District of Ohio in the Congress of the United States. During this time every effort has been made to sound out the sentiment of the district and be well informed of the views of the residents. I have also made a continuing effort to keep the people of the district advised of the events in Washington through regular newsletters and other news media, opinion polls, and annual traveling office meetings. This constant interchange of ideas between voter and Representative has helped me keep my finger on the pulse of the district and has better enabled me to represent them effectively in Washington.

Again this year another opinion poll was mailed to the home of every registered voter, 111,000 homes in all. response was excellent. Over 16,000 returned the questionnaire, and of these approximately 3,000 amplified their views in additional letters on key issues before the Congress. The percentage of returns received from Ohio's 23d District is much higher than in other areas conducting similar polls, and I am pleased with this response, for it shows the great interest which residents of this suburban area have in their Government.

In comparing the results with previous polls, it is interesting to note that the vote on foreign aid is about the same as it was a year ago, whereas the opposition to Federal aid for school construction showed a marked increase from 58 percent in 1959 to 64 percent this year. About our military preparedness, 14 percent said they did not have sufficient information to know whether or not our defense budget was adequate. However, 74 percent, or 12 percent more than in 1959, thought that we were spending enough money on our Nation's defense.

The response to the question, "Who is your choice for the next President of the United States?" clearly put the voters in Vice President Nixon's corner, as tabulations showed him a 4 to 1 favorite over Senator Kennedy. A very small but vociferous percentage of voters, however, did voice strong opposition to one or the other of these candidates.

I should like to emphasize that I do not use the results of these polls as an absolute guide or political weather vane in voting on major issues, but do derive much benefit from having the excellent comments, advice and views of my constituents.

The results of the poll follow: OPINION POLL

1. Do you consider the proposed \$41 billion Defense budget adequate? Yes, 74 percent; no, 12 percent; no opinion, 14 percent.

2. Do you favor Federal aid for local school construction? Yes, 35 percent; no, 64 per-

cent; no opinion, 1 percent.
3. Do you favor Federal aid to raise teachers' salaries? Yes, 26 percent; no, 72 percent; no opinion, 2 percent.

4. Do you believe we should continue our foreign-aid program? Yes, 49 percent; no, 46 percent; no opinion, 5 percent.

5. Do you favor the Eisenhower-Khrushchev exchange of visits? Yes, 83 percent; no, 15 percent; no opinion, 2 percent.

6. Do you believe the Federal budget should be kept in balance? Yes, 91 percent; no, 8 percent; no opinion, 1 percent.

7. Who is your choice for the next Presi-

dent of the United States?

Democracy Depends on Your Vote-Don't Fail It

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. WILEY. Mr. President, the lifeblood of a republic is its people-well informed, thinking, creative, knowledgeable people.

In a complex age, however, each of us, as citizens, faces the task of fulfilling a dual role: First, as an individual integrated into our social and economic structure, and second, as a civically responsible citizen in our political system.

Tragically, the voters of the country historically have demonstrated far too little interest in exercising their voices in government. Specifically, what does this really mean?

First, loss of a voice in governmentthrough negligence-for millions of people:

Second, rule of the minority, since the total vote at its top is barely over 50 percent of the population;

Third, an inordinately strong voice in government for the special interests crusading for their own goals; and

Fourth, a loss to the government itself in terms of strength of support, ideas, efficiency, and organization.

In general, the apathetic attitude toward voting results in "somebody else minding our business"-and government is the business of each of us.

Comparatively, our voting record-in the greatest free country in the worldcompares unfavorably with the voting of people in other nations in which citizens are allowed the voice of the ballot box. For example, the span of voter participation in elections has varied in the United States from 24 percent in 1904 to 63 percent in 1952. By contrast, voting in other countries has reached such ranges as follows: Italy, 93 percent; Germany, 89 percent; Turkey, 87 percent; Denmark, 80 percent.

We recognize of course that the responsibility of voting involves more than just going to the polls and marking an "x" on a ballot, or pulling a lever on a voting machine. The duties of citizen-ship also require educating ourselves on the fundamental issues of a campaign, on the qualifications of candidates, on the operation of government and thoughtful concern as to how we, as citizens, feel that government could better serve the people.

Currently, I am most encouraged to note that voluntary organizations, labor, management and a great many other groups are sponsoring voter education programs-to awaken the American people to a greater responsibility in citizen-

ship

Recently, the Retail Clerk's Advocate published an informative editorial entitled, "Democracy Depends on Your Vote—Don't Fail It." Reflective of the kind of constructive thinking underway to encourage voting by a greater number of people, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

DEMOCRACY DEPENDS ON YOUR VOTE-DON'T FAIL IT

Whenever a city is rocked by political scandals everyone asks, "How did those crooks get into office?" Looking around for someone to blame, they rarely face up to the truth: It is the nonvoter who is responsible for corruption in the government at any

level: city, State, or National.

The bosses and their machines can afford an occasional scandal. They know that the good people who denounce them in mass meetings and newspapers, who clamor loudest for independent candidates, and who cry for better government will have forgotten about these incidents by election day. Moreover, the primary contests, where ma-chine politics are most rampant, will excite very few.

So the bosses and their machines are left in practical control in many of the Nation's most important political areas. This control will continue as long as the apathy of

the average citizen persists. This situation is a dangerous one which cannot be allowed to continue. The problem of encouraging democratic government through greater voter participation is one of the primary missions of the Active Ballot

It is obvious that the people have the power and the ballot to make their government responsive to the will of the majority. It is obvious that it is greatly in the individual as well as the collective interest to have truly representative government.

In spite of the intellectual awareness of this on the part of most of our citizens, our elections consistently record the lowest percentage of votes of any democracy in the world.

The Active Ballot Club is an organization founded on the principle that every citizen is a responsible voter. By broadening the base of participation in our government, the influence of all special interest pressure groups and corrupting forces will be diminished.

The voter participation program of the ABC is based on three principles, registration, informing oneself about the candidates

and issues, and voting.

Particularly in this important presidential election year, the direction the country will take over the next 4 years hangs on the decisions of the voters.

It is scarcely an exaggeration to say that the next President of the United States will face problems of a magnitude that stagger the imagination.

Some of the Nation's foremost economists are fearful of another recession in 1960. School problems have long since passed the crisis state. Resource conservation, extension of national minimum wage and hour coverage, water pollution control, farm problems, the country's depressed areas, all need attention.

Foreign affairs will continue to bulk ever larger in the policies of our Nation. Communism, which once was a problem confined to the other side of the earth, is making serious inroads in this hemisphere.

The Active Ballot Club is not, nor will it ever be, a prophet of doom. It believes that the Nation possesses the strength, determination, boldness, and imagination to solve the problems which face it.

But the solutions will not come automatically and without effort on anyone's part. They will have to be worked for, even

fought for.

The challenge of perpetuating and improving our democratic way of life is one that no member of the ABC can safely ignore.

Airline Safety and Economy in the Jet Age

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. BROYHILL. Mr. Speaker, more than 1,500 commercial airline aircraft in the United States today are flying hundreds of thousands of route miles per day from more than 550 airports. A takeoff or landing occurs every 6 seconds. Yet, for all this, aviation is one of the safest

means of travel ever devised by man.

The system of cross-checks and double-checks provided by the airlines insure the safety, comfort, and convenience of the traveling public.

No small part of this team effort safety is played by a man you probably have never heard of, the airline flight dispatcher, sometimes called a flight superintendent.

The very existence of these dispatchers was created by our former colleagues in the passage by Congress of the Civil Aeronautics Act of 1938, with the intent to insure the utmost in safety in the operations of the scheduled airlines.

These gentlemen have formed a union known as the Air Line Dispatchers Association, a dedicated body of men who are devoted to free enterprise, performing a vital function for the safety of the

traveling public, at the same time doing their utmost for the economic success of the Nation's carriers. This, at a time when there is much emphasis on the growing role of Federal Government in aviation matters, is mute evidence that private enterprise can perform well, in the public interest.

This group has recently published a brochure entitled "The Dispatcher—Airline Safety and Economy in the Jet Age." A copy has been mailed to each Member of Congress. I am sure you will find it most helpful as a reference book on this phase of aviation at this time when safety and economics relative to the scheduled airlines is of such importance.

The Family-Size Farm

EXTENSION OF REMARKS

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. DIRKSEN. Mr. President, irresponsible charges are not new to American politics in campaign years but some of the most reprehensible allegations are being made by several of the Democratic presidential hopefuls in their desperate dash for delegates.

To the volume of mounting criticism of such contentions as "17 million hungry Americans" and the "disappearing family farm" I should like to add for the RECORD, the recent editorial of the Chicago Daily Tribune on the subject of "Fact and Rumor."

I ask unanimous consent that the editorial be printed in the Appendix of the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune, Apr. 16, 1960]

FACT AND RUMOR

Exaggeration is a characteristic of political campaigning, but we do think it is sometimes carried a trifle far. The other day, for example, Senator John F. Kennedy improved a stop in Indiana in his quest for the Democratic presidential nomination by charging that prosperity under the Elsenhower administration is a myth, because "17 million Americans go to bed hungry every night."

You may be sure that Senator Kennedy is not among this hypothetical 17 million, for the family fortune is of dimensions which do not permit famine to be envisioned.

Other Democratic aspirants, such as Senator Hubert Humphrey, are forever lamenting the imminent passing of the family farm, though it is to be noted that the system of farm payoffs originated by the Democrats has so far conspicuously rewarded huge corporate farming enterprises.

Secretary of Agriculture Ezra Taft Benson took a look at these campaign assertions last week and offered the opinion that they were unashamed misstatements and distortions. He said that the allegation about the 17 million hungry had no factual basis, which is a polite way of saying that it is an untruth.

Mr. Benson then addressed himself to Senator Humphrey's contention that millions of families are being forced off the farm.

Here the Secretary was able to cite unarguable statistics that the statement was untrue. The greatest exodus from farms, he said, occurred during the two Democratic decades, 1933-53, when 10 million persons left the land. The greatest percentage decline in farm population occurred during Harry Truman's finals years in the White House, 1950-53.

Today, Mr. Benson said, 96 percent of all American farms are family owned. This is the same percentage of family ownership as prevailed 30 years ago, before the coming of the New Deal.

Secretary Benson has been blamed for many things, among them the administration of an unworkable and monstrously expensive system of farm price supports and ostensible crop control which he inherited intact from the Democrats and has never been able to scrap or change. Because the farm program is idiotic, he is usually charged with its shortcomings and saddled with its unpopularity. Even the Republicans who hope to follow in Mr. Elsenhower's tracks start running away when they catch a glimpse of Mr. Benson.

But who is the only member of the Re-

But who is the only member of the Republican party and administration who replies to unfounded aspersions on his party's record? Why, it is Mr. Benson.

Interfaith Fellowship Awards

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following address by Mr. Philip Lustine, a trustee of the B'nai B'rith Foundation, delivered on Thursday, April 28, 1960, at the Interfaith Fellowship Awards dinner of B'nai B'rith which was held at the University of Maryland, College Park, Md. The dinner was in honor of Gov. Millard J. Tawes of Maryland and the scholarship awards were presented to Miss Patricia Messer and Mr. Jack Hillhouse.

The important addresses were delivered that evening by Speaker Sam Rayburn and Senate Majority Leader Lyndon B. Johnson. Among the distinguished dais guests were our coltinguished dais guests were our coltinguished dais guests were our coltinguished E. Lankford, and Daniel B. Brewster.

Mr. Lustine was general chairman of the dinner and his remarks follow:

My dear friend, Gov. J. Millard Tawes, President Label Katz, distinguished guests on the dals, and all of you wonderful people who have come to celebrate our beloved Governor's birthday.

My heart is very full as I stand here right now. I wish that the gift of words had been given to me in full measure, so that I could express to you the tremendous feeling of happiness I am now experiencing. As the Bible would say: "My cup runneth over"—for not always is it any one man's good fortune to be able to pay a descrying tribute to a close friend of many years, but also, that in doing this, he can do something close to his heart, and that is help make possible the interfaith fellowship in the Governor's honor.

I have been chatting with the Governor while we were sitting here having our dinner-and I know he too is aware of the warmth, good fellowship and-above even that—the extra "something" which we all feel tonight and which will long be remembered and cherished by me. The Governor also is aware of this "benevolence, harmony and brotherhood" which is the essence of the service of the B'nai B'rith.

Many people have asked me "What does B'nai B'rith mean?" It is Hebrew for "Sons of the Covenant," and this organization, recognized by our own Government as outstanding in its service to humanity, has been carrying on its work with quite dig-

nity for over 117 years.

Particularly tonight, when we are celebrating our beloved Governor's birthday by instituting an interfaith youth fellowship in his honor, it is fitting that we have a small picture of what this organization's youth program stands for. B'nai B'rith has today 219 Hillel Foundations all over the United States in major colleges and universities. It has lecture series, programs, forums and debates, all open to the college campus. It awards interfaith scholarships, work incentive scholarships and annual awards to outstanding students throughout these foundations. Through its offices for vocational service, it has helped over 160,000 young people in the last several years to find their particular slot for their future success as adults. It conducts studies in vocations and careers, and gives guidance and counseling to groups, as well as indi-vidually. Through the B'nai B'rith Youth Organization, which consists of over 1,400 teenage chapters of boys and girls nationally, these young people are taught devo-tion to their country, their responsibility as future adults and members of their communities, by working on programs such as the March of Dimes, cancer, heart and other brotherhood and service activities.

Altogether, over 300,000 young people are served through the B'nai B'rith and are aided by affairs such as this one we are

holding tonight.

Therefore, it has been a great personal joy to me to be able to be associated with this wonderful undertaking and to have served as its general chairman. The won-derful turnout this evening, Governor, derful turnout this evening, demonstrates the affection and regard we all have for you, both as an elected public official and as a warmhearted and genuine human being. The honor that is bestowed on you this evening is most fitting and proper. It is a true testimonial to your marvelous integrity of character, to your dedication to humanity, and to your sincerity in demonstrating kindness and af-Your public spirit and highfection. minded purpose hold you in esteem by all.

Governor, I want you to know of the many wonderful people who have worked with me on this affair. Time and effort meant nothing to them. Their devotion and enthusiasm were outstanding. They gladly volunteered their services—with their hearts and souls. Yes; they are truly dedicated marvelous folks. The real success of tonight's activity has been made possible by them. Words cannot express my deep appre ciation for what they have done. Words cannot express my high regard and praise I will always be grateful to them. for them. I will always be grateful to them. Only for the reason of conserving time, I refer you to their names, listed as the testimonial committee, which appears on your program. However, I would like to single out one person who did over and above what anyone could be expected to do-Mrs. Irma Bogdanoff, assistant national director of the B'nai B'rith Foundation. To her goes the sincere thanks and appreciation of not only myself, but of the entire committee. Incidentally, I want to congratulate the staff of

the University of Maryland for the very lovely dinner.

My friends-to all of you here tonightthe warm appreciation and heartfelt gratitude of the future of our great countrythe youth of America-who are served by the B'nai B'rith. Thanks to your generosity, understanding, and wholehearted support, you have made this possible. And to you, Governor, my heartiest congratulations on this honor you so justly deserve. May good health, happiness, and God's blessings, always be with you and your family.

I thank you.

Making a Mockery of the Judicial Process-The Chessman Case

EXTENSION OF REMARKS OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. ERVIN. Mr. President, the Washington Evening Star for May 3, 1960, contained an editorial entitled, "Chessman—and Victim," and a news item entitled, "Chessman Victim Still Unbalanced: Second Weeps."

This editorial and this item ought to enable us to see the Chessman case in the right perspective. It certainly affords a most glaring illustration of the truth that justice travels on leaden feet when courts permit an undue solicitude for convicted criminals to make them forget that the primary function of the criminal law is the protection of society.

I ask unanimous consent that this editorial and this item be printed in the Appendix of the RECORD.

There being no objection, the editorial and news item were ordered to be printed in the RECORD, as follows:

CHESSMAN-AND VICTIM

There are two grounds upon which valid objection might be raised to the execution of Caryl Chessman.

One would be that there was a substantial doubt as to his guilt, a doubt which we do not think was present in his case. other, of course, would be a conscientious objection to capital punishment—an objection which would apply equally to all cases no matter how clear the guilt or how heinous the crime.

Neither of these considerations has been stressed in most of the mawkish nonsense written about the Chessman case. For example, the foreign press, possibly with an eye to the sale of papers, has harped on the 12 years of "indescribable mental agony" to which Chessman has been subjected. What is never mentioned is the fact that Chessman and his resourceful lawyers were responsible for this 12-year delay. They availed them-selves of every opportunity, every technicality, for appeals and stays of execution. course they were within their rights in doing this. But why should American justice be damned by critics at home and abroad because it gives a condemned man every opportunity under the law to plead his case? We cannot help but think that most of the criticism has been the product either of a monumental ignorance of the facts or of a sinister readiness to seize upon any propaganda weapon if it can be used to belabor the United States.

Finally, why has so little been written about the victims of this man's perverted crimes; why so much concern for Caryl Chessman, so little for the people whose lives he ruined? In all of the frenzied chatter in Chessman's behalf, we have seen not one word of compassion for the girl, 17 at the time, who was one of his victims. As a result of her dreadful experience she has spent 12 years in a mental institution, and she may spend the rest of her life there.

CHESSMAN VICTIM STILL UNBALANCED: SECOND WEEPS

Los Angeles, May 3 .- One of the victims of Caryl Chessman's sexual attacks a dozen years ago sits in a trance, not able to understand that he has gone to the gas chamber.

She is Mary Alice Meza, 29. As a 17-yearold girl on her first real date after a parish dance she was subjected to brutal depravity

for 4 hours.

"There is little hope that my daughter will ever be released from the (mental) institution," said her mother, Mrs. Ruth Shaw, an hour after Chessman's execution yesterday.

"I'm glad it's over; it had to be that way. The whole series of events is a great tragedy for everybody. It should never have hap-

Did Mrs. Shaw think Chessman's execution might relieve her daughter's burden? "I don't think so. It's been too long. She

is very sick."

Another victim of similar treatment by Chessman, Mrs. Andrew H. Brennan, wept uncontrollably and told newsmen:

"I just want to forget it all."

She had been out of the hospital only a few days following a polio attack when Chessman attacked her, disregarding her pleas for mercy.

Resident Correspondent Reports on West Germany-I

EXTENSION OF REMARKS OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. COHELAN, Mr. Speaker, the following article by Sebastian Haffner of the London Observer News Service, reprinted in the Washington Post of May 1, 1960, is a series of answers to key questions about the situation and the attitudes in West Germany today, less than 2 weeks before the summit conference to be held in Paris. Under permission to extend remarks, I wish to enter this article in the RECORD in two parts, the first of which follows. The second will appear elsewhere in today's RECORD:

WEST GERMANS STILL ENJOYING CHROMIUM IDVIJ.

(By Sebastian Haffner)

BERLIN.-Here are a resident correspondent's answers to some questions being asked in allied countries about West Germany:

What is the mood of West Germany? For long time we have been told it is comfortable, materialist, selfish, pacifist, against all adventures, lacking in confidence, not even very interested in the reunion of Germany. Is this still true or is the mood slowly changing?

It is still surprisingly true. Among the politically minded, of course, the mood is no longer as placid as it used to be—rather a little uneasy, even a little glum. They know that they are at the moment being subject to a drumfire of worldwide denunciation for which every resource of Communist and Communist-influenced propaganda is employed.

They sense that this propaganda is having its effect, and that British—and perhaps also American—feelings for West Germany are no longer what they were a few years ago. They are worried, but remain passive. They keep their fingers crossed and hope for the best.

As far as the big nonpolitical majority is concerned, almost nothing of all this has yet sunk in, and people just continue to enjoy their regained prosperity and respectability, their supposed holiday from history, their chromium-plated idyll, and hope that it may last forever.

Insofar as there is a visible reaction against this still predominant happy philistine complacency, it comes from the intellectual and literary left and not from the right. A leftwing radical nonconformism, neither Communist nor Social Democratic but antigovernmental contemptuous of the economic miracle, nationally self-critical to the point of sometimes being anti-German, calling for a belated repentence of Nazi sins and sometimes for a belated prosecution of former Nazis—this has become a growing force in West German public opinion over the last 3 years or so.

It forms the mainstream of the reviving German literature, has strong points in the universities, in the Protestant church, in the press, and has established a complete hold on German television. Whether it will in its turn bring about a right-wing reaction (of which the swastika daubings around the New Year may have been an inarticulate premonition) is too early to say.

A word about reunion. No German will ever admit that he does not passionately care about it, and a substantial minority, especially in Protestant northern Germany, really does passionately care. But pessimism about reunion in the foreseeable future has been growing, and sometimes this pessimism is hard to distinguish from resignation.

Still, this is a subject about which only a fool would dogmatize. Nine out of 10 Germans reject the idea of a war for reunion with genuine horror. But how they would react if one day there were a Hungary in East Germany, I would not dare to say.

A UNITED EUROPE

Do West Germans still believe in a united Western Europe or not?

Yes and no. As a popular political movement, European federalism in Germany is far weaker than it was 10 years ago. At the same time, the new friendship with France and the new intimacy with Western Europe in general are taken for granted; anti-French resentments are not only dead but are regarded as positively quaint, like Victorian interior decoration, and masses of Germans now habitually take their holidays in France and Italy without a conscious feeling of going "abroad."

The idea that Germany could ever be at war again with her Western European neighbors has dropped right out of existence. Perhaps it would be truest to say that West Germans today—mistakenly—regard and treat West European unity as if it were an accomplished fact, something to be enjoyed rather than something still to be achieved.

ARMED STRENGTH

How strong is their army and how efficient? Are the people proud of it? And the air force? Navy?

In round figures, the German forces today total 250,000 men, of which the army has around 150,000, the air force 80,000, the navy 20,000. The planned ultimate peacetime establishment, to be reached in about 2 years, may be 350,000 in all. The efficiency rating, on the basis of the last maneuvers, is fair to good; but it is still a force in the making which will need several more years to reach maturity.

maturity.

Public attitudes toward the new forces vary from tolerant acceptance to grudging indifference. The active (ohne mich) antimilitarism of the early fifties has died down but there is none of the old popular enthusiasm for the army.

NAZI REVIVALS

Are there then any strongly nationalist groups or parties waiting in the wings for Adenauer to die? If so, are these led by old Nazis, or are they new men?

The answer is in the negative. Nazi revivals have been attempted by little groups or parties ever since 1949, with constantly declining success. At the moment, neo-Nazism in West Germany is a lunatic fringe, not more.

As for old Nazis (real ones), a few of them live discreet professional lives, under assumed names, in Germany (and provide the occasional scandal when dug out); rather more form little emigre circles in Cairo and Buenos Aires. None of them has any political influence or following in Germany.

Whether a Nazi revival is possible if West Germany were ever cast out from the West and/or subject to an economic depression, is a matter for speculation. My own opinion is that it is improbable even then, and that a new German nationalism would take different forms. Today, at any rate, Nazism in West Germany is a figment of Communist propaganda.

NAZIS IN POWER

Was Adenauer's policy of deliberately softpedaling denazification and letting time heal the wound wise or not? How many real (as opposed to formal) Nazis are there in power and office?

In my opinion, the policy was very wise indeed. The real and effective denazification of Germany took place during the last stage of the war and was largely, the work of Hitler himself. In May 1945, Nazism, as a political creed, was dead in Germany, and personal persecution of the numerous former adherents of this discredited creed could only have revived it by creating a massive vested interest in Nazi apologetics.

The number of real present Nazis in positions of power and influence in West Germany is, to the best of my knowledge, zero. The number of real former Nazis is probably still quite substantial (though in a natural way diminishing year by year).

Not even Communist propaganda can deny that present West German justice is a model of mildness, humanity and civilized sophistication. This is so although, or possibly because, many of the older judges once had, willingly or unwillingly, to dispense Nazi justice; it represents, in them, a genuine recoil from, and compensation for, their own

One can generalize from this example and say that, in a sense, the whole present West Germany represents Germany's genuine recoil from, and compensation for, its Nazi past, and this is naturally embodied in hundreds and thousands of cases of individual persons who had a Nazi period in their lives and have turned their backs on it.

Protection of Wilderness Areas for Public Enjoyment

EXTENSION OF REMARKS

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. KUCHEL. Mr. President, on Tuesday of this week the Senate Interior and Insular Affairs Committee held an executive session, the first, perhaps, of several, with the highly important wilderness legislation before it. I hope the committee will approve this legislation. It is completely in the interest of the American people. In voicing that hope, I believe it would be a great accomplishment for this Congress if the wilderness legislation should become law. It would afford protection to a small portion of federally owned lands against spoliation, so that the people, now and in the future, may enjoy some of the primeval beauty by which the Creator endowed our great country.

An excellent editorial on the subject appeared in the San Francisco Chronicle of May 1, 1960. I ask unanimous consent that the editorial may appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILDERNESS BILL UP FOR HEARING

The Senate Interior Committee on Tuesday is to take up the wilderness bill, essential legislation for protecting wilderness areas for public enjoyment.

This measure should be approved and given a clear track to the Senate floor for passage this year. It has the backing of the Interior and Agriculture Departments and the Bureau of the Budget; public hearings have been held in Washington and in the West; criticisms have been met; it is "ready for the question."

Unfortunately, the House has not considered this measure, and may not before adjournment in July, even should the Senate pass it. Yet the House will have to consider it eventually, and conservationists hope the popular concern for keeping intact what we can of our natural heritage will speed it along.

About 2 percent of the land is under consideration for establishment in the national wilderness preservation system. These areas, it is felt, should be preserved for the permanent good of the whole people—not left open to exploitation by the few who can profit from destroying the character of the wilderness.

Naturally, the setting aside of public land closed to the entry of the advocates of its multiple use creates a conflict of interest and principles. While we are certainly not out of sympathy with modern techniques for land use, such as the harvesting of timber and other natural-resource crops, we are convinced that these techniques should be kept out of wilderness areas.

out of wilderness areas.

The bill gives statutory protection to wilderness areas in national parks and monuments, national forests and national wildlife refuges and ranges, but won't conflict with established practices, such as grazing. It includes no areas now open to lumbering.

It is said to invade no existing private rights, and it will not call for money. It protects good administrators from severe pressures to give away the key to the national closet. The wilderness bill should be passed this year.

A Word of Advice to Republicans

EXTENSION OF REMARKS

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. GLENN. Mr. Speaker, in these days of State primary elections, the political forecasters are having a field day in predicting so-called trends.

The Bridgeton Evening News, a daily newspaper in my Second District of New Jersey, recently had a very instructive and incisive editorial which is worthy of consideration by all Republicans, as in my mind its purport is national in scope and extends far beyond the limits of south Jersey. The editorial follows:

These are the days when political philosophies are paraded around for analysis and trend.

For instance, the decisive victory of U.S. Senator CLIPFORD P. CASE on Tuesday was hailed as a trend in favor of liberalism in the Republican Party. It was observed that the Case victory in a test with a strong conservative Republican challenge served as a beacon to guide Vice President Nixon in his quest for the White House seat in November.

The terms "left wingers," "right wingers,"

The terms "left wingers," "right wingers," "liberals," and "conservatives," have been heard frequently in recent weeks, as candidates make nomination bids for the coming conventions of the two major parties.

Some of the Democratic political philosophy has conjured up such designations in the past as the New Deal under the late President Franklin D. Roosevelt, and the Fair Deal under former President Harry Truman. This has been followed by cries of the conservative Republicans, left over from the Hoover days, that the Democrats created a "welfare state" by passing out large benefits to the people, thus endangering the spirit of free enterprise, the cornerstone of American growth for 150 years.

In fact, what the Democrats now embrace as their political philosophy was once rank socialism, always feared and hated by both parties in elections of former decades.

But you can call it what you like—it's what the majority of the people want and will support at any election time. They want security as much as they can get, jobless benefits that meet the high cost of living, and health insurance.

The balanced budget in Government has become as obsolete as the balanced budget in the average household and is therefore treated with concern only by the learned economists of the country who hold up their hands in righteous horror at the billions of dollars being utilized for everything under the sun.

However, the Republican version of being liberal is not quite as farfetched and overpowering as the Democratic theory of government through the giveaway. It seeks a middle-of-the-course protecting private enterprise, but maintaining the security which have proven to be of such benefit to the masses of people.

And no candidate who yearns for a return to the old days of conservative Government can ever hope to get elected, except in isolated areas of the country. The new concept of political reasoning, first initiated by the Roosevelt administration, was not a trial balloon. It was greeted with joy by the laboring groups—and it has come to stay.

During the past 7 years, ever since the conservative wing of the Republican Party was beaten at the national convention, there has been a revolt within its ranks.

While the conservative elements and the liberals battled for supremacy, the Democrats went forward, as usual, building up huge support that extended into the grassroots, and buckling only to the personal appeal that President Eisenhower evoked in the hearts of the people.

Even today, the GOP old guard would like to see Vice President Nixon repudiate the liberals. But it seems indicated that he will take the liberal road in his campaign to keep the Republican banner flying in the White House.

He got firsthand evidence of this trend in the New Jersey primary. Senator Case has demonstrated that a great liberal statesman commands the vote. Vice President Nixon needs no further example to chart his own course of action in the days ahead.

Maryland Explained

EXTENSION OF REMARKS

HON, J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. BEALL. Mr. President, the great free State of Maryland was featured in a special magazine section of the New York Times of Sunday, May 1, 1960, and I would like to direct the attention of my colleagues, businessmen, vacationers, and, in general, persons interested in enjoyable and productive living to the articles contained in it. All aspects of our State are discussed in interesting detail, and I am sure the various items will be both fascinating and profitable for whoever reads them.

Representative of the articles included in the New York Times Maryland section is one by Gerald Johnson, one of our State's leading and most respected literary figures. Mr. Johnson's comments indicate clearly why native Marylanders and those who have adopted the State alike love it, and I ask unanimous consent that a copy of the article and the accompanying comments about Mr. Johnson be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

MARYLAND EXPLAINED

(By Gerald Johnson)

Almost, perhaps quite, the tallest order I have ever received came a few years ago when I had boarded a train en route to New York and was pushing my way toward a crowded club car. Someone seized my elbow and I turned to face Bernard De Voto, Harvard professor and the greatest historian of the West since Parkman.

"You are the very man I wanted to see," said De Voto. "Come have a drink and explain Maryland."

It floored me. I could only protest feebly that I live in Baltimore, and if he wanted Maryland explained he should get a man

from Philadelphia or Richmond to do it. I know too much about it to put it clearly in a few words. He agreed that I had a point, and the talk drifted to other things.

But the truth of the matter is that he caught me unprepared. When I thought it over I realized that it is easy enough to meet his demand with one sentence. It is this: Maryland lies approximately in the geographical, and exactly in the moral, center of the temperature zone.

TOO HOT FOR ESKIMOS

Geographically, the State is between the 38th and 40th parallels of latitude which, as every schoolboy knows, is nearly equidistant from the Arctic and the Tropic. It is uncomfortable for people accustomed to extremes—too cold for a Hottentot, and not cold enough for an Eskimo. What is not so clearly understood by everyone is that the moral and intellectual climate of Maryland resembles the physical in that it is unsuited to extremists—too cold for fiery radicals, too warm for ice-bound reactionaries, but pretty satisfactory to men whose temperament places them about the same distance from both fascism and communism.

It is not that Maryland is incapable of producing strong partisans. "The Star-Spangled Banner" isn't exactly a neutrality proclamation while—

Avenge the patriotic gore
That flecked the streets of Baltimore
And be the battle queen of yore
Maryland, my Maryland

is definitely not an admonition to judicial impartiality.

Indeed from the days of Samuel Chase, impeached for anti-Jeffersonian diatribes from the bench, and Frederick Douglass, the abolitionist leader, to the days of Bishop James Cannon, called "The Dry Messiah," and Upton Sinclair, theoretical ender of poverty in California, some Marylanders have been winning national fame for indignation and objurgation.

And Mencken's fame was international.

LITTLE GIVEN TO DELIRIUM

The mass of the people, however, have never been moved to a delirium of enthusiasm by the strong emotions and stronger language of these eminent champions of various causes. Baltimore City, indeed, gained the name of "Mobtown" 150 years ago, but the wide gap that existed then between the city and the State has since been fairly well closed, and, for generations, now. Maryland has been little given to delirium of any kind.

Your typical Marylander is always interested, sometimes amazed, and frequently amused, but only occasionally scandalized by the champions of odd ideas. As a rule, he is definitely opposed to having them suppressed, less, perhaps, on account of his superior virtue than on account of a long tradition of tolerance that goes back to 1634 when the instructions given by the proprietor to the first colonial governor included a stern prohibition of any interference with religion.

Maryland was originally a palatinate, modeled on that of Durham, in England, which means that practically all royal authority over the colony was held by the Barons of Baltimore until 1776; and nearly 200 years later one can discern traces of that experience in the life of the State. There is something baronial about Maryland. It is not merely such place-names as My Lady's Manor, Prince Georges and Anne Arundel Counties, Duke of Gloucester Street in Annapolis and Charles Street in Baltimore. It is a touch of that feeling of a secure status that enabled the nobleman to view with tolerant good humor the vagaries of noisy dissidents, whether crackpot or reniuses.

GOOD WINE AND PRETTY WOMEN

The baronial temper implies also a discriminating appreciation of the good things of this world and this is so strongly characteristic of Maryland that no one can miss it. Long ago, when George Washington was fortunate enough to be in residence at Mount Vernon, it was to nearby Annapolis that he was accustomed to resort when he felt the need of a break in the placid serenity of country life; for at Annapolis he could always count on a good dinner, a good wine, a good horse race and, especially in the winter, a ball graced by the presence of pretty women.

If George were to return to earth today, he could resume his routine with no trouble. The dinners are not as stupendous as they were when 20 courses occasioned no remark, but the cooking is improved and the wines are better and far more varied in type; the tracks and the horses are faster; the balls are somewhat less formal than they were then, but he is a renegade Marylander who will not swear his mightlest oath that the Women are prettier. Maryland is one of the few American regions in which it is still the custom to recognize distinguished achievement in any line by staging a testimonial dinner in honor of the eminent citizen.

YACHTSMEN SWARM

The great estuary of many rivers called the Chesapeake Bay still strongly influences the life of the State, not merely economically but socially and culturally, as well. It is magnificent water for amateur sailors, an inland sea 200 miles long, fairly placid as a rule, but occasionally visited, especially in summer, by vicious squalls that add just enough spice of danger to test one's seamanship and make the sport adult instead of child's play. As a result, the State swarms with yachtsmen, many of whom have graduated from inland waters to the Bermuda races and other adventures on the high seas.

But the maritime culture of the Eastern Shore is modified by the fact that here the Piedmont plateau, sweeping northeastward from Alabama, touches tidewater, bringing hillmen and fishermen into intimate contact. Duck hunter knows bear hunter, oysterman is at least aware of the existence of coal miner, and all are acutely aware of the vast steel and chemical industries, centering around the port of Baltimore, but extending eastward across the Chesapeake and westward into the Appalachian mountains.

All this has made Maryland, although the 42d State in area, one of the most variegated in the union, physically, and culturally. In addition to all else, the fact that it surrounds the national capital—for the Potomac River is all Maryland to the right bank, where Virginia begins—has made the State in a peculiar sense a summation of America, a kind of sampler into which every American thread is worked.

thread is worked.

Nevertheless, it remains itself, as highly individual as Maine or Louisiana. But its individuality consists in the very fact that it is not committed to any particular point of view. This does not please everybody—in fact, it maddens intense souls who are convinced that they are in possession of all truth and whoever differs from them is in error.

LIVE AND LET LIVE

But for the man who admits that he doesn't know all the answers, and who is therefore content to live and let live, the State is an admirable place in which to reside. Whether alpinist or seafarer, he can find the environment he desires. Whether Protestant, or Catholic, or Jew, he finds his coreligionists rubbing along very well with the others. Whether intellectual, or businessman, or sportsman, or artist, he can find others of like mind. That, one must admit, goes for a dimwit, too.

goes for a dimwit, too.

The charm of Maryland, however, is not so much that a man can easily find others

of his own type in the State, but that the other types will not interfere with him as long as he is reasonably law abiding. On the contrary, he will find, if he is not himself of a prickly and belligerent disposition, that his peculiarities will be accepted goodhumoredly and even, unless they are quite exceptionally outrageous, admired and praised.

A LONG LIFE

The Marylander, in short, is content to be himself without much inclination to try to make others over in his own image. That suggests some lack of the missionary spirit, and if that lack is a fault, well, it must be admitted.

But it makes for lack of strain, and in a world as tense as that of the 20th century anything that relaxes tends to longevity. Stern idealists hold that to live in the very center of the Temperate Zone—culturally as well as geographically—means that you will never live greatly. Perhaps they are right; but it means that you will live pleasantly and as a rule it means that you will live a long time, a consideration that we in Maryland find much to our taste.

(Gerald Johnson, when asked for a few personal details to accompany this article, said: "The most apposite item is the fact that I have lived, by deliberate choice, in Maryland for 33 years; or by choice at least for 17 years. In 1943 I resigned from the editorial staff of the Baltimore Sun to do free-lance writing, but I remained in Baltimore partly because it is handy both to New York, my market, and to Washington, a source of much material, but mainly because I consider it a pleasanter place to live than either. For the rest, I have contributed to most of the big magazines and have written 20-odd books, most in history and biography.")

Help for the Aged

EXTENSION OF REMARKS

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. HOLLAND. Mr. Speaker, I would like to insert in the Record the attached editorial from the Pittsburg Post-Gazette and Sun-Telegraph dated may 2, 1960, in which they state that some action must be taken and some solution reached for assisting our elder citizens.

They endorse the Forand bill although they feel it has some weaknesses. I am sure that once they read the Eisenhower health program, which was presented today, their endorsement of H.R. 4700 will be glowing.

To those of us who are interested in the problems of our aged and who are doing our utmost to alleviate their worries and bring them comfort and peace of mind in their declining years, the proposal of the administration is a farce.

Human beings with emotions and feelings are asking for help, and the Eisenhower administration proposes a \$1.2 billion tax program for the relief of the insurance industry.

"Profits Before People" has been the motto of this administration, and in its dying months it insists upon getting all it can.

The President has spoken and has told our elder citizens that they can pay \$24 a year each and after the first \$250 expenses, which they must meet, the Federal and State governments will see that they get the same medical care, hospitalization and nursing home care as those unfortunate souls who are now on our relief rolls.

Just for the record, Mr. Speaker, our elder citizens in Pennsylvania can get that now without paying \$24 a year—all they have to do is have a lien on their home and, under our laws in Pennsylvania, they will probably have to do that too under the President's health program.

The article follows:

[From the Post-Gazette and Sun-Telegraph, May 2, 1960]

HELP FOR THE AGED

Although it opposes the Forand bill as a step toward "socialized medicine," the Eisenhower administration is under such heavy political pressure that it cannot sweep under the rug the problem of medical care for the aged. Consequently, it is reported considering an alternative plan.

The Forand bill, which was rejected recently by the House Ways and Means Committee, would attack the problem by adding a health insurance program to the social security system. The Federal Government would write health insurance for everyone eligible to draw social security checks. The cost would be borne by increasing the social security tax from 3 to 3½ percent.

There are weaknesses in the Forand bill. For one thing, it would provide medical benefits for all elderly social security beneficiaries regardless of need. For another, it would not reach those old people who are not eligible for social security benefits. Presently some 3 million of the poorest are aided through public assistance programs that cost the Federal and State Governments something like \$500 million a year, including medical treatment.

While we have favored the Forand bill as the soundest approach to the problem thus far, we are fully conscious of its shortcomings. If a better approach can be devised; that is, an approach that will meet more fully the need, then Congress ought to approve it.

Just now the administration is said to be considering a proposal to provide Federal income tax deductions to help offset the cost of buying medical insurance. Those without income sufficient to require taxpayments would be given outright cash benefits by the Government to help defray the cost of insurance.

Whatever the plan approved, it will be costly. There is no sense in pretending otherwise. But neither should anyone kid himself that the problem doesn't have to be met.

The number of people 65 years or older, presently estimated at 16 million, is growing by about 1,000 a day. Twenty-five years ago our senior citizens made up only 6 percent of the population; today they constitute 9 percent. By 1975, the number is expected to be at least 20 million.

Many of our old people, hard hit by inflation that shrinks small fixed incomes, are angry, and vocal. As they grow older, their earning power shrinks while their physical ailments increase and private insurance becomes costlier and harder to get. Congress is hearing from them in a great outpouring of mail. Their pressure for help promises to provide the big domestic issue in this year's presidential campaign. For humane, no less than political considerations, the issue cannot be ignored.

The World Needs Countless Gordon Seagraves

EXTENSION OF REMARKS

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. HART. Mr. President, many of us know about the unusual contribution made to mankind by Dr. Gordon Seagrave in Burma and southwest China as a doctor, a surgeon, and a teacher to people who would never otherwise have had professional help. Recently, Dr. Seagrave's autobiography was published, "Life of a Burma Surgeon."

Mr. President, I would like to insert in the Appendix of the Record a review of Dr. Seagrave's book by another great American, whose contribution in the same continent of Asia in the field of diplomacy parallels that of Dr. Seagrave. I ask unanimous consent to have printed in the Appendix of the Record the article by Chester Bowles which appeared in the Louisville (Ky.) Times on March 30, 1960, entitled "The World Needs Countless Gordon Seagraves."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORLD NEEDS COUNTLESS GORDON SEA-GRAVES—NATIONS AWAKENING TO A BETTER LIFE NEED SERVICES OF DEDICATED EXPERTS IN A VARIETY OF FIELDS

(By Chester Bowles)

Washington.—This week, a new autobiography of a remarkable American will be published.—"Life of a Burma Surgeon" (Ballantine).

The story of Dr. Gordon Seagrave is the story of the best of America overseas. What he has tried to do in Burma is something of which we can be justly proud, for his actions are a natural extension of our traditional national purpose—the widening of opportunities for all men everywhere.

Here, in the life of one man, is a rare

Here, in the life of one man, is a rare combination of brotherhood and patriotism, of service and courage, that seems to me distinctly American. I could no more picture Gordon Seagrave as of another nationality than I could imagine Gandhi a Frenchman or Churchill an Indian.

In 1897, when Gordon S. Seagrave was born in Rangoon, Burma, the American people stood poised on the verge of a curious and unprecedented Pacific adventure. With our seizure of the Philippines a year later, we awakened with surprise—and some misgivings—to find ourselves an Asian colonial power.

Our relations with Asia have been an outgrowth of mixed motivations. Yet running throughout this record is a remarkably constant current of vigorous humanitarianism.

Today we are reaping the harvest of this long relationship with Asia and Asians. Gone are the days of colonialism. In their place is a new age of explosive nationalism, when millions of men and women are awakening to a new sense of opportunities for a better life. The revolution first triggered by merchant and missionary alike is now at floodtide.

The new Asia confronts us with radically new challenges.

In this revolutionary world, the record of individual Americans of vision, courage, and long experience among Asian peoples can serve to guide the rest of us in our quest for understanding. Gordon Seagrave is one such American. To be sure his story is similar in many ways to that of other men and women who gave their lives to serving the people of Asia. And yet there is uniqueness in his perseverance and in the long family tradition of service to which he is the heir.

Gordon Seagrave's forebears went to Burma in 1835 as a part of that early trickle of Americans who left friends, family, home, and country to pioneer in the cause of the Christian Gospel. To their neighbors, their decision often seemed foolhardy, dangerous, and ill conceived.

Yet theirs was not a choice motivated by the traditional causes of migration—escape from oppression and economic hardship or a craving for greater material opportunity. The Seagraves had no personal fortunes to make, no political ax to grind, nor were they carrying the fiag on a colonial adventure.

Theirs was a mission of faith.

In the years since the coming of the first Seagraves, Asia and change have become almost synonymous. As a young man who knew only Burma as his home, Gordon Seagrave was already able to perceive the needs of an awakening people.

When he returned to the United States in 1909, he was determined to acquire the medical skills necessary to heal his fellow man. He doubtless felt misgivings about missionary work which sought exclusively to substitute one religion for another in a country already deeply spiritual. He understood, too, what has in recent years become a truism—that worthwhile souls require healthy bodies and free minds.

In any event, Gordon Seagrave acquired his medical training at Johns Hopkins, and in 1922 returned to Burma as a young doctor in search of a practice. He chose a most remote part of Burma—the town of Namkham, on the Chinese border, some 700 miles from Rangoon, where his family had lived before him for generations.

He chose this place on the basis of need, not comfort or acceptance. His greatest challenge was, consequently, that of proving he was needed to thousands of chronically ill but curable people who did not as yet believe they could be cured.

Through skillful surgery and constant teaching, he slowly spread the wonders of modern medicine in ever-widening circles throughout northern Burma and southwest China. His clinic became the center of a quiet upcountry revolution which gave new meaning to lives which would have otherwise been lost or wasted.

The challenge of disease was everywhere. Malaria was as common in Burma as colds in New York or Seattle. Also present in abundance were cholera, typhoid, tuberculosis, goiter—indeed, almost every variety of tropical and temperate disease known to the medical profession.

It is difficult to say which was Gordon Seagrave's greater contribution—the lives he healed and saved or the influence of his person and character on the Northern Shan peoples. Living in a place so remote from modern technological America, he has preserved qualities which sometimes seem rare among contemporary Americans.

Like the men who wrested our country from the wilderness, he is a pioneer oblivious to danger whether physical or intellectual. He is almost flintlike in his indestructibility.

For decades, disease has racked his body. War and insurrection have plagued his life and destroyed his hospital. Supplies, equipment, and money have been the exception rather than the rule.

The story recounted in his book is remarkable. With the advance of the Axis armies, Gordon Seagrave reacted instinctively and volunteered at the age of 47 without hesitation. In 1942 this extraordinary man marched out of Burma on foot with Stilwell,

and many months later marched back again under combat conditions, healing Allied soldiers and holding together large hospital units.

Since World War II, we have begun slowly to do as a people what Gordon Seagrave and others have done as individuals. We have begun to understand our critical stake in the peaceful economic and political development of free nations.

We need dedicated medical, educational, and technological experts in every field—men and women who are willing to pool their efforts in the service of villagers and workers everywhere. We need people who are willing to live and work in the tradition of Gordon Searrave.

Ahead of us is a vast frontier which only our young people of today can cross. Are we as a nation prepared to inspire and encourage these young people to undertake this historic effort? Are we willing to instill in them the sense of mission and to equip them with the necessary skills to help the people of Asia, Africa, and Latin America to create prosperous free societies within the framework of their own cultures?

The answers to these questions may well determine mankind's future course.

We have in our national heritage the ideals and examples for such action. Although there is only one Gordon Seagrave, let us hope that his brilliant example may inspire countless other Americans to similar deeds in the future.

This may well be his greatest and most enduring contribution.

Poland's Constitution Day

SPEECH

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. GIAIMO. Mr. Speaker, it is with great pleasure that I join my colleagues in paying tribute to the heroic Polish people who, on May 3, observed the 169th anniversary of the adoption of the Polish Constitution. It is with equal feelings of great sadness that I think of the many years since the promulgation of this Constitution during which it lay unused while tyrants enslaved the Polish people. Since the first partition of Poland in 1772, with the exception of a brief period between World Wars I and II, the Poles have known only strife and oppression.

The Polish people today live in hope; in hope of peace, liberty, and justice. Despite all adversities, such high hopes have never diminished in their hearts. Their desire for freedom and independence has been nurtured by the brilliance and devotion of Poland's patriots. In the vanguard of such patriotic heroes, Poland proudly boasts the great composer Frederic Chopin.

This year, in addition to commemorating the birth of her Constitution, Poland observes the 150th anniversary of the birth of Chopin, one of her noblest citizens. Therefore, I wish to insert into the RECORD a brief tribute to Chopin which was written by George J. Olszewski of New York and was distributed by the Polish American Congress. Mr. Olszewski's article follows in part:

In his youth Chopin was forced into exile by the Russians because of the revolutionary character of his music. Some 20 years before his birth Poland was partitioned by Russia, Prussia, and Austria and at the time of his birth, was dominated by occupying forces of these three powers as it is dominated today by the Communists.

Chopin found safe haven in Paris, where he continued to live and to compose in the freedom which France has traditionally extended to the persecuted of all nations. In exile Chopin was kept informed by family and friends of the dire plight of his native land. Throughout his life an urn of Polish earth remained in Chopin's room to remind him of his origin. He breathed into his music the undying love of an exile for his homeland.

This Polish son was not only an ardent and intense patriot but was God's chosen musical spokesman for a Poland ravaged by occupation forces. He devoted his life to the perpetuation of the spirit of freedom, liberty, and independence. For more than a century the voice of this patriot has inspired and guided his tortured nation through the pangs and ignominies of bloodshed and brutal occupation. His voice was the voice of music. It was the undying voice of Frederic Francois Chopin.

Throughout the intense 39 years of his life, the voice of Chopin's music rose as a hymn of liberty. It swept from his tiny cell on the Island of Majorca in the Mediterranean. It spread throughout France, England, and all of continental Europe. It penetrated the most remote corners of his natice land to plague the oppressors.

The occupation forces sought to suppress the compelling, arousing voice of Chopin's music. The Germans forbade its playing; the Russians crashed his piano into the streets of Warsaw. But the jangled crashing of Chopin's piano became transmuted into noble strains of the Revolutionary Etude itself. What a supreme weapon. The voice of Chopin could not be silenced, for music was the weapon beyond compare. The oppressors could not grasp it; they could not silence it; they could not tear it from the hearts of a proping sceling liberty.

hearts of a people seeking liberty.

Throughout the years this vital weapon has retained its mystic potency. During World War I and again when pagan hordes invaded Poland in World War II, it was the music of Chopin which majestically sounded the call to battle from the Warsaw radio and triumphantly led the resistance. Throughout the bitter struggle which followed, Polish sons and daughters were inspired to untold feats of heroism. They rose from prisons and concentration camps; from hidden caves and dugouts in the woods; from the sewers, rubble, and ruins of Polish cities. They struck a last blow for Polish independence to the penetrating, commanding, and inspiring themes of the "Polonaise Militaire." Chopin's music symbolized the united response of a nation which resisted the onslaughts of its oppressor.

The militant nationalistic spirit is but one facet of the genius of Chopin. He speaks not only for the physically and spiritually oppressed of his own nation but for all humanity. His music carries a message of spiritual tranquillity to the oppressed of all nations, for its appeal is varied-to some it may be emotional or spiritual, to others artistic and intellectual. All agree, however, on its benign influence, for the power of Chopin's compositions stems from the very foundation of music which is an expression of life itself. It stems from the forces of creation and the depths of the human soul. His music lives in the breath of the wind, in the murmur of the forests, and in the flow of the rivers. It lies in the very blood of our veins reflecting every sensation of joy, grief, sorrow, happiness, anguish, delusion, and ecstasy which grips the heart and soul of man. The melodies of Chopin's music flow unbroken across the starry pathway of the sky. They flow unbroken above the range of human speech and sweep the entire universe.

Chopin's music shall live on through the endless eons of time, its voice shall carry his message to countless unborn generations. As the heroes of the past have fought for their precious ideals and inherent rights, may Chopin's clarion message inspire the generations of the future.

Let us recall the words of another heroic Pole. Speaking at the opening ceremonies of the Chopin Centenary Festival in Poland in 1910, the great Ignace Paderewski said:

"Here, at this moment, there rises amid us, above us, the radiant spirit of one who was. What light, what valor, what energy were his. What strength of endeavor he showed in the midst of suffering. Through trouble and affliction, through heartache, through creative pain, he marked to his country's glory the burning trace of his existence. By a bloodless fight on the plains of peace, he assured the victory of Polish thought.

"Blessed be the past, the great, the sacred past, which brought him forth."

Today Poland hopes that once again it may be free. We share that hope. We hope, indeed we pray that Poland and all the nations of the world might enjoy that freedom and liberty which was, and is, embedded in the music of Frederic Chopin and in the spirit of the 3d of May.

Delhi Tech Forums Play Vital Role in Keeping Rural New Yorkers Informed

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. KEATING. Mr. President, during the past 4 months, members of the Washington diplomatic corps have been journeying to a small college community in upstate New York, to participate in the Delhi Tech Forums on "World Trouble Spots and the United States." The Delhi Tech forums are a community and academic event of an unusual nature.

The Delhi Tech forums are sponsored by the State University of New York, Agricultural and Technical Institute, at Delhi. The Ambassadors of Ceylon, Ghana, and Israel, and high-ranking members of the Pakistan and United Arab Republic missions to the United States have presented their nations' viewpoints on major political and economic problems of their areas. The unusual feature of the Delhi Tech forums is that they have allowed hundreds of citizens of rural communities in upstate New York to see, hear, and question world diplomats on Asia, Middle East, and Africa.

Upstate New Yorkers braved all kinds of weather and traveled as far as 60 miles to attend the forums. Area newspaper publishers, leaders of both political parties, a State senator, clergymen, representatives of local and county government, teachers, students, and faculty from two neighboring colleges and 14

area high schools, heads of farm, religious, business, and civic groups, doctors, lawyers, farmers, businessmen, housewives, and Delhi Tech students and faculty have jammed the Delhi Tech gym. to hear each guest.

The Delhi Tech forums are a community service of the highest order. The college, by sponsoring the forums, is filling a real need of upstate citizens. The college is demonstrating in a very practical way the role that institutions must play in providing for an informed citizenry, which is vital to the preservation of democracy. The forums not only enrich Delhi Tech student life, but also are an effective and meaningful community service. For making available to our rural citizens, who often are forgotten, I salute the State University Agricultural and Technical Institute, at Delhi, N.Y., and all concerned with this pioneering series.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two newspaper articles which report on the last two Delhi Tech forums

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Oneonta (N.Y.) Star, Mar. 28, 1960]

AMBASSADOR'S SECRETARY—PAKISTANI CITES CLASH OF IDEALS

Delhi.—"One thing stands out which dominates the world scene today. That outstanding fact is the clash, the conflict of two ideologies, two ideas, two systems. One system is the totalitarian way. The other is the way of life of the free world."

Those were the opening words of the address of N. S. Khan, secretary to the Ambassador of Pakistan in the U.S.A., before the more than 600 persons who attended the fourth in the current series of forums on "World Trouble Spots and the United States."

The forums are being presented under the joint auspices of the general education division, and the Student Union, of the State University Agricultural and Technical Institute at Delhi.

Mr. Khan, who is attached to the Embassy of Pakistan, in Washington, D.C., came to Delhi, Thursday night, and addressed the forum in the place of His Excellency Aziz Ahmed, Ambassador of Pakistan to the United States, who was unavoidably detained at his post of duty.

For slightly more than an hour, Mr. Khan held his audience in a captive mood, after which he continued for 30 minutes to hold the close attention of the sizable gathering while he answered questions from the floor in rapid fire style. At the conclusion of the prolonged and enthusiastic round of spontaneous applause.

Mr. Khan, who was educated in India and the United States, started his foreign service career in the Pakistanian Consulate in New York City.

"I think," he said, "it would be useful by dividing my remarks into two categories, first, a broader framework, and second, a discussion of matters pertaining to Pakistan, why it came in to being, its plan, and its relations with the United States.

"What meaning does this conflict of ideologies have in Asia? The conflict between the two ideologies will be fought in the hearts and minds of men in Egypt. Which system can deliver the goods? That is going to determine the outcome of the difference between totalitarianism and the free world. That is the crux. The two systems

deeds. "Ever since World War II, some 800 mil-

lion people have gained freedom in Asia and This fact has released new desires Europe. and aspirations. People are no longer willing to accept their stations in life. New desires and energies befitting human beings have been released. A reasonable, decent standard of living is essential. This is what independence has done, to make people

desirous of improving their lot.
"Nationalism has blitzed the people to have self respect and dignity, and to obtain recognition, and to make some reasonable progress. What can we do with this force of nationalism? We want it to link itself with positive results. We must make nation-

alism serve a positive end.

Per capita income in Asia is about \$60 per annum. In the United States the per capita income is about \$2,400, or 40 times greater than the Asian. This shows you the poverty and undernourishment of the people. Another facet of this problem is population explosion. Population in our country is increasing at the rate of 2 percent per year. It will double its population in 30 years. To be frank, there are too many 30 years. babies. There is a high birth rate, but the death rate has reduced from 60 per 1,000 to 10 per 1,000. These facts highlight the problem of economic development.

"I would like to focus your attention on key things about Pakistan. It desires to exercise the right of self-determination. people felt they had a separate culture and stature. By vote, the people voted to have a separate state to develop their own way of

living.

Basic facts are, that Pakistan has a population of 85 million. It is the seventh largest country in the world, equal in area to France, Germany, Belgium, Italy, and Holland combined. Agriculture is the key industry of Pakistan. Sixty percent of its income is from agriculture; 80 percent of its agricultural income is earned through the exports of hides, skins, tea, and wool.

'In 1947 land reforms were begun in east Pakistan; sweeping land reforms have been introduced in west Pakistan. There is no expropriation of land. A fair compensation paid. Not only have land reforms been introduced but the government has taken

steps to prevent uneconomic units. 'We are the allies of the United States, being members of SEATO, which includes United States, France Great Britain, Pakistan, the Philippines, and Thailand. This

organization is for the defense of its members, and means that any encroachment on any one of the nations will be considered an

attack on all of them.

'We have just formulated our second 5year plan, in which Pakistan proposed to increase industry by 20 percent, production of foodstuffs by 50 percent and employment by 30 percent. We hope to offer new employment opportunities to 3 million people. Sixty percent of our plan will be financed by our own money, and 40 percent by foreign aid. We hope to double our national income by 1975."

In conclusion, Mr. Khan said, "We are living in difficult times when farm landmarks have disappeared; when there are no readymade answers to problems of the world. It is more easily said than done, but there are no solutions just around the corner. We must combine our material and economic resources in an attempt to reach

Following the forum meeting, in the school gymnasium, some 300 persons attending, made their way to the Student Union build ing where an informal reception was held in honor of Mr. Khan.

are not to be judged by promises but by [From the Onenonta (N.Y.) Star, Apr. 11, 1960]

> THE ARAB WORLD STORY-PRESS ATTACHÉ TALKS IN DELHI

> DELHI.-Dr. Mostafa Kamel, Ambassador of the United Arab Republic to the United States, was prevented from speaking before the fifth and final session of the Delhi Tech Thursday night, due to illness. Mohamed Habib press attaché of the Embassy spoke in the Ambassador's stead.

> a 30 minutes prepared speech, Mr. Habib gave the audience of some 600 persons, a general rundown on conditions in his country. Following his address, a lively question-and-answer period continued on

for a full hour.

Prof. Sheldon R. Merritt of the agriculture division of the college, who acted as moderator, was obliged to terminate the question-and-answer period, at its full height, in order that those attending might have the opportunity of meeting Mr. Habib at a reception tendered in his honor at the Student Union.

"After World War I and strangely, at the peace conference, Britain and France divided

the Arab area among themselves.

"In 1952, a primary goal of Arab nationalism was achieved when a group of Egyptian Army officers led the greatest popular revolution in Arab history—a revolution which was directed against all of the conditions of oppression and governmental decay from which the people had been trying to emancipate themselves for many decades.

"No longer were our people content to watch their affairs being steered by foreign powers or despotic monarchs or feudal politicians. The people were now determined to take hold of the helm themselves, and determine their own course in the future.

"To me, the revolution in Egypt was the most important fruition of Arab nationalism. It was an achievement of the goals of

generation after generation.

"After the treaty of 1954, which ended occupation of the Suez Canal Zone by British troops, the natural course should have been a beginning of a new era of friendship and cooperation but the natural course obstructed.

"I would like to stress the fact that we really and sincerely believe there is no genuine conflict between Arab nationalism and the interests of the United States. However, as in the case of all nations, and, for that matter, of all individuals, complete agree ment with our friends on all matters is not always possible.

"First, one point of difference between us lies in the creation of the State of Israel. The creation of the State of Israel has affected our relationship in a grievious way.

"To the Arab eye, and even to the eyes of many westerners, the whole story of Israel is that of injustice and lamentable mistakes. Whoever hoped the creation of Israel would bring about any fulfillment, or solve any problems, or settle any arguments must, by now, in the light of the facts, be terribly disillusioned.

"The Israel of today is nothing similar to, or even near the picture of her which some people visualized. Israel is not the peaceful haven for persecuted Jews. Her record in the United Nations, the first day of her existence, proves in a blunt way that she is neither peaceful nor a haven.

"Israel today is aggressive, ambitious, and apparaionist. The majority of her people expansionist. consist of militant elements, recruited from all parts of the world, by all sorts of means, to accomplish expansionable design.

"More than 80 percent of the land within her present borders belongs to the wretched refugees who are rotting on those borders,

a symbol of one of the greatest injustices in the history of man.

"We understand perfectly well that the West is entitled to organize a defense system to protect itself against aggression. We also understand that the other side has the same right.

"President Nasser said: 'I have nothing against the West. As a matter of fact, our natural inclination is toward the West, because of culture, religion, and the same roots of history. But, when they come to me with proposals of pacts and doctrines, I have to say no. I have promised my people that we will follow a road of positive neutrality, and that I will involve them in no entangling alliances.' "

Mr. Habib ended his address by saying, "During the past centuries, the Arabs have lived on the most friendly terms with the Americans. Let us hope that the future relations between the two nations will be even happier than they were in the past. All we want from you is your friendship."

Garden Club Favors Multiple Use

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. WESTLAND. Mr. Speaker, the Bogachiel Garden Club of Forks, Wash., in my district has sent to me a copy of a letter in which it points out the relationship of the multiple-use principle to the economy of communities situated near or adjacent to national forests.

I agree with the club that wilderness areas have a place and are a good thing. I also believe that wilderness management is a part of the multiple-use concept. But, Mr. Speaker, I feel that action on wilderness legislation such as has been introduced in the Congress should be delayed until the National Outdoor Resources Review Board can make its report.

Under leave to extend my remarks I include in the RECORD the letter to which I have referred:

FORKS, WASH., April 27, 1960. Mrs. Jamie L. Johnson,

President, National Council of State Garden

Clubs, Dearborn, Mich.

DEAR MRS. JOHNSON: The Bogachiel Garden Club of Forks, Wash., has asked me to write to you to call your attention to the wilderness bill, which is now pending before Congress. Our club has done some research on this bill as it will affect our State directly if it is passed.

If you will look on a map you will see that Forks is on the edge of the Olympic National Park, most of which is wilderness area. The National Park Service believes in leaving nature entirely alone. They let trees mature and die to fall to the forest floor to rot as this is part of the natural cycle. They do not believe in tampering with nature in any

We also have much timberland in our area under the management of the National Forest Service. This agency scientifically manages its holdings as a crop. Thinning of trees is carried out where necessary to encourage healthy growth, mature trees are logged and taken out. They are not allowed to rot.

Trees like anything else reach maturity, then deteriorate and eventually die. The National Forest Service farms its trees to get the

most good from every acre.

With these two agencies, with their wide separation of beliefs, at work in our area we cannot help but form an opinion as to which is right. We are very strongly for National Forest Service management. They farm their timber so as to get the most use out of it for the most people. Campsites and recreational areas are a part of their pro-

A farmer in Iowa growing corn or wheat takes care of his crop-spraying, thinning, removing dead or diseased plants, and so forth. Timber in Washington State is a crop, our biggest crop and should be cared for as such. Our timbered areas receive from 50 to 140 inches of rain per year. The Forks area gets an average of 120 inches per year. Our evergreen trees grow accordingly. You can see why trees are considered a crop

As our forests bear no resemblance to the Eastern forests I felt that this preamble was necessary before discussing the wilderness bill. Our trees grow so thick and the underbrush so high and thick that it is impossible to walk through the forest unless you follow a well maintained trail. Therefore setting aside a wilderness area doesn't necessarily mean that the area will be opened up to be

Setting aside huge wilderness areas presents grave economic threats to our Nation and to the West in particular. If the wilderness bill passes it will assure the formation of a new wilderness area in Washington, the Northern Cascades National Park. park, if formed, would take in a total of 318,788 acres of operable forest land now located in the Mount Baker, Okanogan, Snoqualmie, and Wenatchee National Forests. The Forest Service estimates that 12,832 million board feet of timber is located on this acreage. This is in addition to the 1,279,000 acres of forest land already under reserve in our State. Together, they would total 1,598,000 acres, containing 64 billion board feet of timber. According to the Washington State Department of Commerce and Economic Development, 1 million board feet of timber harvest means on the average: Direct employment for 13.3 persons; a payroll of \$58,750; direct support for 45 persons; and forest products valued at \$180,000. is the product of 1 million board feet of timber harvest. Multiply this by 64 billion (the total amount of timber locked up in our State if this bill passes) and you can see What this would mean to our State's economy. If this new area is locked up in a Wilderness park reserved for a single purpose our economy will be forever denied the great potential of this timber which could be administered under the Forest Service's multiple-usage plan.

Our State is largely dependent on forest products for support. Looking ahead to the time when our population will be increasing at unprecedented rates, who can say that we should ignore the potential of 6,600 more Jobs with an annual payroll exceeding \$29 million in manufactured forest products each year.

We recognize that a certain amount of Wilderness areas is a good thing but feel that it should not be carried to an extreme. Only a small part of our neighboring Olympic National Park will ever be seen by human eyes. It is too vast and inaccessible for it to be practical to open it up.

Our club feels that anyone who believes in multiple use of forest lands must speak out now before it is too late. We will ap-Preciate it if your group will study the prob-lems involved in the wilderness bill. We

hope that after studying it you will wage an active campaign to prevent its passage. Very truly yours,

Secretary, Bogachiel Garden Club,

Waste Undermines America

EXTENSION OF REMARKS

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

LAUSCHE. Mr. President, Mr. whether or not they make any impression upon the Congress is debatable. nevertheless, voices from grassroots America continue to cry out in protest of the bigness of our Federal Government and its wastefulness, which apparently is an end product of such big-

These cries of protest of the lavishness and imprudence on the part of our Federal Government upon many occasions are well enumerated in an editorial entitled, "Waste Undermines America," which appeared in the April 29, 1960, edition of the Fort Wayne Journal Gazette, Fort Wayne, Ind.

Mr. President, I ask unanimous consent that the editorial be printed in the

Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASTE UNDERMINES AMERICA

It is time that the American people took control of their Government.

It is too big.

It spends too much money on things which are not necessary to the general wel-

It spends too much on the wrong things. It exports billions of dollars every year to other countries under the guise of foreign aid.

While the regular aid bill is set at around \$4 billion annually, informed sources say that the total for this purpose is actually about \$10 billion each year.

There are several agencies which dole out these dollars in one way or another.

The Government in Washington is so huge that nobody really has control over it.

The President and the Congress cannot keep track of the far-flung bureaucracy. There is much evidence that nobody really

The President submits Federal budgets which are staggering to the imagination of our citizens.

Many Members of Congress seem to sit around and figure out how they can spend more.

Thus the Federal Government is completely out of control.

Agencies of one kind or another are created. Then they are forgotten. They become a law unto themselves and get tangled up in red tape.

The executive department includes them in its budget at their own figure and the request is approved in the mass of budget

What would George Washington and Benjamin Franklin and Thomas Jefferson think of the waste which goes on every day, year in and year out, in the Nation's Capital?

They would cry out in horror at this runaway Goverment which seems to go on the theory that if the price tag is high the serv-

ice is good.

That is a great fallacy and one which is

wasting the substance of America.

It is time the people awakened to this threat to their democratic way of life.

Of course, government cannot be as simple now as it was a century and one-half ago. Nobody contends that it should be.

But the maze of confusion in Washington today is a menace to the strength and dynamics of the American Nation.

The waste, the high taxes, and the bloated budgets are eating away the solid foundation upon which our country was founded.

It is time for action.

Need for Action To Save Passenger Train Service

EXTENSION OF REMARKS OF

HON, EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. GARMATZ. Mr. Speaker, I wish to urge prompt enactment of H.R. 9742, the proposed Passenger Train Service Act of 1960, which I have daily become more and more convinced is legislation which is essential to protect our national security and the future transportation needs of the Nation against deliberate and unwise and intolerable cutbacks in passenger train service by railroad manage-

I have reached this decision, even though my State of Maryland, fortunately, is not one of those which to date has suffered directly from the effects of section 13a of the Interstate Commerce Act. However, while I say that Maryland has not suffered directly, it is clear that each day this provision of law remains in effect, the railroad passenger service which is available to citizens of Maryland on a national scale is being greatly curtailed, and thus it is no exaggeration to say that the people of Maryland who wish to use passenger trains for transportation throughout the Nation as a whole have suffered a considerable indirect adverse effect.

The clear fact is that a curtailment of the passenger train service available anywhere in the country, by any railroad, inevitably means some curtailment in the use of the services of other railroads-no matter how good a job those railroads individually may be trying to do. In my own hometown, the city of Baltimore, which is one of the great railroad centers of our Nation, we happen to have a railroad, the Baltimore & Ohio Railroad, which is one of the comparatively few that may be pointed to as still trying to provide safe and adequate passenger train service. In fact, the management of the B. & O. is one of the few which has actually been pioneering in new services, designed to make passenger train travel more attractive to its customers, through the introduction of fare reductions and new equipment such as the slumber coaches. Probably no other railroad in the East has done as much to promote its passenger operation as has the B. & O., and it has done a good job of providing good meal service, clean and reasonably well maintained equipment, and reasonable scheduling.

Nevertheless, despite this genuine interest in passenger train services and an apparently real desire to provide as outstanding a service to passengers as is possible, the B. & O. railroad has had to consolidate and eliminate some trains in recent years. This result, I am convinced, comes from the curtailment of railroad passenger service in other parts of the country, by other railroads. Passengers who would use the B. & O. services, with pleasure, for the start of a journey today are being discouraged from doing so, because they now find that trains which formerly linked with the B. & O. and on which they continued their journey either no longer are running or else are so rundown, dirty, and poorly maintained, or are scheduled at such inconvenient hours, that they are discouraged from making their journey by train altogether.

From this, it is readily apparent that even those railroads which still recognize their responsibility to the public as common carriers are frequently being thwarted in their efforts to maintain safe and adequate passenger train operations simply because other railroads—and I regret that I must include the majority of railroad managements in this indictment—are apparently determined to make passenger train travel so disagreeable to potential customers that business will fall off to a point where the train can be discontinued.

Mr. Speaker, I submit that it is unfair to those railroad managements which still are trying to make passenger train service in this country what it should be to allow the deliberate destruction of such service by other railroad management who want to get out of the passenger business.

Moreover, since mail and railway express operations are directly related to passenger train services, by allowing these irresponsible managements to determine the future course of the industry as a whole, we are only contributing directly to the rapid development of a situation in which railroad mail and express services, as well as passenger train service, will inevitably be extinguished. I believe that there are very few Members of Congress who have not already had some complaints directed to them by constituents about the decline in mail services in recent years, and I shudder to think of the prospects before us if this Congress permits the railroads to continue to pursue the policy of killing off passenger train services, which include the handling of mail, that are encouraged by the passenger train abandonment provisions of the Transportation Act of 1958.

From the very beginning of railroading in this country, the transportation policy which made this country the possessor of what once was the greatest railroad transportation network in the

world was one under which the railroads, in return for the many special privileges and benefits conferred upon them, were required to meet certain obligations to the public as common carriers. The railroads today still enjoy those special privileges, including the right to acquire by eminent domain any piece of property which you and I may own if it is needed for the railroads' operations. Yet, while we have preserved these privileges, Congress by its action has done much to destroy the balancing obligations of the railroads to provide needed services to the public.

In my view, the passeinger train discontinuance provisions of the Transportation Act of 1958 have completely reversed the traditional railroad transportation policies of this Nation. Let us not forget our history. Over the years, the railroads traditionally have been required to perform certain services at a loss, in exchange for the monopoly right conferred upon them to provide other services at a greater margin of profit. This has worked out well, and has made our railroad system one of the most efficient, profitable and dependable ever devised by any nation. In very few years of their history have the railroads ever run their passenger train services-by their unique bookkeepingat a profit, but this has been more than offset by the high profits which their operations as a whole have returned to railroad stockholders and investors. By adopting a totally new concept that the railroad passenger train operations-by the railroads' own unreliable bookkeeping-must show a profit before they can be required to continue such services, no matter how great the public's need for such services and without regard for the total profits of the railroad, the Transportation Act of 1958 departed from our traditional transportation policies. It did this, moreover, under the pretense that such action would strengthen our railroad transportation system, but the clear fact is that it has served only to rapidly deteriorate passenger train services and how threatens their extinction. Section 13a of the Interstate Commerce Act, I submit, defeats even the announced purpose behind its enactment.

The time has clearly come when Congress must decide whether it wishes to permit the passenger train services of this Nation to be almost completely eliminated except for a few crack trains. That, I believe, is the inevitable result that will be brought about unless Congress acts at this session to once again place railroad passenger train operations on a sound footing. In my view, H.R. 9742 is the only pending measure which goes far enough, by requiring the railroads to exert every reasonable effort to maintain safe and adequate passenger train service, to prevent the rapid extinction of the passenger train.

The enactment of this bill is, I believe, necessary to provide the means of meeting the future transportation needs of this Nation in peacetime, and it is a compelling urgency if the needs of national security are also to be met. We have before us a report of the House Armed Services Subcommittee which re-

veals that already our passenger train facilities have declined to a point which invites disaster in the event of another outbreak of hostilities. The number of railroad passenger cars has declined from 30,052 in 1939 to only 18,577 in 1958; yet all of us can remember how. even with the larger number of cars then available, there was a real shortage of rail passenger car space during World War II. With the great cutback in facilities which has taken place since that time, and with the far greater need which would exist for such facilities in any future war as the result of our greater population and probable wartime shortages of gasoline and other items needed for highway travel, the outlook for the future, from a defense standpoint, is bleak indeed.

I urge immediate enactment of H.R. 9742.

Error on Growth

EXTENSION OF REMARKS

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. BUSH. Mr. President, I call to the attention of Members of Congress a letter which appeared in the Washington Post of May 4, signed by Mr. Charles T. Stewart, Jr., of Washington, in which he responds partly to a letter published in the Post of April 21, written by Prof. Seymour Harris, of Harvard University. Mr. Stewart points out that the Harris letter contains a very simple error which completely changes the conclusion which a reader might reach.

I ask unanimous consent, therefore, that the letter of Mr. Stewart be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ERROR ON GROWTH

Seymour Harris' letter of April 21 contains a simple error which completely changes the conclusions which he, and the reader, may reach. He contrasts the effects of "tight" money and "loose" money on the rate of economic growth, concluding that "tight" money has slowed down the economy.

Unfortunately his "tight" money period is 1953-59, and his "loose" money period is 1947-52. This is a mistake. The accord between the Treasury and the Federal Reserve which initiated a tight money policy was reached in early 1951. I know this is awkward, because President Truman still had nearly 2 years to go in the White House, and because Senator Douglas was instrumental in bringing about the accord. But facts are facts.

The tight money period, therefore, should be 1951-59. The economic growth rate for this period was 2.8 percent. The loose money period should be 1945-50. The growth rate during this period was 0.3 percent. But what are the results of this correction? Practically no growth during the "loose" money period (and actual decline in income per capita); substantial growth thereafter.

Why does Professor Harris pick on 1947 as the initial year? It is not the first year of the Truman administration, nor of a loose money policy, nor of peace. In all these regards 1945 is a better choice.

This abuse of innocents at home wins no laurels for the economics profession. CHARLES T. STEWART, Jr.

WASHINGTON.

A Shaky Reed To Lean On

EXTENSION OF REMARKS

HON. WILLIAM H. MEYER

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. MEYER. Mr. Speaker, it has been my privilege to observe and listen while the distinguished gentleman from California, James Roosevelt, waged an uphill struggle against "trial by publicity." For a long time he has steadfastly and thoroughly sought to promote balance and moderation in a field of action where emotional fears and responses have endangered constitutional guarantees. He has demonstrated that, regardless of motive, justice is not promoted when the rights and reputations of American citizens are carelessly treated. He has shown that this can weaken America and everywhere degrade our reputation as a land of freedom.

The able and courageous gentleman from California has alerted many of us to the need for finding a better way in an area where misunderstanding is both dangerous and commonplace.

Under unanimous consent, Mr. Speaker, I include an editorial appearing in the New York Times of April 30, 1960, in the RECORD:

A SHARY REED TO LEAN ON

Just as the Senate had ultimately to take responsibility for the outrages committed in its name by the late Senator McCarthy, so the House is responsible for the actions of Representative Walter's Un-American Activities Committee.

This is the fundamental point, as we see it, of Representative James Roosevelt's massive attack on the committee in a House speech a few days ago, reinforced by the American Civil Liberties Union decision at its recent biennial conference in Chicago for a "maximum effort" to abolish it. Fortified by ample appropriations almost automatically renewed each year by the House, the committee pursues its heresy hunt, endangering constitutional guarantees in the process, weakening at home and abroad America's reputation as the land of the free-and all to what avail?

If the security of this Nation were dependent on the kind of exposure for ex-Posure's sake that the committee has repeatedly indulged in, whether investigating actors in New York or schoolteachers in California, then our country would really be in a dangerous condition. But few disinterested persons can any longer believe that this is where the real danger lies. It lies less in gumshoe subversion than in the corrosion of domestic complacency, less in the absurd handful of Communist doctrinaires who may still exist among us than in the unconscious tendency of many Americans to accept a second-place position in the World so long as it is cushioned in luxury.

There are dangers to the United States, emanating directly from Russia; but their true meaning is obscured rather than

illumined by the antics of Un-American Activities Committees. For such positive subversion as exists, the FBI is sufficient. The United States no longer needs-if it ever did need—the aimless pursuit of heresy that has led to a present total of nearly 40 "first amendment" cases, in which 4 of the principals are actually now in prison.

Administration Bows to Will of Utility Interests

EXTENSION OF REMARKS OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. YOUNG of Ohio. Mr. President, refusal of President Eisenhower to re-nominate William R. Connole to the Federal Power Commission once again highlights this administration's slavish dedication to big business interests.

It is significant that Commissioner Connole's concern for the welfare of the consumer earned the bitter enmity of the big utilities and thus made him persona non grata with the administration.

One of Ohio's great newspapers, the Akron Beacon Journal, has urged in an editorial that the people of America are entitled to a full explanation of why a man who stood for their interests is not asked to remain in his job.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the RECORD, as follows:

[From the Akron Beacon Journal, Apr. 25, 19601

CONSUMERS LOSE A FRIEND

The member of the Federal Power Commission who has been labeled "consumer minded" by the Nation's utility interests, is to be dropped from the regulatory body by the Eisenhower administration.

William R. Connole, now completing his first 5-year term on the Commission, has been notified that he will not be nominated for another term. The notice was given him by the White House several months ago and apparently has no connection with the more recent disclosures that Thomas Corcoran, representing a natural gas transmission company, had off-record talks with members of the Commission. Whether the Corcoran incident was stirred up to take the heat off the administration when consumer groups found out about Connole's dismissal, has been the subject of speculation in Washington.

However that may be, the dislike of utility interests for Connole has been no secret around governmental departments in Washington. The New York Times in a lengthy review of the Federal Power Commission situation said, "Sources usually identified with the gas and electric industry regulated by the Commission have suggested in print that Connole's stringent attitude as a regulator is what is making difficulty for him."

The enmity of utility spokesmen would appear to carry more weight than the friendship of members of other utility regulatory bodies around the Nation. At least the efforts of other "consumer minded" officials has made no dent in the decision of the White House to drop Connole from the Commission.

In New England there is a regional conference of utility regulator bodies. The commissions of the six States sent a petition to President Eisenhower urging Connole's reappointment. Connole is a political independent from Connecticut. In addition, the head of the California Public Utilities Commission wrote Senator CLAIR ENGLE on behalf of Connole.

On at least two occasions Connole has held out against the decisions of the Commission which he felt were not in the best interests of consumers, and his position later was justified by rulings of the Supreme Court.

Under the law, the Federal Power Commission may not have more than three of its five members from the same party. Since there now are three Republicans on it, and one vacancy, the President has to name a Democrat or find another independent.

There is a chance the plan to drop Connole may stir up repercussions in Congress, or there may be an airing of the situation when the House Legislative Oversight Committee takes up the Corcoran incident early in May. In any event, in our opinion, the people are entitled to a full explanation as to why the man who has stood up for their interests against the pressures of big utility companies, will not be given another term on a body originally set up for the protection and benefit of consumers.

Jobs for the Handicapped-Passports to Dignity

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks, I would like to include an essay by Miss Ann Marie Casey, a student at Padua Academy, Wilmington, Del. Miss Casey was selected this year's first-place winner in the essay contest sponsored by the Delaware Governor's committee on the employment of the physically handicapped.

The text of the essay by Miss Ann Marie Casey follows:

JOBS FOR THE HANDICAPPED-PASSPORTS TO DIGNITY

(By Miss Ann Marie Casey)

Time: Yesterday, a bitter winter evening. Place: A windy corner in any city, in any State.

Characters: You, me, Mr. and Mrs. America, and one lonely man, sick in spirit as well as in body.

Actions: He begs, shamefully. We give,

sorrowfully.

Result: A small donation to help provide

His will, his nourishment for his body. His will, his spirit? Well, perhaps it is to late to help these.

But is it too late for us today to help that man and the millions like him who, because of some physical handicap, have lost all their will to live? No; for we Americans it is not too late. We can follow the example of those before us who have annihilated these tragic scenes, advancing toward despair. They have successfully succeeded in instilling new life into these men and women. How did they do this? They gave them a purpose for living, a passport to future happiness.

Webster has defined the word passport as a "license or permit to leave one's country for travel in a foreign land." Therefore, should we take it to mean that the passport of a handicapped person is official permission to travel? No; for theirs is a different kind of passport. Instead of taking them to far away countries their passports transport them to a land of equality. It takes them into the world of happy human beings, a world in which they rightfully belong. But exactly what is their passport? It is the greatest gift that can be offered to a handicapped person. It is the chance to occupy themselves with useful work. Yes; the everyday jobs that we, the blessed non-handicapped take for granted, can be a source of explicit happiness for them. Employment is their bridge back to a life in which they may walk with their heads held high in a world where they may live with pride and dignity.

Work is one of nature's greatest doctors. The physically impaired, while at work, have some chance to forget their disablement by concentrating on the particular jobs at hand. For example, the thousands of disabled veterans returning from the war might have lain in hospitals for months or years. But instead, through the help of various rehabilitation agencies, they are now useful, efficient workers, earning a regular salary and able to supply their families with all the necessities

of life.

The handicapped do not want merely our pity, nor can only our financial donations satisfy them. Neither can they substitute for the dignity of a productive life. They are self-respecting people who desire only the opportunity to display their abilities, not their disabilities. They need a chance to regain their lost self-respect and equality with all the self-supporting members of our society by performing profitable labor.

It is this opportunity of steady employment that breeds a growth of self-respect and self-fulfillment which inspires each to do his best at anything he undertakes.

That the handicapped are efficient and dependable workers has been proven again and again. In facts taken in over 100 establishments throughout the United States, the handicapped won over the nonhandicapped 101 to 100. The Department of Labor, with the Veterans' Administration, made a 2-year study of the work of 11,000 physically handicapped working with 18,000 nonhandicapped on the same kinds of jobs. They proved, without doubt, that the handicapped were just as efficient, reliable, stable, careful, and versatile as the nonhandicapped. Just recently, it has been demonstrated in other industries and confirmed by official studies, the impaired compared more than favorably with the nonhandicapped. Also, in 1948, a study at the Oak Ridge National Laboratory, Oak Ridge, Tenn., showed no significant difference between the two groups.

Most important, let us not forget the war period during World War II. Because of a critical shortage of workers, industries and businesses utilized the physically handicapped on a scale never before known in this Nation. The results were so impressive that they made obsolete the hiring policies and practices which regard the handicapped as marginal or bottom-of-the-barrel labor. It is now known that successful employment of the handicapped is directly dependent upon the workers evaluation and placement procedures and techniques used by the employer in building and maintaining his entire work

The late Henry Ford, of the famous Ford Co., often stated his belief that no man was disabled if he had courage to go ahead and the willingness to do his level best in whatever he undertook. He believed that what a handicapped person needed most was a chance to become self-sustaining and above all, to play a productive role in society.

The above is sound proof of the tremendous success of the efforts of the handi-

capped throughout the country. But without the continued aid of all of us and our trust in their ability, they cannot continue on their road of accomplishments. If they are striving so very hard to fulfill their state in life, can we do less than help in every possible manner, especially since our way has been made clear?

Also, let us not forget that we may also derive benefits from these "passports" we issue. Because of our help, we can gain eternal merit in heaven as well as receive the valuable services of capable workers. Other than individual merit, the church, the state, the nation, that has reached out to help her less fortunate brothers is worthy of the honor and respect of every other country in the world and will reap the graces of the Heavenly Father.

In conclusion, I think this following statement of Mr. Earl Bunting, managing director of the National Association of Manufacturers, ably expresses all that I have tried to convey: "There are few things as basic as the individual's desire to take his proper place in society as a productive and self-supporting citizen. This is, in fact, at the root of our democratic society. There is no longer any question as to the competence of workers physically handicapped because we have seen that, when placed in jobs for which they are properly trained, they become satisfactory and valued employees."

Commitments to the People

EXTENSION OF REMARKS

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article entitled "Commitments to the People," published in the Wall Street Journal of today, May 4, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMITMENTS TO THE PEOPLE

It has become an annual ritual for the President to appeal to the people in an effort to head off sizable congressional cuts in his foreign aid program. This time, though, on the same day he made his appeal he told another audience that world peace and stability depend on the soundness of the American dollar.

The juxtaposition is interesting. Plainly Mr. Eisenhower does not care to see the connection between massive foreign aid and the threats to the soundness of the dollar. Yet it is a fact that foreign aid is a major contributor to this country's serious and continuing deficits in international payments, deficits which very well could undermine the standing of the dollar.

So if world peace and stability depend on the soundness of the dollar, then it cannot be that world peace and stability depend on foreign aid. But that is what the President contends

Indeed, it seems to us one trouble with Mr. Elsenhower's appeal is that it claims far too much for foreign aid. The President not only passes over the payments deficit; he insists that any significant reduction would have consequences close to catastrophic, jeopardizing defense and weakening resistance to communism. Such assertions, based on an arbitrary dollar figure, tax credibility.

The blunders and waste of foreign aid are dismissed as isolated instances of malfunctioning even though they are hardly isolated and some of them have ripened into scandals. Some of the most important questions about foreign aid are not even considered; such as whether it can in fact transform a backward, over-populated economy into a relatively prosperous one. Mr. Eisenhower's speech seems to assume that foreign aid can work such wonders; realistic on-the-spot appraisals indicate otherwise.

For an example of extreme phraseology, here is one passage from the address: "We can, here at home, arm to the teeth, and yet go down in total defeat if we let the rest of the world be swallowed up by an atheistic imperialism." That is certainly true, but who is suggesting that this is the alternative to any change in foreign aid?

What the critics of foreign aid are suggesting, we believe, is that it is too costly for the financial health of this country. More than that, they are suggesting that the program should be fundamentally reformed. It has simply been allowed to grow, with one appendage after another added, until by now no one could be expected to know all the alphabetical agencies involved.

In this haphazard process, the legitimate function of foreign ald has been lost sight of; that function is to accomplish a specific foreign policy objective in a specific place. Instead we have an indiscriminate outpouring to all and sundry, apparently on the theory that mere handouts will promote some vague and undefined national interest. Other prosperous nations are not so foolish with their wealth. In the process, too, the Government has in effect lost control of its foreign ald program, because without precise purposes it cannot purposefully choose, and it comes to fear the wrath of the recipients if any change is proposed.

This Administration, like the one before it, has never undertaken a basic rethinking and reform of foreign aid. Surely the American people are entitled to that. And speaking of what they are entitled to, Mr. Eisenhower makes the rather startling argument that continued undiluted aid is a commitment not only by but to the American people because both parties have endorsed it in principle.

In our recollection the past commitments were something different. Economic aid was sold to the country as a temporary program to get war-ravaged nations on their feet. Military aid was sold as a temporary program to get the wheels of rearmament going; then the nations concerned would take over their own defense. Today, years and years later, both programs are going full blast.

The Government's overriding commitment, in any case, is not to other nations. It is, as Mr. Eisenhower recognized in his other speech, to husband this Nation's resources and preserve its money.

Sackcloth Upholstery on a Lincoln

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include in the Record the following editorial by Miles McMillin, political writer for the Capital Times in Madison, Wis.:

SACKCLOTH UPHOLSTERY ON A LINCOLN (By Miles McMillin)

If you want to know the kind of thing that changes people into beatnicks, follow the campaign trail of Phil Kuehn and Jack Olson, two handsome young products of Wiscousin business prosperity who are in contention for the Republican nomination for Governor.

They have both been going about the State making a great to-do about the ago-nies business endures in its brave effort to operate here.

Olson appears lately to be making an effort to disassociate himself from this theme but it is doubtful whether he can do it. Talking of the ordeal of business is part of a Republican's heritage, his environment, and

his compulsive instincts.

They have always talked this way, just as a hound automatically bays when he strikes the spoor of the fox. There are students of this phenomenon who insist they have observed Republican orators lose their train of thought and lapse into an automatic 10-minute discussion of this theme While trying to remember the point eluding them.

It makes no difference which party is in control of government. Through 20 years of complete Republican domination they recited this litany of gloom and doom.

Wisconsin is not unique in this respect. once remarked to a meeting of Democratic Politicians from various States that they were lucky to be getting all the business the Republicans claimed was moving out of Wisconsin.

All of them swore that the Republicans were making the same claims in their States. It was Lieutenant Governor vaag, of Minnesota, I believe, who remarked that the "greatest thing about American

industry is its mobility."

If ever there were two glittering examples of the fallacy of the GOP doctrine they are Kuehn and Olson. The cold storage business, which Kuehn's father founded in 1915, produced enough to provide Phil with an education at the Milwaukee Country Day School, a private school which is not known for catering to the economic destitute. He went on to Cornell, one of the best of the private universities.

In the years since Phil took over, the business has grown and now has branches in

Marshfield and Waukesha.

Much of this expansion took place when Phil was devoting considerable time to politics, as chairman of the Milwaukee GOP organization and later as State GOP chairman. He lives in a comfortable suburban home in Whitefish Bay and owns a farm in

Ozaukee County.
His business is currently so robust it runs Itself while he devotes virtually full time to

campaigning.

Olson has also had a successful business career, building on the Olson Boat Co., which his father founded. He is in the souvenir shop business, operates a motel, amphibious ducks and has lately joined up with the Wisconsin Alumni Research Foundation in other business ventures.

He customarily drives a huge Lincoln with an H-1 license plate. He is not one to flaunt his prosperity, however. During his cam-paigning he drives a Chevrolet, lent to him by a Wisconsin Dells auto dealer who chose this way to demonstrate his enthusiasm for Jack's candidacy.

Despite the fact that he is spending almost full time campaigning, business has been so good he has invited the members of the Wisconsin Press Association to be the stop-over guests of his boat company as they make their way wearily northward for the June convention at Eagle River.

Only the cynical would conclude that this has anything to do with his campaign. There is no foundation for the report that one of the features of the preconvention hospitality will be a lecture to the editors about the sins of diskjockeys who accept

Incidentally, the editors are also scheduled for preconvention hospitality at Wisconsin Rapids, a short way up the river from the The bookmakers are giving odds that at this pace the tired editors will not make Eagle River until Christmas.

I am willing to give Jack credit for sincerely wanting to break with the Republican habit of discrediting Wisconsin's business climate.

And I am confident that he will justify my faith, will turn the Chevrolet back and finish up his campaign in that beautiful, big Lincoln.

Can you think of a better way to advertise Wisconsin's favorable business climate than to campaign for Governor in a Lincoln long enough for a bowling alley?

Resolution on Multiple Use of Forests

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. WILEY. Mr. President, today there are more than 180 million acres of public land within the national forest system. Across the Nation, these forests are a significant part of our watershed, range, outdoor, recreation, wildlife and fish, and other programs.

An ever increasing population-now at approximately 180 million-requires that we exercise foresight in management and utilization practices of our forest resources. Unless this is done, there will not be sufficient reserves for future generations.

During the years, there has been considerable controversy over the use of forests or public lands-centering mainly about questions of whether or not there should be multiple use of such resources.

Today, I was pleased to receive a copy of a resolution adopted by the Society of American Foresters, Wisconsin-Michigan section, endorsing legislative proposals in Congress for the multiple use of public forest land. Reflecting the views of this fine organization. I believe the resolution deserves the consideration of Congress and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SOCIETY OF AMERICAN FORESTERS, WISCONSIN-MICHIGAN SECTION-RESOLUTION

MULTIPLE-USE BILLS

Whereas the 180 million acres of public land within the national forests contain a significant part of the Nation's outdoor recreation, range, timber, watersheds, and wildlife and fish; and

Whereas these renewable natural resources and services within the national forests, due to increasing population and better accessibility, are rapidly growing in value to the social and economic welfare of the Nation; and

Whereas the policy of managing these resources for multiple use and sustained yield by the Forest Service will yield the maximum of products and services from these lands in the long run; and

Whereas there has been no legislative action by the Congress directing the Secretary of Agriculture to manage outdoor recreation, range, timber, watersheds, and wildlife and fish on the national forests for multiple use and sustained yield: Now, therefore, be it Resolved, That the Wisconsin-Michigan

Section of the Society of American Foresters urges passage by the Congress of the multiple-use bills, S. 3044 and H.R. 10572 and H.R. 10708 and H.R. 10776; and be it further Resolved, That copies of this resolution be

sent to appropriate committees of the Congress with the request that it be included in hearing records on the above-mentioned bills; and be it further

Resolved, That copies be sent to all Members of Congress from Wisconsin and Michigan with the request that they actively support and urge passage of these bills.

Health Care Recommendations Proposed by the Administration

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming, today appeared before the Committee on Ways and Means in executive session and outlined the structure of the administration's proposed plan for meeting the health care requirements of our aged citizens.

Mr. Flemming's prepared statement has been authorized for public release. So that it may be available to the membership of the House I will insert the Secretary's statement at this point:

STATEMENT BY ARTHUR S. FLEMMING, SECRE-TARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE HOUSE WAYS AND MEANS COM-MITTEE OF THE U.S. HOUSE OF REPRESENTA-TIVES, WEDNESDAY, MAY 4, 1960

Mr. Chairman and members of the committee, I am glad to appear this morning to present the administration's plan to provide health and medical care for the aged.

The executive branch of the Government fully recognizes and accepts the fact that the Federal Government should act in this field. A careful consideration of facts such as the following can lead to no other conclusion:

- 1. There are 16 million persons aged 65 and over-4 million pay income taxes. Of the 12 million who do not pay income taxes, 2.4 million are recipients of public assistance.
- 2. A 1958 study identified 60 percent, or 9.6 million, of the aged as having incomes of \$1,000 or less, and 80 percent, or 12.8 million, as having incomes of \$2,000 or less. These figures should be discounted, because they include situations where a wife has an income of less than \$1,000 and the husband has a substantial income, and because they include situations where other members of the family have substantial resources. Nevertheless, we are dealing with a group in

our population which contains an unusually large percentage of persons with very limited resources.

3. A 1957-58 study shows that the average annual expenditures of this group for health and medical expenses was \$177, not including nursing home care, as compared with \$84 for the rest of the population. But it is important to note that 15 percent of the persons 65 and over, or 2.25 million, had total medical expenditures, on the average, of \$700 per year, not including nursing home care. The expenditures for this group represented 60 percent of the total medical care expenditures of the aged. Since 1957, costs for medical care have increased at least 20 percent. Also, it should be noted that the high-average expenditure for the aged is attributable to the fact that \$6,000 is a conservative estimate of total medical expenditures incurred by persons who are continuously ill for an entire year.

4. According to the Health Insurance Association of America, approximately 49 percent of the persons in this age group have some kind of health and medical insurance. But, only a comparatively small percentage of this group have policies that protect them against long-term illnesses. This is true of those who are covered by group policies, as well as those who are covered by individual policies. There is a trend in the direction of extending beyond the retirement age provisions in group policies that cover major medical expenses. There is also a trend in the direction of making individual policies that cover major medical expenses available to persons 65 and over. These policies call for payment of premiums ranging from \$60 to \$130 a year per individual. They include deductible provisions ranging from \$250 to \$500. They ordinarily establish annual or lifetime dollar ceilings on benefits. Most contain coinsurance provisions of 20 to 25 percent.

It follows, therefore, that a large percentage of persons aged 65 and over do not have protection against long-term illnesses, and either cannot obtain protection at rates they can afford to pay, or cannot obtain adequate protection.

In the light of these facts we have developed a program that is designed to achieve just one objective; namely, to provide approximately 12 million persons 65 and over who have limited resources with the opportunity of taking steps which, if taken, will enable them to cope with the heavy economic burden of long-term or other expensive illnesses.

We have developed this proposal in the belief that any program undertaken by the Federal Government in this area should meet the following tests:

1. It should provide the individual with the opportunity of deciding for himself whether or not he desires to be a participant in the program.

 It should make available a system of comprehensive health and medical benefits which provide adequate protection against the costs of long-term and other expensive illnesses.

3. It should make available all the benefits of the program to public assistance recipients at public expense.

4. It should provide for some financial contribution on the part of those participants who are not on public assistance.

 It should provide private insurers with the opportunity of expanding their programs of extending health protection to the over-65 age group.

6. It should provide for a Federal-State partnership in dealing with the problem.

We have developed a program that is consistent with these guidelines. We believe that if it is put into operation, it will provide the aged with the type of assistance they most need. We want to make it clear, however, that we will be glad to discuss any suggestions for improvements that are consistent with the consistency of the cons

sistent with the basic guidelines that I have just outlined.

Specifically, we recommend that the Federal Government assist the States in establishing a medicare program for the aged in accordance with the following specifications:

1. Eligibility for participation in program: The program would be open to all persons aged 65 and over who did not pay an income tax in the preceding year and to taxpayers 65 and over whose adjusted gross income, plus social security, railroad retirement benefits, and veterans pensions, in the preceding year did not exceed \$2,500 (\$3,800 for a couple).

2. Eligibility for benefits:

Persons eligible for participation in the program would be entitled to the benefits of the program if they had paid an enrollment fee each year of \$24 and after they had incurred health and medical expenses of \$250 (\$400 for a couple).

Public assistance recipients would be entitled to the benefits of the program without paying the enrollment fee and with the States paying the initial \$250 of expenses under the regular public assistance program.

3. Benefits:
The medicare program for the aged would pay 80 percent (100 percent for public assistance recipients) of the costs of the following comprehensive health and medical services for all participants who had established their eligibility, and where such services have been determined to be medically necessary:

(a) Hospital care, 180 days.

(b) Skilled nursing home care, 365 days.(c) Organized home care services, 365 days.

(d) Surgical procedures.

(e) Laboratory and X-ray services, up to \$200.

(f) Physicians' services.

(g) Dental services.

(h) Prescribed drugs, up to \$350.

(i) Private duty nurses.

(j) Physical restoration services.

4. Optional benefits:

Each State would provide that an aged person eligible for participation in the program could elect to purchase from a private group a major medical expense insurance policy with the understanding that 50 percent of the cost would be paid for him from Federal-State matching funds up to a maximum of \$60. The States would be responsible for establishing the minimum specifications for such policies.

5. Continuation of eligibility:

Once a person has qualified for participation in the medicare program for the aged, he can maintain his eligibility by the payment of the annual fee. If his income rises above the figure specified for eligibility, his fee would be raised on a graduated basis for each \$500 of increase in income until the fee covered the full per capita cost of the benefits made available to him.

6. Administration:

The medicare program for the aged would be administered by the States, under a State plan approved by the Department of Health, Education, and Welfare. The State would be authorized to use appropriate private organizations as agents.

7. Financing:

The governmental cost of the program would be financed by the Federal Government and the States on a matching basis. Federal matching would be 50 percent on the average with an equalization formula ranging from 33½ to 66¾ percent for the Federal share.

8. Cost:

Assuming that all States participate and that 80 percent of those who are eligible enroll for the program, it is estimated that the annual Federal-State cost of this plan would be \$1.2 billion with the Federal share being estimated at \$600 million. There would be some reduction to the extent that

persons eligible for participation in the plan elected to purchase insurance policies providing for the optional benefits. It is impossible to estimate the number of persons who would elect the optional benefits.

On the other hand, however, it should be noted that increases in costs and increased utilization of facilities over and above that included in the cost estimates could lead to an increase in these estimates. Also, there would be some increase in Federal payments for public assistance. This increase might reach \$100 million per year.

The make ready cost during fiscal year 1960-61—including grants to States to help them develop their programs—would be about \$5 million. The fiscal year 1961-62 cost would depend on many factors. We estimate that this would run in the neighborhood of \$400 million, of which \$200 million would be the Federal share.

We believe that the plan which I have just described would achieve the following re-

 It would permit the individual to decide for himself whether or not he will participate in the program.

It would preserve the opportunity for private insurors to continue to demonstrate their ability to develop major medical expense programs for the aged.

It would divide the cost equitably among the entire population by providing for financing the Federal share out of general revenues, contrasted with a payroll tax that places the entire burden on earnings of less than \$4,800.

4. It would provide a wide range of benefits without placing a premium on institutional care as opposed to alternative lower cost services. Thus, it would facilitate the most effective and economical use of available medical facilities and services.

5. It would provide a built-in incentive for judicious use of health facilities and services by requiring the individual (other than public assistance recipients) to share in the cost above the deductible of \$250.

Most important, however, the program is designed in such a manner as to pinpoint the area of greatest need; namely, the large number of persons over 65 who do not have the resources or the opportunity to obtain adequate protection against the staggering financial burdens of long-term illness. This is the most serious problem in the financing of health care for the aged.

This plan guarantees comprehensive health and medical services to all aged public assistance recipients in States that become part of the program. It is available to all persons in the lower income brackets, regardless of whether they happen to be covered by social security. It identifies persons who may benefit by the program on the basis of a simple and easily determined eligibility requirement, without subjecting the individual to a detailed and involved income or means test.

In summary, we believe that the medicare program for the aged will concentrate governmental assistance in such a manner as to provide the most effective and most responsible use of Federal and State funds. We believe this program represents a practical solution to a pressing human problem.

Tapco Design Wins Sun Power Chance

EXTENSION OF REMARKS

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. LAUSCHE. Mr. President, Ohio. long noted and often worldwide ac-

claimed for its leadership in the development of modern communication and travel, again through its industrial ingenuity and progress takes pride in another great forward step, this time into outer space.

Today there is being developed, and soon to be manufactured in the plants of the Thompson Ramo Wooldridge, Inc., of Cleveland, Ohio, an outer space craft sun-powered electric generator, capable of generating 3,000 watts of electricity for at least a year up in space. This device is known as Sunflower I.

Ohio, due to its geographical location, terrain, and waterways, even with the first westward migration of a century and a half ago, became a bridge for the connecting of New England with the new West. It was to have been the western terminus of the old Chesapeake & Ohio Canal. Later, when railroads pushed Westward, the Baltimore & Ohio traversed its lands.

It was Ohio that gave both light and flight to the world; Thomas Alva Edison, of Milan, Ohio; the Wright brothers, of Montgomery County, Ohio; and it was Charles Kettering of Ohio who gave the self-starter to the automotive industry.

The development of Ohio's most recent pride is well described in an article which appeared on April 20, 1960, in the Cleveland Plain Dealer, which I ask unanimous consent to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAPCO DESIGN WINS SUN POWER CHANCE

With a parasol-shaped design and a price tag of \$4,900,000, the Tapco group of Thompson Ramo Wooldridge here won first chance to get the job of developing a sun-powered electric generator for spacecraft.

The National Aeronautics and Space Administration will negotiate with the Cleveland firm on the system, to be called Sunflower I, the Associated Press reported from

Washington last night.

The TRW proposal was chosen out of 23 designs and cost estimates.

A Tapco spokesman said: "It was a highly

A Tapco spokesman said: "It was a highly competitive situation. Naturally, we are gratified.

"All these devices to gather energy from the sun's rays are either shaped like an umbrella or else they have paddle wheels such as you have on Pioneer V or Discoverer VI.

"This one is a giant parasol, a parabola, used to gather solar heat and concentrate it on a boiler containing liquid mercury.

"That turns the mercury to vapor, and the vapor turns a turbine which generates electricity. Then the mercury vapor is condensed and used again. It's a closed system.

"Mercury works better in a closed system than other things like water, and takes less space. And gravity doesn't affect it. Mercury vapor will climb uphill against gravity."

The NASA announcement said that the Sunflower I was expected to generate 3,000 watts of power for at least a year up in Space.

It is hoped, the NASA statement said, to be done with a 700-pound device which can be housed in the nose of Centaur or Saturn rocket-launched vehicles and to have potential uses in satellites and in lunar or planetary spacecraft.

The parasol would be folded at launching. Once up, the petals would spread out to a diameter of about 32 feet.

The scheme would include an energy storage unit so that the device could continue putting out power even while the spacecraft was in the shadow of the earth, unable to gather solar heat.

This was the second space research contract NASA announced this week. Monday it disclosed a \$500,000, 1-year engineering and development study of an electric rocket engine to power spacecraft.

Avco Corp. and General Electric won that

Mr. LAUSCHE. Mr. President, the Space Technology Laboratories, a west coast subsidiary of the Thompson Ramo Wooldridge, Inc., has also made marked accomplishments in space projects. I ask unanimous consent that they also be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Pioneer V: Designed and constructed at Space Technology Laboratories and launched under its direction for the National Aeronautics and Space Administration, and the Air Force Ballistic Missile Division. It includes man's first interplanetary communication system, and this, too, was designed and constructed at Space Technology Laboratories. Pioneer V instrumentation provides for the collection and transmisson of 14 different kinds of scientific data about the nature of the solar system and the space environment. It is expected to continue sending information back to earth from distances up to 50 million miles. Pioneer V is being tracked by the Space Technology Laboratories global network of ground stations.

Tiros I: Space Technology Laboratories provided systems engineering and technical direction of the launched vehicle, which is a television weather observation station. On command from earth, it takes pictures from any segment of its orbit and either relays them immediately, or stores them on tape until called for by a ground receiving station.

Transit IB: This is the world's first navigational satellite. Space Technology Laboratories provided systems engineering and technical direction of the launched vehicle and launch operation. In addition, Space Technology Laboratories developed, produced, and instrumented a second-stage vehicle capable of restarting its engine in flight and correcting its trajectory on command from earth. This Space Technology Laboratories-developed second-stage included a propellant capacity twice that of any predecessor, and thus eliminated the need for a third-stage rocket theretofore mandatory for advanced space probes.

For the Transit project, Space Technology Laboratories added a new element to its ground monitor network—the free world's first mobile tracking and telemetry station. This new unit includes the largest known portable radio telescope. It can be air lifted to any location in the free world.

Polish Constitution Day

SPEECH

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. REUSS. Mr. Speaker, the 3d of May 1960, marks the 169th anniversary of the adoption of the Polish Constitution. I join with my colleagues in the Congress, with Americans of Polish descent, and with the countless friends of the Polish people everywhere, in celebrating this great document's adoption. The Polish Constitution, patterned after our own Constitution, remains even today a symbol of man's eternal struggle for freedom and justice.

The Polish people, ruled today by a government subservient to the Soviet Union, have never lost their sense of nationalism and their dedication to the principles of liberty.

And this observance today in the Congress of the United States will, we devoutly hope, serve as a message to these brave people that we in America have the deepest sympathy and concern for them; that we do not accept the present condition of Poland; and that we shall work constantly toward the goal of total freedom for the Polish people.

The Polish people have been forced before to relinquish their rights. But I am confident that, as in the past, the Polish love of liberty, justice, and freedom will prevail over despotism.

Keep Rim on the Job

EXTENSION OF REMARKS

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks, I desire to insert in the Record an editorial which appeared in the Morning Call, a newspaper of Allentown, Pa., on May 2, 1960. This editorial refers to Dr. Charles H. Boehm, the present superintendent of public instructions of Pennsylvania, and mentions some of his accomplishments during his tenure of office.

The editorial follows:

[From the Allentown (Pa.) Morning Call, May 2, 1960]

KEEP HIM ON THE JOB

It was not unexpected, controversial though he has been, that Dr. Charles H. Boehm was reappointed Pennsylvania's superintendent of public instruction.

It should be just as rational an assumption that his appointment for a second 4-year term as the State's chief educational officer will be approved when his name is submitted to the Pennsylvania Senate in June.

For, regardless of how many toes he has stepped on, this veteran educator who knows schools and their teachers and their pupils and their needs both as a teacher and as a district administrator has done more in 4 years to bring about needed changes in the tax-supported educational system of the Commonwealth than has been done in any previous decade.

Under his leadership the public school curriculum has been revised to place more emphasis where it should be placed—on such subjects as English and science and mathematics and government. He has sought to assure a supply of better trained teachers by insisting that teachers colleges strengthen course offerings in the subjects that are to be taught in elementary and

May 4

secondary schools and has raised standards for permanent teaching certificates.

He has dared to agree publicly with what many pupils and parents and other observers long have contended—that not every teacher is infallible because he is a teacher, that not every teacher is doing the teaching job that is expected, and that there are misfits in this as in every other vocation and profession.

He has refused to be a rubber stamp for some of the grandiose and exorbitant tax subsidy proposals supported by such groups as the Pennsylvania State Education Association consisting of some 70,000 teachers and administrators.

For some of these forthright actions he has, of course, been criticized and censured. Generally, however, the people of Pennsylvania—and particularly those who have children attending its schools and its State supported colleges—would support what he has done and is doing because any fair and unbiased appraisal would find more than ample evidence that under his leadership the educational program is being strengthened.

If nothing else he has, in the words of a spokesman for the State school directors association, succeeded in counteracting an attitude of complacency about education in Pennsylvania and has called attention to a lot of things that needed to be changed.

For this reason alone his reappointment by Governor Lawrence—who also has been criticized by the teachers' lobby—deserves commendation and approbation.

Gates Takes Decisive Role in Joint Chiefs' Deadlocks

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. ARENDS. Mr. Speaker, on Sunday, May 1, 1960, there appeared in the New York Times an article entitled "Gates Takes Decisive Role in Joint Chiefs' Deadlocks," by Hansen W. Baldwin, the noted military commentator of the Times. The article was inserted into the Congressional Record of May 2, 1960, by the senior Senator from Massachusetts, the Honorable Leverett Saltonstall.

In view of the past and continuing discussion with respect to defense organization and decisionmaking procedures in the executive branch of the Government, that article should be of widespread interest, as Mr. Baldwin analyzes, with the perception and logic which characterizes his writings, both the mechanics and the policy importance of Secretary Gates' personally instituted procedure of meeting with the Joint Chiefs of Staff. In addition, Mr. Baldwin documents some of the principal decisions which the Secretary has made under the new procedure.

I bring this matter to the attention of the House because I believe that the article is a reassuring affirmation of the fundamental soundness of the Joint Chiefs of Staff system, and that it underlines the fact that this essentially sound Joint Chiefs concept has been even further improved under the leadership of the present Secretary of Defense.

The article, and Secretary Gates' policy of meeting with the Joint Chiefs of Staff, which Mr. Baldwin discusses, constitute a strong refutation of those critics who seem so eager to abandon our warproven Joint Chiefs of Staff system and replace it with some version of a supreme high command that would be antithetical to our form of government and far less responsive to our national security requirements. I further believe that this article by Mr. Baldwin heavily underlines the wisdom of Congress, and particularly this House and its Armed Services Committee, in protecting the Joint Chiefs of Staff system and concept against the efforts of those who would eliminate it openly, or destroy it indirectly by separating the Joint Chiefs of Staff from their status as chiefs of their services.

Also, it is apparent from Mr. Baldwin's analysis that the action by Secretary Gates in sitting with the Joint Chiefs of Staff again demonstrates the often forgotten truism that there is very little in governmental organization problems that intelligence, determination, hard work, and leadership will not cure. The Gates-JCS procedure reminds us once again that new organization charts will never take the place of able officials who willingly assume the responsibilities of their office and discharge those responsibilities with intelligence.

In particular, I believe that Mr. Baldwin's opening sentence is at once a summation of the overall effect of Mr. Gates' leadership and an infallible formula for those who seek more effective administrative procedures. The sentence to which I refer reads:

Secretary of Defense Thomas S. Gates has galvanized the decisionmaking process of government by the simple expedient of making decisions.

It is evident that the Gates' JCS directive of December 29, 1959, establishing the procedure by which the Secretary of Defense sits with the Joint Chiefs of Staff, is already being recognized as one of the most important documents of its kind in modern governmental organization. The manner in which Secretary Gates has performed his duties as Secretary of Defense is receiving continually widespread endorsement and approbation. After reading Mr. Bald-win's article, it becomes even more apparent why the Honorable Carl Vinson, the distinguished chairman of the Armed Services Committee of the House of Representatives, recently stated, with respect to Secretary Gates' policy of sitting with the Joint Chiefs of Staff:

I especially wish to commend you for your recent directive with regard to your participation in the deliberations of the Joint Chiefs of Staff.

With this one directive you have left an impressive mark on defense organization.

You have strengthened our great Joint Chiefs of Staff system, and at the same time have dealt a shattering blow to the advocates of a single chief of staff system.

And, you have vitalized and reaffirmed the constitutional principle of civilian control.

Mr. Speaker, in view of the interest in efficient defense organization and the importance of this article from the New York Times, I commend it to the attention of all Members of this House.

Economic Ignorance of the American People—The World's Ninth Wonder

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1960

Mr. WILEY. Mr. President, today our Nation is facing serious—but not insurmountable—economic problems.

At home, we are besieged with pleas from a wide variety of sources for more and more Federal spending. At the same time, we are hearing from different sources cries for relief from the tax burden. A major task facing Congress is to reconcile these conflicting viewpoints in the best interest of the country.

Today, our economy is rolling along at well over a \$500 billion gross national output on an annually adjusted basis—a new record. As a result, employment is high; people are living better; the country is stronger; we are more capable of meeting challenges at home and abroad.

There are, of course, economic problems to be resolved.

Internationally, the East-West contest—at a relative standoff militarily—is focusing more and more upon the economic, as well as other, fronts. Time after time, Communist boasts echo around the world of the superiority of communism over free enterprise.

Frankly, I am confident that our system will prove superior. However, the matter of economics—whether in private enterprise or in governmental operations—is becoming an increasingly crucial issue.

As a result, we need greater public understanding not only of how our system works but also broader fundamental knowledge of economic principles. This, I believe, would better serve the people individually, local, State, and Federal Governments, and the economy of the country.

Recently, Mr. G. Keith Funston, president of the New York Stock Exchange, outlined some constructive ideas before the National Association of Secondary School Principals on the need for establishing in our schools a more fundamental knowledge of economics.

Among the suggestions outlined by the president of the stock exchange are the following:

First. Assign specific responsibility for having the subject taught properly.

Second. We must recruit qualified teachers to do the job.

Third. Teaching techniques can be vastly improved.

Fourth. We must make economics compulsory for all students.

Believing that the overall speech contains most worthwhile food for thought on our economic challenge, I ask unanimous consent to have the talk by Mr. G. Keith Funston printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ECONOMIC ILLITERACY—UNSOLVED PROBLEM OF AMERICAN EDUCATION

When one thinks about the challenges facing educators today, the first thing that is apparent is how great the stakes are. I don't have to emphasize the extraordinary, exhilarating, and terribly dangerous period through which we are living. Whether we are going to get through this period with bodies and our souls intact seems to me to be in no small part a measure of the challenge which has been flung at you educators.

This is a truly awesome responsibilityand in some ways it is a new one. For too many years we received our educations With little more in mind than the personal advantages that education would bring us. A person went to school to enlarge his capacities-to enjoy life more fully, to make more money, to reach higher in the world. If he succeeded, that was his personal good fortune; if he failed, that was his personal loss.

Few people now would weigh the challenge to education by personal and indi-vidual standards alone. Throughout the world we are engaged in a contest which has entirely altered the criteria by which We must judge education. This was highlighted for me last week when a group of Russian politicians came, at their specific request, to visit the stock exchange. It seemed to me that their leader and spokesman came not so much to listen and learn as to make propaganda designed to mislead the American people. This same technique is being used all over the world. It requires a collectively well-educated people to dis-cern and counter this strategy both at home and abroad.

As President Eisenhower said to a group of foreign educators at the White House last fall, "* * * we need to put new ideas—and more of them—into orbit." But if these ideas are to get off the ground, must less stay aloft, we must understand that our classrooms are our most important launching platforms. A people which trifles with its schooling today is jeopardizing not only its chances for success, but for survival as

EDUCATION IN AMERICA: SUCCESS IN QUANTITY; QUESTION MARK IN QUALITY

I am sure that no one here would disagree. But how well has education responded to this challenge? From one point of view the answer is comforting. The statistics are impressive. More Americans go to school today than ever before. Nearly one in every four is currently adding to his formal education. In the traditional school years, the achievement is even more striking. Ninety-eight percent of our 7- to 13-Year-olds are in school; so are 85 percent of our 13- to 17-year-olds. Meanwhile, the pro-Portion of high school graduates going on to college is rising steadily. It was 35 percent 20 years ago. It is 53 percent today. And by 1970 there will be at least 6 million college students-double the amount enrolled today.

Many people, looking at these figures, would be tempted to conclude that our educational achievement has been a whopping Success. To them I would say: first, it had better be. And second, is it really?

As the president of a small college and then as the president of a large institution Which is also concerned with education, I have learned painfully that a people can emerge from the long educational process and still be woefully uninformed in areas of the most urgent importance—unprepared to cope with the problems of today, much less the ideas of tomorrow.

We have seen this very recently in regard to a subject we now acknowledge to be absolutely indispensable for our survival—science. For years we permitted our highschool graduates to gain their diplomas while remaining, many of them, mathematical know-nothings, with only a speaking acquaintance with modern chemistry and physics. We awoke with a jolt to the im-possibility of allowing that kind of illiteracy to continue. But now, I submit, a similar illiteracy exists in another area of great importance economics and its relation to the world in which we live.

I doubt that it is necessary to spell out at any length why economic understanding is so vital. Merely to list the great questions facing us as a Nation is to tick off a series of major economic problems. For example, how will America resolve the question of inflation? What will be its role in the drama of the developing nations? What are we going to do about the problems posed by agriculture, labor, business?

Undoubtedly much of our long-range capacity to survive hinges on the answers given to these questions. But how will our answers be arrived at? From what vantage point does a person decide? Has he a background of information and understanding that helps him determine what makes sense and what does not, what is good economics and what is bad? Or will his opinion be shaped by that odd mixture of hearsay, prejudice, and stereotype which passes, in so many peoples' minds, for economic knowledge?

AMERICA'S ECONOMIC ILLITERACY: "THE NINTH WONDER OF THE WORLD"

The answers to the qustions are not at all reassuring. At the stock exchange, we have come into firsthand contact with the range of knowledge—the economic literacyof a broad cross-section of the American people. That knowledge, not to mince words, is often shockingly inadequate. Seven years ago, for example, we set out to find just how many adults could more or less define what is meant by a "common stock." We learned that less than one-quarter of the adult population understood that basic term.

Now, of course, I am not suggesting that a knowledge of common stocks is the touchstone of economic literacy. But the lack of familiarity with securities does dramatize a disturbing problem. If only a quarter of our population knows something as personally meaningful as the ABC's of investments, what percentage do you suppose understands the basic principles of how a free economy works, or how it evolves and grows? As one well-known financial writer has commented: "The American economy is the eighth wonder of the world; the ninth wonder is the economic ignorance of the American people."

Let me add, however, that we should not be completely discouraged by this illiteracy. It does not stem from any profound and insoluable problem. It is mainly the consequence of a simple fact-that we do not teach economics. If we are a nation of eco-nomic know-nothings, it is because no one has ever bothered to explain the subject to us.

Consider, for a moment, these 1951 fig-ures—which I might add are, unfortunately, the latest available and which certainly should be brought up to date through a new study.

Of the 9,240,000 students enrolled in the Nation's high schools, only about 4 percent were ever expected to take a course in eco-

In the Nation as a whole, only one State, Oregon, our host State today, had made eco-nomics a requisite for high-school gradua-

Finally, for every student who took economics in high school, 6 took a foreign language, 8 took music, and 19 took physical education.

This is some indication of the low regard in which economics has been held by education. I am aware, of course, that you edu-cators are much concerned about this. You recognize, too, that very little has apparently been accomplished in recent years. The number of students taking economics shows no discernible upward trend. The level of economic illiteracy among them remains virtually unchanged.

IS TEACHING ECONOMICS "TOO TOUGH?"

Why has improvement failed to come? I wonder if the answer doesn't lie in the story told about an executive who was known for his passion for order. On this man's antiseptically clean desk was an array of baskets for his papers. One read "In." One read "Out." Another was labeled One read "Out." Another was labeled "Urgent." But the one with the biggest pile of all had the sign "Too Tough."

Is economics "too tough" to be taught at the high school level? Let me try to answer that. As you know the stock exchange and its member firms have been engaged in a broad program of adult education ever since we first became aware of the public's lack of information. Through newspapers, magazines, television, and radio, and through courses held at schools, libraries, and other meeting places, we have been trying not to sell common stock or bonds but to explain the opportunities, risks, and rewards that go with ownership of securities. Partly as a result of this effort, we have seen the number of shareowners almost double 1952-from 61/2 million to 121/2 million. Equally important, we find an overwhelming majority of investors in the market for the right reasons and with sound goals. But, of even greater significance to educators, we have witnessed an encouraging rise in the degree of interest in and literacy about the investing process. A new survey, soon to be released by the exchange, will document this in fascinating detail.

Of course, you may say, "That's all very well for adults. But we have to deal with adolescents." Let me tell you then about two successful ways in which economics has

been presented to youngsters.

The first concerns an elementary school in Kalamazoo. The wall of the schoolbuilding cracked and a construction crane with its owner-operator arrived to make the necessary repairs. One teacher, who had attended an economic education workshop, decided to put the occasion to use. She took her pupils-who were in the second gradeand explained to them how the crane could, in half a day, do a job that would require weeks by hand. After she had interested her pupils in the productive power of machinery, she asked them how they thought the crane owner had bought his expensive machine. That led to a simple explanation of how a business is financed and money raised. From there it was only a step to explaining how the money that people saved and invested was put to work. Later on, after hearing these second grade pupils discussing the economic consequences of the crack in their school building, one college economist exclaimed: "She's teaching capital formation to second grade kids-a concept I have a rough time drumming into my college freshmen."

In another instance, the teacher of a senior class in the Nyack (N.Y.) High School decided to bring economics home by suggesting that his class participate in the economic process itself. He proposed that each student ante up 50 cents and that the class invest the proceeds. This led to an enthusiastic search for the right company—and an equally enthusiastic discovery of the range and variety of American industry. Finally one corporation was chosen to be the agent of destiny for the class fund of \$18-which was just enough to buy one share of the company's stock. But that was only the beginning. Now the class had to find out how current developments-taxes and tariffs, competition and even fiscal policy—were going to affect their company. Economics was not too tough for those students. It was their most exciting course. It was made more so, incidentally, when the president of the company heard about the experiment and came to the school to conduct an annual meeting and answer questions for this special group of owners. This simple technique of teaching youngsters by doing, I might add, is being duplicated in many high schools across the country. A few weeks ago, a workshop for teachers was held at Nyack to explore this experiment in detail. This conference may well prove to be the start of a new interest in the way economics can be brought to life. I hope the Nyack idea—and the teachers' workshop that grew out of it—will spread from coast to coast.

All this has, Î think, a moral. If economics has traditionally been considered too tough, a large part of the trouble lies in the fact that we haven't always taught it too well—as evidenced by your association's sponsorship of the Council for the Advancement of Secondary Education, which seeks to upgrade the level of economic literacy. And if I may generalize from the few examples I have offered, I think we can see how to teach it better. I am encouraged to make these suggestions before the National Association of Secondary School Principals, because you have traditionally taken a farsighted view of the problems facing education, and have done much to exercise leadership in bringing about necessary changes.

First, we must make economics real. It is certainly difficult to make a youngster's heart beat faster about concepts so abstract as productivity or investment. But it is easy to stir his imagination about a machine, or about an individual enterprise in which he may own a tiny share. In other words, the overall theory of economics should be taught only after economics has been made as personal as something we touch or as something we do.

Second, economics should be imbued with some of the excitement of life. We must not be afraid, by the same token, to make economics controversial. By this I most emphatically do not mean that we should "slant" economics teaching. But it is surely a greater disservice to make believe that diverse points of view do not exist, or that economics is not one of the great, legitimate, continuing debates of a free society.

We can bring that debate directly into our schools by inviting into the classroom, from our own communities, people whose backgrounds lie in government, business, labor unions, and agriculture. We can further enrich the subject by supplementing the standard textbooks with some of the more thoughtful material available from these groups. Needless to say, the source of such material should be clearly indicated. In our own case, we have been heartened by the enthusiastic response of over 7,000 fifth to twelfth-grade teachers who have used our series, "You and the Investment World," in their classrooms. May I add, also, that the texts prepared by your Council for the Advancement of Secondary Education are available—and I would certainly urge you to make wide use of them. Finally, we can teach economics from that greatest and most readily available of all textbooks-the daily newspaper. From first page to last, there is not a section of a newspaper in which a skilled teacher cannot find examples of economics at work.

BETTER EQUIPPED TEACHERS MUST MAKE ECONOMICS A PART OF LIFE

I believe that if we taught economics in this manner, it would not be "too tough." But I suggest there is a second reason why our economic education has fallen short of the mark. To come directly to the point, it is because too often the wrong people are teaching it.

In the files of our education department at the stock exchange is a letter I would like to read to you:

"Dear Sirs: I am teaching a course in economics to a small group of high school seniors. This is my first experience in the field. I am a band director by profession, and I would appreciate any material you have that would benefit my students or myself."

I do not decry the effort of a band director to teach economics. Rather, I am happy that the need to teach such a course was recognized and that steps were taken to meet that need. Nor do I claim that all economics teachers are band directors. But I think it is fair to say that most high-school principals would rather have a band leader teach economics than have an economist lead their band.

In economics, as in any other field, it takes careful training to do the job right. The person for whom economics really is "too tough" is the teacher who has no adequate preparation. And the fact is that economics is too important to be taught by "anybody."

What can we do about this? There are four things I would like to suggest:

First, assign specific responsibility for having the subject taught properly. Economics has been an orphan of the curriculum for too long. It cannot remain so. The subject needs the planning, and guidance, that any important discipline requires. You will find that the people within your community—taxpayers, parents, civic and business people—will respond enthusiastically when they realize the steps you are taking. Moreover, I believe that responsibility for teaching economics must be assumed not only at the local level by a department or a group of your teachers, but at the State and National levels as well. For instance, I would hope than an organization such as the National Council for the Social Studies will take the unqualified position that the teaching of economics is something to which they have to devote major attention.

Second, we must recruit qualified teachers to do the job. You can take a major step here simply by being sure that those assigned to teach the subject have a lively interest in it and have had college-level economics courses. Also, you can point out the availability of effective and inexpensive teaching aids—and see to it that they are used properly. You may well reply that all this is fine, but attracting better teachers means paying higher salaries. I quite agree. And I believe you will find a larger measure of local support once it becomes known that you have a down-to-earth purpose such as this.

Third, teaching techniques can be vastly improved. I have mentioned a few of the vivid, often exciting ways that economics can be brought into the classroom. Why not, then, encourage your economics teachers to attend one of the many inservice workshops that are exploring ways to throw fresh light on what too many people feel is a dull subject. With imaginative assistance, your teachers will do the expert job of which we know they are capable.

we know they are capable. Finally, I believe we must make economics compulsory for all students. This does not mean piling the subject into a 1-year required history course. Such courses already contain more than the student can absorb, or the teacher teach. Rather, I refer to the example Oregon and some school districts around the country have set. They require a separate course in economics study as a requisite for high-school graduation. Or, as an alternative, economics should be included as an essential element in an expanded 2-or 3-year history course.

This is certainly not too ambitious a program. In fact, the only serious obstacles

in its way could be our failure to acknowledge that the problem exists, or to be serious about solving it.

If I may summarize the points I've wanted to stress:

First, widespread economic illiteracy is a weakness which must be recognized when assessing the Nation's educational system.

Second, this weakness stems more from neglect than from any other single factor.

Third, the means exist to correct that weakness by strengthening our teaching standards and introducing economics into the classroom as a part of life, rather than as something apart from life.

Finally, may I include on a personal note. Fourteen years ago, in my inaugural talk at Trinity College, I remarked to the effect that: "We must not hesitate to teach things which will prove useful in later life. Rather, we must attempt to give a man background and breadth, so that he can bring to a profession, or to a specific job, a viewpoint and an approach which will increase his effectiveness both as a wage earner and as a citizen."

Fourteen years later, it seems to me that this comment, directed at college students, is all the more pertinent when applied to the educational needs of high-school students—many of whom will have no further opportunity for formal education. This is a challenge to education which we can and must meet if, as President Eisenhower has urged, we are to succeed, in our time, in putting new ideas into orbit.

If I Were Satan

EXTENSION OF REMARKS

OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BURDICK. Mr. Speaker, I should like to call to the attention of my colleagues an article written by Father Joseph L. Hylden, of Edgeley, N. Dak., in the April 1960 issue of Catholic Action News. Father Hylden has been a stanch fighter for the preservation of family agriculture and I unhesitatingly associate myself with the views expressed.

The article follows:

If I were Satan:

I would work, using all means good or bad, to destroy the family, because it is the basis of good living for people.

I would work expecially hard to destroy the family in the rural community. There, I find it hardest to get a foothold. There I find it much harder to promote juvenile delinquency and crime of all kinds. I find this from the studies and statistics of the human beings themselves.

I would connive to destroy the tremendous power of personal face-to-face relationships of people in rural communities. It is this personal touch that helps to keep people interested in the good society.

I would certainly foster the thinking of many college professors and other leaders that the traditional patterns of family life have outlived their usefulness, and that now we must be modern, throw out those old mores and discover new modes of living in groups.

I would look very hard to find a new Sinclair Lewis who would do a good job in the 1960's to lampoon, ridicule and satirize rural community life. A new "Main Street" would strengthen my cause immeasurably.

I would get the Madison Avenue crowd to glamorize the quality of democracy and Christianity in our great urban centers and also in suburbia. Thereby I would get rural people to overlook what "they" have in these

two vital areas.

I would lead smalltown businessmen into believing that they are really important to their wholesalers and distributors from the larger centers who keep feeding them with misinformation about "the enemies to their success;" namely, the cooperatives, credit unions and labor unions.

I would get farm people to increase their buying through the mail-order catalog, and to establish more charge accounts in the

big stores of the big cities.

I would teach rural town chambers of commorce and other businessmen's clubs to promote their towns by bringing in chainstores, substations for the big city banks and savings and loan companies, etc.

I would not let them see that I was destroying the local family-owned business places that are the backbone of rural

America.

I would promote the mania for bigness in the successful farmers of the surrounding trade areas.

I would get the successful farmers to buy up more and more land, putting many family farmers out of business. Thus destroying the market for local businessmen—I would deal the deathblow to the family.

I would encourage the theory of unlimited expansion in material possessions. If they get this "bug" to grow and grow and grow. they will just naturally drive many farm and smalltown families to the big centers where I have more of a chance to influence their

I would encourage the newspapers of America to keep harping away on the theme that the farmers should not be subsidized any

more than anyone else.

I would keep in office those who say, "Get the Government out of agriculture." Such People are doing much for me to kill the rural community, because it is only a half-truth that needs much explaining and further study.

I would encourage governmental bureaus to hinder local communities in their efforts to provide themselves with hospitals, doctors, schools, and recreational facilities that are

adequate.

I would encourage church leaders to send out poorer clergymen to the rural communities, and would get them to close churches and consolidate as much as possible. A live-Wire clergyman living in a rural community is a real hindrance to my work.

I would give anything to destroy the rural community. From there on my work would

be simple.

The Fight for Fiscal Sanity

EXTENSION OF REMARKS

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. CASE of South Dakota, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Fight for Fiscal Sanity," by Kenneth O. Gil-more, which appeared in the May issue of the Reader's Digest.

There being no objection, the article Was ordered to be printed in the RECORD,

as follows:

THE FIGHT FOR FISCAL SANITY (By Kenneth O. Gilmore)

This is the season of the year when you are digging deep for Federal income taxes. It is also the season when pressure groups are doing their methodical best to drain your cash from the Federal Treasury, and saddle you and your children with inevitably

greater taxes.

Right now, highly organized forces are working to push their pet spending schemes through Congress. Huge money bills are rolling out of appropriation committees, to be considered by the House and Senate and finally signed or vetoed by the President.

In the crucial weeks ahead you'll be hit from every direction with slickly presented appeals for additional Federal dollars—more money than is called for in the President's \$79.8 billion budget for fiscal year 1961. You'll be caught in a crossfire of protest. pleas, alarms and dire warnings. You'll be told that the welfare or the very survival of the Nation hinges on every money demand.

The public can pierce through all the

double talk by understanding the Federal budget and how it is put together. It's as important as understanding your own family

budget.

Preparation of the Federal budget is a gigantic contest between two forces. On one side are the bosses of an army of more than 2,300,000 Federal employees. These officials are ever striving to enlarge their empires and increase their budgets. Urging them on is a nationwide network of vestedinterest groups that put the heat on Congress for greater spending.

On the other side is a tiny band of fewer than 300 budget experts trying to stave off these pressures that, unchecked, would hurl us into bankruptcy. They work for Washington's most unloved agency, the Bureau of the Budget, headed by Maurice H. Stans—a public servant whose determination to face fiscal facts has enabled President Eisenhower to submit balanced budgets to Congress the last 2 years.

The contest begins far in advance. \$79.8 billion budget sent to Congress this year started taking shape 16 months ago. In January 1959, bureau heads of all departments issued instructions to branches, divisions, field stations, and regional offices to start compiling money requests for fiscal 1961.

This was the awaited signal. Every bureaucrat who valued his job description had ready a must list of new programs that required cash: more field trips, investigations, sample surveys, demonstration workshops, and training courses; more information services, grants, contracts; more construction and equipment; more clerical help, more space. All this was presented in terms of absolute, unquestionable need—yet in truth the totals were far more than were really needed and more than anyone actually expected to get.

By June, the Cabinet Secretaries and their budget experts were sitting down with each bureau chief to trim the money demands. Then in September all the departments sent their final requests to the Bureau of the Budget.

Now, in dramatic closed-door hearings, officials from every civilian department and agency in the Government had to appear before Budget Bureau examiners and defend their proposals for funds. From October to December, they filed into the bleak, highceilinged rooms of the Executive Office Building, next door to the White House.

These sessions make the later congressional quizzes look mild. It's a bureaucrat's nightmare when Budget Bureau examiners get on the track of a needless scheme to drain the Treasury. During the year, budget men have been bird-dogging an agency's every move-making spot checks, asking for financial reports, questioning key administrators, inspecting field offices. As a result they can swiftly slice through complex computations designed to foster impressions of unquestionable need.

Once a hearing is finished-it can last a few hours or weeks-the Budget Bureau examiners go before the director and his deputy, and argue for their recommendations. Verdicts are handed down. An agency head who disagrees with a verdict can go directly to the President and plead his case. happened, and in a few cases the Bureau has been reversed, for it is the President who must make the final judgment.

Then in January the budget is sent to Congress. After this, the departments and agencies are permitted to argue only for the

amounts that are in it.

Although no exact total can be set, Budget Bureau savings run into billions. One department alone-Health, Education, and Welfare-had \$160 million lopped off its proposed budget in fiscal 1960. No item is left unscrutinized. When the Office of Education, in HEW, needed 1,163 jobs in fiscal 1960, the Department knocked out 101 of these jobs as nonessential. The Budget Bureau whittled off another 40.

After the Post Office Department went through the Budget Bureau mill, it had lost \$40 million—a drastic cut, said a Depart-ment official. But mail service was not hurt

When the General Services Administration proposed to spend more than half a billion dollars to construct new Federal buildings, the Bureau turned thumbs down, and the President agreed, GSA Administrator Franklin Floete later conceded that the amount requested was not quite a realistic figure.

The Budget Bureau does more than just hone down budget proposals. After appropriation bills have actually been passed and signed at the White House, the Bureau can freeze the funds if it finds the money is going to be used wastefully—a fact that brings some agency officials and legislators to a boil

"An appropriation by Congress is not necessarily a mandate to spend," explains Maurice Stans. "For example, if resources are provided to deliver 64 billion pieces of mail but the volume turns out to be just 62 billion, then there's no sense in giving the Post Office Department more cash than it needs."

This power of apportionment has been applied with special effectiveness at the Department of Defense. At one point last year, the Budget Bureau was holding back more than \$900 million until its experts satisfied themselves that the money could be spent effectively. One reason for this: with constant and sometimes unexpected technological advances, weapons can be obsolete by the time money is actually appropriated

Congress set up the Budget Bureau in 1921 to aid the President in sorting out the Government's fiscal needs, and in 1950 and 1956 strengthened its powers to enforce efficient management of taxpayer funds. As no other director before him, Stans has boldly exercised this power and made the Bureau's impact felt in every office of government. His remarkable success makes him a target for bitter attack. But abuse does not worry him. A calm, friendly man with a bear-trap mind for facts, he says: "Good budgeting means uniform distribution of dissatisfaction, so I expect to be a whipping boy. My job is to watch out for the interests of the American taxpayer."

Stans has irritated generals and admirals by raising basic questions about our gigantic defense-spending programs. His persistent inquisitiveness, for example, had much to do with the decision not to invest millions in an atomic aircraft carrier but to use our resources on high-priority programs such as submarines that hurl Polaris missiles. Recently the Budget Bureau questioned the need for continuing investment in Bomarc, an antiaircraft missile, in an era when enemy aircraft are not the primary threat. The Air Force's request for costly new Bomarc sites

has since been sharply reduced.

Stans' judgments on defense spending do not come out of thin air. He attends all Cabinet and National Security Council meetings, has access to secret reports. Moreover, he is backstopped by 33 Budget Bureau military specialists. Every year Defense Department and Budget Bureau men sit down togother at the Pentagon and hear the services justify their financial requests.

Called before a Senate committee last spring, Stans refuted the charge that the Budget Bureau has put our defense program in a dollar straitjacket. But he said bluntly "I do not accept a presumption that the Defense budget must necessarily increase."

Stans' courage to say what he believes is no doubt reinforced by his phenomenal success in private life. As a 17-year-old, he left Shakopee, Minn., in 1925 with \$151 to try his talents in Chicago. Hired as an office boy for the national accounting firm of Alexander Grant & Co., he attended night classes in college. In 10 years he had moved up to become executive partner of his firm. In 1953 the House Appropriations Committee called on him to help review the budget. Two years later, as Deputy Postmaster General, he took a major part in reorganizing the postal service and modernizing its operating and financial procedures.

His appointment as Ike's fourth Budget Director created hardly a ripple of notice. But the date was significant—mid-March 1958, the first stage of the buildup for the budget for fiscal 1960. At that time the economy was still in a recession. Nevertheless, small signs of recovery offered a longshot hope that the 1960 budget could conceivably be balanced. Stans believed that business would pick up sufficiently to bring in the needed revenue, and he believed he could keep Government costs down-convictions shared by Secretary of the Treasury

Robert B. Anderson.

Stans was determined not to let an un-necessary cent slip into the budget. In his office he framed the simple question, "Why?" It became the watchword at the Bureau. a needle to collapse ballooned spending schemes. Why do you have to have this money? Why will the program cost so much? Why do we have to do it now? Why should this be the responsibility of the Federal Government?

No agency, big or little, escaped this stubborn curiosity. After the Agriculture Department came through the Bureau's wringer, nearly 70 million dollars had been squeezed from its regular administrative expenses. The U.S. Information Agency came to the Bureau with a budget of \$138,200,000, went away with \$120,550,000. When the International Boundary Commission wanted \$6,863,000, the Bureau sliced it to \$3,733,000. The Tariff Commission's appropriation request was reduced \$174,000-a tiny economy. but apply it in thousands of places, and savings snowball.

When the Bureau finished its work late in December 1958 the budget added up to \$77 billion, and the President sent it to Congress with the prediction that revenues would make it pay its own way. Although it was the biggest peacetime budget in U.S. history, a cry of horror went up from pressure blocs-the big unions, veterans groups, farm organizations and others. Politicians joined the unit. The budget was labeled "unrealistic," "crippling," "penny-pinching." "restrictive,"

But every time the President spoke, he spoke of fiscal responsibility. And Stans himself, making dozens of speeches all over

the country, did all he could to persuade the public that the time had come to stop living in the red.1 The fight for financial common sense caught fire. Citizens flooded Congress with letters. Bills for more billions were halted and cut down. When Congress went home late last summer, the fight for a balanced budget was won.

Now this year President Eisenhower has presented a budget with an estimated surplus of \$4 billion. Again Stans has been its chief architect. Again the catcalls and attacks of the spenders are being heard. And again the outcome depends on you. For the work of Stans and his staff could be tragically wiped out if an election-conscious Congress gives in to pressure for more Federal spending.

"We've done our job," says Stans. "Now it's up to the public to make the decision.

It's their money."

1 See "Must We Delude Ourselves Into Disaster?" The Reader's Digest, July 1959.

Enforcible World Law Is a Practical

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. MOORHEAD. Mr. Speaker, the statement that we are living in a shrinking world has become axiomatic. What is not so axiomatic but should become so is the realization that our smaller world makes the role of world law more important than ever before.

In a speech prepared for delivery at an annual Law Day observance in Pittsburgh this past Monday, the Honorable JOSEPH S. CLARK, the distinguished senior Senator from Pennsylvania, dealt most appropriately with the growing importance of world law.

Senator CLARK warned that the world community must achieve the rule of law in the 1960's-before it is too late.

I believe Senator CLARK's remarks are particularly timely. Thus, under leave heretofor granted to extend my remarks in the Appendix of the RECORD, I include the text of Senator Clark's address and commend its reading to my colleagues.

WORLD PEACE, WORLD LAW, AND DISARMAMENT (Speech by Senator CLARK at Allegheny County Bar Association, Pittsburgh, Pa., Law Day celebration, May 2, 1960)

On this third annual celebration of Law Day, U.S.A., I welcome the opportunity to speak to you about world peace, world law, and disarmament.

Never before have the people of the United States received such unanimous advice in an election year as to the No. 1 problem facing the Nation.

The United Nations, President Eisenhower, Prime Minister Macmillan, President de Gaulle, and Premier Khrushchev, all agree that the questions of general and complete disarmament is the most important one facing the world today.

Is this just the conventional lipservice of politicians to the popular yearning for peace? How can our leaders speak of the need for disarmament at the same time they

proclaim the need for greater armaments? Why all the talk about disarmament and the rule of law at this particular time? What are the current and upcoming issues at the nuclear test ban and general disarmament conferences? What is being done in Washington to assure that the negotiations succeed? What is the status of efforts to promote the rule of law in international relations? How can we strengthen the authority of the United Nations? In fact, do we want to do so?

I will attempt to touch on each of these questions in the course of this presentation.

ARMAMENT VERSUS DISARMAMENT

The query which appears most frequently in my mail is perhaps the easiest one to

"How can you and other members of the Democratic Party protest about the missile gap and other shortcomings in the state of our defenses and still profess a genuine concern about disarmament?"

In my view Winston Churchill's four-word answer cannot be bettered: "We arm to parlay."

I share the view of many Americans that U.S. defensive and offensive capabilities must be strengthened to offset growing Communist military might. I believe that we are taking military risks we ought not to take; that we must hasten the development of our mobile, solid-fuel, long-range Polaris and Minuteman missile programs; increase production of existing ICBM's and longrange Strategic Air Command bombers in the interim period; and provide the latest conventional weapons, airlift support and antisubmarine weapons for Armed Forces of greater strength. I also fear that an en-larged military budget will be required, at least for the next few years, although large economies and greater efficiency can undoubtedly be obtained by promoting genu-ine service unification and eliminating exprocurement procedures and travagant senseless duplication in the Pentagon.

We are in an arms race with the Communists, and it would be folly to forget it.

But the ultimate purpose of the best deterrent weapons systems science and money can produce is not human destruction, but a series of international agreement which will prevent the use, and eventually call for the elimination, of the weapons involved. Obviously, the best deterrent system could not give us security. It would merely reduce the risk of armed attack. It would not remove Communist capability to destroy us and our allies. It would not remove ever-present danger of war by accident rather than design. It would merely provide a little more time to come to grips with the real problem: how to achieve world peace through world law.

Maintenance of an East-West power balance in an ever-accelerating and ever-moredangerous arms race must not be accepted as the ultimate objective. We must use our strength to negotiate enforcible disarmament agreements and to promote the rule of law as the enforcible foundation for world

peace. The great challenge of the times is to design and present to the Communists a system of arms control and peacekeeping machinery which would offer an acceptable alternative to the present delicate balance of

WHY DISARMAMENT NOW

Why disarmament now? There are those who assert that the tensions of the world do not result from the arms race, but from the unresolved political disputes between the free and the Communist worlds. To disarm before resolving the quarrels which led us to arm in the first place, they say, is both illogical and dangerous.

To me this argument is as senseless as the old argument about the chicken and the

It doesn't matter which came first. Both problems must be attacked simultaneously.

Of course, we must seek solutions to political problems, such as the future of Berlin and the Chinese offshore islands. But we must also realize that the arms race is a present problem of at least equal importance. As Senator HUMPHREY has said arms race has taken on a life and a will of its own." Weapons breed counterweapons; military scientific breakthroughs result in massive new research and development programs which lead, in turn, to new breakthroughs and new and even more destructive sets of weapons. Neither armed camp dares to pause in this race toward mutual annihilation.

Perhaps the best answer to the question, "Why disarmament now?" is to recall that at the beginning of this year, we were speaking of the "fourth country problem." The membership of the nuclear club had stood at three since the Soviet Union exploded its first atomic bomb in 1949, several years sooner than our intelligence sources estimated

Since the French plutonium explosions in the Sahara on February 13 of this year, references to the "fifth country problem" have been current, although talk of the "Nth country problem" is more realistic.

Just a week ago I had the privilege of hearing President de Gaulle speak to a joint session of Congress. In an extraordinary passage he revealed French apprehensions

about the "Nth" country problems:
"We have reached the last moment when (disarmament) agreement appears possible. Failing the renunciation of atomic armaments by those states who are provided with them, the French Republic obviously Will be obliged to equip itself with such armaments. In consequence, how many others will attempt to do the same? In the state of increasing uncertainty in which fear throws the peoples of the world, the risk grows that, one day, events will escape from the control of those who obey reason and that the worst catastrophes will be unleashed by fanatics, lunatics or men of ambition."

Those who do not quail at the thought of nuclear weapons in the hands of our oldest ally are seldom sanguine when reminded of published intelligence estimates that the Communist Chinese will explode their first atomic device in the early 1960's.

The National Planning Association has predicted that by 1970 "most countries with appreciable military strength will have in their arsenals nuclear weapons-strategic, tactical or both."

CESSATION OF NUCLEAR WEAPONS TESTS

Let me turn first to the area in which the rule of law appears to be making the most progress: the Geneva negotiations for the cessation of nuclear weapons tests.

Because of the slow start and sporadic pace of the Geneva talks which have been going on for over a year and a half in more than 200 meetings, there is little comprehension of how tantalizingly close to agreement the negotiators for the United States, the United Kingdom, and the U.S.S.R. now

Agreement has been reached on the solution of many tough problems.

- (1) The treaty will prohibit all nuclear Weapons tests which are monitorable with existing detection equipment. Thus there will be specific provisions against aerial tests Within 175,000 miles of the earth's surface, all underwater tests, and all underground tests if the latter register 4.75 on seismic instruments placed at agreed locations.
- (2) The West has agreed, subject to Russian concessions on certain unresolved issues and the successful undertaking of a joint East-West test detection research pro-

gram, to a limited moratorium on all nuclear tests not specifically prohibited by the treaty. The President has made it clear that he will recommend to his successor continuation of this unilateral ban conditioned on good faith Russian compliance with the terms of the treaty, and all of the leading presidential candidates of both parties have indicated they would continue the moratorium under those conditions.

(3) The heart of the agreement centers on the creation of a worldwide control sys-tem, consisting of 180 control posts, whose number and location were agreed upon in 1958 by scientists of the three negotiating countries. Each post will be fully instru-mented to detect atmospheric underwater and underground explosions, and will be manned by 30 technicians, only 10 of whom could be nationals of the country where the post was located: 24 of the inspection posts will be located in North America, 6 in Europe, 37 in Asia, 16 in South America, 16 Africa, 4 in Australia, 7 in Antarctica, and 60 on islands. In addition there will be 10 detection ships and planes with roving assignments, and laboratories and a headquarters control setup in Vienna.

The control system will be super-(4) vised by a control commission, also to be located in Vienna, set up to meet on 24hour notice by any party to the agreement. East and West will have equal representation on the commission which will have

either seven or nine members.

Despite this wide area of agreement, difficult questions remain unresolved: the number of times inspection teams will be permitted to conduct onsite inspections following the monitoring of a suspicious event; the identity of the other nations to be represented on the Control Commission in addition to the negotiating powers, and the creation and staffing of control posts in countries not party to the initial agreement. An attempt to settle these remaining questions will be made at the summit conference 2 weeks from now.

The likelihood of a final agreement in the near future has alarmed those persons who want to see the United States resume testing to perfect our arsenal of "small, clean tacti-cal nuclear weapons" and "fission-free thermonuclear explosions" as well as those who are loath to enter any agreement with the Russians.

The Joint Atomic Energy Committee recently completed a week of public hearings on the scientific aspects of the test ban negotiations. Through the testimony of Dr. Teller and others the entire gamut of possible and theoretical means of avoiding discovery of underground and outerspace explosions was explored. The public was solemnly warned that explosions in large natural cavities or vast holes dug in salt domes or limestone at considerable depths below the Earth's surface and explosions on the far side of the Moon or at distances in excess of 5 million miles out in space could not be detected by the control system agreed on at Geneva.

It is generally admitted that there is a threshold, be it 1 kiloton or 20, below which known detection devices cannot assure identification of clandestine testing. But when the risk of hidden testing by the Soviets, which would expose them upon discovery through fortuitous onsite inspections or normal intelligence operations to the opprobrium of world opinion, is weighed against the risk of failure of the negotiations and the resumption of unlimited, multimegaton, high-yield tests, the latter risks appear far heavier. And the gains from a test cessation treaty would be truly estimable. It is admitted that the proposed control system would effectively identify atmospheric and underwater tests and large underground tests. But even more importantly, a society which has been largely

closed to the outside world would be opened to at least some foreign inspections.

It is worthy of note that Senator Gore, of Tennessee, the only Senator on both the Joint Atomic Energy and the Senate For-eign Relations Committees, declared just last Thursday after the Joint Committee hearings had concluded, that a test ban treaty negotiated in accordance with our last offer and not containing any further concessions would merit sympathetic and favorable consideration by the U.S. Senate."

Once the hurdle of Senate ratification is passed the issue of participation of countries other than the United States. United Kingdom, and USSR will come to the fore. This enormous problem has been put aside until agreement has been reached among the negotiators as to controls on their own territories, although the wisdom of deferring

this issue appears questionable.

It is already clear that French participation in the control system will be necessary from the beginning. Although the cooperation of the Fifth Republic cannot be taken for granted and De Gaulle has stated that France would forego further testing only if adequate controls over nuclear production could also be agreed on, his utterances show a keen appreciation of the risks involved and ultimate French cooperation will surely be achieved. The United States and the United Kingdom favor France as the third Western country on the nuclear test ban Control Commission. France is already participating in the general disarmament talks.

Communist China's participation in the control system will also be essential. Almost half of the 37 control posts to be located in Asia would be located on the China mainland. If the Soviets agree to United States-United Kingdom preliminary draft provisions a start on the establishment of control posts in countries such as China which are adjacent or contiguous to the territory of the signatory powers will be required within 2 years of the signing of the treaty. The com-pletion of all 180 control posts will be required within 4 years of the signing of the treaty. A failure to comply with either requirement will be cause for abrogation. Thus, we must obtain China's participation in the control system within 2 years of ratification of the agreement.

Secretary of State Christian Herter told the Senate Foreign Relations Committee on January 21, 1960, that Communist China's participation is inevitable if a disarmament agreement between East and West is to be effective. President Eisenhower concurred in this view at his March 16 press conference. All Western disarmament experts share

these views.

GENERAL DISARMAMENT

A treaty stopping nuclear testing is clearly only the first step in any program designed to end the arms race and to promote rule of law. The 10-nation East-West general disarmament conference which met in Geneva on March 15 is dealing with the broader problems.

The conference, which recessed last Friday until June 7, was not expected to make any progress until after the summit meeting, and it is right on schedule-just where it The intervening period started 6 weeks ago. has been used by both sides to make repetitious statements of positions and no real negotiating has taken place.

The Soviets have insisted on reaching agreement on their stated objective of "general and complete disarmament" before discussing specific controls. The West has insisted on proceeding initially with a discussion of limited control measures without agreement on ultimate goals.

If my experience as an attorney is typi-cal, and the members of this association can apply their own negotiating experiences to the question, it would seem almost impossible to obtain any fruitful result from a

difficult negotiation unless the parties agree at the outset on what they are trying to

accomplish.

Wisdom would seem to indicate that we waste no time in agreeing on the common objective of total and permanent disarmament, the goal already stated in a U.N. resolution unanimously approved last fall, and that we start to smoke out Communist views on the controls necessary to make a start toward that objective in the areas where agreement seems most likely.

It is important to understand the constructive side of the three-stage proposals put forward by the United States, United Kingdom, France, Canada, and Italy with the advance approval of Austria, Belgium, Denmark, West Germany, Holland, New Zealand, Norway, Portugal, Turkey, and a num-

ber of other nations.

In addition to a series of military control measures for the immediate future, such as the inspection of missile launching sites, reduction of armed forces to agreed levels, aerial and ground inspection against surprise attacks, and ultimate controls over the production and storage of nuclear, chemical, biological, and other weapons of mass destruction, the Western plan includes enforcement proposals of far-reaching significance.

The plan calls for the creation not only of a new international disarmament organization (IDO), to supervise the process of general disarmament, but also a separate "or-ganization, to be an organ of, or linked to, the United Nations," charged with "preventing aggression and preserving world peace and security, as national armaments are reduced." This peace-keeping body would be set up during the second phase of the Western plan and during the third and final stage its development as an "international law enforcement" agency capable of "pr serving world peace" would be completed.

Probably the greatest single deficiency in the Soviet plan, contrary to press reports which have stated inaccurately that Khrushchev's proposals do not provide for controls in the early stages of disarmament, lies in its silence about peace enforcement ma-The Soviet plan in this regard is chinery. The Soviet plan in this regard is totally deficient and its obvious weakness

has not been exploited.

Unfortunately, as can be inferred from the vague formulation in the Western plan, the State Department has no clear position worked out concerning the type of international peace-keeping organization we want to see developed. We are not even certain whether we want to follow the path of U.N. Charter review, as many smaller nations have urged, or whether we want to see an entirely new international organization created, free of the veto and other obstacles built into the present charter.

I am the author of a resolution, sponsored by more than a quarter of the Members of the Senate, including the three leading Democratic presidential candidates and several Republicans, calling for U.N. Charter review studies at the highest levels of our Government, but the administration has clearly indicated that it does not want to undertake this seemingly necessary assign-

Fortunately, a detailed plan for charter review and revision exists. In a work of the first importance, Grenville Clark, Esq., and Prof. Louis B. Sohn set forth the results of 7 years of research on this problem in "World Peace Through World Law," published by the Harvard Press in 1958 and since reprinted in and translated into a number of different languages.' The book comprises a set of definite and interrelated proposals to strengthen the United Nations through the establishment of such legislative, executive and judicial institutions as are necessary to maintain world order under enforcible world law. It should receive the careful scrutiny of the State Department in conjunction with our efforts at the general disarmament conference.

THE RULE OF LAW

Let me discuss one final matter in which the lawyers in this country in general, and members of the Allegheny Bar Association in particular, have taken such a commendable lead-the repeal of the selfjudging Connally reservation to the U.S. ratification of the statute of the International Court of Justice.

The arguments for repeal are familiar to the members of this association:

1. There is little chance of world peace without a system of enforceable world law. 2. Enforceable world law requires an international court to try cases arising under international law and involving two or more

nations.

3. While purely domestic questions are beyond the jurisdiction of the International Court under the terms of article XXXVI of its statute, the decision as to what is a domestic issue should be argued before, and decided by, an international court rather than determined by the Court or by the government of any one nation.

4. The Connally amendment permits the United States to determine unflaterally what is a domestic question. It thus gives us the unilateral right to determine whether we will submit a dispute involving inter-

national law to the World Court.

5. By retaining this right to determine for ourselves what is a domestic matter, we effectively prevent the World Court from extending jurisdiction to matters affecting the rule of law and world peace by encouraging other nations to make similar reservations, which, in the end, eliminate most of the jurisdiction of the World Court since most questions have some domestic implications.

6. If any such reservation were made by private citizens or groups with reference to domestic law or enforcement the result would be chaos and no effective law. same argument applies at an international

On March 29 the Senate Foreign Relations Committee, much to the distress of Senator FULBRIGHT, chairman, voted nine to eight to postpone indefinitely further consideration of solution (S. Res. 94) to repeal the Connally reservation. The majority was made up primarily of a coalition of Republicans and southern Democrats. It will take a concentrated effort by the executive branch and public interest groups to reactivate and pass Senate Resolution 94 this year.

Senator AIKEN, of Vermont, was the only Republican member of the committee who voted against the tabling motion and in favor of reporting the repeal resolution to the Senate. What more could the administration have done, you may ask, in view of President Eisenhower's plea for passage of the repeal resolution in his state of the Union message last January, and the Vice President's the Attorney General's, and the Secretary of State's statements in favor of repeal early this year.

The answer is: "A lot." There is all the difference in the world between the inclusion of two or three sentences in favor of a legislative proposal in a formal address mentioning scores of proposals or indica-tions of approval in formal statements of Cabinet officers submitted on request by congressional committees, and the special pleas for legislative action which characterized the President's interest in labor reform last summer, followed by phone calls and visits to the Hill by the White House staff and other executive officials to round up needed votes. The exertion of real executive leadership will inevitably result in the votes of more than one lone party member on a large committee. Obviously the repeal proposal has been assigned a low legislative priority by the executive.

Similar expressions of support for the repeal resolution by lawyers and others have been far from overwhelming. My mail this year has run 542-177 against repeal; congresswide, the opposition mail from veteran and other groups is reported to be even heavier. If my own mail were a true reflection of attorney sentiment in the Commonwealth, there is far more interest in passage of the Keogh tax relief bill for worthy, selfemployed members of the bar than in U.S. participation in the World Court. If the lawyers are disinterested, imagine the apathy of other professions.

I do not mean to deprecate in any way the effect of bar association resolutions in support of repeal. The repeal resolutions, including the one passed by the Allegheny Bar Association last June 30, have provided the most effective expressions of support for

repeal received by the Congress.

CONCLUSION

This discussion of the problems involved in repealing the Connally reservation and in achieving enforceable agreements with the Communists on the cessation of nuclear weapons and general disarmament suggests certain conclusions:

1. The Connally reservation will not be repealed this year unless interested groups and persons, especially attorneys, demand by word and letter that the President take effective actions to achieve this end.

2. A nuclear test ban treaty before year's end is a distinct possibility, and Communist Chinese participation in the control system will have to be obtained shortly after the signing of the treaty. Soviet views should be sought at the summit meeting on this problem which may be confronting both of our countries in the immediate future, and in which U.S. long-range interests may not be dissimilar from those of the Soviet Union.

3. U.S. disarmament efforts will not be successfully planned or executed until the Disarmament Office at the State Department is upgraded. At present it is headed by a junior official and staffed by a total of 12 men. The office should be headed by an Under Secretary of State with a full staff of experts to do the immense amount of preparatory work needed to backup our disarmament negotiation conference, and to equip Secretary Herter to do battle with the Pentagon, the Atomic Energy Commission and other groups opposed to all arms control measures.

None of these suggestions or any others designed to promote world peace through enforceable world law may work. The rule of law may never be more than a goal for lawyers to talk about on Law Day, United States of America. The arms race may have gone too far to be stopped. If so, the sooner we establish that fact the better, because the military effort we will have to make to keep the race in balance in coming years as well as the risks of failure will be stupendous. But I submit that enforceable world law is a practical goal; the only practical goal for this Nation and others at this advanced date; that the isolationist goal of the 19th century ultra nationalists is no longer tenable; and that the rule of law in the world community can and must be achieved—in the 1960's—before it is too late.

The Myth of Soviet Unity

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks I include an article from the May 1960 issue of the Sign entitled "The Myth of Soviet Unity," by Lev Dobriansky.

The author of this trenchant article point out that there are more non-Russians than Russians inhabitating the Soviet orbit. He indicates that Estonia, Latvia, Lithuania, Byelorusisa, Ukraine, Cossackia, Idel-Ural, Georgia, Armenia, Azerbaijan, Uzbek, Turkmen, Tadzhik, Kazakh, and Kirghiz were at one time independent of Russian authority and some of them are still eagerly seeking their own freedom. Three of these governments are still recognized by our country as free governments; namely, Latvia, Lithuania, and Estonia.

It is important to note that most of the major resources of the U.S.S.R. are to be found in the non-Russian areas. Dobriansky indicates that the vast Soviet Empire is really a giant with clay feet. While this is heartening to some, we must bear in mind that it still has more ICBM operational ability than we have, which is an important fact to be reckoned with

However, the piece explodes a number of myths with knowledge of the truth.

The article follows:

THE MYTH OF SOVIET UNITY (By Lev Dobriansky 1)

The U.S.S.R. is a giant with clay feet a restless conglomeration of many unwilling nations held in bondage by masters of deceit in Moscow. Soviet strength depends largely on hiding this fact from the world.

POPULATION FIGURES

The U.S.S.R. Russians, 96 million. Non-Russians, 114 million. Non-Russian nations within U.S.S.R.: Estonia, 1,200,000. Latvia, 2,100,000. Lithuania, 2,700,000. Byelorussia, 10,800,000. Ukraine, 42 million. Cossackia, 10 million. Idel-Ural, 15 million. Georgia, 4 million. Armenia, 1.8 million. Azerbaijan, 3,700,000. Uzbek, 8,100,000. Turkmen, 1,500,000. Tadzhik, 2 million. Kazakh 9,300,000.

Kirghiz, 2 million.
Figures based on U.S.S.R. census, 1959.
Propaganda is the Russian Communists'
most important weapon in the cold war. Out
of a strange mixture of truths, half truths,
and bald lies, they have cunningly devised an
amazing system of deception. Chief among
their deceits is the myth of Soviet unity.

This myth is kept alive only as long as we remain ignorant of the facts. It is high time we exploded the myth with knowledge of the truth.

What Americans do not know about Russia came to light painfully last July when a joint resolution, unanimously passed by Congress, called for the observance of Captive Nations Week. Now Public Law 86-90, this congressional act is the first official recognition which our Government has made of the existence of non-Russian nations within the Soviet Union.

The act of Congress mentions many captive nations without and within the U.S.S.R. borders. Deceived by Russian propaganda, Americans had long thought of captive nations only in terms of the satellites in eastern and central Europe.

When the resolution was made public, reporters, commentators, and the public inquired, "Where is White Ruthenia? Where is Cossackia?" Many admitted that they had never heard of Idel-Ural or Azerbaijan or even Turkestan. Meanwhile, a number of writers and analysts continued along their merry but blind way to apply this act of Congress solely to those minority captive nations in central Europe.

Those who investigated the situation were astonished to discover that there are more captive nations within the U.S.R. than there are without. They were surprised to learn that the people of those captive nations within the Soviet borders outnumber all the Russians combined.

When the joint resolution was passed, few Americans appreciated this fact. But Khrushchev did. Knowing the implications of President Eisenhower's proclamation of Captive Nations Week, he exploded.

Khrushchev was aroused because he wants to hide from the free world the fact that Russia, although a political giant, is a giant with clay feet—a giant whose framework is made up of many different strands.

We must understand some important distinctions between tribes, nations, states, voluntary federations, and tyrannically constructed empires.

The state, it should be noted, is simply the political aspect of the nation. Sometimes you have several nations voluntarily existing in one state, as in Switzerland. Again, you may have one nation being ruled, in separate parts, by two governments, as in Ireland. Again, many nations, against their will, may be politically and tyrannically controlled by one superimposed government, as

in the Soviet Union.

After World War I, the present captive nations within the U.S.S.R., were newly independent states. In the collapsing Russian empire, after World War I, Lithuania, Georgia, Armenia, and other non-Russian nations, declared their political independence. They were free of czarist control. Furthermore, they had no mind to submit to Communist control from Moscow. They established themselves as free democratic republics. Ukraine and Georgia were even recognized as separate states by Lenin's Soviet Russia.

We remember well the tragic fate that overtook independent Lithuania, Poland, Hungary, and others in the forties. But what most of us forget is that similar tragedies befell Georgia, the Ukraine, White Ruthenia, and others in the early twenties. Trotsky's Red Russian Army had picked them off one by one after softening them up by infiltration, subversion, propaganda, etc.

tion, subversion, propaganda, etc.

By 1923, following the first wave of Red
Russian imperialism, these non-Russian nations were forced into the spurious federation called the Union of Soviet Socialist Republics. Because of their large populations
and their natural resources, these non-Russian nations formed the base for Moscow's
further imperialist thrust into central Europe. Currently, they form the base for
Russian colonial designs in the Middle East,
Asia, and Africa.

Yet—and here is a basic point which Americans must grasp—these non-Russian nations within the U.S.S.R. have not passively accepted the Soviet yoke. Each decade, since the twenties, has seen serious friction, resistance, even open rebellion, scald the hand of their Moscow masters.

This struggle continues. Not a month goes by that Moscow does not launch a fresh attack against this nationalistic trend. Indeed this opposition to Moscow pressured Stalin to bid for the inclusion of Ukraine and Byelorussia as original members of the United Nations. From time to time, Moscow finds it expedient to pretend that the non-Russian republics are independent. Amendments to the U.S.S.R. Constitution provide for these republics to have their own war ministries and to enter into direct diplomatic relations with other states. Moscow clearly does not underestimate the reality of these restless nations.

In December 1957, Khrushchev addressed the Supreme Soviet in Ukraine. He referred to Ukraine as "a truly free and independent nation."

But Nikita Khrushchev is not fooling the Ukrainians—and he dreads their genuine nationalism. Even during the illusory "spirit of Camp David" his agents in Munich assassinated the Ukrainian nationalist leader, Stefan Bandera, and, under the economic disguise of "voluntary resettlements," Khrushchev is currently engineering the deportation of families from western Ukraine to central Asia and the Crimea.

These non-Russian nations within the Soviet borders are ancient peoples with long histories and periods of national freedom. Ukraine has 42 million people, the biggest non-Russian nation within the U.S.S.R. The three Baitle nations number 6 million; White Ruthenia (Byelorussia), 10.8 million; Georgia, 4 million; Armenia, 1.8 million; Azerbaijan, 3.7 million; and Turkestan, purposely divided by Moscow into five "republics," (Kazakh, Tadzhik, Kirghiz, Turkmen, Uzbek), 22.9 million. Add to these some 10 million ethnic and nationally conscious Cossacks located above the Caucasus, and about 15 million Moslems concentrated in the Idel-Ural (Volga-Ural) country, and you wind up with the sizable figure, of about 114 million people. This figure covers only 11 compact ethnic and national non-Russian units. There are many small tribal units besides. The Russians number 96 million. Kremlin propaganda concerning the economic progress of the U.S.S.R. would take on a different color if it were subjected to the searching light of reality.

searching light of reality.

Moscow is supervising an uneasy conglomeration of many nations within the borders of the U.S.S.R. and a restless system of additional colonies outside its borders.

An economy based on extensive captive resources can hardly be compared with a free national economy. Most of the resources within the U.S.S.R. are concentrated in non-Russian areas: agriculture in Ukraine, Turkestan, and Georgia; coal in Ukraine and Turkestan; oil in Azerbaijan and Idel-Ural; 90 percent of the manganese in Georgia and Ukraine; iron ore in the Caucasus and Ukraine. Turkestan, three times the combined size of Britain, France, and Germany, alone accounts for about half the copper, lead, zinc output, and is also rich in bauxite and silver.

Soviet propaganda concerning the military might of the U.S.S.R. also acquires a different shade of meaning when confronted with facts. Forty-three percent of the armed forces of the U.S.S.R. is non-Russian. Even apart from likely Russian defections, this is most significant. As for potential Ukrainian, Russian, and other defections, Hungary has furnished the most recent example of what may happen.

Despite their inner weaknesses, the Russians have not only manufactured a myth of unity and invincible strength but they have managed to have the myth accepted by America. The myth has been swallowed not only by the public but by newsmen, commentators, columnists, and political leaders in high levels of government. A few examples:

The New York Times, October 21, 1958: "Cardinal Agagianian is Russian by birth,

¹Dr. Lev E. Dobriansky, associate professor of economics at Georgetown University and staff member of Georgetown's Institute of Ethnic Studies, is an authority on the Soviet Union and communism whose views have been widely quoted in leading newspapers, governmental studies, the Congressional Record, and in many scholarly publications.

having been born near Tiflis." This statement makes about as much sense as asserting that "Cardinal D'Alton is English by birth, having been born in the British Empire." Cardinal D'Alton is Irish and Cardinal Agagianian is Armenian.

Returning from a visit to the U.S.S.R., Adlai Stevenson wrote: "Russia is still a land of sharp and vivid contrasts." He meant the

J.S.S.R.

Last July the Governors report on the Soviet visit was issued. Referring to the United States and the U.S.R., the report stated: "Ways must be devised for the people of these two major nations to understand each other." Even Khrushchev, speaking to various peoples within his empire, would not go so far as to call the U.S.S.R. a nation.

We would expect the U.S. Office of Education would be correctly informed. Yet, in its "U.S. Mission's Report on Education in the Soviet Union," we read: "The one fact that most impressed us in the U.S.S.R. was the extent to which the nation is committed to education as a means of national advancement." Actually, our Government still recognizes the free governments of Latvia, Lithuania, and Estonia.

I can almost hear my readers complaining that I am indulging in semantics. But this is not merely semantics. Senator John F. Kennedy would resent it very much if people kept calling him Richard M. Nixon and vice versa. Everyone likes to retain his own identity, his own background, character, and intentions. So do peoples and nations.

The cold war today is being waged basically on the propaganda level. Hearts and minds of men are the primary targets. This has always been Russia's empire-building mode of attack. But Moscow's lies will eventually smash themselves against the hard reality of truth. Truth makes men free—and we can begin to triumph over imperialist Russian totalitarianism once we replace our misconceptions of Russia with knowledge of the truth. The captive nations resolution was a start. It is tragic that Moscow knows this better than we.

Nixon's Stock Moves Up Again

EXTENSION OF REMARKS

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. MICHEL. Mr. Speaker, as a follow up to my previous remarks which I extended into the Appendix of the Record of April 18 on page A3336 concerning an editorial by David Lawrence, I wish to insert the following editorial by Ralph McGill which points up the continuity of thought being expressed more frequently these days by our leading editorialists all over the Nation:

[From the Evening Star, May 3, 1960]
NIXON'S STOCK MOVES UP AGAIN—PENNSYLVANIA VOTE FOUND ELIMINATING POPULARITY SAG IN RECENT POLLS

(By Ralph McGill)

Vice President Nixon's refusal to be pushed off balance a few weeks ago by a sag in his popularity as theoretically established by the ubiquitous polis, and a spate of comments by persons who expressed distaste for him as a candidate, has been sustained by the Pennsylvania vote.

The more pragmatic politicians did not

need this. They knew all along he is a politically tough-minded young man who knows where he is going. Others may not know. But he does. They also were under no illusions that he will not be difficult to beat. The tremendous vote for him in Pennsylvania's primary will cause the fever charts of polls to spurt upward again.

So Mr. Nixon, and those who must contend with him, are back where they were before. There are a number of persons, including Republicans, who do not like Mr. Nixon. Most of them cannot say why. But this doesn't matter. They do not care for him. Most of the independent voters have not yet made up their minds. They do not now lean toward Mr. Nixon, but they assuredly will wait and see. The independent, or "mugwump" is not an emotionalist. He more and more tends to vote for the man he thinks will do the best job for the country. He also prefers to wait for the campaign so as to give ear to the issues and the manner in which candidates reveal their personalities and thought processes. So the very large independent vote will continue to wait.

The Pennsylvania balloting, as was generally noted in the first reports of it, was a blackjack behind the ear to the revived Rockefeller hopes. Mr. Rockefeller has political potential. But he obviously is not yet well known. It may be, if Mr. Nixon should be defeated, the party will turn to him in 1964. But not now.

So we return to Mr. NIXON.

The Taft right wing in his party, which was so badly mauled in New Jersey, goes about muttering to itself like the somewhat senile symbol it is. A number of those about the country who had great hopes of nominating one of their number in New Jersey's recent primary are now saying that LYNDON JOHNSON is the very best candidate before the people regardless of party. There is just one flaw in this thinking. They cannot vote for Mr. Johnson unless he is nominated. Presently it does not appear he will be.

The New Jersey election, the substantial needs of a great many American people as revealed by the campaign in West Virginia, and the recent Kellogg grant for a study of the desperate condition of some 30 eastern counties in Kentucky, explain why we will have more social legislation in the future, It is astonishing how many persons continue to believe that we can have the increasing concentrations of people in urban areas, dependent on a relatively few corporate employers and the many service jobs they create and still operate with the political policies of Cal Coolidge's days.

If we are not careful, and do not attend to the issues on hand, we may very well end up with a sort of liberal facade of social services and a Government which is highly isolationist and protectionist in trade. Such a Government could not long maintain this Nation as the first-rate power it must be if it is to survive. But to have such a facade and such a Government is to have one's cake and eat it too, at least for a time.

Every thoughtful American should be grateful to Mr. Nixon at this point for what he said at the recent meeting of editors. "We must," he said, "help the jobless miners and the destitute in West Virginia and other areas where the industrial and agricultural revolution has created pockets of unemployed and unemployables. But we must also have an intelligent program of foreign aid and trade."

Mr. Nixon remains something of an enigma. But he is making his own decisions and he does possess boldness and imagination. And his stock is now moving up again. The polls reflect chiefly the feverishness and fickleness of opinion. What most of the people are thinking can't yet be measured.

Resident Correspondent Reports on West Germany—II

EXTENSION OF REMARKS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. COHELAN. Mr. Speaker, following is the second part of an article by Sebastian Haffner on the situation in West Germany today. The first portion of this valuable report appears elsewhere in today's Record.

West Germans Still Enjoying Chromium Idyll (By Sebastian Haffner) STANDSTILL EDUCATION

What is education like, particularly in the universities? What do German historians and philosophers teach young people? Do the young men and women really know what the Nazi regime was like, and do they care? Are they secretly a bit proud of Hitler?

Education in West Germany, including the universities, is very much what it was in all Germany before Hitler, or even before 1918—at which point history teaching in the schools often stops. It imparts much solid factual knowledge and, in the case of the universities, sound methods of research. With few exceptions, it does not impart either a coherent philosophy of life or an established set of manners. It never did.

As everywhere in the West, science dominates the universities at the expense of the humanities and probably attracts the best talents.

German academic historians have, on the whole, despite one or two brave freelance attempts, so far failed to review and rewrite German history in the light of 20th-century experience. The great 19th-century historians still retain their authority, and modern events are often judged in the incongruent terms of the Bismarckians and their liberal critics.

An authoritative, scholarly German history of Hitler does not exist, and textbooks make do with scrappy facts and conventionally adverse snap judgments.

The young—with individual exceptions—know and care little about Hitler, but then they know and care little about history altogether. (They do know and care about cars, rockets, and space travel.) I have never personally come across signs of secret pride in Hitler's exploits among the young, and I don't think it is at all widespread among the general run of them. But there are odd little youth circles here and there in which, usually under the guidance of middle-aged misfits, a brew of Germanic mystique, military glory, and wandervogel romanticism continues to be distilled.

Altogether, it is probably true that education is the weakest spot in West Germany. Partly, this is a weakness Germany shares with the agnostic West as a whole. Partly, education is the field in which the secret insecurity and sick conscience of the German elder generation—the Hitler generation—have their most damaging and most lasting effects. But the result of weak education among the young seems to be shapelessness and disorientation rather than any positive evil.

DEMOCRACY'S STRENGTH

How deeply rooted are democracy and parliamentary government? What are deeply rooted and really valued in post-Hitter Germany are the rule of law, personal liberty, humane decency, and orderly constitutional process of government—"normality." Democracy and Parliament are certainly less deeply rooted, but they are now soberly accepted by almost everybody as the necessary political basis of the aforementioned values.

There is, in any case, no alternative. Monarchy and aristocratic rule are past reviving; dictatorship and totalitarianism are completely discredited; and there is no serious opposition to democracy and parliamentary government, in striking contrast to the days of the Weimar Republic.

Power in West Germany is distributed among (in rough order of importance) the Chancellor, the parliamentary majority party, the Cabinet, Parliament as a whole, the States, and the big lobbles. The Christian Democratic Party machine is hardly a power factor at all.

The German Christian Democrats, like the British Conservaties, are the sort of party that outside Parliament and between elections leads an obscure, almost unnoticeable existence. They are not a machine party.

OPPOSITION PARTY

What has happened to the Social Democrats, and what do they want? Who will succeed Adenauer anyway?

The Social Democrats have taken a grip on themselves and—to judge by the latest state and municipal elections results—are on the upgrade again. The two great—connected—events of their, recent party history are the meteoric rise of Willy Brandt and the adoption of a new party program which repudiates Marx and remodels the party on Scandinavian lines.

Brandt, the Social Democrat mayor of Berlin, is now the only serious rival of Adenauer in popular esteem in Germany, and appears as the predestined successor. The question is whether even he can carry his party—the natural minority party in West Germany—into government.

After Adenauer, this might not be wholly impossible in a straight electoral fight; in the meantime, the possibility of a coalition—toward which Brandt is edging his party via a bipartisan foreign policy—is for the first time a matter of serious talk in political Germany.

RUSSIAN DEAL

Do the West Germans ever talk or think of making a deal with Russia?

Some outsiders, yes. (Among them, remarkably, the little German Reich Party, often considered neo-Nazi.) Any responsible politicians, no. Among the general public, deep fear and horror of communism stand in the way.

And yet I could imagine a situation in which many Germans would begin to think and talk of a deal with Russia, not from a sense of strength, but from a sense of weak-ness.

If the West, on which West Germany relies, were proved too weak to hold Berlin, or too unfriendly to stand by the West German alllance, or too disloyal to hold out against recognition of East Germany, there might be panic and a clamor to come to terms with Russia while reasonable terms could still be had. If Russia then made a generous reunion offer, anything might happen.

INDUSTRY'S ROLE

What part does big industry play? We said we must split up German heavy industry, and this was not done—probably rightly. But does it matter or not?

If education is the weakest point of West Germany, industry is the strongest. The professional achievement of West German industry since 1948—not only in sheer production, but also in technological planning marketing and social relations—is beyond praise. Of course it matters greatly that German industry was not split up after the war. Had it been, this would have imposed articial misery on Germany and would have made Germany safe for communism. As it is, the "economic miracle" has given the new German democracy and Western orientation, a solid basis of prosperity.

tation a solid basis of prosperity.

The "economic miracle" is only very partly the work of the old industrial families. A vast stream of managerial talent from the middle and lower middle classes has flowed into German industry since the war, and many of the biggest industrial names of today are entirely new men. (For instance, the present director-general of Krupp and virtual re-creator of this gigantic combine is the expellee-son of a washerwoman from now-Polish Stettin.)

The industrial climate, too, is new. Despite over-full employment, there is an almost complete absence of strikes, thanks to remarkable relations between industrial management and trade unions. In fact there is something like a secret coalition between them against bankers and hard money politicians.

Industry is, of course, a powerful lobby in economic affairs, but—in contrast to Weimar days—it is rather kept out of real influence on major foreign policy. Such as it is, this influence works rather for Eastern trade—and to that extent a softer attitude toward Russia—and against the Common Market.

President Lleras' Speech

EXTENSION OF REMARKS

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. BARRY. Mr. Speaker, we in the Congress were privileged recently to hear in a joint session, the distinguished President of Colombia, Dr. Alberto Lleras Camargo. His words were important and should be given serious attention. In furtherance of this objective I would like to insert in the RECORD a letter to the editor of the New York Times from a citizen of my hometown, Bronxville. Mr. Inman is a friend of mine. He has been long active in the pan-American movement, is the author of a number of books and articles on Latin America and has lectured extensively there. His expert opinion should carry weight. The article follows:

To the EDITOR OF THE NEW YORK TIMES:

In connection with the recent Pan American Day I would like to recall the important suggestions made to us by our distinguished visitor, Alberto Lleras Camargo, President of the Republic of Colombia.

The main theme running through all his addresses was his conviction that if the profound suffering in Latin America were not alleviated within the next 10 or 15 years chaos will have taken place on the American Continent. These are not the words of an alarmist, but of a sober student who probably has had greater opportunity than any other government official in the Americas to study the subject.

Under Dr. Lleras' 10 years of leadership the Pan American Union at Washington was completely transformed into the political Organization of American States. He then resigned and returned to his native Colombia, where he was soon drafted into the Presidency. Later he was invited to visit the United States and speak frankly about inter-American conditions.

CONTRAST IN LIVING STANDARDS

One reason for his extraordinary reception was his frank judgment concerning the present grave dangers for both his host and the southern Republics. In his frank warning of the danger of oncoming chaos in the New World he put the responsibility on both the poverty-stricken people of the southern Republics and the rich civilization of the north.

"We have at best only a few years to meet the social challenge," said President Lleras. "People in our hills who have been poor always now have a radio that tells them that others are wealthy. They know what is happening in the world. They hear about crowds in Algeria putting up barricades and defying the government. They may not know where Algeria is, but they learn what barricades are. They can be ignored no longer."

As an old newspaperman, President Lleras chose the Overseas Press Club as the place for his last meal with us. He explained to us, probably referring to the present quarrel with Cuba, that the inter-American system has the most complete organization in the world with which to settle its disputes and said that "if the inter-American system did not exist there would be in the New World only insecurity, imperialism and war.

"What the states of the hemisphere have attained within their organization has no parallel in the world. They have achieved nothing less than the greatest autonomy, without having to protect themselves by armed force, and a juridical and political balance which safeguards the smallest and weakest as fully and effectively as the strongest of all."

Summing up. Dr. Lleras said: "Inter-American peace faces probably its toughest future. For victory, two activities are especially needed: Strenuous struggle for social justice; everlasting use of inter-American peace machinery."

SAMUEL GUY INMAN.

Polish Constitution Day

SPEECH

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DONOHUE. Mr. Speaker, on this 169th anniversary of Polish Constitution Day all Americans of every racial descent join with the people of Poland in a prayer for Polish independence and a renewed pledge to continue to work for the restoration of liberty and freedom to Poland and the rest of the enslaved Christian world.

No one who understands the great contribution to our own independence of the immortal Polish heroes of the Revolution or who has read of the glorious history of Poland in defense of Christian principles can help having tremendous admiration for the courage, patience, and fortitude of the Polish people in their current struggle to regain independence.

Heroic Poland gave us the best and most inspiring modern example of sacrifice for Christian principle in that terrible engagement with the Communists in 1920. The Polish people proved then to the world that they were among the very, very few who early recognized the planned and determined Kremlin objective of reducing the free world to pagan Would that we had wisely learned from their example and the recent years of too much appeasement and too often retreat, of developing world confusion and of increasing turmoil. might well have been avoided.

The price the Polish people paid for their early courageous resistance to Communist attack was catastrophic and the blow was even more severe when it appeared that their supposed allies turned their backs upon and heads away from their cruel plight under Soviet subjugation and tyranny. The debt the free world owes to heroic Poland for her courageous struggle against the Communist horde 40 years ago still remains unpaid and will remain a blot upon the moral integrity of this country and the United Nations until it is paid.

That is why we as Americans must never relax our efforts to help the Polish people to reestablish their freedoms under their own chosen government. As a nation dedicated ourselves to the democratic principles of personal liberty and individual freedom, the U.S. Government has an obligation to unceasingly maintain the right of Poland to her independence and persevere, both as an individual nation and as a member of the United Nations, in demanding that the Communist leaders grant freedom and independence to Poland. We can do no less and still call ourselves a Christian democratic country while we join in prayer that the day will soon come when Poland. and all the other enslaved nations, will once again happily enjoy their personal and national freedom.

Pittsburgh Renaissance Tackles Housing

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. MOORHEAD. Mr. Speaker, rebuilding of our older cities has been one of this Nation's most dramatic developments in the postwar era. Pittsburgh, which I represent, has led the way in development in what has become known as the Pittsburgh renaissance.

So far, however, such programs have been mostly concerned in Pittsburgh and elsewhere with redevelopment and renewal on a civic, industrial, and commercial scale.

A far greater challenge faces city planners, however. It is the job of residential renewal, the task of focusing urban renewal machinery upon the housing needs of millions of our city residents.

In a recent address before the 27th annual stockholders meeting of the Federal Home Loan Bank of Pittsburgh, Bernard E. Loshbough, executive director of ACTION-Housing, Inc., told of Pittsburgh and Allegheny County plans to meet the urban renewal needs of an entire county area. This involves primarily the meeting of great housing needs through the building of new housing and the reconditioning of older housing. Because of the importance of this subject to communities throughout the country. I think Mr. Loshbough's remarks are indeed timely. Thus, under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I include the text of Mr. Loshbough's address and commend its reading to my colleagues:

THE PUTSBURGH RENAISSANCE TACKLES HOUSING

(By Bernard E. Loshbough)

It is a rewarding and encouraging experience to meet with executives of ings and loan associations who are doing so much in the field of housing-whose efforts should certainly help in solving a great national problem as we move into the golden elytice

All of us recognize that the problem of upgrading existing housing and providing an adequate supply of new housing for middle income families is complex and frustrating. But we have firm faith in the ingenuity of private enterprise to break through and place a good home within the reach of every American family.

Just recently, Robert B. Anderson, Secretary of the Treasury, declared that 1960 promises to be the most prosperous in history, with better prospects for a longer period of healthy, rewarding, and noninflationary growth than at any time in the past 2 decades.

Your own industry is destined to play an important role in creating and sustaining that growth

Three trends have been noted by the population forecasters:

1. A greatly increased national population. 2. A continued and more intensive concentration of population in the urban areas.

3. Enormous opportunities.

The census takers are out today counting American noses. There are now about 180 million people in these United States, and if the present growth continues, some demographers predict 215 million people by 1970 and 264 million by 1980. This is certainly a whopping increase, but what's important is the kind of growth.

For instance, there will be many more elderly people and many more teenagers and young adults by 1980.

Consider these figures: 64 percent more children under 10; 67 percent more young people from 10 to 19; 83 percent more young adults 20 to 29; 29 percent more adults 30 to 39; only 1 percent more from 40 to 49: 29 percent more from 50 to 59; 56 percent more adults over 60.

Virtually all of this growth will be jammed into the suburban fringes of our booming urban centers. In less than a century, great technological forces have changed us an overwhelmingly rural to an overwhelmingly urban nation. In the past 10 years, some 3 million people have left the farms and the exodus continues.

Cities alert to the needs of a mushrooming population will grow and prosper; those apathetic and unresponsive will stagnate. The future of any urban center rests squarely upon the willingness and ability of its leaders to face problems, seize opportunities, and cooperate creatively.

Pittsburgh enters the soaring sixtles with a full jet thrust. Our problems are as difficult as those of other cities. But we have the momentum generated by 15 years of dynamic business, civic, governmental team-

When World War II ended, Pittsburgh faced two choices: inaction and certain decline, or concerted action leading to regeneration and progress. Pittsburgh took the difficult road of progress. Obstacles and roadblocks were overcome through a singular demonstration of teamwork epitomized by the nationally famous Allegheny Conference on Community Development,

Its achievements are evident all around us-cleaner air, flood control, a network of highways and parkways, new bridges, Gateway Center, the Golden Triangle, and a monumental civic areas

Pittsburgh's progress since 1945 has been achieved largely by a partnership of local government and business enterprise, and financed in the main with private capital. Much assistance has come from the public agencies, notably the Urban Redevelopment Authority of Pittsburgh, through the judicious use of its powers of eminent domain for land assembly.

Justifiably, most of our community renewal in the past decade has been predominantly industrial, commercial, and civic. Aware, however, of the critical nature of the area's housing problem in general, and its relationship to the continued progress of the Pittsburgh renaissance, the Allegheny con-ference addressed itself to the housing field several years ago. To guide its course, a study was made of local housing needs.

The report to the conference concluded that a civic organization with a broadly representative board of directors and a fulltime staff was required to move effectively against the obstacles hindering housing progress.

Accordingly, Action-Housing, Inc., was established in August 1957.

Action-Housing, Inc. is preparing, in coop eration with other private, civic, and public agencies, a program of housing and urban renewal to eliminate the slums and rundown areas in Allegheny County. Important parts of this program are now going forward.

Let me say this about our objective. We're deeply concerned both with good housing for people and sustaining a sound local economy. These components are inseparable.

Richard K. Mellon, chief civic architect of the Pittsburgh renaissance, said last January at Action-Housing's second annual meeting: "An urban center such as Pittsburgh does not achieve true greatness until its people are well housed—regardless of how many new office towers, expressways, and industrial plants are built."

Here then are the essentials of Action-Housing's six-point program—the tools it puts to work to achieve its objectives:

- 1. Expanding the housing supply for moderate income families.
- 2. Modernization of houses and neighbor-
- 3. Establishing effective neighborhood participation.
- 4. Promoting countywide planning and programing.
- 5. Bringing new housing design and technology into widespread use.
- 6. Developing increased public understanding of housing problems and their solution. Let me cite an example or two of each of these six points.

Action-Housing, Inc., sponsored the con-struction of Spring Hill Gardens, the first section 221 moderate rental housing development of its kind in Pennsylvania and the second in the Nation. Privately built, financed, and managed, Spring Hill Gardens provides 209 apartments on Pittsburgh's north side for families whose annual incomes range between \$3,600 and \$7,000.

We have tackled the thorny problem of home modernization in several ways. Together with the Greater Pittsburgh Board of Realtors, we invited the build-Americabetter committee of the National Association of Real Estate Boards to come to Pittsburgh and survey the potential of neighborhood conservation in the local urban renewal

program.

This was followed by a major clinic on financing residential rehabilitation, and a number of other smaller meetings on home modernization. The clinic was attended by more than 300 persons—realtors, public officials, bankers, homebuilders, architects, appraisers, savings and loan officials, building material suppliers, and neighborhood leaders.

With local realtors and other organizations, Action-Housing, Inc., cosponsored the pilot demonstration of a single house under section 221 of the National Housing Act. We will soon be doing another demonstration of home modernization in conjunction with the marketing division of Life magazine and a Pittsburgh lumber dealer. This demonstration will be conventionally financed.

Progress in this aspect of urban renewal has been slow. There are technological, economic, and human problems. We have devoted considerable time and effort to the home modernization phase of our program and will continue to do so until a solution is found.

With the proper incentives, home modernization will develop an entirely new industry in America. Some say this represents a fresh

and untapped \$15 billion market.

As for the vital involvement of people in direct participation in urban renewal, we have been working with groups in 10 Pittsburgh neighborhoods, and in several towns and suburbs in Allegheny County. Action-Housing, Inc., carries the full responsibility for organizing and assisting citizens' re-newal councils in designated urban renewal

The first was the East Liberty Citizens Renewal Council, organized in Pittsburgh's initial federally assisted neighborhood urban renewal area. C. Elwood Knapp, president of Pittsburgh Friendship Federal Savings & Loan Association and vice president of the United States Savings & Loan League, and Gregor F. Meyer, chairman of the board of the East End Federal Savings & Loan Association, are active in the renewal council.

Action-Housing, Inc., has helped neighborhood leaders in other areas set up such councils. The newest one is functioning in Pittsburgh's Homewood-Brushton neighborhood, where a full-scale self-help renewal program—without Federal aid—is now underway.

The fourth point of our program is countywide planning and research. Our most important research project to date is what we call the urban renewal impact study, financed Partially by a grant from the Ford Foundation, and by matching grants or services from local civic and public agencies.

From this study will come the answers to many questions about a total urban renewal Program for Allegheny County: how much will it cost in public and private funds; do municipalities have adequate legal and financial capacity to do the job; how many families will have to be relocated; how can the program best benefit the economy of the area; and what priorities should be assigned to various phases of the program.

As to point 5, there has been much talk about the need for technological advances in the housing industry, but little has reached the home buyer. In fact, some economists say "housing is the industry the industrial revolution forgot." Through our East Hills development, private builders will have the Opportunity to use many of these technological advances. Indeed, we look forward to East Hills as a barrier-breaking demonstration of new techniques in housing design, construction, and site layout.

The final point is public understanding. It is often said of any program involving the interests of people that "we must reach them." We say it another way: "They must be able to reach us" with their ideas, their needs and their desires. But we must build the bridge by which they can reach us.

To do this, we have held many conferences and meetings of all descriptions. We have brought to Pittsburgh specialists from every area of the housing industry, to exchange ideas with their local counterparts. We have gone on television and radio, and have spoken to scores of organizations. We have given talks on housing at premarriage courses, at innumerable service clubs, civic groups and

Our major accomplishment to date is the Pittsburgh Development Fund of Action-Housing, Inc., launched last September. It will create a revolving loan fund expected to exceed \$2 million, through interest-bearing loans from local major corporations, industries and organizations. The funda-mental purpose of the development fund is to provide intermediate equity capital-seed money-for an extensive program of privately financed, privately built and operated sales and rental housing, as well as stimulate large-scale home modernization.

The fund will serve to backstop lending institutions and the homebuilding industry, and will primarily be a source of working capital that could not be obtained otherwise. Here is how the fund would operate;

Loan intermediate equity capital to builders for development of new housing.

2. Supply intermediate equity capital to modernizers for restoring rundown housing. 3. Acquire landsites available only for total cash purchase for resale to developers.

4. Provide large-scale demonstrations of new housing materials, design, technology,

and production.

The development fund is well underway. It was established and given terrific impetus toward its goal of \$2 million by grants totaling \$350,000 from the three Mellon foundations. Richard K. Mellon, speaking of the fund at our second annual meeting, said: "Action-Housing, Inc., has justified the faith of all who have supported it. Now it has a great new project in its Pittsburgh Development Fund. The Mellon foundations have felt it worth supporting. We are confident that large Pittsburgh corporations will evidence the same faith."

Major Pittsburgh corporations are backing the fund with substantial loans.

In addition to the obvious direct benefits, the collateral benefits to be derived from the operations of the development fund are:

(a) A substantial increase in mortgage lending and consumer loan activity.

(b) An increased demand for consumer goods.

(c) Protection of industry's huge investment in the Pittsburgh renaissance.

(d) Assistance to industry to attract and keep able personnel.

(e) Attract new industrial development. (f) An increase in revenue to the taxing

bodies. East Hills, located on a 130-acre vacant tract at the easterly edge of Pittsburgh, is

the first housing proposal of the develop-ment fund. It will provide 1,400 to 1,600 fine new rental and sales homes for moderate-income families. East Hills will demonstrate the feasibility of a variety of plans, designs, technological advances in production methods, materials, and innovations in financing and management. And East Hills will most certainly create a significant de-

mand for mortgage loans.

As exciting as East Hills is, we must not overlook the fact that the vast number of moderate-income families will continue to find their housing in the existing housing supply. Nationally, only about 3 percent in new dwellings is added annually to the inventory. In Allegheny County, the annual increase in recent years has been only 1.5

ACTION-Housing, Inc., is acutely aware that innovations are also needed in our older neighborhoods-in the neighborhoods that have grown old in service to the community.

With this in mind, we have launched a new kind of renewal in the Homewood-Brushton neighborhood of Pittsburgh. have as allies the health and welfare association, city and county governments, lo-cal public authorities, and the civic, business, industrial and citizen leadership of Homewood-Brushton.

The new plan is based on the self-help principle. Most of the work of remodeling homes, modernizing stores, expanding parking facilities, landscaping industrial sites. augmenting youth activities, and other physical and social upgrading will be carried out by the people in the neighborhood, through the Homewood-Brushton Citizens Renewal Council. Savings and loan officials there are participating in the council's program. They are Vernon T. Sampson, president, Homewood Savings and Loan Association, and Fred C. Reinhardt, president, Second Federal Savings and Loan Association.

No matter what your home base, each of you has the opportunity to aid in meeting the housing challenge of the soaring sixties.

Before closing, permit me to suggest to you a method whereby the savings and loan associations can be of tremendous assistance in implementing broad-scale home modernization.

I suggest that you from the Pittsburgh area consider the establishment of a home modernization fund of at least \$2 million for a starter. This is no paper scheme—it has been put into operation in the District of Columbia, with the approval of the Federal Home Loan Bank Board and the Federal Housing Administration. If you follow the sound policies and procedures perfected by the District of Columbia's Saving and Loan League, the home modernization fund would operate in the following manner:

First. Establish a trust fund agreement to which participating associations would sub-The combined subscriptions would

constitute the fund.

Second. Loans, insured by the FHA, would be made to home owners wishing to bring their properties up to standard.

Third. Appoint a trustee, such as a bank, to handle disbursements under the fund and the collection of loans as they are paid off. The bank would receive a nominal service charge for its work.

Eleven savings and loan associations in Washington, D.C., are participating in this novel program to the extent of \$1,820,000 in subscriptions, thus spreading the risk.

The District of Columbia fund will be used primarily to assist the local government there in enforcing its housing code. The same purpose could be achieved in Pitts-burgh. It is anticipated by the Washington group that the plan can also be used in carrying out self-help renewal programssuch as has been launched in Homewood-Brushton.

According to William H. Dyer, executive vice president of the Perpetual Building Association of Washington, D.C., inspectors working out of the District of Columbia's Building Inspector's office have been authorized to refer persons needing financing for home improvements to any of the participating associations.

There is also the possibility, said Mr. Dyer, that the operation of the fund by savings and loan associations can lead to some control in the District of Columbia over the flyby-night type of home improvement contractor and other contractors of similar questionable integrity.

I am grateful for this opportunity to tell you of the work of Action-Housing, Inc., and how it is part of the Pittsburgh Renaissance team that is tackling the local housing problem with vigor and imagination.

The tremendous expansion of urban America will be the dominant domestic factor of the next decade. The challenge of that growth is the central concern of all of us in the business of building and financing housing.

In Pittsburgh, Action-Housing, Inc., is one participant in a great and vital effort. With the dynamic contribution of you in the financial field and the concerted drive of the whole homebuilding industry, our goals cannot only be met, but surpassed. Working together, we will mount a housing program of sufficient scale and imagination to encompass a new and more rewarding way of urhan life.

Military Supply Management

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. CURTIS of Missouri. Mr. Speaker. I am placing in the RECORD a wellwritten article appearing in the Wall Street Journal, Monday, May 2, 1960, which discusses some of the problems involved in trying to reform the military supply management system. I intend to refer to this article during debate on the military appropriations bill now under consideration: The article follows:

[From the Wall Street Journal, May 2, 1960] MILITARY MANAGERS: THEY WASTE \$2 BILLION OR MORE EVERY YEAR, CIVILIAN CRITICS SAY-MORE DESK-JOB AIRMEN GET FLIGHT PAY: NEW HOSPITALS ADD TO A SURPLUS OF BEDS-SAGA OF 30.017 FOOTLOCKERS

(By Alan L. Otten)

WASHINGTON .- The Army is resisting all attempts to make it sell 72 acres of Hawaii's Walkiki Beach. It maintains that GI's need the tract, valued at \$40 million, for swimming and sunbathing.

The cost of operating planes for deskbound airmen who put in a few hours a month of practice flying time to collect bonus flight pay has risen so high that the administration is considering awarding the men the extra pay without requiring the flying. There's hardly a thought of cutting out this bonus; it has become so ingrained in military pay scales that removal would bring an uproar that military men wouldn't like to face.

The San Francisco area already has four military hospitals with total capacity of 5,235 beds, of which less than 2,850 are in use, and there's an inactive 775-bed hospital Yet the Army and Navy are pronearby. posing to build new hospitals to replace two of the four.

Civilians who have worked for years on military budget-in the executive branch, in Congress in private life-produce these examples of what's wrong with management of the Nation's defense effort. Any topnotch impartial management experts, they say, would agree on the need for reform. Such practices, they maintain, flout widely accepted principles of efficiency and economy. And they involve no hotly controversial issucs of defense policy, such as emphasis on missiles versus manned aircraft or preparedness for big or limited war.

MOST REFORMS ARE BLOCKED

Yet, most of the reforms proposed by management experts are blocked by pressure-pressures from empire-building officers within the services, pressures from Congressmen and local businessmen intent on keeping military payrolls in their districts, pressures from patriotic and veterans' organizations who see some broad national defense issue in the simplest procedural changes.

'Good management changes, on which any right-minded man should be able to agree. can save \$2 billion to \$3 billion a year in the military budget, and produce a better defense effort," asserts one top Government official who has labored for many years to hold down service outlays. Military spending now runs about \$41 billion annually, over half of the total Federal budget.

Most of the critics of military management agree the fairly new Defense Secretary, Thomas Gates, is the kind of man needed to bring some order out of chaos; he has worked in the Pentagon for 7 years and knows the political maneuvers of the services in and out. But they say even a man like Mr. Gates needs time to build up a loyal and knowledgeable staff and to bring a change in the atmosphere. And, with this administration nearing a close, time is what Mr. Gates does not have.

"Talk to people who don't live with it every day and they refuse to believe what you tell them," declares one observer of the defense setup. "It's the most complex organization ever developed, and you can't change it overnight. Change must come slowly. But it must come if we are to support this huge Military Establishment for much longer without breaking the country."

BUILT-IN RESISTANCE

"Resistance is built into the system," declares another critic of Pentagon ways. don't get promoted for being a good manager or efficient spender, but for the job you hold and the time you put in and the number of people under you. The Defense Department is one of the finest collections of individuals you can find anywhere, but the system just doesn't let them function. No lieutenant colonel is going to tell his superior what's wrong or go over his head. No Air Force officer temporarily assigned to the staff of the Secretary of Defense is going to be too rough on the Air Force so long as he must get his promotions in the Air Force and go back there someday."

But, the critics agree, changes can be made to improve the situation immediately and pave the way for more basic overhaul later on. The changes would involve disposing of valuable real estate the services don't need, eliminating duplication in supply and servicing, keeping better track of what's on hand, doing a better job of placing new orders and getting rid of surpluses, overhauling sacred cow fringe benefits, and making dozens of other big and little alterations.

Air Force flight pay, many experts believe, is coming close to scandal proportions, as the Air Force switches increasingly to missiles and more and more fliers descend to ground jobs. About 110,000 Air Force pilots, navigators, flight surgeons, and other airmen now get some \$200 million a year in bonus flight pay. Provided originally as compensation for hazardous combat flights, the pay can now be earned for flying as little as 4 hours a month and 100 hours a year. Most flight personnel, even if deskbound, make sure they log that much time. Many are taking special jet training so they can continue to get flight pay when few nonjet planes remain. None of these is ever likely to fly jets as a main job. Meantime, there's a mounting outlay to provide, maintain, service, and repair the planes these men use for their minimum fiving activity.

Smaller matters prove equally sticky. The Army, Air Force, and most civilian Government agencies pay their employees every 2 weeks. Navy blue collar workers, however, have long been paid every week and, despite

the clear prospect of a \$2 million a year saving in bookkeeping costs, the Navy refuses to change.

THE FOOTLOCKER STORY

Supply distribution, management experts say, betrays Pentagon muddling at its worst. Witness the horror story of an order for 300 footlockers by the Air Force Base at Bitberg. Germany. As received at the Quartermaster Depot at Philadelphia, the order had somehow grown to 30,017 footlockers. Without questioning the need for more than 30,000 footlockers at a base of 400 men, the depot had the trunks shipped from Texas and Tennessee supply points. While they were on the high seas the error was discovered, too late to save some \$100,000 in excess shipping

That's not all. When the footlockers did arrive, the base obligingly took 702, more than double its original order. The rest went to the Army supply depot at Glessen. Germany; it already had on hand several thousand footlockers, from which the Bit-berg order could have been filled in the first nlace.

An area where the greatest economy progress could be most painlessly made, the critics say, is in the disposal of unneeded military real estate. The services now have land, factories, and other buildings that cost \$33 billion to acquire or build, and recently they've been adding about \$1.5 to \$2 billion a year and getting rid of practically nothing. The maintenance cost creeps up. "It's eating us out of house and home, leaving us less and less for strictly military spending," one official complains. Some experts figure the Pentagon could easily take in \$1 billion from sale of unneeded real estate and save some \$200 to \$300 million a year on upkeep.

Consider these unrealized possibilities for

savings:

The Presidio, 1,343 acres of prime San Francisco real estate overlooking the Golden Gate, serves as the sprawling headquarters of the Sixth Army. The headquarters, critics say, could operate far more economically and efficiently in one compact office building.

Fort Hamilton in Brooklyn is now used chiefly to process dependents of service families going overseas or returning to the States. The processing, economizers agree, could easily be done at other military installations around New York, and higherups in the Pentagon and White House have pressed the Army to yield this land to civilian use. But the Army refuses. Recently, when the New York Triborough Bridge Authority needed a strip of the fort for the approach to the new Narrows Bridge, the Army gave up a small piece of land-on condition the authority replace the land at another point and also replace the building which had been on the ceded land.

The services not only refuse to yield real estate but persistently try to do more with what they have. The Army recently proposed reactivating its nearly idle Cleveland and Lima, Ohio, ordnance plants and its Detroit arsenal. The Cleveland plant was to be used to produce lightweight combat vehicles, and the Detroit and Lima plants to produce medium weight combat vehiclesall satisfactorily produced by private firms. The Army argued its plants could produce the vehicles more cheaply and better. Top Pentagon officials vetoed this plan as too sweeping, but expect the Army to come back shortly with a more modest proposal.

When the services do get ready to dispose of installations, they frequently run into stormy opposition. Local merchants like the military payrolls. Southern Wisconsin took months to quiet down not long ago when the Air Force decided to discontinue construction of the new Bong Air Base and dispose of the land. Right now Maryland and Virginia Congressmen of both parties are teaming up again, as in past years, to pressure the Navy into revising plans to cut back Washington's naval weapons plant with its 5,500 employees. The plant makes a variety of missile control devices, antisub gear and other items which management specialists agree could be better produced elsewhere.

PROBLEM OF DUPLICATION

Elimination of military duplication is considered another huge area of potential savings, and here too there is marked resistance to change within each service. Each has its own medical, communications, supply, contracting, auditing, and weather forecasting systems—and each aims to keep them as long as it can.

A congressional staff study recently estimated Armed Forces medical costs at over \$400 million a year, with some 185 hospitals in the United States and 90 overseas. The hospitals have a total capacity of about 105,000 beds and average occupancy of less than 40 percent. They employ about 145,000 people, about 75 percent military and 25 percent civilian.

"It is difficult to conceive," the report said,
"of an area that would more readily lend itself to consolidation than medical care. The
conditions which require medical service, the
facilities for treatment, and the professional
standards for medical personnel are virtually
indistinguishable among the services."

At Denver, a 350-bed hospital at Lowry Air Force Base keeps only 100 beds in use to care for an average load of 51 patients. Six miles away, Fitzsimons Army Hospital, with 2,078 beds, operates about 900 of them to care for an average of 684 patients.

At Langley Air Force Base in Virginia, a 217-bed hospital keeps 100 beds in use to care for 62 patients, on the average. Six miles away, at the Army's Fort Monroe, there is a 141-bed hospital, in which 35 beds are maintained to care for an average 20-patient load.

DEPOTS DO SAME JOB

Supply distribution is an area of rampant duplication, experts say. In the Southeastern United States, one congressional investigation has found, the Army's Atlanta and Memphis depots, the Air Force's Mobile depot, the Marine Corps supply center in Albany, Ca., and four Navy stock points are all supplying their respective services with the same supplies. Army supply operates through seven different "technical services"—Ordnance, Chemical, and the like—each with specific types of material assigned it. This results in no less than 24 separate Army supply control points in the continental United States—several for each of the seven services—when five to eight could handle the job nicely, according to one management expert.

Military overbuying, lack of standardization, bad inventorying, and slow and costly surplus disposal habits long have been favorite congressional targets. Some progress has been made, budget scanners say, but much remains to be done.

This year the Navy has begun buying extra plane engines on the basis of having a 150-day supply in the pipeline; previously, it insisted on a 210-day supply. Though the shorter cycle would save millions, it took the General Accounting Office, Congress spending guardian, two long battles to get the Navy to change.

Attempts to standardize military footwear have so far eliminated 752 different types and finishes, but 339 types remain. Pentagon experts recently attempted to prescribe a black low men's shoe as standard for all services. The Marine Corps insisted on keeping its mahogany shoe because it matched the bill on the Marine caps, and the Navy insisted on keeping a brown shoe for its fliers because it has been "traditional"—ever since late in World War II.

MANY ITEMS DIFFER ONLY SLIGHTLY

Over 1.3 million common supply items, according to congressional investigators, differ among the services in such relatively minor respects as color, finish, or even just names. Defense officials estimate they could save about \$1 million a year in management expenses alone—not counting procurement savings from placing larger consolidated orders—for every 1,000 items eliminated from the supply system.

The Defense Department has been bally-hooing its "single manager" system as the answer to many of its buying problems. Under this system, one service buys all supplies of one kind for all the services; the Navy does all the fuel purchasing, for instance. But management experts say it's only a step in the right direction.

For one thing, the Pentagon is installing the system very slowly; seven supply categories were put under single managers in 1955 and 1956, but only two more minor categories have been added since then. More important, though, the single manager has authority only to consolidate and place the orders he's given. He has no power to standardize equipment, redistribute excess

stocks, or cutback orders.
"If we can extend its use, and raise it to a higher level of command where it can really accomplish more, the single manager system might some day pave the way for a separate single supply service," one would-be reformer wistfully asserts.

FRINGE BENEFITS

Perhaps one of the touchiest areas of theoretical saving in the entire Military Establishment is the vast number of fringe benefits which military personnel now enjoy. Many have grown out of all proportion to the original intent, and now seem beyond uprooting.

Commissaries are a prime example. These food supermarkets were supposed to be set up where there were no private facilities selling at reasonable prices convenient to the post. Now there are over 250 commissaries in the continental United States, many in cities such as Washington and New York.

The right to buy there is now extended not only to people living on the posts, but to military families off the post, reserve and retired personnel, and Public Health officials. Less than 20 percent of the people holding permits to buy at U.S. commissaries now live on the base where the store is located. In Washington, customers at the Walter Reed Army Hospital commissary include such off-base types as a National Institutes of Health neurologist and a World War II Navy nurse, now a reservist, who is the mother of seven children and extremely unlikely ever to return to active duty.

The Government not only employs 9,000 people to man the commissaries, but supplies the buildings, equipment, light, heat, and other services. The customers pay only the original cost of the food, plus transportation charges, and a highly inadequate 3 percent markup to cover all else. Military experts figure the annual running subsidy is \$75 million, not counting depreciation on the buildings and equipment.

The Government also provides medical care and hospitalization for military men and their dependents, including veterinary care for pets; a retirement plan completely Government-financed; quarters, often including all or much of the furniture; in many areas, free libraries and even bus service to public schools; in many cases, subsidized laundry service; free personal travel on military planes and ships if space is available; and burial in Government-owned cemeteries, including plots for pets.

"The military life," comments one Administration official, "is marked by growing socialism and paternalism, literally from the cradle to the grave."

In Support of Salary Increase for Postal and Federal Classified Employees

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I insert at this point in the Record a copy of my statement, submitted to the Committee on Post Office and Civil Service, in behalf of an increase in the salaries of postal and Federal classified employees.

It is my sincere hope that this Congress will pass an adequate and needed bill which will reflect an enlightened and realistic Government approach in this matter.

My committee statement follows:

STATEMENT OF HON. JAMES ROOSEVELT SUB-MITTED TO COMMITTEE ON POST OFFICE AND CIVIL SERVICE, APRIL 29, 1960

The need for an increase in the salaries of postal and Federal classified employees is a problem for which, in my opinion, Congress should find an adequate solution as soon as possible.

As I view it, this problem has two aspects. First, the immediate relief of the need of these employees for added income at a time when rising prices have continued to reduce purchasing power. This is the personal and social aspect of the problem which needs no prolonged consideration and requires the assembly of no additional economic data beyond that which we already have at hand.

Then there is the second phase which has long-range implications. Congress has received recommendations for extensive study of all pay systems according to which employees of the Federal Government are compensated. There is no doubt some merit in this suggestion, but it involves a project which is aside and apart from the essence of this problem, which is providing additional income for these employees and doing it now.

In recent years, Congress has increased postal and classified salaries seven times, beginning in 1945, but it has never adequately increased the pay of all grades. This failure to enable these employees fully to overcome their economic disadvantage is one reason why I am advocating prompt action. These employees have suffered chiefly from delay in raising pay each time it was apparent that the need existed.

For some years Federal Government employees have been suffering along with many other persons from the lessening purchasing power of the dollar. There is a striking difference between salaried Federal employees and many workers in private industry. The latter have continuously received frequent and regular adjustment of their salaries. Business does it in this way because it is a sound policy and one which enables any well-operated enterprise to maintain its position in the labor market.

The Federal Government policy should not be less enlightened. We hear on many occasions statement of the principle that there should be more businesslike methods in Government. There is considerable truth in such a statement, but it does not apply only to certain operating procedures. It applies equally to the treatment which Government or private business accords its employees.

Because of this failure to adopt and maintain a sound salary policy the Federal Government has done a real injustice to its

employees and has lost many thousands of employees who were needed. By failing to retain their services, the Government has engaged in a practice which is costly and no doubt has had serious effects which may never be fully appraised. No organization, public or private, can afford to tolerate turnover of personnel at a rate which is depriving it of valuable manpower. That is the impersonal and businesslike aspect of this problem which the Government should not

And so, no matter how we approach this question of providing adequate salaries for our postal and classified personnel, we come to the same conclusion, namely, that there must be prompt action to provide the pay which will make available to the Government at all times the trained and experienced persons that are needed to conduct the

public business.

Many Presidential Candidates Do Not Believe in Democracy

EXTENSION OF REMARKS OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. O'KONSKI. Mr. Speaker, with people all over the world fighting and dying for the right to vote, it is inconceivable the number of presidential candidates we have in the United States who do not believe in the right to vote.

The manner in which presidential candidates are shunning primaries in the various States makes it appear that they

are afraid of the people.

Mr. Speaker, I would like very much to add to these remarks an editorial that appeared in the Vilas County News-Review at Eagle River, Wis., which expresses my sentiments in every respect.

Many people in America are beginning to ask the same question.

The editorial follows:

UNDEMOCRATIC LEADERS BLOCK PRIMARIES

Though the Wisconsin presidential primary has been criticized as ineffectualcalled just so much eyewash by the former U.S. President, Harry Truman-it actually may be the most important political phenomena in this country.

It is the only open presidential primary in the United States. Though this primary, alone, cannot rectify the evils in our system of nominating presidential candidates, it serves as an example-a beacon in a sea of political darkness.

We are certain many other voters in the United States would appreciate the privilege of helping determine who will be the presidential candidates.

This is denied them by party bosses, and undemocratic politicians, who distrust the people-and actually distrust our American system of government by the people.

Democracy, with the worldwide threat of aggressive Red communism, and all the other forces opposed to it, faces severe tests in the future decades. We believe it will better face those tests, if some of the flaws in our system are corrected.

Surely there must be some U.S. legislators, not so kept by the party bosses, that would have the courage to organize and work for a nationwide presidential primary, along the lines of the Wisconsin primary.

This is not a new thought by the editors of this publication. We are merely endorsing the suggestion of too few of our leaders, who have seen the need for a national presidential primary.

As a protest against the highhanded attitude of our prominent national political leaders, we wish the voters would stay away from primaries, in droves, when all they ask is that we go to the polls to ratify a single

selected candidate.

We do not want this to be construed as an attack against the apparently unopposed Republican presidential candidate, RICHAED Nixon, who certainly is in no way responsi-ble for there being no nationwide system of presidential primaries.

But it most certainly is an attack on our leaders who resist and distrust democracy. A new method should be worked out in

the nationwide presidential primary where candidates could not duck having their names appear in primary elections in every

State in the Union.

There probably would not even be a need for a wild, undemocratic, unfair nominating convention either. The winners could be certified on the basis of best showing in this primary and then in the autumn the voters would have their opportunity, just as now, to change their minds and vote differently either Democratic, Republican-or if there is a third or fourth candidate, for someone

The secrecy of the ballot should be protected and voters not required to state their party affiliation—a commendable system as developed and perpetuated in Wisconsin elections.

Columnists Lawrence and Herling Help To Clarify Long-Range and Immediate Issues Involved in UAR Policy of Boycott and Blacklist

> EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. ROOSEVELT. Mr. Speaker, I insert in the RECORD an article by David Lawrence which deals expertly and perceptively with the basic and interrelated issues surrounding the anti-Israel and anti-American blacklist of the United Arab Republic.

While I have disagreed many times with Mr. Lawrence, I must say in all fairness and with objectivity that his article, which appeared in the Washington Evening Star of May 2, 1960, is one of the best to date in clarifying contradictions in our own policy and in Nasser's position. Unfortunately, as one will see upon reading Mr. Lawrence, Nasser's "having his cake and wanting to eat it too" policy has really gone unchallenged by our Government-to his advantage. of course.

Mr. Lawrence also touches on the action of the maritime unions in refusing to unload ships from the U.A.R. However, I think his real contribution lies in placing the entire U.A.R. policy and our reaction to it in proper and much-needed perspective.

In addition, Mr. Speaker, I insert an article by John Herling, which deals with

the immediate issue of the loss of or threats to jobs of our American seamen as a result of Nasser's heretofore unchallenged actions. Mr. Herling's clear presentation of the facts appeared in the Washington Daily News of May 3, 1960.

I respectfully urge careful perusual of these two articles because in combination they offer an excellent study in the long-range and immediate issues surrounding the abusive and illegal actions of the U.A.R.

The two articles follow:

[From the Washington (D.C.) Evening Star, May 2, 1960]

FULBRIGHT VERSUS CRITICS OF NASSER-SENA-TORS AT ODDS OVER U.S. REACTION TO DIS-PUTE ON ANTI-ISRAEL BLACKLIST

(By David Lawrence)

Does Chairman FULBRIGHT, of the Senate Foreign Relations Committee, speak for the Democratic Party when he takes the side of Dictator Nasser against the Israeli Government? Senators Kennedy, Humphrey, Symingron, and Johnson disagree with the Arkansas Senator in his latest pronouncement that glosses over Nasser's refusal to open the Suez Canal to all shipping.

Senator FULBRIGHT in his statement castigates his fellow Senators—many of them liberal Democrats, like Senator Douglas, of Illinois—because they voted last week against the use of American taxpayers' funds to help Nasser carry on his economic boycott against another country in the free world.

The House of Representatives has adopted a similar provision advocating the principles of free navigation. For a majority derived from both political parties sees no reason why the U.S. Government should continue to send mutual security funds to Egypt if the latter seeks to destroy the economy of Israel, a country which also receives such funds from America.

Nasser has ignored the pleas of President Eisenhower to reopen the Suez Canal to the ships of all nations, though diplomatic help toward that end was promised by Mr. Eisenhower after Britain and France intervened in 1956 in the Middle East war. At least it was a factor in placating Israel, which early in 1957 withdrew its armed forces from the

battle zones with that understanding.
The United Nations has tried repeatedly by its resolutions since 1948 to bring about a reconciliation between Israel and Egypt. But Nasser refuses to negotiate directly or indirectly. He says a state of war exists, and he uses that technical reason in trying to justify closing the Suez Canal to Israel's shipping.

If it be conceded that a "state of war" exists, then why did the World Bank, which is part of the United Nations organization, decide last December to make a loan of \$56 million to Egypt to widen and improve the Suez Canal? Cannot it be argued that the World Bank has thus taken sides in a "war" and has helped one of the so-called belligerents? Plainly Dictator Nasser cannot have it both ways.

Within the last few days another grave development has occurred. A maritime union in New York City decided not to help unload ships coming from Egypt. Immediately the maritime unions in Egypt and other Arab countries retaliated by refusing to unload American ships in their ports.

But the real reason for the boycott imposed in this country is the union's fear of damage to the jobs of American seamen in the future, because the Cairo Government persists in refusing to let ships from any country go through the canal if, at any time previously, they have carried cargoes to Israel. This means that American companies with products destined for other countries must maintain a fleet of ships

solely for the Israel trade. Once a vessel serves Israel, it goes on the blacklist imposed by Nasser not only against Americans, but against the ships of all other countries.

Over the weekend, Nasser issued a bitter attack on President Eisenhower blaming him for the boycott by the union in New York City. He holds President Eisenhower responsible for what the union is doing, though he himself disclaims any responsibility for what the Arab unions are doing.

Should American taxpayers' funds be used to support any regime which discriminates against American seamen in this manner? Although the Senate and House recorded an emphatic "no," Senator Fulbright now accuses his fellow Members of Congress of playing politics and of being influenced by a "pressure" group. The veterans committee of the Jewish War Veterans called this remark "an insult to the loyalty and patriotism of the members of this group who have served this country loyally in war and peace." It added:

"It is apparently the view of Senator Ful-BRIGHT that American organizations must abdicate their right to speak out on issues affecting the foreign policies of the United States."

Senator Keating, Republican, of New York, says that the action taken by Congress means that the United States is asking Rasser to "stop using the Suez Canal as a political pawn." Senator Fulbright, however, contends that the action by the House and Senate has "seriously compromised the conduct of foreign policy by the President."

But it is the Nasser government which is trying to sabotage American foreign policy. Within the last few days the Vice Foreign Minister of the United Arab Republic (Egypt and Syria), on his visit to Chile, told a news conference there that the Cairo government "will resolutely help Cuba defend herself against aggression if Cuba requests it, and if it is within our possibilities." There was a time when such a pronouncement would have been regarded as a public insult to the United States because of the Monroe Doctrine, which warns nations outside this hemisphere to keep out of Latin American affairs.

The Cairo regime has been boldly taking the Communist side in many a dispute, and yet the chairman of the Senate Foreign Relations Committee imputes improper motives to other Members of Congress who resent the pro-Communist tactics of Egypt's dictator.

[From the Washington (D.C.) Daily News, May 3, 1960]

A MARITIME JOB BATTLE (By John Herling)

American maritime trade unions—the Seafarers International Union and the International Longshoremen's Association—are fighting for their jobs despite the strong displeasure of the State Department.

Their fight had taken the form of a picket line on the piers of New York where the Cleopatra, a ship of the United Arab Republic, is docked.

The picket line is a protest against the United Arab Republic's blacklisting of U.S. Ships that may have called at Israell ports. Actually, U.A.R. President Nasser has extended the blacklist to all ships if they carry cargoes to and from Israel.

The obvious intention is to starve Israel by economic strangulation. While such a policy is repulsive on its face, the American trade unions have thrown up their picket line for trade union reasons.

As a result of the U.A.F., American merchant seamen are losing jobs. Only several hundred jobs are now at stake, but if the blacklist is observed, this could spread more widely. Over the past several months, the Nasser regime has struck hard against all

ships which venture to transit the Suez Canal.

Senator Paul Douglas, Democrat of Illinois, sums up the immediate effect on American shipping this way: "Blacklisting the Arab States has injured American shipping and American seamen. The Arab States refuse to permit American ships which have traded with Israel to carry cargoes to Arab ports, and this even applies to cargoes of surplus foods purchased with funds advanced by the United States. Under law, one-half of the shipments must be in American ships. This means that many American ships cannot secure these contracts unless they forego trade with Israel. American seamen and shippers have been discriminated against. And the Arab boycott and blockade against Israel have intruded into our own commerce. American businessmen who would like to trade with Israel are unable to do so far fear that they will lose their commerce with the Arab States."

Aside from the issue of the "freedom of the seas," the American maritime unions are angered by the treatment of three American-flag ships in recent months—the Rockport, the Valiant Faith, and the Westport. These ships were not only barred from the Suez Canal, but their crews were held under practical ship arrest for a long time. In the case of the Valiant Faith, the crew were able to break through their incommunicado only by staging a phony fire drill on board and then rowing over to a nearby ship with an American crew. In that way, word was flashed back to the headquarters of the Seafarers' International Union in New York of the mistreatment of the crew of the Valiant Faith.

Affidavits testifying to mistreatment of American crews have been submitted to the Federal courts, which have three times upheld the legality of the picketing of the U.A.R. ship.

In the meantime, the State Department—or some people in it—are furious at the picketing because they consider it an intrusion into the diplomatic field by trade unions. In the last few days, through a bipartisan effort of Senators Douglas and Kenneth Keating, the foreign-aid program was amended to withhold assistance from nations that obstruct free navigation of international waterways. Target: U.A.R.'s blockage of the Suez.

The Refugee Problem

EXTENSION OF REMARKS

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. LINDSAY. Mr. Speaker, I call to the attention of the Congress the statement of the American Council of Voluntary Agencies for Foreign Service, entitled "The Refugee Problem—Concerning Both Sectors, the Public and the Private."

The American council consists of some 38 voluntary agencies dedicated to promote the welfare of our less fortunate peoples in the world through cooperative humanitarian programs. The council provides these agencies a means for consultation, coordination, and planning so that relief and reconstruction programs may be carried on in the most effective way.

I deem it most appropriate in this World Refugee Year and in the years to come—for this problem cannot be solved in any 1 year alone—that these coordinated efforts be encouraged and continued. Under unanimous consent I include the council's statement in the Appendix of the Record.

THE REFUGEE PROBLEM—CONCERNING BOTH SECTORS, THE PUBLIC AND THE PRIVATE

(Statement by American Council of Voluntary Agencies for Foreign Service, Inc.)

A short time ago the member agencies of the American Council of Voluntary Agencies for Foreign Service undertook a review of their operational activities in the area of need and underprivilege abroad. Their findings are summarized in a formal statement delivered before the Strauss Committee¹ engaged in a study of the role of the American private sector abroad. In conclusion the statement expresses a concern of the 39-member agencies of the American council, as follows:

"During the 20th century it is impossible to escape from the fact that there exists a struggle for the minds and souls of men. This struggle may be conducted by words and by every means of propaganda, and it may also be conducted by deeds and by example. The voluntary sector, besides promoting peace and an abiding sense of brotherhood through programs of cooperation to meet human need, performs a basic service to truth which is deeply significant to the whole future development and ultimate goals of American foreign policy.

mate goals of American foreign policy.
"The American voluntary agencies have been particularly active in mass and individual migration and resettlement of peoples displaced by war's aftermath, calamity or political oppression. In the past decade, some 600,000 such persons have been re-settled in the United States through sponsorship secured by voluntary agencies. American economy was alded, but the reset-tlement movement was not a device to satisfy the labor market; it was a human response to human need-with great social and economic advantage to the labor market. corporate work of rescue has not only saved individual and family lives, but has been of service to the economy of such overpopulated countries as Austria and Postwar sponsored migration has demon-strated the continuing awareness of America as a haven for the oppressed and has thus supported and dramatized the position of the United States in the world. But even more, this activity of the American voluntary agencies has inspired and become an integral part of worldwide endeavor of counterpart agencies thus adding immeasurably to the total achievement of the American voluntary agencies. A number of worldwide voluntary associations have helped to resettle substantial numbers of persons in other countries as well as in the United States. These world programs for refugees relying substantially for financial support on voluntary American gifts, are a vital part of the contribution that American voluntary agencies are making to the broader goals of our foreign policy."

No one familiar with the needs of refugees can fail to recognize the American leadership which has been exerted since the end of World War II Indeed the determination to express our humanitarian concern is reflected in continued American private and governmental action, even as the aspect of the refugee problem has changed with the passage of 15 years of postwar history.

These 15 years have brought action through a variety of concerned organiza-

^{*}Javits amendment to the Mutual Security Act of 1958, sec. 205(j) (2).

tions—governmental, such as the Displaced Persons Commission and the U.S. escapee program; intergovernmental, such as the Intergovernmental Committee for European Migration; international, such as the United Nations Relief and Rehabilitation Administration, the International Refugee Organization, the United Nations Korean Reconstruction Agency, the United Nations Relief and Works Agency for Palestine Refugees, and the Office of the United Nations High Commissioner for Refugees; and private, voluntary organizations sectarian and nonsectarian such as those which constitute the membership of the American Council of Voluntary Agencies.

Through a series of legislative enactments pertaining to immigration and laws relating to the uses of American agricultural products and through the development of specific programs and organizations, the historic concern of the American people for others has been demonstrated. Through the joint action of the public and private sectors millions have been fed and clothed. The movement of many hundreds of thousands of displaced persons throughout the free world by the International Refugee Organization was facilitated by American governmental support and voluntary agency ability to arrange necessary sponsorship and to accept placement responsibilities. Since 1952, through a series of bilateral contracts and cooperative arrangements, the voluntary agencies have made operational and other resources available to the important programs of the existing governmental, in-tergovernmental and international organizations. The voluntary agencies take pride in the spirit which has prevailed; we note the results and we are challenged by the vast area of critical needs still to be met.

Currently appealing to their constituencles throughout the country, during World Refugee Year, voluntary agencies, members of the American council, deeply concerned with refugee needs seek a goal well over the amounts annually subscribed in campaigns of previous years; the target approximates \$65 million and indicates a \$15-million increase over the average annual expenditures of \$50 million for refugee services

since the year 1945.

In keeping with a basic policy of the American private effort, voluntarily contributed funds are expended for assistance to refugees directly by the agencies themselves and/ or through cooperating voluntary agencies in oversea countries. It is important to note, therefore, that these funds do not appear as part of any governmental, intergovernmental, or international income record, as is the practice in some countries where voluntary contributions are sought by public, tax

supported bodies.

The American council is acutely aware of a vast additional resource that can never be fully measured. Through the uncounted contributed hours of unnamed volunteers serving member agencies across the breadth of our land, many theusands of uprooted human beings have felt the impact of an American ideal and again found friends, home life, and independence. Hundreds of thousands of tons of serviceable used clothing and other supplies, collected for distribution wherever there was need, are yet another evidence that our people are a compassionate people and generous. The agencies gratefully acknowledge the vast and diversified contributions of their constituents. Theirs is a role that is not and can never be reflected in simple statistics.

The American Council of Voluntary Agencies has deep concern regarding the impor-tance of a strong support by our Government of the World Refugee Year effort. Aware that Congress recommended the sum of \$10 million from the President's emergency fund for this purpose, it is hoped that our Government will take full advantage of this. Legislation for refugee immigration to the United States including provision for a proportion of the difficult to resettle persons as our share of the responsibility in a move toward solution of this problem, has been recommended by the agencies of the council, aware as they are of the endeavors of other countries in this respect and convinced of this country's capacity to constructively absorb such persons.

It is generally recognized that the refugee problems are too vast and the condition too fluid to be solved in a single World Refugee Year. On the other hand, the concentrated focus of a community of nations on this global problem is fraught with unlimited im-

We acknowledge with satisfaction the continuing American governmental support of the U.S. escapee program, the Intergovernmental Committee for European Migration, the Office of the United Nations High Commissioner for Refugees and the United Nations Relief and Works Agency for Palistine Refugees, recognizing it as essential to the successful resolution of the refugee problem. We are convinced that American concern can be best expressed through the teamwork of the public and voluntary sectors. Firm in this resolve we must so act as to assure that no future historian will refer to the years of our time as "the century of the homeless man."

They Can't Stop the Inevitable

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. ROOSEVELT. Mr. Speaker, a hard-hitting editorial on hospital and medical aid for our senior citizens has just come to my attention.

Appearing in the El Cajon, Calif., Valley News of April 24, 1960, the editorial pulls no punches. I am sure, of course, that opponents of hospitals and medical aid to elderly citizens will be unhappy with the truth of the opening statement

Pressure is beginning to build up all over the Nation for some sort of medical and hospital aid program for elder citizens living on social security benefits.

I am also sure that opponents of the Forand bill will be equally distressed by the editor's shrewd analysis which punctures the arguments propounded by the American Medical Association through its president, Mr. Orr.

The editorial speaks for itself. Its head-on approach to the issue needs no clarifying or explanatory remarks by me. I therefore insert it at this point in the RECORD, with the hope it receives wide readership by the Members of Congress: [From the El Cajon (Calif.) Valley News, Apr. 24, 1960]

THEY CAN'T STOP THE INEVITABLE

Pressure is beginning to build up all over the Nation for some sort of medical and hospital aid program for elder citizens living

on social security benefits.

As this pressure increases, it is significant to note the direction from which comes the resistance to such a program.

One of the major objectors to any form of compulsory public health insurance is none other than President Eisenhower.

Whether the President's attitude is based on a deep personal conviction is question-A man who spends so much of his free time on the golf course, at the bridge table, or reading murder mysteries doesn't have much time left to ponder the problems of other people.

Moreover, President Eisenhower tends to rely on experts for his attitudes. Whoever happens to have his ear and his confidence at the moment probably has shaped his opinion on health insurance for elder citizens.

There is plenty of evidence that President Eisenhower has no personal aversion to free medical and hospital service for certain groups of citizens.

He has never been known to raise his voice publicly against the free medical service available to admirals, and generals, and Members of Congress, and the Cabinet officers, at the various Army and Navy hospitals in and around Washington.

No one in the United States, of course. has enjoyed more free medical and hospital service himself than President Eisenhower. It can be concluded, therefore, that he is not averse to Government medical services per se. If he objects to medical and hospital aid for elder citizens, it can only be concluded that his objection is aimed at the recipients, rather than at Government medical aid in itself. Old folks are just not the right people, perhaps, in the President's eyes.

Another major opponent of medical and hospital aid under social security is that good old craft union known as the American Medical Association. The current president of the doctor's union has this to say on the subject:

"It would result in poorer, not better health for the people of this country.

"Medical care is not susceptible to production-line techniques. It requires flexibility of medical technique, an ingredient which would unquestionably vanish the moment the Government established a health program from a blueprint calling for mass treatment."

These words from President Orr are typical of the AMA's traditional pretense that it is concerned more with the quality of medicine being practiced in the Nation than with the wage scales of its members.

The simple fact which President Orr insists on ignoring is that the objective of a social security health program is quantity, not quality.

People can't suffer from poorer health care who have no care at all. President Orr talks as if all elder citizens were receiving necessary medical aid now, and this aid would be lowered in quality if social security intervened in any degree. This is a typical example of AMA doubletalk. Any kind of medical care is better than no care at all. One medical missionary alone in the jungle with only a sharp pocketknife and a pocket-ful of sulfa tablets is better than no doctor

at all.

And when Dr. Orr says that medical care is not susceptible to "production-line techniques" he is talking more nonsense. He is trying to surround medical practice with the mystery and the individual artistry which was the sole stock in trade of the old witch doctor. He is trying to pretend that there is some sacred and extremely vulnerable relationship between the doctor and the patient which if disturbed may cause internal bleeding, peritonitis, extreme lassitude, and complete loss of appetite, if not the will to live.

All of which has nothing to do with proper medical care for the aged. What they lack today, and what social security should provide, is a source for necessary drugs, necessary medical treatment, and hospital facilities where needed. These needs can be supplied on a production line basis. In fact, the medical profession in many private clinics is supplying these needs today on a production line basis and Dr. Orr is well aware of this fact.

What is really bothering the AMA, and its president, is the fear of discovery. The American people are beginning to wake up. They are coming to realize that private medicine is a tightly unionized monopoly, designed for the benefit of its practitioners first, rather than for the welfare of all who need medical care.

Because of the nature of private medicine, vast segments of our population today cannot afford adequate medical or hospital care. This adequate care can be provided only through a national public health program. Such a program is as inevitable as the old age for which it will be designed.

The AMA has no more chance of stopping the march toward public medicine than it has of bringing Hippocrates back to life.

For Mutual Security

EXTENSION OF REMARKS OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from the New York Times of Wednesday, May 4, 1960. I sincerely hope that my colleagues will take a minute from their busy schedules to read this excellent editorial.

[From the New York Times, May 4, 1960] FOR MUTUAL SECURITY

Going directly to the people, President Elsenhower has in effect appealed to them to keep Congress from weakening an arm of our national defense that is designed to stop Communist imperialism without war. This arm is the mutual security program, miscalled foreign aid.

The vital importance of this program is readily admitted by Congrss, both Houses of which have passed authorization bills cutting only slightly the total expenditures the President requested. But congressional groups are preparing to slash actual appropriations by some 35 percent in a new round of the silly congressional game of first authorizing a program and then refusing ade-

quate funds for it.

As explained by the President, here is the situation in a nutshell. The total cost of the program is put at \$4,175 million for the coming fiscal year. This is one-tenth of our defense budget, one-twentieth of our Federal budget, and less than one-hundredth of

our gross national product.

This money helps our allies and friends to maintain 5 million men, 30,000 planes, and 2,200 warships for our common defense at minimal cost to us. It helps us to maintain an annual foreign trade of \$30 billion, providing jobs for 4,500,000 of our people and supplying us with vital raw materials. It has saved free Europe from being engulfed by the Communist tide and it is helping struggling masses on five continents to better their living standards and gain new hope and new confidence in freedom.

The United States, said the President, nceds the world, and it needs a free world in which alone it can live in freedom. course, we can help only those willing to help themselves, and other now prosperous nations must share the burden. But the freeworld still looks to us for leadership, and We must not fail in it.

Fire Chief Burke

EXTENSION OF REMARKS

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. GALLAGHER. Mr. Speaker, last week a tragedy struck our community which saddened everyone. Acting Fire Chief Michael Burke of Jersey City was killed while fighting a fire. Chief Burke was a young man and one of the ablest of civil servants. He possessed great energy, diligence and made outstanding contributions to his community. His is certainly a tragic loss.

I would like to include as part of my remarks the excellent editorial tribute which the Jersey Journal of April 27, 1960, paid to Fire Chief Burke.

It is with deep sympathy that I extend to his wife and family our sincerest condolence. May it comfort them to know that everyone shares their sorrow and

Perhaps it is a time for all of us to reflect upon the debt of gratitude we owe to all firemen and policemen. All too often they are taken for granted. But we should never forget the demands that are made upon them personally in carrying out the protection of the public safety. Courage is as much a part of their equipment as is their blue uniform. Their everyday duty requires them constantly to place their own life in danger for the general welfare.

Chief Burke's tragic loss shall ever be a reminder that he died excerising courage in order to protect his fellow man. He is of a breed of men who made America great.

The article follows.

[From the Jersey Journal, Apr. 27, 1960] FIRE CHIEF BURKE

The death of Acting Chief Michael Burke, killed last night while fighting a fire, is all the tragic loss brought by the passing of any husband and father in the prime of life. It is a great loss, besides, to all the firemen and

all the residents of Jersey City.

Chief Burke was among our ablest younger civil servants. He gave promise, had he become chief, of carrying the proud tradition of the department to new levels of efficient organization. He was thoroughly grounded in the techniques of his work and for it he had the alert enthusiasm of the good craftsman. Above this, however, was a lively executive sense and a realization of the value of keeping the public informed about and proud of its department.

A less energetic leader might not have been on the roof from which he fell to death. A chief normally might have delegated the rooftop reconnaissance from the safer street level. That was not his style.

His diligence for public goodwill toward his department was demonstrated again only hours before his death. Late yesterday he was in this office talking to the editor about plans for developing popular interest in the fire prevention program. He also was arranging news coverage for the dedication of the Chief Thomas Maloney memorial plaque at the Fire Training School. After a pleasant half hour he rose to go—tanned, smiling, broad shouldered, with about 6 hours to

It would be an appropriate expression of

the city's feeling if Mayor Witkowski called an immediate meeting of the commission forthwith empowering Public Safety Director McLaughlin to make these gestures of sympathy:

A posthumous promotion to the rank of chief of the department and a speedy ap-proval of every monetary provision the city is allowed to make for the bereaved family.

Our Defense Muscles Are Tough

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include an editorial "Reassuring Appraisal—Our Defense Muscles Are Tough" from the San Diego Union of Tuesday, April 26, 1960.

This editorial is particularly note-worthy because of its analytical comments regarding the address by Secretary of Defense Thomas S. Gates, Jr., before the recent Associated Press meeting in New York City. I believe that very properly the editorial describes Mr. Gates' talk as "a reassuring and informative reappraisal of America's armed strength.'

Also, the opinion expressed in the editorial that the impact of Mr. Gates' talk will last far beyond the confines of the Associated Press gathering" has already proved to be an accurate prophecy, because that speech has received extensive and favorable editorial comment, and has been reprinted in its entirety in various prominent newspapers throughout the country.

The editorial points up the inherent wisdom of Secretary Gates' belief in the Joint Chiefs of Staff system, and underlines the importance of Secretary Gates' position that the organization of the Defense Establishment is essentially sound, and that the Defense Reorganization Act of 1958 already is functioning efficiently and will continue to improve. Parenthetically, I believe it is appropriate to point out that Secretary Gates' policy of actually sitting with the Joint Chiefs of Staff is being widely acclaimed as one of the truly great contributions to defense organization. He has demonstrated that intelligent and responsible leadership is more effective than all the proposed defense reorganization plans of so-called experts. As this editorial indi-cates, the high caliber of Secretary Gates' defense leadership is manifesting itself in terms of enhanced efficiency in the Pentagon and increasing public confidence in our national security poli-

In view of the widespread discussion over the so-called missile gap, it is important to note the paragraph in the editorial that states "As the Secretary emphasizes, no 'rational' Soviet leader would make the decision to trigger an attack on the United States, 'since such an attack would guarantee the destruction of his own country."

This paragraph reflects the basic thinking of those who have defended our deterrent strength against some critics who have so gratuitously disparaged the genuinely superior deterrent strength of

our Armed Forces.

Sound, logical, and responsible editorials such as this will greatly help our citizens to view our true military strength in its proper perspective. Thus, it is largely due to editorials such as this that the partisan criticism of our defense policy in past months has been publicly refuted and the Nation has come to recognize more fully the vast superiority of our deterrent strength in relation to that of the Soviet Union.

In view of the importance of this edi -torial from the San Diego Union, I commend it to the attention of all Members

of this House:

[From the San Diego Union, Apr. 26, 1960] REASSURING APPRAISAL-OUR DEFENSE MUS-CLES ARE TOUGH

Defense Secretary Thomas S. Gates, Jr., has made it plain that the United States is unsurpassed in military power and can deal from strength with any enemy. Any analysis of comparable United States and Soviet Russian military power, he insists, "denies any impression that we have been overtaken militarily or that we are second best.

With these words Mr. Gates contributed a reassuring and informative reappraisal of America's armed strength. The Secretary's remarks were directed to newspaper executives attending the annual Associated Press meeting in New York City. But their impact will reach far beyond the confines of the

AP gathering. As the Secretary emphasizes, no "rational" Soviet leader would make the decision to trigger an attack on the United States, "since such an attack would guarantee the destruction of his own country."

These are not the conclusions of Mr. Gates alone. They represent the considered judgment of all the top civilian, military and scientific advisers to President Eisenhower.

They add up to the fact that there is no

gap in our deterrent posture.

Mr. Gates took this occasion to let it be known he will continue to battle for retention of the Joint Chiefs of Staff. There are those in Government who still would re-

place the Joint Chiefs of Staff with the single chief concept.

In the Secretary's view the Defense Reor-ganization Act of 1958 already is functioning efficiently and will continue to improve. The point Mr. Gates was making is this: tinker with the defense structure. The 1958 act will prove itself out.

In the span of nearly 7 years since Mr. Gates went to the Pentagon, he recalls, there have been these fast-moving developments

in our defense picture:

1. We have 9 nuclear-powered marines in commission and 23 others being built or converted. An atomic-driven aircraft carrier, a cruiser and a frigate are under construction.

2. The Nautilus has cruised under the North Pole, followed by the submarine Skate. And the Seawolf has remained submerged for an unprecedented 60 days. These are the vessels which revolutionized undersea warfare.

3. Seven years ago the Polaris missile system was a dream not yet in the blueprint stage. Today we have 2 Polaris fleet ballistic missile subs armed with 16 atom-tipped

weapons each.

4. In 1953 we were talking about supersonic aircraft. Today we have planes in our forces which fly twice the speed of sound and aircraft operating at three times the speed of sound are in the resarch and development stage.

5. Air-breathing missiles like the Snark and Navaho are weapons of the past, replaced by the mighty Atlas.

6. We have launched successfully 22 satellites into space, compared to the Russians' 5. We still have 13 circling the earth.

The Secretary is dedicated to the balanced forces concept as our best possible defense posture. And inherent in this, as Mr. Gates explains, are forces "of great variety and dimension."

The Secretary believes U.S. military leaders acted wisely when they decided to place their confidence in a family of comparatively small ocean-spanning missiles headed by the San Diego-built Atlas ICBM. Mr. stresses, the Atlas and its follow-on Titan, Minuteman, and Polaris systems will be able to deliver a thermonuclear Sunday punch anywhere in the world. For military purposes we had no need for the powerful 600,-000-pound thrust engines produced by Russian missile makers. So we saved time and money by sticking to the original idea of the easy-to-handle ICBM.

Mr. Gates' analysis of our armed might and its development since 1953 should make Americans proud. Moreover, it should give us a feeling of security and an appreciation of work well done by our Secretary of Defense and the Armed Forces.

Growth: U.S.S.R. Versus the West

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. CURTIS of Missourl. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include an article which appeared in Economic Intelligence for May 1960:

GROWTH: U.S.S.R. VERSUS THE WEST

A business advisory service on the coming summit meetings recently made this startling statement:

"With each month Soviet power is increasing relative to the West. This is true whether the measure is military might, GNP, steel production or strength and con-viction of allies."

There is good reason to believe that this conclusion is 100 percent wrong. Many politicians make this same doubtful comparison. What is wrong with it?

The U.S.S.R. may be growing faster than some more mature or grownup economies like the United States, but it is not growing as fast as West Germany, Japan, Mexico, and several other countries. Undoubtedly the U.S.S.R. is ahead of the United States in some things, but so what? The per capita consumption of potatoes in the U.S.S.R. is substantially ahead of that in the United States. Should we therefore feel badly? Recently Mr. Khrushchev boasted that the per capita butter consumption in the U.S.S.R. has now equalled or surpassed that of the United States. Little did he know that this was a sign of immaturity instead of maturity. In the 1890's our butter consumption was around 25 pounds per annum. Now it is about 8 pounds per annum. Why? The answer is simple. Butter is used primarily as a spread; the United States has moved away from "a bread and potatoes" diet to fruits, vegetables, nuts, meats, and other things. This explains, in part, our decline in per capita butter consumption. So should we feel badly about Mr. Khrushchev's butter boast?

ECONOMIC AND MILITARY STRENGTH

But there is a much more fundamental error in the above quotation. Not only is the United States of America growing in economic and military strength, but so is the entire West. Is the U.S.S.R. developing "strength and conviction of allies"? It is doubtful. On the other hand, the United States of America has numerous expanding, dependable allies whose growing GNP, steel, and military might should be added to those of the United States of America.

In a blitz knockout nuclear war anything could happen and a larger United States of America steel capacity or GNP probably would make no difference in the outcome. But the West is growing rapidly and this should add to our deterrent power as well as capacity in case war is forced upon us. Western Europe has some 200 million people. Every nation is growing and expanding its , most of them are increasing their steel and other capacities, and most of them are improving their military might. We should not overlook Canada, Australia, New Zealand, and other countries, particularly those in the Western Hemisphere which would certainly not be allies of the U.S.S.R., and would undoubtedly be essentially on our side in any war and should be added in assessing our defense and deterrent power.

Does the U.S.S.R. have any dependable allies? Poland? East Germany? Hungary? It is hard to name one. The U.S.S.R., furthermore, has potential wartime internal unity vulnerabilities. Its satellites are more likely to be liabilities than allies unless we, or say, the West Germans were foolish enough to attack any one of those satellites or the U.S.S.R. itself. In fact, many of these satellites undoubtedly would utilize the U.S.S.R.'s preoccupation with war to try to break away from the U.S.S.R.

Whether Communist China would be an ally of the U.S.S.R. in case of war is anybody's guess. Depending on the background total situation, it's quite conceivable that things might fall apart in Communist China (ruled without a voluntary consensus) if it went to war now or in the neartime future; but here we must be cautious.

Thus in our military and other plans for the future we must of course evaluate all possibilities and alternatives; no one in his right mind would urge unilateral disarmament on our part, or the slowing down of our economic growth. On the other hand, the popular and perhaps irresponsible odious comparisons of U.S.S.R. versus U.S.A. potentials need to be corrected in terms of the total reliable strength of the West, as to economic potential as well as military potential

We tried to help set the record straight in economic terms in our recent report, Promise of Economic Growth (\$1 per copy). As more people come to think of the realities of geopolitics they will see the folly of facile, narrow comparisons of U.S.S.R. versus U.S.A. without taking into consideration the matters mentioned above

But, again, let's keep dry our economic and military powder.

We're Soaring Over Soviets

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from 19, 1960:

WE'RE SOARING OVER SOVIETS

Let's try to add some realism to the fiction about Soviet superiority over the United States in space achievements.

Ever since the Russians launched Sputnik I on October 4, 1957, critics of the Eisenhower administration have been asking why the United States has fallen so far behind Soviet Russia

This came about through impulsive comparison of American and Russian space efforts. If the opposition to administration space policies was loyal, it also was loud at times

The United States since January 31, 1958, has sent 17 satellites aloft. Since Sputnik I the Russians have reported six satellite launchings.

Only Friday the United States sent Discoverer XI spaceward in a new Air Force attempt to find a way to bring men safely back from space ships of the future.

In the last 5 weeks U.S. scientists have achieved three major space triumphs with the launching of Transit I-B, the world's first known navigation-aid satellite; Pioneer V, which hauled man's first interplanetary communications system around the sun and Tiros I, the weather-eye satellite photographs cloud cover and has given Soviet Russia the jitters because it might be the forerunner of a spy-in-the-sky.

Of the 17 U.S. satellites placed in orbit during the 27 months since we entered the space age, 8 of the baby moons still circle the globe. The three sputniks launched by Russia have plunged to fiery destruction Lunik I is streaking around the sun, Lunik II hit the moon, and Lunik III is in a wide orbit around the earth and moon.

There is a belief among American scientists that many of our satellites will pay off in cosmic findings of inestimable value to mankind. We perhaps do not know all the goals being achieved by Russian satellites; for they are loath to tell the world any more than they must for propaganda pur-Doses

All we know is that the Russians have more powerful space engines than we presently possess.

One thing is certain, however: there can be no more selling the U.S. satellite program short. We should be proud of scientists and engineers who have made possible so many notable U.S. space achieve-ments in the last few weeks.

It's time to stop trying to give them and the administration an inferiority complex.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

the San Diego Union of Tuesday, April LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44. SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS.-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20. 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Representatives, and Delegates is Senators. respectfully invited:

1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2 -point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Con-gress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in

the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a news-paper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost.-No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

Governor Nelson's Founder's Day Address at San Jose College

EXTENSION OF REMARKS

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. PROXMIRE Mr. President it gives me great pleasure to introduce into the Record today an address by the Governor of Wisconsin, the Honorable Gaylord A. Nelson, on Founder's Day at San Jose State College which conferred upon him an honorary degree May 3. I am asking that this address be printed because I believe it is such a powerful statement of the challenge America faces, particularly in the field of higher education. In it the Governor calls not only for the growth of our colleges and universities in terms of physical size and expanded curriculum, but also for a reaffirmation and strengthening of the great traditions of academic freedom and liberal education of the whole man, without which our advances in science and technology cannot bring greatness to America in the decades which lie ahead.

Mr. President, I ask unanimous consent that this address be printed in the

Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNOR NELSON'S FOUNDER'S DAY ADDRESS AT SAN JOSE STATE COLLEGE

On the occasion of this observance of the founding of San Jose State College, it is appropriate that we should consider the place and character of higher education in the emerging future of American life.

We have built in this country an educational system of which we can in good conscience be proud. The progress that we have made is brought home to me strikingly as I look at this campus, so different and so much larger than it was when I was here only a little more than 20 years ago. I must confess to a feeling of nostalgia for San Jose the way it was, but I know—particularly from my own experience as Governor of Wisconsin—that the need for higher educational facilities is great, and that neither sentimentality nor penuriousness can be allowed to stand in the way of the expansion we must have. It is the task of American leadership, both educational and governmental, to move forward.

Despite all we have done, the need outstrips our accomplishments. We live in a perilous world, confronted by an increasingly powerful and implacable competitor. The Soviet economy is growing at the rate of about 6 percent a year; our own economy has been growing at a rate of less than 3 percent. One of the most urgent tasks of responsible American statesmanship, both governmental and economic, is to close this

Moreover, the Soviet Union, which has a managed economy not beholden to the desires of voters in free elections, can invest its national savings in any fashion it chooses. It has chosen to devote much of its increased capital to such national purposes as education and the expansion of heavy industry.

We must strive continuously to understand our place in the contemporary world. If our country is to remain a first-class power, and the head of the free world, it must give increasing support to those factors which lead to national strength. Of all these factors, none counts for more than

higher education.

Our colleges and universities perform indispensable services. They preserve and transmit, and above all, enlarge the Nation's stock of knowledge. They carry on much of the Nation's scientific research. They conserve and transmit to upcoming generations our cultural heritage; without the humanities our lives would be poor indeed. The burgeoning social sciences offer increasingly promising solutions to the problems of social organization.

Our institutions of higher learning supply a large proportion of our most skilled personnel: our teachers, our doctors in the various medical sciences, our engineers, economists, agricultural specialists, accountants, and many other trained people who are essential for our sort of civilization. They train a large proportion of our political leadership and most of our private group leadership. The business community and the labor movement absorb vast numbers of educated men and women. In fact, educated people have always been in short supply, and this is as true today as ever in the past. For while we have more college graduates today than ever before, we also have greater need for them than ever before.

I think that our citizens and taxpayers recognize this need for more higher education. Like any other governor, I hear a great deal from those who want their taxes reduced. But when people understand the relation between taxes and education, it has been my experience that they recognize the value of education and are willing to pay for it.

Higher education is going to continue to cost more and more. Projections of future college enrollments are as frightening as they are encouraging. Enrollments in degree-granting colleges in Wisconsin now are larger than the total high school enrollments there 40 years ago. More than 75 percent of the parents of present Wisconsin college students did not, themselves, graduate from college, and a third did not even graduate from high school.

This higher proportion of college attendance is compounded by the so-called population explosion, and I will not presume to belabor this point in California; it is problem enough in Wisconsin.

Some people argue persuasively that the answer to expanding enrollments is to keep more students out of colleges and universities, to require more exacting entrance examinations and higher high school scholastic records. This has not been the tradition in Wisconsin, and I think it would be an unfortunate departure from American concepts of equality of opportunity to deny

students at least a chance at higher education. In my opinion, it is doubtful whether our testing methods are reliable enough to predict the success of high school students in their college years. Students who do badly in high school often acquit themselves well in college, and vice versa. I do not think keeping students out is the answer.

The next financial question is whether additional money should come from higher tuition fees. I believe that any appreciable increase in fees would have the effect of keeping qualified and promising students out of our institutions for economic reasons, a shameful waste of one of our most precious national resources. I am afraid that the burden of higher education must remain

with the general taxpaver.

I have been greatly concerned with the problem of wasted talent. It is appalling that so many of our best young people are unable to secure college education because of financial reasons. I suspect that the most important reason for the rapid progress in education in Russia is simply the fact that they are less wasteful of potential talent than we are. One of the programs which I urged most strenuously was an enlargement of Wisconsin's scholarship and loan program. I didn't get all I wanted in this program—one house of our legislature is of another political persuasion—but we made progress and I hope we shall make more.

I have talked so far about needs, but it is not enough that we should expand our institutions of higher learning and the educational opportunities we offer our young people. We must do something about the quality as well as the quantity of education. Robert Frost said recently that "a lot of people are being scared by the Russians into hardening up our education or speeding it up. I am interested in toning it up."

So am I.

There are many things that affect the question of quality in education—the attitudes of students toward learning and study, the devotion of teachers, the interest of parents, the availability of books, and of course, money. But the very first requirement, if America is to enjoy the best fruits of higher education, is that our colleges and universities must be absolutely free to seek the truth without hindrance. Our professors and our students must be guaranteed a full measure of academic freedom.

A proposition is not true because a government or a political party or any other authoritative body so declares. We have no official truth, no legally constituted orthodoxies of belief. The case for academic freedom is the same as the case for freedom of speech in general. It is well to recall the words of John Stuart Mill in his essay on

liberty:

"If all mankind minus one were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing

generation; those who dissent from the opinion, still more than those who hold it. If the opinion were right, they are deprived the opportunity of exchanging error for truth; if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error."

That is the rationale of academic freedom. Our teachers must be free to pursue the truth, and to enjoy security of tenure while so engaged, because it is only through free inquiry and the competition of ideas that we can have any confidence in the results of the quest. We have no reason to fear the results of free inquiry. Freedom of the mind is a counsel of strength, not of weakness. It is an indispensable element of our national greatness. Freedom of research has prolonged life and eased some of its pain; it has brought technology to its present peak of productiveness and inventiveness; given us valuable insights into human nature and into the character of our social institutions and problems; it has vastly improved our governmental processes. More than any other single thing, the free, inquiring mind is our best hope for a better future, not only for us, but for all mankind.

Students are equally committed to the educational enterprise, and they, too are entitled to full academic freedom. We serve our youth, and our country, badly, if we demand that students conform to some pattern of orthodox belief. The college years are above all else the time for the student to question, to probe, to investigate, to speculate, to weigh and compare competing values and institutions. He is not and should not be expected to be a mindless robot. And if he is not to be shortchanged, the college student is entitled to counsel with professors who are free to speak their minds about the

truth as they see it.

Students should be free not only to read and ponder and study, but also to translate their ideas and commitments into action, within the law. It is proper, I think, for students to demonstrate their belief in the equal protection clause of the U.S. Constitution. It is deplorable that students should be arrested by the police for exercising the ancient American privilege of stating to the general public their views of such public questions as the right of all people, regardless of race, to equal and fair treatment in places of public accommodation by means of peaceful public processions.

It is equally deplorable that Congress at-

tached to the student loan section of the Defense Education Act of 1958 a requirement that the student must execute an affidavit disclaiming certain beliefs, activities and I do not believe that stumemberships. dents should be forced to sign a declaration of loyalty in order to obtain aid; vast numbers of people, in many walks of life, receive assistance from the Federal Government without oath requirements of any sort. Students justifiably resent being singled out for invidious treatment, as if they were special objects of suspicion. It is bad enough for students to be required to plead not guilty before any evidence of guilt has been produced. But it is wholly indefensible that students should be required not only to proclaim their loyalty, but also to assert in the next breath that they are not disloyal, and in addition, to be required to commit themselves regarding beliefs, associations and supports which are couched in such vague and imprecise terms that no one can quite be sure what he has sworn to. This requirement subjects needy students to imputations of distrust and suspicion. It runs contrary to the normal presumption of innocence which is deeply rooted in American jurisprudence. It also runs against the American grain. Furthermore, the disclaimer affidavit serves no useful purpose, since it would not deter the disloyal from taking benefits under the statute by signing. Only an occasional high-minded student will decline to sign on grounds of principle, thus defeating the basic purpose of the statute, which is to extend the benefits of education.

A bill is now pending before Congress which would repeal the disclaimer affidavit section of the National Defense Education Act. I hope it will pass. It casts an invidious slur upon our educational community. It bespeaks a lack of confidence in our young people. It has stirred up enormous resentments in the educational world: I repeat that the single most important element of American strength, including strength in defense, is freedom, freedom for the human mind, freedom for students, freedom for those who investigate the nature of man, his institutions and his beliefs. The disclaimer affidavit is not consistent with the requirements of this freedom. In the words of the Board of Regents of the University of Wisconsin: this pro-vision is "suggestive of a trammeling of inquiry by subjecting thoughts, research, and learning to political restrictions * * * contrary to the sound principles of academic freedom upon which the leadership of the University of Wisconsin, in independent research and in scholarly learning, has been grounded."

My second general observation about quality is equally fundamental. We should never forget the ancient maxim that true education is concerned with the whole man. We must beware, especially in these days of increasing specialization, of an overemphasis in our colleges and universities upon a vocational approach to education. Of course our society needs doctors, engineers, pharmacists, architects, accountants, and kindergarten teachers. Nevertheless, we must never lose sight of the fact that all of these specialists are also citizens, neighbors, husbands, fathers-fully functioning human beings. Our specialists, like the rest of us, need education in the fine arts and social sciences, in those disciplines which are concerned with the good, the true, and the beautiful. A high culture cannot rest upon the foundation of widespread cultural ignorance. Our students must be more than vocational specialists; they must be encouraged to study history and philosophy, the fine arts, and creative literature in order to understand those distinctive qualities of our culture which make life interesting and meaningful.

I cannot state this too emphatically. It is our ideals, our religions, our law, our cultural consciousness and our ethical principles that constitute our strength in the world.

There is a dangerous tendency in America to lose faith in these things, to abandon hope in the human spirit as the way to peace in in the world. We have lost confidence in ourselves and replaced it with confidence in the hydrogen bomb. Many of our best minds are devoted to planning coldly and coolly for the destruction of civilization and the extinction of life, in the name of defense. Our schools are exhorted to turn out more scientists to build better missiles and bigger bombs.

Most of our citizens, I am sure, believe that these bombs and missiles will never be used; we must believe this if life is to remain tolerable. The meaning of defense has changed; it no longer means the power to repel an enemy; it means the power to destroy him while he destroys us. Defense is good only so long as it is never used.

Defense is not the way to peace. It offers at best a stalemate which gives us time to try to achieve peace. This is the important task: to try to reach the minds of those men everywhere who want peace, to match our ideas and our beliefs against theirs, to convince others that we believe and that they should believe in human dignity, in

human speech, in freedom and in civilization.

The candidates for public office who earnestly desire peace and are resolved to pursue it with fresh ideas and in good faith are those who deserve our votes. This is the first responsibility of our political leadership.

It is also the responsibility of education. Our colleges and universities must be free to engender the spirit of free inquiry. They must impart the knowledge, and the appreciation of its value, that has been accumulated through the centuries and which constitutes civilization. Without this understanding, we are no more than barbarians armed with the destructive power of the gods.

Never before has the task of education loomed so large. We need education to enrich our own lives and to save the lives of all of us.

Custom Versus Persistence

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith an editorial, cited with distinction in the March 12, 1960, edition of the Christian Science Monitor. This statement was compiled by the Honorable Donald M. Ewing, associate editor of the Shreveport (La.) Times, and has been reproduced in the Christian Science Monitor. I commend this editorial for a careful reading and study by all who are interested in the Nation's foremost problems:

CUSTOM VERSUS PERSISTENCE (By Donald M. Ewing)

Shreveport, La.—Shreveport is unique in the South in that for many years it has lived up to equal as well as separate provisions of the original Supreme Court decisions. Of \$65 million voted chiefly by white property owners for school construction since World War II, \$35 million were for Negro schools. Negroes have separate swimming pools, golf courses, youth centers, lighted parks, and athletic fields equal in every way to white and built by money from the same bond issues.

I believe that for the benefit of the white South the Negro must be changed from an economic liability to an economic asset, educated, and made available for any job he can handle by his own ability, but all with 100percent segregation.

Shreveport was given a national Look magazine award several years ago for progress in racial relations when a hundred white leaders of all types sat down with Negroes for a year and helped them further themselves economically—for instance, in housing.

The Shreveport Times has stood for nondiscriminatory Negro voting per the Federal Constitution for many years. Most Shreveport people feel the same way but don't want Federal force, judicial or military.

Shreveport expects no sitdown demonstrations. The reaction here is that demonstrations have been well guided, are intended to be passive though massive, and obviously have been planned by some outside leadership—but that the violence at Columbia, S.C., illustrated how such things could get out of line and might lead to race riots.

Negro leadership is making a serious mistake in forcing its people into places where courts have not yet permitted them. Note, for example, the Fourth Federal Circuit Court of Appeals decision of July 1959, holding that a Howard Johnson's interstate chain restaurant in Virginia did not have to serve

even interstate traveling Negroes.

Reaction here among people trying for years to work out race relations justly for both races is that sitdowns are the most destructive step yet taken by Negroes themselves to peaceful race relations, because such steps are not backed by law and constitute only deliberate intent at annoyance.

Negroes seek respect and dignity as individuals and as a race. But sitdowns are no way to demonstrate dignity or worthiness of respect. No person of any color can display dignity or gain respect by forcing himself where he is not wanted. Dignity and re-spect must be self-earned and cannot be gained through law, through personal intrusion, through violence, or through steps that carry some members of both races to the brink of possible violence.
The Times has urged massive arrests of

sitdowners everywhere under existing local laws and prompt police action, including fire hose, against all persons, regardless of of color

who engage in disorder.

The Weekly Newspaper Must Be Preserved

EXTENSION OF REMARKS OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Thursday, May 5, 1960

Mr. CARLSON. Mr. President, Kansas is fortunate in having a large number of weekly and semiweekly newspapers which have, year in and year out, rendered outstanding service to their communities and our citizens.

No periodical is more thoroughly read than the weekly. It is the newspaper that is personalized by carrying items of local interest. To those who are living away from their home communities, the weekly newspaper is just like a letter from home.

In these modern times, the weekly newspaper has additional problems, in that there has been a great increase in the circulation of the daily newspaper and the ever-increasing coverage of radio and television.

The day of the weekly newspaper has not passed. It is still read and enjoyed by those who find justifiable pride in community affairs. It is an institution

that must be preserved.

Mr. Wallace E. Emmons, publisher of the Enterprise-Chronicle, Burlingame, Kans., made an outstanding address before the Kansas Cooperative Council in Topeka, Kans., entitled "Media for Selling Agricultural Cooperatives," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEDIA FOR SELLING AGRICULTURAL COOPERA-TIVES: THE WEEKLY NEWSPAPER

(By Wallace E. Emmons, publisher, Enterprise-Chronicle, Burlingame, Kans.)

The story of the weekly newspaper is the story of the rural community, small business men, farmers, laborers, and the general practice of democracy in action. In these communities one will find bankers, lawyers, doctors, teachers, grocers, employers, and employees actively supporting the same churches and schools, attending Rotary, Lions, or chamber of commerce-and reading the same weekly newspaper. In many of these communities, cooperatives have been organized; in others, the cooperative effort may take the shape of municipal designowning the waterworks, electric plant or the natural gas system. When private finances are not available, the public need not be without most of the important services.

However, no municipality nor cooperative is known to own a newspaper. The larger newspapers may be incorporated and they are successful in their chosen fields. There have been attempts to produce newspapers for smaller communities with a central plant but these seem to lose something highly desirable by subscribers. Borrowing a time-

worn phrase, "there is a reason."

Although privately owned, the weekly newspaper is endowed with community concern on a two-way street. If it does not have this, it has no reason to exist. And, losing this, they fold up like jackknives.

Most are owned and operated by man-andwife teams; and labor laws do not yet say the children cannot do various chores. Grandpa and grandma are pressed into service when occasions demand. It is likely that Negroes, Mexicans, Indians, Italians, Catholics, Protestants, and drunks find employment in weekly newspaper shops. Whatever combination of race or creed the community has may be found employed by weekly newspapers-and friction is at a minimum.

Had all of you been able to sit in on the roundtable meetings of the weekly press here last week, you would have heard dedicated publishers—men and women—discuss circulation, mechanical problems, advertising, price fixing, agriculture, column writing, country correspondence, editorials, photography, and general excellence. A dim view was taken of those who remember us with plugs disguised as news for which there is no pay. There was no room for politicians as such but there was a serious discussion by the forthcoming change in congressional

It is the duty of weekly publishers to speak up wherever possible and let it be known that, as publishers, we may be an assortment, so to speak, as different as our several communities-some colorful and some dull-but we offer our skills of the trade and each serves his immediate community. It's doubtful that there are any two communities in the Nation with the same services, the same attractions, or the same drawbacks.

Weekly newspaper publishers are basically honest in reporting news, editorial expressions, and handling advertising. It is necessary, or the publisher must explain face to face to subscribers and customers. Weekly newspapers are almost as personal as a tooth-

The weekly editor goes along for months at times when readers and advertisers seem wholly unaware the newspaper exists. Then, accidentally, a wrong word or a wrong line gets into the right place, and-whamreaders who are not even subscribers become vocal. It has happened when the cutlines for a picture of a prize heifer appeared below the picture of a bride-to-be. Or a correction line at the end of a hospital note makes "Miss Soandso underwent an opit read, eration for appendicitis at Cather's Meat Market."

If the weekly press has suffered an injustice, it was by the invention of the "milline" rate. That was supposed to indicate the agate line cost of a million copies printed and mailed. It does not say how many are seen and read.

The most successful selling is accomplished by personal calls with a sample case. That method was found rather limited, and the printed word came into use. Modern advertising can either support the door-to-door salesman or it can draw customers to some central point to buy. In both instances the personal touch is retained. It has been proven beneficial when customers know more about the merchants and the organizations which supply food and limousines, cosmetics and farm machinery-even hearing aids and airplanes.

Advertising couched in the common language will be understood by men, women, and children—if it is placed where those men, women, and children feel the personal touch of an organization interested in their welfare as well as their cash.

That Oldtime Religion

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a timely and appropriate editorial entitled "That Oldtime Religion" appearing in the Washington Post of May 4, 1960, which is not only most objective, but effectively speaks for itself:

THAT OLDTIME RELIGION

These campaigning candidates for the Presidency seem to be in complete agreement on one thing-that religion ought to be kept resolutely out of politics. It is hard to understand how men so determined should be so conspicuously unsuccessful. Vice President Nixon made his bid to have religion ignored in the campaign by making a speech about it in Chicago on Sunday. And Senators HUMPHREY and Morse used the same Sabbath to demonstrate their devotion to the separation of church and state by making three political speeches each in three churches here.

Asked in a television interview how religion could be kept out of the 1960 campaign, the Vice President replied with devastating logic, "I brought it up, of course, because I am trying to keep it out." In pursuit of this objective, Mr. Nixon then went on to observe that religion would be a legitimate issue if a candidate had no religion and that only a President with a belief in God could lead the United States. So much for the constitutional stipulation that "no religious test shall ever be required as a qualification to any office or public trust under the United States." Who is to determine whether a candidate has a religion and a suitable belief in God, Mr. NIXON did not disclose; but as a final fillip to his heroic effort at ignoring religion he gave Senator KENNEDY generous certification—or perhaps we should say confirmation-for the Democratic nomination.

Preaching from the pulpits of churches with Negro congregations, Senators Morse and HUMPHREY made blatant religious and racist appeals which did scant honor to their racist appeals which aid scatt holics to their audiences. Senator Humphrey at least ac-knowledged doubts about the propriety of campaigning in a house of worship; he seemed, however, to surmount his scruples. Senator Morse peddled his political wares without any evidence of embarrassment.

To allow appeals for political support to be made in churches is not only debasing to the concept of consecrated ground; it is also

profoundly dangerous politically, allowing religion to interfere in politics in precisely the way that the Constitution of the United States sought to make forever impossible. Ministers of the Gospel have every right—indeed, they have a duty—to discuss contemporary social problems and to foster morality in public life; but they would do well to refrain from direct political campaigning.

There is one clear, simple, effective way to keep religion out of the campaign for the Presidency: let every candidate for the office refuse at any time, under and circumstances, to answer any question or enter into any discussion concerning his own religion or any rival's religion; and let every clergyman leave politicking to the laity.

The Defense Spending Bill

EXTENSION OF REMARKS

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has made an excellent, concise analysis and summary of the House action on the defense appropriation bill. Because this is one of the most expert simplifications of the very complex and heavy responsibility that faces every Senator in determining our action on this—by far the biggest spending bill that will come before the Congress, I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DEFENSE SPENDING BILL

It is a tighter, tougher defense spending bill that the House Appropriations Committee has laid before Congress after 4 months of hearings and deliberations.

The \$39.3 billion, which covers all military expenditure except for construction and assistance abroad, is only \$2.9 million more than President Eisenhower requested in his January budget. But there has been extensive subtracting from and adding onto individual sums to give the Armed Forces the weapons they need while cutting out some of the waste inherent in the defense operation.

The committee requested \$241 million more than the President asked for atomic-

powered Polaris submarines.

It recommended \$115 million more to enable the Air Force to buy extra engines, spare parts, etc., so that our heavy bombers can be put on airborne alert if the need arises. With the \$85 million the President deemed adequate, this would give the Air Force \$200 million for this purpose.

The committee approved extra funds for the Midas early warning satellite and other

military space programs.

It proposed \$100 million more for antisubmarine warfare and bluntly told the Navy to put a tough boss in command to get the kind of results Admiral Rickover has achieved in nuclear submarines.

achieved in nuclear submarines.

It is urged the spending of \$250 million more than the budget requests for military airlift, especially jet-powered troop and cargo planes.

On the other side of the ledger were substantial slashes.

The controversial Bomarc antiaircraft missile program, which the Air Force had already downgraded, was virtually put out of business. The saving is estimated at \$294 million.

The Navy was refused a new carrier that would have cost \$293 million.

A flat 10-percent cut below budget level was urged to help curb the perennial prob-

lem of excessive military travel.

A 10-percent slash was also proposed to eliminate the topheavy administrative payroll

And a 3-percent cut was demanded in all purchasing appropriations to eliminate wests.

In general, arbitrary percentage reductions are not an effective way to economize. But in its report to Congress the Appropriations Committee cites so much evidence of needless travel, of excessive administrative personnel and gross waste in procurement that in this instance percentage cuts should prove highly beneficial.

UAR Blockade of the Suez Canal to Israeli Shipping

EXTENSION OF REMARKS

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I would like to include herewith a letter I have today sent to President Eisenhower on the Israeli-UAR situation.

The letter refers specifically to the President's response to a question directed to him at his press conference last week by Lillian Levy of the National Jewish Post and Opinion on the continued closure of the Suez Canal to Israeli ships and shipping.

I believe the letter, which follows, is self-explanatory:

May 4, 1960.

Hon. Dwight D. Eisenhower, The President, The White House.

Washington, D.C.

DEAR MR. PRESIDENT: I am appalled at the presumed helplessness of our great Nation in international affairs, as apparently indicated by your response to a question on the Suez situation at your last news conference.

If you are quoted accurately and if my summary is essentially correct, you stated, in substance, that the UAR blockade of the Suez Canal to Israell shipping is in violation of the U.N. resolutions; that your efforts and those of Mr. Hammarskjold to reverse or at least ameliorate the situation have been fruitless; but that short of force we are helpless to do anything about it.

Has our prestige sunk so low? I personally cannot believe it.

You will undoubtedly recall the ominous threat of sanctions directed against Israel in 1956 if she did not immediately withdraw from Sinal; also your assertions on the subject and the Israeli assumptions on which its withdrawal was predicated.

Our justification for the then threat of sanctions was our righteous attitude that regardless of the degree of provocation Israel could not or should not, under the international code as adopted by the U.N., retaliate by force.

May I respectfully ask whether there is a distinction between force by armed might as against the slower but equally deadly process of economic strangulation? Is it any less evil if committed by silent pressure on the windpipe rather than by gunfire? Is Nasser above the international code? Should not sanctions be just as properly and effectively applied against him? Have we in fact fulfilled our international obligations by piously asserting that we do not condone the UAR's acts of blockade, boycott, and blacklist?

Do we rightly accept at face, as a valid defense, Nasser's assertions that he can do what he pleases because he is ostensibly at war with Israel? If so, should the World Bank—which we in effect control—assist a belligerent by lending him money for one purpose so that he can divert other funds to wage a more extensive and effective war against another member of the U.N.? Is the fact that there is an Arab refugee problem an excuse for international piracy and black-mail, having in mind particularly that there are refugee problems all over the world involving some 30 million other people, such as in Pakistan, India, Hong Kong, etc? Prime Minister Ben-Gurion has indicated a desire and willingness to discuss all phases of the refugee problem, but the intransigence of the Arab has made this virtually impossible.

These are some of the questons we must ponder over and find answers to. Shrugging our shoulders hopelessly will not resolve them.

Our State Department under the late Mr. Dulles was criticized for its theory of massive retaliation. Is not the present attitude of our State Department correspondingly subject to criticism for its apparent policy of massive and humiliating retreat when subjected to strong enough Arab protest?

I respectfully submit that you now have an effective weapon in your hands if you care to use it, in the form of a declaration by both Houses of Congress, and surprisingly enough from both parties, as to how, in the view of Congress, our security program should be administered. The world, I submit, will watch to see whether we continue to hand out our funds with our eyes closed and purport to pursue what we choose to call equality when it, in fact, amounts to injustice. Or will we act firmly as morality, rather than expediency, dictates, and thus reestablish our national dignity in the eyes of the world?

Respectfully yours,

LESTER HOLTZMAN,

Member of Congress.

The Uniform Application of Law

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent editorial, entitled "We Want No Laws Which Don't Apply to Everybody," which appeared in the April 23 issue of the Saturday Evening Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE WANT NO LAWS WHICH DON'T APPLY TO EVERYBODY

A lot of ridicule and mystification was aroused by the filibuster in the Senate over the civil rights bill. However, if the final bill is concerned with the main issue, which is the right of Negroes to vote, and has shed a few pounds of foolscap containing a mishmash of vote-catching provisions of dubious merit, the filibuster has to get some of the credit. Furthermore, credit for one saving breath of realism in the long debate must go to that truly liberal realist, Senator Frank Lausche, Democrat, of Ohio.

Senator Lausche's deflationary device was a simple amendment to a clause in the civil rights bill which provided penalties for those who interfered with court orders in carrying out school desegregation decisions. The Ohio Senator asked, "What harm could come to anyone if this section were amended to become operative as to all citizens of the United States and as to all court orders, decrees, and judgments?" He offered an amendment to make the section read that way, instead of "improperly pointing its finger at only one section of the country."

It didn't take long for Senator Lausche to find out who would be harmed by his amendment. It had hardly been announced before the labor-union-minded Senators began scurrying about, asking for more time to think, and employing delaying devices which they had found wicked when practiced by the southerners. Senator Joseph Clark, of Pennsylvania, inquired in consternation if the Lausche amendment "would convert what was a specific criminal penalty for violation of a decree of a Federal court in connection with school desegregation into a general penalty which would affect goodness knows what."

That was exactly what Senator Lausche intended the amendment to mean, even if "goodness knows what" turned out to include labor-union leaders who defied court orders in connection with strikes or picketing. Such being the dire possibility, Senator Clark and his allies discovered that there was no need for the section, with or without the Lausche amendment, because section 1503 of the pre-civil-rights law covers practically the identical situation.

Senator Lausche mercilessly pointed out that "if the law is inadequate to take care of mobs in desegregation cases, it is inadequate to take care of mobs in other cases." Senator Carroll, of Colorado, another backer of the original section, declared that he had been rethinking the Little Rock situation and had come to the conclusion, apparently during the previous few minutes, that "we could eliminate the section altogether because section 1503 has been a pretty good statute through the years." Senator Clark came back into the fray to declare that it was one thing to create a Federal crime in "an area where we are not sure where we are going, and creating a Federal crime in a specific area dealing with school segregation, where we know what we are trying to do."

Senator Lausche, obviously delighting in the discomfiture of his colleagues, summed up the statute as written as if the Attorney General were saying, "Please enact a statute with which I shall be able to prevent crime; but make the statute applicable only to instances in which I recommend that it be used." Obviously few Senators could vote on a rollcell for such a discriminatory piece of legislation. Law has to look like law, even when it is really politics. The Lausche amendment passed, 65 to 19. In the next few minutes, however, the Senators voted to lay the whole thing on the table.

Thus the dilemma was solved and the voting record of the labor-union bloc remains clean, with no damage to their standing in civil rights circles. At the same time a certain small amount of principle was restored to the debate. For this, Senator Lausche, of

Ohlo, who, in a period more concerned with principle, would be a serious contender for the presidential nomination by his party, deserves high marks.

Hon. Carl Vinson, Recipient of Navy League Award

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks, I would like to include a copy of a citation awarded to the very outstanding and most distinguished chairman of the House Committee on Armed Services, the Honorable Carl Vinson.

On Wednesday, May 4, 1960, in Anaheim, Calif., the Navy League of the United States presented, in absentia, the Robert M. Thompson Award for inspirational civilian leadership to the Honorable Carl Vinson.

This award was given to the distinguished chairman in recognition of his incomparable and invaluable contributions to the maintenance of American seapower.

Mr. Speaker, in recent years, there have been too many people who have taken for granted our mastery of the sea. Seapower does not just happen—it has to be created and maintained. And there is no one alive today with greater claim to the title of "Father of the Two-Ocean Navy" than the Honorable Carl Vinson.

I hope that his words will be listened to in the future just as they fortunately were in the past when he urges the Congress and the Nation not only to maintain our existing seapower, but also to prevent its deterioration through obsolescence, that may occur if more people do not become conscious of this tremendous unchallenged superiority which we now possess and which we may lose if we do not replace our Navy at a greater rate than is now being accomplished.

The very distinguished and great American, Carl Vinson, recognizes this situation now, just as he did before World War II.

There may be Members of this House who are alive today because of his foresight; there undoubtedly are hundreds of thousands of Americans alive today because of his foresight. If we listen to his advice for the maintenance of seapower in the years ahead, there may be millions of Americans who will live, who otherwise may perish if his advice is not followed.

The citation awarded to the Honorable Carl Vinson reads as follows:

NAVY LEAGUE OF THE UNITED STATES: THE ROBERT M. THOMPSON AWARD, FOR IN-SPIRATIONAL CIVILIAN LEADERSHIP

Robert M. Thompson, "the father of the Navy League," exemplified the intelligent, patriotic, and forceful advocate of seapower as an essential factor in our national wellbeing and security. Pursuant to the Thompson tradition, the Navy League is therefore, honored to present this award to a distinguished public servant who has always been effectively mindful of seapower's importance to our country's destiny:

THE HONORABLE CARL VINSON

In the days of the House Naval Affairs Committee, the Honorable Carl Vinson understood that seapower was essential to the growth and safety of the United States and he labored continually and vigorously to create and maintain naval strength adequate for the maritime responsibilities devolving on our country in its progress toward major participation in world affairs. When the battlelines for World War II were drawn Chairman Vinson continued his wise and effective efforts in behalf of creating and nourishing the naval componet of our national strength needed to bring that conflict to a successful and honorable conclusion.

Later, the chairman rose to the even more difficult challenges of the confused and dangerous postwar era. With his vast knowledge of the military, often more penetrating than the military thinking, he kept defense reasoning on an even keel with his informed and objective questioning and analytical approach to defense problems.

With the shrinking of time and space, brought about by the swift and unprecedented technological developments of the past decade, new and numerous complexities beset us in the public effort to safeguard our national heritage and our national future. And, again, Carl Vinson was equal to the challenge. As chairman of the more broadly constituted House Armed Services Committee, he addressed himself to the expanded task of leading wisely in the business of dovetailing all of our military needs and resources to meet the overall security needs of our country. In this self-imposed task he has made unforgettable contributions to the welfare of our country.

Throughout the years he has fought to

Throughout the years he has fought to preserve an appropriately strong and far-reaching U.S. seapower as an essential and vital component of our national power and our national capability for contributing to freedom in a world beset by the enemies of freedom. Even more, he has fought a broad gage battle for all those elements that go to make up the sum total of decent and effective national strength.

In the annals of our country the name of Carl Vinson will be inscribed not only as a leader who ably sponsored the role and the importance of seapower, but as one who unfailingly saw and advocated all of the elements necessary for our defense and our national interests.

Therefore we tender this expression of the Navy League's recognition of inspirational leadership to the Honorable Carl Vinson, chairman of the House Armed Services Committee

FRANK GARD JAMESON,
National President.
JOHN L. SULLIVAN,
Chairman, Awards Board.

Department of Christian Social Action

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. WILEY. Mr. President, the right of religious freedom—as wisely foreseen by our forefathers—is a precious heritage under our Constitution. We realize, of course, that, with the privileges and right, also goes a great responsibility.

Historically, the underlying religious faith of our people, has been a highly significant "spiritual mortar"—welding together our Nation.

We recognize, of course, that even in churches, man—being of fragile nature makes mistakes. Whenever these occur, they must be "rooted out."

However, the American people, I believe, must constantly guard against blanket condemnation of a whole organization or system—whether this be of the church, in political life, or elsewhere in our society.

We recall that recently there have been imputations of communism against the churches. Contrary to such allegations, I frankly feel that our churches, as a whole, provide us with one of the strongest front lines against the inroads of communism. Consequently, I cannot allow this kind of thing to reflect unfavorably on the great religious traditions and history interwoven into the progress of our country.

Today, I was pleased to receive from President William B. Oakes, of the Council of Churches of Waukesha, Wis., a resolution adopted at the recent meeting of the executive board of the council. The resolution rejects the recent allegations made, for example, in the Air Force Training Manual.

Reflecting the thinking of the council on this issue, I ask unanimous consent to have the resolution printed in the Appendix of the Record.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF CHRISTIAN SOCIAL ACTION

At the request of the executive committee of the Waukesha Council of Churches, the Department of Christian Social Action offers the following regulation:

the following resolution:

"Resolved, That we reject as slanderous and without foundation in fact, the recent charges of Communist infiltration in the Protestant churches, carried in the Air Reserve Training Manual, Student Text, M.R. 45-0059.

"That we reaffirm our confidence in the National Council of Churches, since no evidence exists that would indicate Communist sympathy or conviction on the part of any responsible leader of the council.

"That we declare our belief in the integrity of the Revised Standard Version of the Bible, rejecting the implication that there is some kind of Communist taint in its translation.

"That we deplore the actions and accusations of 'apostles of discord' in our country who, while claiming to fight communism, actually aid its objectives by adopting its methods which include: taking quotations out of context, the deliberate spreading of prejudice on the theory of 'divide and conquer,' the dissemination of half-truths that willfully deceive, and the constant repeating of false accusations until those who hear them mistake them for fact.

"That we call on the people of our churches to 'consider the source' when they hear charges of communism in the churches or of subversion in the ministry, since these accusations almost invariably come from a very small group of malcontents with a long history of opposition to the ecumenical movement and to the churches affiliated with the national council."

Oregon's Relative Economic Position From 1946 Through 1958

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. PORTER. Mr. Speaker, why has not the per capita disposable personal income in Oregon kept up with the rest of the United States since World War II? Why is Oregon's index of growth for those years 130.8 while the index of growth for the United States is 156.1, for California 139.7, and for Washington 141.2?

And why in per capita personal income is Oregon's index of growth in 1958 124.7, much lower than the national average of 144.8 and the California av-

erage of 146.2? And Oregon's neighbor to the North, the State of Washington, had an index of growth of 135.0 in 1958.

Why do we lag? Is it that the tight money policies of the administration have put a damper on housing activities which we need so much for our lumber industry? Is it because the power of resources have not been sufficiently developed so that the power which is now abundant is abundant at a sufficiently expensive rate? Is it because we have not been able to attract the capital we need to develop ourselves industrially? What are the answers? I intend to send these figures to many persons and ask their opinions about what the reason is for our lagging and what more we can do to help Oregon gain a better rate of growth.

Under unanimous consent previously granted I am including hereunder tables prepared by the Library of Congress on the basis of U.S. Department of Commerce data:

Per capita disposable personal income, Oregon, compared to the national average and that of California and Washington, 1946 through 1958

	Oregon 1	Index of growth (1946=100)	United States	Index of growth (1946=100)	California 1	Index of growth (1946=100)	Wash- ington 1	Index of growth (1946=100)	
946	1, 2		\$1, 116 1, 291	100	\$1,455	100.0	\$1, 253	100.	
949 950 951	1,441	116.1	1, 272 1, 369 1, 474	122. 7	1,659	114.0	1, 522	121. 5	
952 953 964	1,566	126. 2	1, 520 1, 582	141.8	1,899	130. 5	1,727	137.8

Accomplishing Tax Reform

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. WILEY. Mr. President, the power to tax must not be utilized—as has been traditionally stated—to destroy; rather, the tax system, insofar as possible, must be carefully designed to serve the public in a free-enterprise system.

As taxpayers—with taxes taking a big bite out of our income—it is often difficult for taxpayers to be aware of the apparently necessary rule of taxes in our system to support community and national needs.

Over the years, the administration of public affairs in a fast-expanding country has resulted in higher and higher cost to Mr. and Mrs. John Q. Public—particularly as these relate to defense as well as promoting the general welfare. To procure revenue, the Federal as well as the State and local governments have imposed a tremendously wide variety of taxes. In addition, these basic statutes

A3855

have been revised, supplanted—and, in some cases, repealed—and otherwise modified

Recognizing the impact of taxes on the individual, on business, and industry, other organizations that attempt to make a profit, and the economy generally, I believe we need a top-to-bottom overhaul of the complex system of tax laws. Why? For the following reasons:

First. A fair tax system is essential to assure fair treatment of our citizens and to provide the needed revenue for Uncle Sam:

Second. Reportedly, there are extensive loopholes and inequities in the tax laws:

Third. The outlook for immediate, large-scale reductions is extremely dim; consequently this provides a real opportunity for timely, much-needed revision of our overall tax system;

Fourth. A strong economy depends upon a fair, not a punitive tax system—one that encourages, not threatens to destroy, incentive:

Fifth. Although taxes allow and require citizens to make a contribution to the general welfare, a realistic system should also allow the individual and businesses to retain a just share of the fruits of their production.

Sixth. Simplification of our tax system is badly needed, also, to ease the burden of accurate reporting of income;

Seventh. Fairness is essential, to encourage honesty, not dishonestly, among our taxpayers;

Eighth. And, finally, we need a new look also at the complex interrelationship—and often overlapping—of local, State and Federal taxes.

Last session, I introduced a bill, S. 1885, to establish a Hoover-type tax commission. The purpose would be to iron out inequities, plug loopholes, if possible more fairly distribute the tax burdens, and generally provide a fairer tax system.

A task force, with personnel and prestige comparable to that of the original Commission on Governmental Reorganization, headed by former President Hoover, would prepare for Congress and the Nation a comprehensive set of plans for a fair and efficient Federal incometax structure to replace the hodgepodge collection of taxes that now exist.

To assure an economy that will meet the needs of domestic progress, and the challenges to our survival by the Communists, we need a fair tax system. The best time for such revision is now.

Today, I was pleased to receive from Mr. L. E. Kust, general tax counsel of Westinghouse Electric Corp., a reprint of an editorial entitled "Accomplishing Tax Reform." Significantly, the editorial endorses the idea of a Hoovertype tax commission, stressing that, bipartisan commission of outstanding fiscal, economic and tax authorities, with adequate staff support, offers the best promise for formulation of sound reform of our tax system." Reflecting further upon the need for urgently needed revision of our tax laws, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACCOMPLISHING TAX REFORM
(By Leonard E. Kust)

The recent hearings of the Ways and Means Committee on tax reform have produced a three-volume compendium of statements containing a remarkable diversity of views. On the basis of these statements and the oral testimony adduced, the Ways and Means Committee can support with authority doing almost anything and everything to the present tax system. But what should it do? What guidance has it received from hearings that guide in every direction?

While these hearings were a necessary first step in legislative consideration of tax reform, they serve notice that from here forward the legislative process will have to take extraordinary steps to accomplish significant and truly beneficial reform.

Our tax system has pervasive social and economic influences. The recent hearings were motivated by the growing conviction in the country that these influences of our present tax system, as well as its basic revenue producing capabilities, need thorough reexamination. Tax reform is one of the fundamental issues presently confronting the Congress and the Nation.

It is not at all clear that the traditional approach to tax revision is equal to the task. The considerations involved in thorough reexamination of our revenue system are of such magnitude and such far-reaching consequences that the normal resources and procedures of the Congress do not provide adequate means for the intensive and comprehensive analysis and reconciliation of conflicting considerations which must precede and form the foundation for meaningful tax reform.

The Congress has in similar and perhaps less compelling circumstances created a commission to study and recommend action to the Congress. The Commission on Organization of the Executive Branch of the Government in 1947 (the first Hoover Commission), the Commission on Governmental Operations in 1953 (the second Hoover Commission with enlarged powers) and the Commission on Intergovernmental Relations in 1953 are examples of this approach. These were all bipartisan Commissions, the members of which were appointed in part by the President of the United States, in part by the president of the Senate and in part by the Speaker of the House. The Commissions functioned under powers granted by the Congress to appoint staffs, to investigate, to hold hearings and to make a report to the Congress within a specified

This approach commends itself as precisely what is needed to formulate the necessary policy recommendations and legislative proposals to the House Ways and Means Committee and the Senate Finance Committee. The need for taking this approach has been recognized by Senator Willey and several of his colleagues in the Senate who have sponsored S. 1885, which provides for the establishment of a "Commission on Federal Taxation" to function along the lines here recommended.

A bipartisan commission of outstanding fiscal, economic and tax authorities, with adequate staff support, offers the best promise for formulation of sound reform of our tax system. After the submission of the proposals of such a commission, the House of Representatives would in the normal constitutionally required manner consider the proposals through the Ways and Means Committee and act upon the proposals as it does on any tax legislation. Thereafter the Senate Finance Committee and the

Senate would do likewise. Only such an approach, it is submitted, can reasonably be expected to result in maturely considered and comprehensive tax reform to replace a revenue system anchored to the needs and compromises of the past and provide a revenue system tailored to the demands of the present and the future.

Do We Want Quality Education?

EXTENSION OF REMARKS

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. BURDICK. Mr. Speaker, this House will soon have before it consideration of legislation providing aid to education to the States on a matching basis. This legislation could provide funds for teachers' salaries or school construction or both. As we approach the debate, support and objection to a program of this kind is heard. Is this a field in which Government assistance should be given? A valid and effective answer to this question was given on the floor of the U.S. Senate on March 23, 1948, by the late Senator Robert Taft when he said:

To keep America free:

I do not think I can exaggerate the necessity of education. Primary education lies at the basis of all forms of republican government. A government depending on the making of decisions by the people and depending on their intelligence can exist only if the people have some ability to understand the problems of government which are presented to them. Unless there is a satisfactory educational basis, there cannot possibly be hope for success in any democratic form of government where the people are expected to rule and to decide the questions which are placed before them.

The Federal Government must help:
In matters affecting the necessities of life—and I should like to confine it so far as possible to the necessities of life, namely, to relief, to education, to health, and to housing—I do not believe the Federal Government can say it has no interest, and say to the people, "Go your way and do the best you can." I do not believe we should do that. Because of the way wealth is distributed in the United States, I think we have a responsibility to see if we can eliminate hardship, poverty, and inequality of opportunity, to the best of our ability. I do not believe we are able to do it without a Federal aid system.

Voices are heard from those who object, claiming that local control of the students, curricula and general affairs is lost and is taken over by the Federal Government. Let us again listen to the words of the late Senator Taft when he said:

It can be done:

But I believe very strongly indeed that in this field and in health and other fields dealing directly with human welfare we must work out a sound system of improvement. I think that the best form we have today is the form of Federal aid to the States, leaving complete control of the administration of the funds and the administration of the programs, for which they must have the primary responsibility, in the hands of the local communities.

It is my firm belief that public opposition to Federal aid to education is not so strong nor so widespread as some of its more vocal opponents would lead us to believe. I think people recognize the fact that, despite sizable gains in quality and quantity of education, local school districts simply cannot keep up with current demands for classrooms, and more important, for good teachers. Education, therefore, has become a national responsibility. Local agencies, no matter how devoted to the cause of education, simply do not have the resources to do the job as well as it must be done. I also believe that the great majority of Americans know that we cannot afford anything but the best in developing and strengthening this most basic of all our public needs.

I would like, at this point, to call your attention to an editorial which appeared in the March 1960 issue of the North Dakota Teacher. It considers the direction of grassroots opinion on the general subject of Federal support for education:

LET'S LOOK AT THE RECORD

Both Senator Young and Senator Bruns-DALE voted against the McNamara-Hart bill with the Monroney-Clark amendment which provides over \$4 million a year to North Dakota for the payment of teachers' salaries or school construction or both.

Representative Shorr has stated his position according to the Fargo forum on February 10: "I am not going to vote for Federal aid to education even if it means my not being in Congress."

Every poll conducted on the national basis pertaining to Federal support to education has given a resounding "Yes" vote. The 1957 Gallup poll stands as follows:

[Percent

MOTHARMA	Favor	Oppose	No opinion		
Republicans Deniocrats Independents Fast Midwest South West Profestants Atholics	74 79 77 80 76 70 79 75 78	21 17 18 17 21 21 21 21 16 20 17			

We understand that Senator Young has recently tabulated the results from a questionnaire sent to a sizable number of his constituents in North Dakota, both Democrats and Republicans, in which the question of Federal support to education was included. The results of this questionnaire, we understand, were favorable to such support.

The only one representing us in Congress at the present time, who has committed himself to Federal support for education is Representative Burdick. It is rather ironic to see the individual attitudes of our congressional delegation, both as to the financial crisis facing our schools and the total disregard of the sentiment of our people on such an important issue as Federal support to education.

It is interesting to notice the change in the attitude of the Senators from South Dakota who voted for the present bill. No doubt this comes about because they are representing the thinking and wishes of the people in their State and see the immediate need for such assistance as Federal support.

It is apparent from the statement made by Representative Shoar that nothing that the people in the State would say or do could influence his vote.

It is interesting to note the attitude on the part of many of those who advocate Federal funds for other purposes such as highways which in a large measure are controlled by the Federal Government and yet take such a firm and negative attitude to the Federal support of education in the bill before Congress at the present time. This bill contains every possible safeguard that can be included to insure State and local control of education.

We are at a loss to know what the solution to this problem may be other than to ask that we still continue to write to our congressional delegation and ask that they give further consideration to this problem with the possibility that they might change their minds.

I, too, agree that education is primarily a local responsibility. However, when local school districts are unable to provide quality education, Federal assistance, which assures local control, is warranted. I believe this Nation is negligent in permitting academic degrees to be issued, when the student has had no opportunity to study a foreign language, mathematics or natural sciences. I believe this Nation is negligent when students are crowded into small classrooms, where individual attention is impossible. Are we fulfilling our obligation to our children, and to our Nation, when we balance the school budgets with substandard education? I think not.

Suez Aggression

EXTENSION OF REMARKS

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. COOPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial published in the Louisville Courier-Journal of Wednesday, May 4, entitled "There Is Still a Right Way To Counter Suez Aggression."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE'S STILL A RIGHT WAY TO COUNTER SUEZ AGGRESSION

It is not good policy on the practical side for the U.S. Congress to use a threat of withholding foreign aid funds in order to force the United Arab Republic to quit blockading the Suez Canal to Israell shipping.

It is not good practice on the moral side, however, for the United States to ignore this outrageous situation. The blockade is a direct flouting of the authority of the United Nations. It should be dealt with in that body. And the United States should take the lead in a United Nations move to impose economic sanctions on the United Arab Republic, until it desists from its illegal actions.

The U.N. is pledged to oppose aggression between nations in any form. The blockade of Israeli shipping is just as much an act of aggression as the marching of troops across the Israeli border. Israel must carry on trade with the rest of the world or die. President Nasser of the United Arab Republic has

vowed the death of Israel, and he now pursues his ruthless objective through economic strangulation.

President Nasser made a specific pledge to the United Nations to allow "free and open transport through the canal without discrimination." Yet from that very day, Israeli ships have been denied passage. President Eisenhower is also plainly on record on the matter. Any violation by the United Arab Republic of its Suez pledge, he declared, "should be dealt with firmly by the society of nations."

That is exactly what should have been done. But now, after many months of consistent violation, Mr. Eisenhower has not lifted a finger to bring the matter before the U.N. His failure to act has opened the way for unwise action in the Senate.

Senator Paul Douglas, of Illinois, moved to give the President authority to cut off aid to the U.A.R. if the Suez blockade is not lifted. Acting Secretary of State Douglas Dillon warned that this action might have harmful repercussions in the Middle East. Senator J. William Fulbricht, of Arkansas, argued that this was the wrong way to deal with the problem. Senator John Sherman Cooper, of Kentucky, announced that he had been inclined to vote for the Douglas measure, as a way of forwarding "the principle of freedom of navigation in international waterways," but that he had reversed his position when he concluded that the proposal "would be harmful to these very purposes."

The Douglas amendment carried anyway, by 45 to 39. It is obvious that there was much political pressure ebhind it. It is also obvious that this is an effort to use the foreign aid program to blackjack a nation into line with American policy. That is bad procedure, even when the cause is just.

The trouble is that Nasser's conduct of the Suez affair cries out for world censure, and no proper protest has been raised. United Nations Secretary-General Dag Hammarskjold has journeyed to Cairo to reason with the Egyptian strong man without getting the least satisfaction. Nasser still proclaims the death of Israel. He still pursues a course of destruction which the U.N. should not permit for a single day.

not permit for a single day.

The Senate majority has taken the wrong way to attack the problem. There would never have been any occasion for this congressional error, however, if the President and his State Department had lived up to a moral obligation to seek a positive solution in the U.N. Under that failure, emotional pressures have built up which may cause damage in a campaign year. Such irrational gestures as the refusal of New York union longshoremen to unload an Egyptian ship have inevitably appeared.

It is late now for American action in the United Nations, but not yet too late. The next move is up to President Eisenhower.

Mother of Year Has Seven Winners

EXTENSION OF REMARKS

HON. DANIEL K. INOUYE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. INOUYE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news article which appeared in the Honolulu Advertiser of Sunday, May 1, 1960, reporting that Mrs. Riu Wakai had been selected as Honolulu's "Mother of the Year" by

the retail board of the Honolulu Chamber of Commerce.

The story of Mrs. Wakai and her efforts to provide her seven children with the necessary tools for their development into responsible citizenship is exemplary and a tribute to motherhood. Her selection portrays vividly the silent self-sacrificing role of mothers everywhere. To them we dedicate Mothers Day, to say in our own little way, "we have not forgotten."

I wish to take this opportunity to congratulate Mrs. Riu Wakai and in doing so, to congratulate all mothers for being the wonderful women they are.

The article follows:

MOTHER OF YEAR HAS SEVEN WINNERS

A widow who labored long and cheerfully to launch her seven children on worthy careers is Honolulu's "Mother of the Year.

She is Mrs. Riu Wakai, of 2826 E. Manoa Road

Mother is but one of the titles 69-year-old Mrs. Wakai can claim.

She has also been a missionary and teacher to generations of youngsters on Oahu and Kaual.

And she continues to be as active as many

women half her age.,
Mrs. Wakai's selection as Mother of the Year was made by the retail board of the Honolulu Chamber of Commerce which will honor her at a luncheon at the Willows Restaurant on Wednesday.

Wednesday happens to be Mrs. Wakai's

70th birthday.

In addition, she will receive a free vaca-

tion trip to a neighbor island.

Mrs. Wakai was nominated by a friend. Mrs. May Horio, who wrote a letter about her candidate to Advertiser columnist Bob Krauss, who in turn submitted the letter to the retail board.

Here is what Mrs. Horio had to say:

"I know Mama Wakai best through her children whom she has reared despite many hardships and obstacles. Mrs. Wakai, is the widow of the Rev. Henry Gengo Wakai, founder of the Kapas Congregational Church, Kapaa, Kauai.

"The Reverend and Mrs. Wakai came to Hawaii almost 40 years ago from Japan and immediately started their church work on

Kanai

"In 1936, Mrs. Wakai was widowed with seven young children. In order to support them she went to work as a Japanese language schoolteacher.

Soon afterward the family moved to Honolulu and settled in a home on the grounds of the Makiki Christian Church. Mrs. Kakal

continued to teach

Mrs. Horio notes that "the success of a mother can be measured by how well she has helped mold the character of her children so that they, in turn, will become responsible, mature citizens in a community."

The seven children and what they are doing now:

The Reverend Masayoshi Wakai, chaplain at Kulani Prison Camp, Maui.

Mary Wakai, secretary with the municipal government in Chicago.

Dr. Warren Wakai, Honolulu dentist.

Theodore Wakai, chemical engineer and research scientist with the Federal Government at Oxnard, Calif.

Dr. Coolidge Wakai, Honolulu physician. Calvin Wakai, operational supervisor for the Bank of Hawaii at Barber's Point.

Herbert Wakai, attending the Farleigh-Dickenson Dental College at Teaneck, N.J.

Mrs. Wakai named her younger children after U.S. presidents on the theory that it would be an incentive to them to be good citizens.

But that is only part of the story, son Warren said.

"She sacrificed a lot of things, she put our welfare first. Because of her and dad we were able to have all these education opportunities." he said.

The children helped themselves, too.

Many were scholarship winners. All have attended at least one college or university and some of them as many as three or four.

Tribute to Colonel Olmstead, Engineer in Charge of U.S. Construction on St. Lawrence Seaway

> EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSTN

IN THE SENATE OF THE UNITED STATES Thursday, May 5, 1960

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway in 1959 marked one of the great steps of progress-economically as well as engineering and construction-in American

Now that the job is done, the Nationand particularly the Great Lakes-must look forward to resolving the additional problems relating to promoting greater trade and commerce through the seaway, as well as the reaping of benefits of this economic lifeline between our country and the world.

The translation of the idea of a deep sea waterway into the heartland of America was, as we all recognize, the outgrowth of the vision, effort, skill and foresight of many great men. The country, I believe, owes a debt of thanks to all—from President Eisenhower who backed the project to the pick-andshovel man-who helped to tame and harness the mighty waters of the St. Lawrence into a trafficable road of commerce.

Regrettably, it is no possible to pay adequate tribute to each and every one of these individuals who transformed the dream of a deep sea passageway to other countries of the world into a reality,

As time and opportunity permit-and in accordance with our traditions-I believe, however, we must make an effort to pay tribute where tribute is due. Today, I want to call attention to the work of one individual whose competence, courage, and great engineering ability are indelibly imprinted on the St. Lawrence Seaway-that is Col. Loren W. Olmstead, Colonel Olmstead was in charge of the engineering and construction work of the U.S. part of the seaway.

Recently, I was privileged to be joined by my colleagues, Senator Javits and Senator Keating, of New York, in paying tribute to Colonel Olmstead, respectfully recommending to the President recognition of his outstanding work. At this time, I ask unanimous consent to have a copy of a joint letter-urging appropriate recognition of Colonel Olmstead's work-sent to President Eisenhower. printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD. as follows.

> U.S. SENATE. COMMITTEE ON FOREIGN RELATIONS, May 3, 1960.

Hon. DWIGHT D. EISENHOWER, President of the United States. The White House, Washington, D.C.

DEAR MR. PRESIDENT: In accordance with longstanding American tradition of giving recognition and tribute to worthy individuals for a job well done, we wish to pay tribute to Col. Loren W. Olmstead, Deputy Chief of Engineers, Corps of Engineers, U.S. Army. Colonel Olmstead's outstanding military

career includes distinguished service on many flood control projects as well as the development of Buffalo Harbor and extensive improvements to Niagara Falls. His competence and technical ability were evidenced to the fullest when he served as district engineer at Buffalo, N.Y., in charge of the U.S. construction on the St. Lawrence Seaway. Due in large part to Colonel Olm-stead's skill and untiring efforts, this magnificent undertaking resulted in a modern-ized seaway and is today contributing immeasurably to America's defense and com-mercial and industrial development.

In light of his long, productive career in the service of his country, we respectfully urge consideration of Colonel Olmstead for such recognition, including advancement in rank, which, in your judgment, is warranted.

With high esteem and all good wishes.

Very sincerely yours, ALEXANDER WILEY, U.S. Senator. JACOB K. JAVITS. U.S. Senator. KENNETH B. KEATING, U.S. Senator.

Area Redevelopment Administration

SPEECH OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. WHARTON. Mr Chairman, during the 5 hours of parliamentary maneuvers, we on the floor have had ample time to review S. 722, a bill to create a new Government agency to be known as the Area Development Administration. It is a brandnew spending program which seems to create no new industry, and therefore may pirate existing industry from one location to another. I note that the measure is strongly supported by the depressed areas, such as the coalmining areas of West Virginia and Pennsylvania, and in New York by the glove industry, all of whom have had a taste of foreign competition and labor trouble.

It has already been said here on the floor that it is a bill to bail out union leadership where bad labor conditions have driven industry away from the locality. We have also heard it characterized as the "little WPA" and a "foot-inthe-door measure." The principal argument in its favor seems to be that we are spending too much on foreign aid and so can afford an expenditure of this kind at home-but that questionable argument is used on every spending proposal. The truth of the reflection on union leadership, of course, would bear a great deal of local investigation.

What I strongly suspect, however, is that this bill should be entitled a "voteseeking bill" instead of a depressed area measure, and I should like to call attention to the following facts as disclosed in the bill and the accompanying commit-

tee report:

First, a \$20,000-per-annum Administrator, with a large unspecified and unlimited office force, would organize a brandnew bureau which would probably be known, and significantly so, as the ADA-for Area Development Administration. With such an imposing organization, he would set out to "lend lease" \$75 million in industrially depressed areas, and we all know that amount would be spread pretty thin over the entire country where unemployment exceeds 6 percent.

Next, he would tackle another \$75million fund for "lend lease" to so-called depressed rural areas, and right here I would like to compliment the committee in charge for a most comprehensive report. Further examination discloses that it would affect but 19 of the 50 States, and some 500 counties in those States, not one of which is located in New York State. There are 36 counties listed in rich and powerful Texas, and votes from those areas, I presume, will be relied upon to bolster a majority vote here in the House.

It is my prediction that neither my own State nor any other will be appreciably benefited by this bill. The taxpayers will be saddled with another bureaucracy, and some attempt might well be expected to pirate existing industry from progressive communities to politically favored areas.

I think this is a weak and politically inspired measure, and one that ought to be defeated here in the House without waiting for a Presidential veto.

Unions Protest Against U.A.R. Blacklisting American Ships

EXTENSION OF REMARKS

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, May 5, 1960

Mr. PROXMIRE. Mr. President, the recent protest by members of the International Longshoremen's Union aaginst United Arab Republic blacklisting of American ships which put in at Israeli ports has aroused considerable comment. Protesting also against mistreatment of American seamen in U.A.R. ports, the members of the union have refused to unload an Egyptian freighter docked in New York, and are picketing the vessel. This is a courageous and timely demonstration against the notorious "boycott of Israel," the systematic blacklisting of ships, manufacturers, merchants, even film actors, who have any dealing with Israel.

Unfortunately the protest against this unjustifiable Arab policy has been misunderstood in some quarters. I have received a copy of a letter from Mr. Seymour W. Miller, general counsel to the Seafarers International Union, addressed to the editor of the New York Times. which states clearly the reasons for this significant action. I ask unanimous consent that Mr. Miller's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD,

as follows:

LAW OFFICES. MILLER & SEEGER. New York, N.Y., April 28, 1960.

THE EDITOR, New York Times, New York, N.Y.

SIR: I am general counsel to the Seafarers International Union of North America, Atlantic and Gulf District, AFL-CIO, involved in the protest against the policy of the United Arab Republic in blacklisting American vessels which touched Israeli ports and mistreating American seamen aboard "suspect" American vessels. As such, it is naturally to be expected, I suppose, that I would differ with your editorial on the subject in the New York Times of Monday, April 25, 1960. However, in my capacity as a private American citizen and as a reader of long standing of the Times, I must go beyond the Union's position (concerned, as it is, only with the threat to the jobs and wellbeing of its adherents), and tell you why many people, including myself, take most serious issue with your position.

Your point seems to be that the protest of the SIU and ILA should be abandoned, primarily because the Arab governments are threatening to boycott all American ships and, secondly, because the State Department says it is "embarrassed in the conduct of the Nation's foreign relations." Neither

reason is valid.

The facts are that many of SIU's contracted companies have suffered a severe loss of business as a result of the policy all of us, including the State Department and you, appear to decry. As a consequence, job op-portunities for its members have decreased substantially. Moreover, its seamen have been subject to personal abuse and harassment in U.A.R. ports. This situation has existed for years and constitutes a flagrant affront to our flag, to our country, to American shipping companies, and to American merchant mariners. Indeed, the arrogance of the Arab Governments, and the U.A.R. government in particular, has become so fulsome as to prompt them to dictate to us in which manner they wish us to convey aid to their hungry peoples. The Department of Agriculture, concerned with the shipment of foreign aid grain cargoes, has publicly stated it is not concerned with these matters and. until recently, the Navy Department, as is true of the Department of Agriculture to this day, cooperated in the effectuation of these affronts by the inclusion of charter provisions precluding the issuance of charters to American shipping companies that had ever delivered cargoes to Israel. State Department has accomplished nothing in the way of a remedy. It has mostly confined itself to the issuance of sporadic, ineffectual, general statements. In the meantime, the Union's losses continue, as does, indeed, the threat to its very existence, and it grows with each Arab League conference called for the purpose of enlarging upon this blacklist and in making increased use of Nasser's physical control of the Suez Canal, notwithstanding the U.A.R.'s contravention of numerous U.S. resolutions and open violation of international law.

I realize that the State Department is embarrassed, as they put it, but I suggest that this embarrassment should be predicated on reasons other than the one it offers. I suggest it ought to be embarrassed because it has not stopped this insult to our country, to our flag, and to our citizens. It ought to be embarrassed because it is engaged in the shameful policy of appeasing a dictatorial tyrant, because it allows him to so cleverly and obviously play us off against the Bolsheviks, and because it panders to an ever-increasing aggressiveness which, if not checked, will most certainly lead to war. It ought to be embarrassed because preaches so loudly about support of the democracies and the unity of the free world, and conducts, certainly so far as the Middle East is concerned, a day-to-day foreign policy in precise contradiction thereof. So much for State Department embarrassment.

Since you consider the SIU's protest IIIadvised from the start. I submit that it is incumbent upon you to suggest an alternative procedure which would offer the Union some hope of eventual surcrease from the threat which hangs over its contracted companies and available job opportunities. Certainly you canont be suggesting it sit by and do nothing, and that the SIU just take it and hope for a solution. What is there in the wind to suggest that such a solution is forthcoming? Certainly our present appeasement policy is no solution, for it has accomplished nothing. Indeed, does not history prove that such a policy is not merely doomed to failure but, more significantly, actually tends to evoke an ever-increasing arrogance, leading, in turn, to more serious crises, and, ulti-

mately, war. The Arab countries are engaged right now

in a boycott of many American-flag vessels. Your answer appears to be that, notwithstanding, the unions should not protest, lest the Arab countries boycott all Americanflag vessels. But, in the light of the State Department's proven incapacity to accomplish anything, that means you are advocating that the SIU and ILA submit, that they suffer their losses and the promise of even further losses, under threat of further pressure. It is my own opinion that this sort of thinking brought about the Ethiopian war, the Rhineland debacle, Munich, and all the other appeasement gestures that merely whetted the insatiable appetites of dictators. Such thinking, in short, courts disaster.

If, as all of us seem to agree, the blacklist and harassment directed against our ships and seamen are wrong (as well as seriously injurious to the material interests of our merchant marine), we Americans should not adopt an appeasement posture predicated on the utterance or even execution of threats calculated to insure the survival of that wrong. America has not exerted pressure on Egyptian vessels, notwithstanding how much we may dislike their ports of call. Egypt should observe the same amenities with respect to our vessels. We do not harass and humiliate Egyptian seamen. Egypt should not harass and humiliate American seamen.

In my judgment, the shameful failure of the State Department to uphold America and American principles, and to insist upon the observance of these basic tenets of reciprocal fair play, has left the unions involved no other choice but to legally protest as effectively as they can, and that is precisely what they are doing. You should be in-formed that the fight these unions are putting up in defense of their legitimate interests has won the support of peoples and groups all over the world, from Guatamala to the Philippines, from the U.S. Senate to Main Street.

Very truly yours,

SEYMOUR W. MILLER.

Twentieth Anniversary of the Tragic Katyn Forest Massacre

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. PUCINSKI. Mr. Speaker, the spring of 1960 marks the 20th anniversary of the Katyn Forest Massacre, in which 15,000 Allied soldiers were brutally murdered by the Communist Secret Police.

This monstrous crime shocked the entire world and let to a special investigation by the Congress of the United States in 1952, which was headed by the Honorable RAY J. MADDEN, Congressman from Indiana.

Last week I participated in a memorial tribute, sponsored by the Illinois Division of the Polish American Congress in Chicago, to these gallant Polish officers who were the victims of this massacre. I had served as chief investigator for the Select Committee of the House of Representatives To Investigate the Katyn Forest Massacre in 1952.

The Illinois Division of the Polish American Congress is to be commended for arranging last week's memorial service to the memory of these Polish soldiers. Through this tribute, the Illinois division has manifestly demonstrated again how dangerous it is for American leaders today to deal with Soviet leaders at face value.

Investigation by Mr. Madden's committee in 1952 clearly demonstrated, beyond an iota of doubt, that Soviet Premier Stalin had ordered the execution of these Polish officers, whom we proudly listed as our most gallant allies. Our evidence clearly showed that Stalin brazenly lied to President Roosevelt on repeated occasions when the President tried to learn the fate of these men, after they had been deported to the Katyn Forest in the Soviet Union by Communist forces.

Despite the fact that Stalin ordered these Polish soldiers executed in Katyn in the spring of 1940, he repeatedly kept assuring President Roosevelt he did not know the whereabouts of these men until Stalin's lies became apparent to the entire world when the mass graves of the Polish officers were discovered in 1943.

President Eisenhower would do well today to recall this treacherous aspect of Soviet diplomacy when he sits down with Stalin's successor at the summit later this month.

Mr. Speaker, I should like to include in the RECORD today my own remarks delivered in Chicago last week in tribute

to these Polish officers and also the remarks of Congressman Madden, who was the principal speaker. I should also like to include the resolution adopted at this mass memorial service, which was attended by 1,000 Chicagoans.

I hope that the conscience of this Congress can be sufficiently aroused to demand that the President of the United States carry out the recommendations of the House select committee, which were included in its final report filed here in this House of Representatives on July 4, 1952. Not until those recommendations are carried out by the Government of the United States can we, as Americans, satisfy our conscience that we have done everything possible to properly recognize the great sacrifice these Polish officers made in Katyn.

The remarks and the resolution follow:

Mr. Chairman, may I take this opportunity to commend the Illinois Division of the Polish American Congress for arranging this 20th anniversary memorial service to the victims of the Katyn Forest massacre.

The brutal assassination by Communist troops of 15,000 of Poland's army officers in the spring of 1940 in the Katyn Forest marks one of the most scandalous pages of civilized history. By this tribute tonight, the Illinois Division of the Polish American Congress has again demonstrated that we shall not let the conscience of the world rest until the perpetrators of this monstrous crime against the Polish nation and its gallant soldiers are brought to the bar of justice.

The Congress of the United States in 1952, after a most thorough investigation, which I had the honor to head as chief investigator of the Select Committee of Congress To Investigate the Katyn Massacre, had clearly and unequivocally proven that this horrible massacre was perpetrated by the Soviet Union. Our investigation conclusively proved that these heroic Polish officers were murdered by the Communists in the Katyn Forest in order to pave the way for the eventual occupation of Poland by a puppet Communist government, which to this very day still holds the gallant Polish people in bondage.

Despite the overwhelming proof we presented to the world at the conclusion of this congressional investigation that the Soviet Union was guilty of this barbaric act, little, if anything, has been done to bring those guilty for this crime to justice.

It is conclusively clear to me that certain elements in our own Government to this very day oppose any effort to carry out the recom-mendations of our congressional committee in 1952, which included a strong plea that the Soviet Union be cited before the International Court of Justice for conduct contrary to that recognized by civilized coun-Despite the fact that the congressional committee had demonstrated unequivocally that there is sufficient language in the present Charter of the United Nations dealing with the World Court to bring such an action against the Soviet Union before that tribunal, both the present administration and the State Department have refused to initiate such action.

There is no question in my mind that if the American people and the President of the United States had been given all the details of the Katyn massacre when they first became known in 1943, including indisputable proof that Communist troops on orders of Premier Stalin had massacred these Polish soldiers, this Nation would have taken an entirely different attitude toward the Soviet Union in its wartime dealings.

However, regardless of how logical our position may be today, it is clearly apparent

that any redress for this hideous crime to the Polish nation can come only when the Polish people again have a free government, unshackled from the influence of Moscow, and are able themselves to demand justice before the World Court.

Because I believe this to be so true, it gives me great pleasure today to disclose to those of you assembled here the fact that the House Committee on Foreign Affairs this morning approved a resolution which I had the pleasure of introducing, along with Congressman Zablocki and other Members of Congress, urging President Eisenhower to demand free elections for the people of Poland and all the other captive nations when he meets with the Soviet leaders at the summit on May 16.

I think that the Foreign Affairs Committee has taken a historic step toward restoring justice and liberty to the enslayed people of the captive nations. I have every reason to believe that this resolution will be confirmed by the House of Representatives on Monday when it comes up on the Consent Calendar. I strongly hope that the Senate will concur in the spirit of this resolution, and I pray that the President of the United States will respect the wishes of Congress and make this demand for free elections in the captive nations when he meets with Mr. Khrushchev.

It is clear to me that justice in Eastern Europe regarding not only redress for this monstrous Katyn Massacre, but also all the other crimes that the Communists have perpetrated against the people of these captive nations, can be realized only when these nations are again free and able to demand their proper rights before the World Court.

Those of you assembled here tonight have played a most important role in helping keep alive the demands for ultimate justice for these captive nations. Your voice is being heard in Congress, and I hope the action of Congress will be heeded by the President.

We know one fact is indisputable: there can be no lasting peace so long as this vast population of people traditionally dedicated to freedom are held captive behind the Iron Curtain. We know that the key to lasting peace, to disarmament, to ultimate justice lies in the liberation through peaceful means of these postwar victims of Soviet aggression. Only when our foreign policy becomes based on a firm demand that these captive nations must be permitted to take their rightful place in the family of free nations will we, indeed, inspire the entire world to follow our leadership. In this great struggle for the minds of men throughout the world. the United States can provide the leadership by demanding justice and freedom for those in Poland, Czechoslovakia, Lithuania, Estonia, Latvia, Hungary, Rumania, and Bul-garia, now being held captive by their Soviet oppressors.

This year, Americans of Polish descent are going to pay tribute to the 100th anniversary of the birth of Ignace Jan Paderewski as one of the great sons of Poland, who to his dying day fought for freedom. I am happy to inform you this evening that within the next few days the U.S. Post Office will announce issuance of a commemorative stamp under the champions of freedom series in tribute to Paderewski. We here tonight, in paying tribute to the victims of Katyn, in demanding freedom and justice for the captive nations, are indeed upholding the highest principles for which Paderewski lived and died.

Thank you.

Speech of Ray J. Madden Before the Illinois Division of the Polish American Congress Chicago, Ill., April 29, 1960

The Polish American Congress and especially the Illinois division must be commended for calling this mass meeting to

memoralize the thousands of Polish patriots who were massacred in the Katyn Forest 20 years ago this spring. The Katyn massacre has already been recorded as one of the most barbarous international crimes in world his-

At the outbreak of World War II and during the winter of September 1939 and 1940, over 15,000 Polish army officers and intellectual leaders were taken prisoners by the Soviets when Stalin invaded Poland. These officers and Polish leaders were interned in three Soviet prison camps in the territory of the U.S.S.R. The incarceration of these prisoners and their mass deaths took place during the first 4 months of 1940. All traces of these men were lost and the Soviet leaders denied any knowledge of their whereabouts and their disappearance was a mystery up until April in 1943. At that time, the Nazi troops had invaded the Katyn Forest area near Smolensk which was under the complete domination of the Soviets. Upon discovery of the mass graves by the Hitler forces, word was sent out by the German propaganda minister exposing the international crime that had been kept secret for almost 2 years. Stalin and his Communist leaders immediately accused the Nazis of the deplorable crime committed in the Katyn

In 1952 the Congress authorized a special committee to investigate and hold hearings both in this country and in Europe for the purpose of placing the guilt for this international crime. For the first time in history, an international crime was committed wherein one nation accused the other and vice versa. The world knows that before, during and after World War II, the Communists in their infiltration and aggressions committed many deplorable mass murders, massacres, and campaigns of starvation against enslaved peoples in Poland's neighboring nations.

The special congressional committee held hearings over a period of many months both in this country, London, and Europe. Over 250 witnesses and hundreds of exhibits and depositions were taken by this committee, revealing the true facts regarding the Katyn Forest Massacre. On December 22, 1952, the committee submitted to Congress its final report establishing beyond any question of a reasonable doubt that the Soviets committed the mass murders of over 14,000 Polish officers and intellectual leaders in the spring of 1940. The leaders of the Soviets, their Ambassador in Washington, and any one whom they would designate were invited to appear before our committee to submit facts regarding this crime, but they refused to participate in the hearings. Throughout the entire proceedings, there was not a scintilla of proof or even remote circumstantial evidence presented that could indict any other nation but Russia for this international crime. News services, radio, television, and other publicity mediums in England and in Europe covered the testimony and hearings, and dispatches were sent throughout the world exposing the true blueprint of Communist aggression, brutality, and methods used in the enslavement of a nation and its liberty loving people. The world knows now that the same duplicity and methods of aggression were used by the Soviets in enslaving the Balkans and other neighbor nations surrounding the borders of the Soviets. The members of our committee were informed while holding hearings in Europe that the facts revealed by the special congressional committee for the first time, placed the Soviet propaganda machine on the defensive. Stalin and his lieutenants and his successor Khrushchev have to this day no answer to the facts and testimony revealed in the Katyn Forest massacre investigation. Khrushchev in his visit to this country, exhibited agitation and anger when even remote inferences were made concerning the Communist crimes of aggression

and tyranny in keeping small nations under their enslavement. The Communist leaders are very anxious to have their criminal records of the past buried from the minds of the present generation and generations to come. The Soviet propaganda broadcast today in Africa, Asia, South America, Cuba, and other areas, emphasizes that captive nations were anxious to come under their sphere of the Communist government, and that their present status was voluntary cooperation with the Kremlin.

I might state here that the special congressional Katyn Committee received the praise and commendations for the outstanding success of its hearings by the State Department, congressional leaders, Ambassador Lodge of the United Nations, and all of the former leaders of satellite nations now under the Communist yoke. My office in Washington has received requests for copies of the Katyn report, recommendations, and findings, from the leaders in most of the free nations throughout the world and we still receive requests from individuals and organizations throughout the world.

I should mention here that the Polish-American Congress, through its president, Charles Rozmarek, should be given major credit for arousing public opinion and aiding in securing congressional action to act favorably on my resolution to authorize the congressional investigation of this international crime. I wish to further state that Congressman Roman Pucinski, of Illinois, contributed great work as a special investigator, interpreter, and adviser to the Katyn committee during its long months of hearings and that this work he performed proved to be a major contribution to the success of the committee.

It is highly important that our Nation and the nations of the free world should constantly remind the peoples of neutral and undeveloped countries, the true facts as to how the Soviets succeed in enslaving neighbor nations against the will of the conquered. When the Katyn congressional committee was holding hearings in Europe, Pravda and the Soviet propaganda broadcasts devoted daily charges ridiculing the purpose and work of our committee as being a malicious committee disseminating capitalistic propaganda against communism.

Most of the people of the world now realize that the international crimes occurring before and during World War II by the Soviets were repeated only by a different pattern during the Hungarian and East German uprising. Unlers our Nation and the free nations of the world continue to keep the facts alive and send forth the truth to all people about communism, future Katyn massacres will take place in countries that today are enjoying freedom and self-government.

The Polish-American Congress is contributing greatly to future world freedom and the eventual reestablishment of freedom in captive countries by holding this great mass meeting memorializing the thousands of Poles who sacrificed their life in the Katyn Forest.

The former leaders of Poland who testified before our committee, warned against the future coexistence moves and peace overtures which the Communists will make at strategic times in order to carry out their program for world conquest. It was only a few years ago in Geneva when President Eisenhower, Secretary Dulles, Anthony Eden of Great Britain, and other representatives of free nations met with Khrushchev, Bulganin, and the Chinese Communists. former leaders of Poland and other satellite nations all realized at that time that the Geneva meeting was another strategic move on the part of Khrushchev to use that summit meeting as a propaganda platform to mislead the people of the world that they were fighting for world peace.

The leaders of Poland and the leaders of the former free nations now enslaved, call all to testify that treaties, pacts, summit meetings, etc., mean nothing, as far as the sincerity and reliability of the Communist mind is concerned, when they see fit to move in their well-planned aggressions.

The No. 1 program on the agenda for the coming summit meeting should be to review the methods and facts concerning the enslavement of Poland and other satellite nations, and demand that immediate steps be taken to inaugurate free and uncontrolled elections in the enslaved nations today under the Communist yoke. I firmly believe that world public opinion, if the true facts on Communist aggression were made known in all neutral and backward nations would some day free enslaved nations so that they would again enjoy liberty and free government.

POLITICS IN FOREIGN POLICY

Back in 1952, after the Katyn hearings were officially completed, it was heartening to hear General Eisenhower and his advisers during his campaign advocate that our Government take rigid steps to liberate satellite nations. It was indeed disappointing to the members of the Katyn committee that within the short space of 1 year, Secretary Dulles and the State Department actively opposed a congressional resolution sponsored by the members of the Katyn Committee that the Congress recommend to the United Nations that affirmative action be taken by that international body dealing with international crime committed by the Soviets in the Katyn Forest.

The members of the Katyn Committee were again optimistic when 2 years later on July 6. 1955, Charles Rozmarek, the president of the Polish American Congress and Rev. Valerian Karcz, the secretary, along with other officlais, and Congressmen Machrowicz, San-LAK, and LESINSKI, personally visited the White House and requested the President to present the satellite nations' case before the then pending conference of the Four Great Powers. The resolution submitted to the President at that time offered a number of convincing reasons why it was proper to insist at the Geneva Conference that if the Soviets were sincere in their peace overtures that they should allow captive nations the freedom of uncontrolled elections and selfgovernment. The Geneva Conference resulted in nothing more than a strategic propaganda platform for the Soviet leaders to broadcast untruths and lies to the neutral and backward nations of the world. Communist leaders in 1955 or today are not prepared militarily to start their program for world conquest. They want to complete their communization of the enslaved nations to strengthen their own war potential and economy. This task will take several years in the future for the Soviets to accomplish world superiority before they strike. Khrushchev and his leaders have not changed one step from the words of Lenin when he said: The permanent existence of the Soviet Republic with the captive countries side by side is unthinkable. One or the other must eventually triumph."

Our country is in the same position today as far as successfully curbing the Soviets' goal as we were before the Geneva Conference. Two months after the Geneva Conference, Khrushchev and Bulganin majestically toured the Middle East and Asia calling our President and Secretary of State "warmongers." It is our earnest hope that a different strategy will be used by the leaders of the free world at the coming Summit Conference. If the Soviets are sincere in their peace proposals, they should demonstrate good faith by allowing captive neighboring nations free elections to assume their former status as independent free people.

Stalin and Khrushchev made great success through bluff and false propaganda and it is high time that the leaders of the free na-

tions demand affirmative action from the communistic dictators. Demands must be made that they stop their infiltration and aggressions throughout the free world; and also, restore freedom to the millions whom they have reduced to enslavement under the communistic tyranny.

RESOLUTION ADOPTED BY THE ILLINOIS DIVI-SION, POLISH AMERICAN CONGRESS, IN CHI-CAGO ON APRIL 29, 1960

The month of April 1960 marks the 20th anniversary of the massacre of Polish officer prisoners of war committed by Soviet Russia in the Katyn Forest.

These prisoners were active and reserve officers of the Polish Army—physicians, teachers, lawyers, and, as chaplains, priests, and rabbis—assembled in the camps at Ostaszkow, Starobielsk, and Kozielsk.

By executing Polish intelligentsia, Soviet Russia hoped to weaken the resistance of the

Polish Nation.

In 1943 the advancing German troops discovered the mass graves of the Polish officers in the Katyn Forest. At that time the Soviet Government accused the Germans of committing the crime.

Thousands of similar crimes had been committed by the Germans during the last war. The Katyn massacre, however, is a deed of

Soviet hands.

The International Tribunal for War Crimes at Nuremburg convicted many German war criminals, yet those guilty of the Katyn massacre escaped unpunished. Moreover, under Soviet pressure, the whole civilized world seemed to forget that the massacre was a war crime and that the guilty should be punished.

The free world chose silence rather than confronting Soviet Russia with the facts.

In 1952 an investigation of the Select Congressional Committee To Investigate the Katyn Massacre clearly proved that Soviet Russia is responsible for this crime.

The committee concluded its investigation by recommending that details of the Katyn massacre be presented to the United Nations by the U.S. delegation and that the Soviet Union be cited before the International World Court for this horrible crime.

We American citizens of Polish descent in Chicago, Ill., assembled here at the 20th anniversary commemorating the Katyn massacre, appeal to the President of the United States and request that he direct the proper U.S. agencies to carry out the congressional committee's recommendations.

We emphasize that the Katyn massacre is one of many acts of genocide committed by Soviet Russia upon the captive nations.

The glorious past of our Nation demands that we defend justice rather than appease criminals.

Louisville: The Gracious Tradition

EXTENSION OF REMARKS

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. COOPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record a very interesting article by the well-known writer, Jim Morrissey, entitled "Louisville: the Gracious Tradition," and published in the April 1960 issue of the Catholic Digest.

In addition to providing us with interesting material about Louisville, and particularly in the early years after its settlement in 1778, the article contains valuable information about the early history of the Catholic church in the archdiocese of Louisville.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOUISVILLE: THE GRACIOUS TRADITION

(By Jim Morrissey)

Some people think of Louisville, Ky., as a city composed mainly of beautiful women, fast horses, and drawling Kentucky colonels. No Louisvillian would deny that his city has these three elements in abundance. He's proud of them. But he will boast, also, of schools and churches, and he will point to bustling plants pouring out gargantuan quantities of cigarettes, home appliances, cars, farm equipment, and—of course—bourbon whisky.

The Ohio River city that forms the gate-way to the South has worked out a pleasant harmony of men and machines. Barry Bingham, editor-in-chief of the Louisville Times and Courier Journal, summarizes Louisville's 20th century character: "The city, for all its growth, remains as always a place where people lay more stress on living than on money, where hospitality is an evergreen tradition, and where progress is closely linked with the pursuit of happiness."

The Kentucky colonel is an ineradicable symbol. The colonel is a constant reminder that the easygoing grace and good manners of the Old South must be kept alive. He is a reminder, too, that the city must always be on its guard against decadence.

The 1959 variety of colonel bears little resemblance to his prototype in swallow-tailed coat, string tie, broad-brimmed fedora, and elegant white beard, regularly seen in advertisements. The abundant colonels of today (Kentucky Governors commission many each term) are usually civic or political leaders dressed in conservative business suits, and are surprisingly short on southern drawl.

The dominant influence on Louisville since that dismal May day in 1778 when explorer George Rogers Clark landed a weary band of soldiers and settlers on muddy Corn Island has been the Ohio River. It forms the city's northern and western boundaries as it sweeps on to the Mississippi. The river is responsible for the city's growth and prosperity.

Clark's dispirited group had moved to an Indian-proof fort at the present city site by Christmas, 1778. The little village was incorporated by the Virginia Legislature (Kentucky was not then a State) in 1780. Louis-ville was named for King Louis XVI of France, then active in the cause of the American Revolution.

By 1808, when what is now the Archdiocese of Louisville was established at Bardstown, Ky., 40 milles to the south, the town was booming with river commerce.

The city's location was dictated by the "falls of the Ohio," 2 miles of treacherous, rocky rapids. The rapids drop about 30 feet in gradual stages and form the only big impediment to traffic in the 980 miles of river from Pittsburgh to the Mississippi. They made portages necessary, except when flood-stage water allowed boats to pass safely over the rocks. The town prospered as a natural river port.

Some \$52 million is now being spent on expansion of the river locks to more than double the size of the old Portland Canal. The canal has been a bottleneck to constantly increasing barge traffic. River commerce flowing past Louisville is expected to hit 150 million tons annually by 1963.

Powerful diesel towboats pushing halfmile-long strings of barges have replaced the picturesque stern-wheelers. But the river, with its constant flow of tows and pleasure boats, is a colorful sight for tourists driving along mansion-lined River Road. Louisville is an interesting study in contrasts. The spire shadows of the Cathedral of the Assumption (1849) can almost reach the new black and white contemporary Federal Reserve bank building a half block away. Century-old business buildings in blocks near the river give way to gleaming modern façades of establishments farther downtown.

The stately Pendennis Club for men of means is only a few steps away from bustling Fourth Street. The club's excellent food, warm southern hospitality, and restful quiet make it seem a world apart.

The business district is getting a homey touch these days. Civic and political leaders are trying to prevent the blight that strikes other cities when downtown businesses move to outlying shopping centers. They are considering turning sections of streets into restful, landscaped malls free of traffic danger and noise. Street light poles have been painted robins'-egg blue, and wastebaskets in bright pastel colors have been set on corners. Small evergreen trees planted in wooden boxes have been placed along Fourth Street, the main business artery.

The first Catholic church was erected in Louisville in 1811, 5 years before the cornerstone was laid for the cathedral at Bardstown. The original missionaries considered Louisville "a wicked city where there is much trade and wickedness " of ew confessions heard, but plenty of curses uttered."

The Bardstown diocese was first ruled over by Bishop Benedict Joseph Flaget. His spiritual jurisdiction originally included the entire "West and Northwest" and was second in number of Catholics to the diocese of Baltimore. The diocese was established 35 years before the beginning of the Chicago diocese.

Flaget, a backwoods bishop, said mass in log chapels, wore homespun vestments, and set a rugged example of dedication for later generations. At the age of 80 he rode horseback 600 miles visiting all the parishes of his diocese.

Louisville's growth and its importance in the settlement of the West, plus the great numbers of German and Irish Catholic immigrants flooding into the city, brought about transfer of the see from Bardstown in 1841.

Today the population of the Louisville metropolitan area is 736,000. The city is 33 percent Catholic. An increase of 13 percent in the Catholic population during the last 10 years has been due to the increased birth rate and an influx of Catholics from the East.

Throughout its 180-year history, Louisville by temperament has been a southern city, even though geographically it appears to be Middle West. Local citizens proudly point out that Louisville was the first southern city to integrate its public schools. This took place in 1956.

The pattern for tranquil desegregation had been set earlier by Catholics. In 1910, St. Ann's Church had a mixed Negro and white congregation. Bellarmine College for men was established in 1950 as an integrated institution. At that time two other Catholic colleges in Louisville, Nazareth and Ursuline Colleges for women, joined Bellarmine in public announcement of an integration policy. One year before public school integration, Catholic elementary schools enrolled Negro pupils.

A Protestant civic leader commented recently, "We had no trouble integrating here because the Catholics had proved to the community it could be done."

About 50,000 students now attend 131 Catholic schools, colleges, and seminaries in the archdiocese. The bulk of the student population (about 43,000) attend institutions in Louisville and suburban Jefferson County.

Bishop Flaget's successor, Bishop Martin John Spalding, brought rapid expansion of

the parochial school system. A historian has observed, "Remarkable progress was made in Catholic education in Kentucky two generations before public schools were inaugu-Prelates following Bishop Spalding continued the emphasis on education. In the last 10 years, under Archbishop John A. Floersh, 46 new school buildings have been added in Louisville and Jefferson County, at a cost of more than \$13 million. Archbishop Floersh became Bishop of Louisville in 1924, archbishop in 1937.

The community also has the University of Louisville, the oldest city university in the United States. It was founded in 1789.

The best known Louisville institution is the Kentucky Derby. Each year in May the 1-day sports classic attracts about 100,000 to historic Churchill Downs, only a few blocks south of the business district.

The Derby is an electrifying social phenomenon. It brings about a citywide transformation for a week or 10 days before the race. World problems get pushed into a remote corner by endless, involved discussions throughout the city on track conditions, past performances, and the unpre-dictability of 3-year-old horses. Society is at its busiest during Derby Week, with balls, dinners, and cocktall parties. can't get to the track have Derby parties at home and watch the race on TV.

The mile-and-a-quarter run for the roses by the world's fastest horses has been held without interruption since 1875. It has defied the disastrous flood of 1937, wars, and Kentucky's own brand of unpredictable politics

Humorist Irvin S. Cobb once said. "You ain't never been nowhere, and you ain't never seen nothin', until you go to Kentucky and with your own eyes behold a Kentucky Derby."

Whisky making is as much a part of the Louisville tradition as thoroughbred-horse racing. Ten distilleries are located in the Louisville area. By 1985 Kentucky is expected to be producing 90 percent of the world's whisky, instead of the present 75 Evan Williams is credited with making the first corn whisky, forerunner of bourbon, in Louisville in 1783.

From the days when Indians roamed the dark and bloody ground, Kentucky has been associated with tobacco. Fifteen leading brands of cigarettes are manufactured in Louisville, accounting for one-fourth of the Nation's output. About 100 billion cigarettes were produced there in 1958. Total cigarette-stamp taxes collected by the Federal Revenue Service's Louisville office was \$349,731,000.

Tours of distilleries and cigarette plants are popular with visitors. And the city is within easy driving distance of many other attractions.

The beautiful white-fenced horse farms in the Blue Grass country around Lexington are only 60 miles away. The sprawling Army armor center at Fort Knox, the U.S. gold depository, is 40 miles to the south. My Old Kentucky Home, the Rowan family mension where Shephen Foster wrote some of his songs, is a half hour's drive away. The ca-thedrals at Louisville and Bardstown and the Trappist monastery at Gethsemani, Ky., are a few of the Catholic institutions visitors like to see.

A new and unusual tourist stop is Farmington, the ancestral Speed home in Louisville, recently opened to the public. Abrahem Lincoln spent 3 weeks there in 1841 when he was weary and discouraged. His return to his native Kentucky at the age of 32 had special significance. During the visit, his friend Joshua Speed encouraged him to marry Mary Todd, of Lexington. And on his return trip from Louisville to Springfield, Ill., Lincoln saw slaves herded aboard his boat: a miserable scene still fixed in his memory when he signed the Emancipation Proclamation.

Louisville had close ties with other famous Americans. Daniel Boone was in and out of the city many times during his eventful journeys, and many of his ancestors are buried in the area. Before John James Audubon became famous as an ornithologist and painter. he operated a general store in Louisville. His deep love of nature was handed down to other Louisvillians. The city today studded with beautiful parks. Adjoining Seneca and Cherokee parks cover almost 700 They are within 20 blocks of the downtown section.

The adventures and misadventures of dynamite-fisted Mike Fink, a keelboater of the late 1790's and early 1800's have been popularized by Walt Wisney. Mike's name was well known in Louisville during that boisterous era.

Practically all of the great baseball stars of this century have stopped in Louisville to give specifications for bats. The Hillerich & Bradsby Co. developed the Louisville Slugger, a byword with major leaguers and little leaguers too.

The firm originally was engaged in wood turning, and got into the bat business by accident. In 1884, Louisville's most prominent slugger, Pete (the Old Giadiator) Browning broke his favorite bat. J. A. Hillerich, an avid fan, made Pete a new one. Browning got three straight hits with the bat, and the business was born.

On one of Babe Ruth's visits, Hillerich asked the Sultan of Swat how he liked his new custom-made bats. Babe spoke con-temptuously of them. But he kept them anyway. And those were the bats he used the season he hit his record 60 home runs.

Louisville has made its mark in many fields. But nowhere has its influence been as far-reaching as in the development of the church in America. In a new history of the diocese Father Jeremiah Smith, of Bellarmine college, says, "Bishop Flaget helped fashion the dioceses of Cincinnati, Detroit, Vincennes, St. Louis, and Nashville. His diocese was the proving ground for many eminent ecclesiastics, supplying more bishops for the infant church than any other see except that of Baltimore." Smith calls Marion County, original home county of the Louisville archdiocese, the cradle of the church in the West.

Defense Appropriations

EXTENSION OF REMARKS OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. BARR. Mr. Speaker, today we are preparing to vote on a defense appropriation bill in excess of \$39 billion. Surely any of us in this Chamber should be prepared to go back to his district and explain how we are spending this money. So far as I am concerned the 79-page report explaining this bill might as well have been printed in Turkish. It would tell me just about as much. I do get an idea from the bill, from the report, and from the debate as to what direction the Committee is pointing our defense efforts. I do not get much else.

This bill will probably cost my State of Indiana just about \$1 billion in fiscal 1961. It will cost my congressional district about \$200 million. On a very arbitrary basis and not taking into account corporation taxes, this figures out to about \$1,000 per family in Marion County, Ind. Surely it is not too much to ask to have an explanation of what is

What is the trouble? Why can I not understand it? Why can I not explain it? The answer is simply that the Department of Defense and the Appropriations Committee insist on an antiquated accounting system that General Grant would have understood beautifully, but which makes no sense in an age of missiles, satellites, and nuclear submarines.

Since General Grant's time a whole new concept of accounting emerged because the old cash systems just did not accurately describe industrial processes. Andrew Carnegie helped start a revolution in accounting about 70 years ago that is completely accepted by industry and that is completely understood by most of the men in my generation who have had a business career. This was called the cost accounting and accrual approach, and basically it was designed to draw a picture of a flow of production. This system was designed to portray the flow of production from prior years, into the present, and on into the future. It realized that the old system of splitting production up year by year just did not make sense.

Let us just take a look at some figures that will illustrate what I am trying to say. The Defense Department will start fiscal 1961 in July with \$61/2 billion in unobligated balances. This means simply that we in the Congress last year or in previous years gave them authority to enter into contracts, and they have not yet used all this authority.

The Defense Department will start fiscal 1961 with unexpended balances of about \$31 billion. This is the money due on contracts where the submarines, planes, or missiles have been ordered but

not yet delivered or paid for.

How can I go back to my district and say, "I voted for 39 billions of new authority to spend money for the Defense Department and yet they already have 31 billion they have not spent?" I could explain this on an accrual basis that showed the flow of money and production through Defense. I cannot explain it on this obligation system of accounting.

Nowhere in these 79 pages can I find the inventories of the armed services. I have not the vaguest notion how much stock they have on hand. I do not have any idea as to whether they will increase their inventories, decrease the inventories, or stay the same.

The 85th Congress passed a law by an overwhelming vote showing that the Congress wanted to get budgets on an accrual basis. That bill was H.R. 8002, now Public Law 759. So far the Defense Department and the Appropriations Committee have practically ignored this law. So today Mr. Speaker, I am voting "no" on this defense bill. I am not doing this in spite. I have a vast respect for Mr. MAHON and Mr. FORD. They are unquestionably two of the ablest Members of

this Congress. If the vote is close, I will change my vote to "aye," because I trust their judgment. But someone, some-Where has to start screaming about this archaic accounting. Someone must yell for figures that can be explained. I know of no better way to express my conviction than by a "no" vote.

Zachary Taylor

EXTENSION OF REMARKS OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Thursday, May 5, 1960

Mr. COOPER. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a resolution adopted by the Senate of the Commonwealth of Kentucky memorializing Gen. Zachary Taylor, 12th President of the United States, who lived and was buried at Louisville, Ky.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION MEMORIALIZING GEN. ZACHARY TAYLOR

Whereas the remains of Gen. Zachary Taylor, the 12th President of the United States, and his beloved wife, Margaret, lie entombed in a beautiful marble mausoleum in the Zachary Taylor National Cemetery on the outskirts of Louisville, Jefferson County, Ky., surrounded by the graves of veterans from the Spanish American War to the wars of

the present era; and Whereas a small group of patriotic Kentuckians under the leadership of Mrs. C. D. Greer of Louisville as chairman of the Zachary Taylor Memorial Committee of the Outdoor Art League of Louisville, in 1921, undertook the task of beautifying the Zachary Taylor Burial Grounds, and to make of them a fitting resting place for this beloved soldier in the fall of 1922. The first step toward the development of the project was undertaken by the planting of pin oaks, and on March 10, 1924, the Kentucky Legislature enacted a bill which was signed by Gov. William J. Fields, requiring the State of Kentucky to deed to Jefferson County that part of the Zachary Taylor Burial Grounds and road which had been deeded to the State in 1881 by Mr. George McCurdey, and on April 22, 1924, Jefferson County appropriated \$10,000 for the building of a roadway leading to the burial grounds. In June of 1924, the Honorable Maurice Thatcher, Member of Congress from Louisville and Jefferson County, introduced a bill in the Congress calling for an annual appropriation for the maintenance of the grounds, the bill was enacted by the Congress and signed by President Calvin Coolidge on February 24, 1925. Thus was established the Zachary Taylor National Shrine, and in 1926, the Kentucky Legislature enacted a bill which was signed by Gov. William J. Fields, appropriating funds for the purchase of 15 acres of ground sur-rounding the Zachary Taylor Burial Grounds, which was promptly purchased and deeded to the U.S. Government for the establishment of the Zachary Taylor National Cemetery, and was so dedicated on May 31, 1928. The dedicatory address was delivered by the Honorable Maurice Thatcher, Member of Congress from the Third Congressional District of Kentucky, who began his address with these glowing words:

"We are here today to dedicate this lovely

mausoleum which shall hold through the indefinite future, all that remains of the sacred dust of that splendid Kentuckian, that great American, that splendid soldier and citizen, Zachary Taylor, the 12th President of the United States"; and

Whereas Gen. Zachary Taylor, affectionately called "Old Rough and Ready" by the officers and soldiers who served with him out of respect for his courageous and energetic leadership, was born on November 24, 1784, in Montebello, Orange County, Va., and a year later migrated with his family to Jefferson County, Ky., and thus truly became an early Kentucky pioneer. In 1806, Gen. Zachary Taylor volunteered for the Army which he served for 40 years. the war with England broke out in 1812, Taylor, a major, was sent with 50 men to the defense of Fort Harrison on the Wabash River in Indiana, where on September 4, 1812, Indians led by Tecumseh furiously attacked and after 7 hours of hard fighting they were forced to fiee in disorder. As a colonel, Taylor in 1832 participated in the Black Hawk campaign, and for the defeat of the Seminoles in the Battle of Okeechobee in December 1837, he was brevetted brigadier general, and in 1840, General Taylor was promoted to command the southern division of the western department of the Army. As commander of the Army of the Rio Grande, General Taylor on March 6, 1846, was instructed to march to the Rio Grande, which was recognized by the United States as the southern boundary of Texas, but rejected by Mexico, and his first encounter with the Mexicans occurred on May 8, 1846, at Palo Alto, followed the next day by the Battle of Resaca de la Paloma. General Taylor defeated the Mexicans in this and the war with Mexico was begun. On September 21, 1846. General Taylor marched on Monterrey, the chief stronghold in northern Mexico. General Ampudia, the Mexican commander, proposed surrender and terms were agreed on, late in the autumn of 1846, General Santa Anna with a large army marched against General Taylor, who had taken a position near Buena Vista, on February 22, 1847. General Santa Anna made a demand upon General Taylor for surrender, which was promptly refused and battle ensued, and just before the battle, General Taylor addressed his troops, "Soldiers, I intend to stand here not only so long as a man remains, but so long as a piece of a man is left." By nightfall the Mexicans were fleeing in confusion. With a force one-fourth the size of the enemy, General Taylor had won his greatest victory and won the Mexican War. In 1848 General Taylor was elected President of the United State and was inaugurated on March 5, 1849. On July 4, 1850, President Taylor, while attending a ceremony connected with the building of the George Washington Monument, became ill and died on July 9, 1850, and shortly thereafter he was brought to Kentucky and interred in the Taylor family burial ground, now the Zachary Taylor National Cemetery, neglected and almost forgotten by the Nation until the Outdoor Art League of Louisville in 1921 initiated their plan for the establishment of a Zachary Taylor Na-

Whereas the 15 acres acquired by the State of Kentucky and deeded to the U.S. Government for the establishment of a Zachary Taylor National Shrine and Cemetery is now completely filled with the remains of servicemen and their families and 63 members of the Zachary Taylor family and 200 slaves, and unless additional acreage is obtained the cemetery will be permanently closed to servicemen and their families forever; and

Whereas the Zachary Taylor National Cemetery is an important link in the system of national military cemeteries in this country, and the closing of this cemetery will create and cause great hardship to the families of countless numbers of veterans and servicemen desiring to be interred in Kentucky, especially in the Zachary Taylor National Cemetery; the national cemetery should not only be enlarged for cemetery purposes but the home of Zachary Taylor 'Springfield," adjacent to Zachary Taylor National Cemetery, should be acquired for a national shrine and become a part of the Zachary Taylor National Cemetery thus making the cemetery and the home a national shrine; and

Whereas "Springfield" the home of Gen. Zachary Taylor for the first 23 years of his life, now 175 years old, built by General Taylor's father upon moving to Kentucky from Virginia, situated on Apache Road, in an excellent state of preservation, privately owned, the owners having indicated, as reported in an article appearing in the Louisville Courier-Journal on Sunday, January 24, 1960, that they would make the home available to the Government if assured it would become a part of a shrine, that this home stands near the old Taylor Burial Grounds and now the Zachary Taylor National Cemetery, and that Time magazine reported recently that the National Park Service is considering a systematic survey to insure that at least one residence for each President will be preserved: and

Whereas it appears that the memory of the life and exploits of Kentucky's greatest military leader and the 12th President of the United States is not well known to many of us and forgotten generally by the public, hence, it behooves us, in reverence and everlasting appreciation for the accomplishments of Gen. Zachary Taylor, for his leadership and services in making a great contribution to this Nation, which greatly helped in the formation of our United States as we have it today, and that the acquirement of his old home, "Springfield" for a national shrine and for the expansion of the Zachary Taylor National Cemetery, where he will be surrounded by honored veterans of the wars of the United States, will, indeed, be helpful and a fitting way of render-ing a needed service to our service men and women, and the veterans of our Armed Forces, and in preserving the memory of Gen. Zachary Taylor: Now, therefore, be it

Resolved by the Senate of the Commonwealth of Kentucky (the House of Representatives concurring therein):

- (1) That the foregoing resolution in re spect to General and former President of the United States, the Honorable Zachary Taylor, that the Congress of the United States of America be, and it hereby is, memorialized to consider appropriate legislation to acquire "Springfield," the former home of Gen. Zachary Taylor, and to acquire addi-tional acreage for the expansion of the cemetery.
- (2) That a bill has been introduced in the House of Representatives by the Honorable Frank W. Burke, Member of Congress from the Third Congressional District of Kentucky, and one in the U.S. Senate by the Honorable John Sherman Cooper, U.S. Senator from Kentucky, seeking expansion of the Zachary Taylor National Cemetery, assuring its expansion and permanent existence as a cemetery and shrine.
- (3) That the clerk of the senate be directed to forward a copy of this resolution to the Governor of the Commonwealth of Kentucky, the Lieutenant Governor, speaker of the house of representatives, Kentucky Members of the U.S. Congress, the chairmen of the House Military Affairs and Veterans' Affairs Committees of the U.S. Congress, a copy to the Secretary of Defense, Secretary of the Army, and the Secretary of the Interior, urgently soliciting their support in the accomplishment of the purpose of this resolution-the acquisition of "Springfield" and additional acreage for the expansion of Zachary Taylor National Cemetery.

Attested:

JOHN W. WILLIS. Chief Clerk of the Senate.

Questionnaire Response From Virginia's 10th District

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROYHILL. Mr. Speaker, in January of this year, I mailed a questionnaire to all the registered voters of the 10th Congressional District of Virginia. Of the 65,000 questionnaires mailed out, over 12,500, or approximately 20 percent, were completed and returned. This is an unusually high percentage of returns for a questionnaire of this type, but hundreds of citizens went even further and added extensive comments on the questions listed and upon other matters in which they were interested.

As I interpret the results of this questionnaire, I believe they indicate a progressive spirit accompanied by a clear

sense of fiscal responsibility on the part of my constituents in the 10th District. For example, the responses favored emphasis on a balanced budget in a ratio of more than $3\frac{1}{2}$ to 1. The ratio of those favoring a pay-as-you-go basis for interstate highway construction, even if it required a raise in the Federal gasoline tax, was greater than $2\frac{1}{2}$ to 1.

The people of my district also tend to prefer emphasis on solution of problems on a local level, if possible. This is indicated by an approximately 2½-to-1 response in the affirmative to the question: "Do you think more federally administered programs should be turned back to the States?" Also, 3 to 1 opposed the Federal Government taking over some of the financial obligation for construction and maintenance if it were accompanied by corresponding Federal control of the educational system, excluding Federal assistance to federally impacted areas

My constituents indicate an overwhelming preference for a strong foreign policy, but are relatively uncertain as to whether our present defense program is adequate. On the local plane, there is a strong preference for solution of water, sewerage, and other problems jointly affecting Virginia, the District of Columbia, and Maryland, by means of regional authorities.

I have been particularly impressed both by the number of people who took the time to add additional comments, sometimes running to several pages, and by the high quality of these comments. These comments have been invaluable to me in understanding the thinking of the people of my district, and in working out my own legislative program. All in all, the response to this questionnaire has been one of the most gratifying experiences of my life. It gives me a deep sense of pride to be the Representative in Congress for as intelligent and public-spirited a group of people as my constituents have shown themselves to be.

In the belief that my colleagues also will find the results of this questionnaire valuable, I am attaching a complete tabulation of the questions and the responses in percentages;

Canadian Sheet Peddles Smut in Jersey

EXTENSION OF REMARKS

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. WALLHAUSER. Mr. Speaker, yesterday I introduced House Resolution 519 and I respectfully request favorable consideration and support on the part of the Members. It requests the President to make appropriate representation to our friendly neighbor to the north, Canada, to enlist her cooperation in efforts to curb the importation into the United States of obscene or indecent printed material.

I am pleased to call to the attention of the Congress the excellent article by

Don Malafronte of the Newark (N.J.) Star-Ledger entitled "Canadian Sheet Peddles Smut in Jersey."

The article, which appeared on May 2, shows that our Nation, which is confronted not only with a tremendous commerce in pornography originating within our boundaries, now must guard against a new flow coming in from outside the country. I am sure that this vicious traffic across the friendly Canadian-American border is just as much abhorred by the overwhelming majority of our friends in Canada as it is by right-thinking citizens of the United States.

We are working tirelessly on the Postal Operations Subcommittee of the House Post Office and Civil Service Committee to put a stop to "pornography for profit."

The full text of the article by Mr. Malafronte follows:

Canadian Sheet Peddles Smut in Jersey (By Don Malafronte)

New Jersey newsstands are being flooded with a Canadian-printed weekly scandal sheet which serves as a clearinghouse for pornography and perversion.

From their hiding place across the border, the publishers use salacious photographs and suggestive headlines to attract readers.

But the real purpose for which the sheet exists lurks between the lines of the personal advertisements listed in a special center section. The advertisements have been labeled by Essex County Sheriff Neil Duffy as "the filthiest and most degrading stuff of its kind I've ever seen."

The advertisements, printed under the question "Lonely?" purport to be from persons interested in meeting new friends, but the ads are carefully written to attract sadists, masochists, and other degenerates.

"The paper unquestionably gives perverts a chance to contact other perverts," Duffy said.

The scandal sheet, called "The Confidential Tattler," is printed in Canada—like much other material aimed at degenerates—to

avoid more stringent United States publish-

ing laws.

However, a check with Canadian police and with government officials in Toronto, where the paper is printed, revealed "The Tattler is sold there under a different name-"The Confidential Flash.'

The papers are identical except for the

names and the personal ads.

Ironically, Canadian law apparently allows the printing of "The Tattler," but blocks its distribution because of the objectionable ads.

The publishers get around this block by printing the ads in a special section which is inserted only in the version of the paper headed for the United States.

They avoid direct interference from U.S. postal authorities through the simple expedient of trucking rather than mailing their

product.

Postal inspectors said, however, that they can move indirectly against "The Tattler" type of publication by keeping tabs on the mail transmitted in response to the twisted ads. If a lascivious act results from the ads, the post office can move in and make arrests.

According to Duffy, who has issued orders to keep the scandal sheet out of Essex, the advertisements in "The Tattler" invariably show the fine hand of either a seasoned degenerate or a veteran smut peddler.

Sadists and masochists recognize each other-or smut dealers who pander to their tastes by a code made up of key words or phrases mentioned in the ads, investigators in Duffy's office report.

Scores of persons have been tempted—some through boredom, some curiosity—to answer questionable ads, he said. There are

a variety of results.

In some cases there has been simply fraud. "The Tattler," for instances, requires \$1 be enclosed with every answer to "cover costs" of forwarding the answer to the advertiser.

In the past, law enforcement officers have found many lewd ads are out-and-out phonies planted by the paper. The incoming dollar is pocketed and no reply is ever made to the person who sent it in.

In other cases, Duffy pointed out, the person answering a suggestive ad found himself swamped by a wave of pornographic mail. The person's name had found its way to the mailing lists of the Nation's smut peddlers. It happens through the misuse of post office box numbers.

In a typical case described by a post office inspector, a smut peddler interested in developing a "special" mailing list took out a post office box and planted ads peppered with certain "key phrases" in a number of borderline publications. The peddler then waited for the publications to forward answers to the ads.

As the mail came into the post office box, the peddler compiled his new list. Unfortunately for him, one of the replies was planted by Federal officials and the peddler's reply

led to his arrest.

"It's all part of a classic and despicable pattern," Duffy said. "It's worse in personal advertisement-type come-ons because the person answering the ad may not only be opening the gates to a flood of filth, but may be putting himself in personal danger."

To the very young or the very foolish, an invitation to a meeting or a "party" received through an ad is strange and dangerous and exciting. Only the dangerous part, Duffy said, is likely to develop.

The world of perversion is populated not only by the perverted but by those who prey on the perverted. They are criminals to whom beating and blackmall are part of the job," Duffy said.

Duffy, who has raided a series of newsstands and bookstores which dealt in smut, said newsdealers themselves have helped keep Essex clear of "The Tattler."

The first editions of the sheet came down from Canada more than a month ago, he said, and was stocked by a number of dealers in Newark and suburban Essex.

The personal ad sections touched off a flurry of activity in Duffy's office, at the post office, and among the newsdealers themselves.

When the next edition came down, most dealers refused to handle it, Duffy said. It was the same way with subsequent editions, but the paper is still in evidence in New Jersey outside of Essex and in New York.

"I can only speak for this county," Duffy said, "but if "The Tattler' is sold here, the dealer is going to find himself in trouble."

Views of the Citizens of the First Congressional District of Arkansas

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. GATHINGS. Mr. Speaker, over the past several weeks it has been my policy to seek the views and observations of the citizens of the First Congressional District of Arkansas on a number of important matters currently under study by the Congress. To secure these views, I have prepared and mailed throughout the 10 counties of the First District a questionnaire and I have now tabulated the results of that poll.

At this time I should like to present the tabulation for the information of the Members, and should any Member care to examine the results further and to read some of the interesting comments and amplifications of the replies given by these citizens, it would be a pleasure

to have them visit my office.

I might add that this questionnaire was sent to all segments of the economy in eastern Arkansas-farmers, merchants, workingmen, teachers, public officials, and housewives. The results indicate that these fine citizens are well informed on public affairs and that they have reached definite opinions on these problems confronting the Congress.

One other word of explanation—the last question asked was "Who is your choice for the next President of the United States?" Following this question was a blank space and the citizen was invited to write in the person of his choice. No selection of candidates was offered, and the names written in were entirely those selected by the persons questioned.

I am grateful to these splendid citizens for favoring me with their views and comments on these questions, and I trust that Members will find them of interest and assistance in their own studies of these problems.

The questions and the tabulation follows:

- (1) Do you favor continuing military and economic aid to friendly nations? Yes, 76 percent; no, 18 percent; no opinion, 6 percent.
- (2) Do you favor our Government acknowledging Communist China? Yes, 11 percent; no, 83 percent; no opinion, 6 per-

(3) Do you favor a firm stand on the question of Berlin? Yes, 92 percent; no, 4 percent; no opinion, 4 percent.

(4) Do you believe we should defend Formosa? Yes, 69 percent; no, 15 percent;

no opinion, 16 percent.

(5) Do you favor the United States making grants to States for the building of classrooms in our schools? Yes, 30 percent; no, 67 percent; no opinion, 3 percent.

(6) Do you favor continued reliance on local and State support for teachers' salaries rather than Federal grants for this purpose? Yes, 78 percent; no, 20 percent; no opinion, 2 percent.

(7) Do you favor Federal legislation to tighten taxation of cooperatives? Yes, 69 percent; no, 27 percent; no opinion, 4 per-

(8) Should parents be given deductions on their income tax for tuition paid for children who attend college? Yes, 70 percent; no. 27 percent; no opinion, 3 percent.
(9) The Forand bill, H.R. 4700, would pro-

vide paid-up hospitalization, nursing, and surgical insurance for those drawing social security benefits, to be paid for by increasing the employee-employer payroll tax. Are you in favor of this proposed legislation? Yes, 26 percent; no, 70 percent; no opinion, 4 percent.

(10) Do you favor the Federal Government being given more authority to regulate radio and television programs? Yes, 36 percent; no, 56 percent; no opinion, 8 percent.

(11) Do you favor the enactment of a Federal fair-trade act for the benefit of our local merchants? Yes, 40 percent; no, 49

percent; no opinion, 11 percent.

(12) Do you believe we should reduce Government costs and maintain a balanced budget even if it will mean reduction of certain services to the people? Yes. 81 percent; no, 14 percent; no opinion, 5 percent.

(13) Who is your choice for the next President of the United States? Johnson, 21 percent; Kennedy, 10 percent; McClellan, 6 percent; Nixon, 6 percent; Symington, 5 percent; Stevenson, 5 percent; Humphrey. 3 percent; others, 14 percent; undecided, 30

Editorial Cites Need for Unification of Defense Establishment

EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. KOWALSKI. Mr. Speaker, as the sponsor of legislation to provide for full unification of our armed services, I am happy to bring to the attention of my colleagues an editorial in today's Washington Daily News.

As the editorial points out, unification is needed not only as an economy measure-which I believe would save our taxpayers several billions of dollars a yearbut also to make possible a more effective Defense Establishment.

Until we can halt interservice rivalries by establishing a unified defense force we shall continue to see waste, duplication, overlapping, and ineffectiveness. Only by unification can we best mobilize our defense potential into the most effective possible system.

Following is the editorial from today's Washington Daily News:

THE DEFENSE ISSUE OF 1960

There's little or no difference of opinion on the vital importance of national defense. It should be strong enough to discourage aggression, or defeat it if it comes. We must maintain this kind of defense, even though it raises taxes and deeply cuts living standards.

The questions for debate include the present adequacy of our defenses, plus the

wisdom of military expenditures.

As to expenditures, repeated testimony indicates great waste both in careless purchasing systems for necessary items and in the accumulation of unneeded or worthless materials.

A basic trouble is the effective resistance by our three military arms—Army, Navy, and Air Force—to a form of consolidation which would meet modern military needs.

As an economy measure, but far more importantly as an insurance of effective defense, we believe our next Congress and our next President must move vigorously to hait interservice rivalries as to military missions; must consolidate military purchases to stop waste and enforce price competition among suppliers; must establish unified authority over all services; and must make military promotions dependent upon service to country, rather than upon prestige gained in any one branch.

Somewhere in this area, in our opinion, lies the answer to continuing doubts as to whether we are properly armed—whether we have enough misslies, or the right kind; whether we are doing enough in space, etc.

Wherever we stand, we are not doing our best when branches of the service use part of their energies contesting against each other, instead of uniting against dangers from abroad.

In this highly technical field, the necessarily uninformed citizen never can have full confidence so long as rival generals and admirals stress their own weapons systems to the disadvantage of the others.

This country needs a Military Establishment with one aim, speaking with one voice, wearing one uniform. In listening to the candidates this fall, much attention should be paid to the understanding and conviction with which they discuss unification.

Oneonta Star Raises Legislative Questions Regarding Violence on TV

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. STRATTON. Mr. Speaker, many of us, I know, especially we who are the parents of small children, have become increasingly concerned over what appears to be the increasing percentage of programs on television, presented during the hours when children predominate in the audience, which involve violence in one form or another. As we consider in this body the kind of legislation required to correct some of the abuses recently uncovered in the television industry, I do hope we will also keep in mind the need to protect the impressionable minds of our children from any improper or unnecessary accumulation of violence.

In that connection I insert herewith a thoughtful editorial from the Oneonta

Star of May 2, 1960, which points up this vital consideration.

VIOLENCE ON TV PROGRAMS SHOULD BE DISCOURAGED

To the viewer who find television's overemphasis on violence boring and/or demoralizing, the news that the networks plan few changes in next season's schedules is hard to stomach. Even the FCC, usually cautious in its criticism, has warned the broadcasters that constructive action must be taken on this matter—and soon.

Apologists for the abundance of crime and shooting on westerns try to justify it on the basis of public demand. They also are fond of noting that there is plenty of violence in Shakespeare. But the ordinary western or crime program is a far cry from Shapespeake. It is somewhat akin to playing the murders of Macbeth with everything else left out.

Adequate Municipal Lighting Has Been Demonstrated as One Very Effective Deterrent to Juvenile Delinquency

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. STRATTON. Mr. Speaker, one of the problems which has caused great concern to all of us in recent months has been the problem of juvenile delinquency. Many proposals have been advanced, probably by most of us, for dealing with the problem. No one suggestion, of course, is likely to represent an adequate solution all by itself; but each may contribute to the gradual development of a program which can prevent this serious waste and erosion of our young people.

In the past, Mr. Speaker, I have suggested that one step that might be taken to cut down on the incidence of juvenile crime and delinquency within our cities would be to increase our municipal lighting facilities. I was especially gratified the other day to read an editorial from the New York Times of April 27 to the effect that New York City has now demonstrated that this approach is getting results in the Nation's largest municipality. As the representative of a district which includes one of the real leaders in the electrical industry, the General Electric Co., I am especially delighted to see that there is available to us one relatively simple device which can be so helpful in dealing with this urgent and disturbing problem.

The editorial follows:

LIGHT VERSUS CRIME

A city hall announcement reports that a drastic reduction in vandalism has resulted from peripheral floodlighting of 16 playgrounds. Installation of the new lighting was begun last fall, and by June 30 the city hopes to have the brighter lighting installed at 40 of the city. 782 playgrounds.

A survey by the park department finds that vandalism has been eliminated entirely from three newly lighted playgrounds on Staten Island. Conditions at three playgrounds lighted in Brooklyn improved 86 percent, three in Manhattan 81 percent,

three in the Bronx 50 percent and four in Queens 50 percent.

There is no doubt that better illumination in the city's parks and playgrounds and at various points in the streets can be an effective aid in fighting night crime. The city is wise to push forward its street and park lighting program. At the same time, Mayor Wagner knows that there is no real substitute for additional policemen as a sure-fire crime deterrent; more patrolmen should also be provided.

Harry Alpert on the Government's Growing Recognition of Social Science

SPEECH

OF

HON, CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. PORTER. Mr. Speaker, most of our effort, both private and public, goes to advance our knowledge in the nonhuman sciences and not where we most need it, namely, the various social sciences.

My friend, Dr. Harry Alpert, dean of Graduate School and professor of sociology at the University of Oregon, writes encouragingly about "the Government's growing recognition of social science" in the January 1960 issue of the Annals of the American Academy of Political and Social Science.

We're making some progress, but congressional confusion—

Says Dr. Alpert-

regarding social science has by no means been completely eliminated. Negative attitudes still persist and need to be reckoned with.

Under a previous consent I am including the text of his article:

THE GOVERNMENT'S GROWING RECOGNITION OF SOCIAL SCIENCE

(By Harry Alpert)

Abstract: Important new developments have strengthened the standing of the social sciences in the Federal Government. Historical analysis emphasizes the recency of the Government's recognition of the national contributions of social science research. Significant progress has been made despite critical fluctuations. Five factors contributing to the more favored governmental position of social science research are (1) changing congressional attitudes; (2) acceptance of the social sciences at the White House level; (3) inclusion of the social sciences as part of broad definitions of scientific disciplines; (4) the general post-sputnik interest in American education; and (5) the screen with the social science and the science of the social science and the science of the sc and (5) the concern with redressing imbalances in American higher education. Research support for the social sciences is growing but a critical shortage remains in funds for fellowships and assistantships-The social sciences approach the next decade in a climate of acceptance and encourage-

"They never had it so good." This vernacular phrase may startle grammarians, but it describes accurately the present position of the social sciences with respect to support and interest by the Federal Government. As the result of important new developments which have served to consolidate the standing of the social sciences in the Fed-

eral Government, there is every likelihood that the 10 years from 1950 to 1960 will be viewed as the "March" decade of the social sciences. March, according to folk weather lore, comes in like a lion and goes out like a lamb. Similarly, the 1950's may be said to have come in with a roaring antipathy to the social sciences and to be departing with attitudes of positive interest and quiet acceptance.

That it has taken so long for the Federal Government to develop a modus vivendi with the social sciences is quite ironical, for its involvement in social research was written into the U.S. Constitution. By providing for a decennial census and making this count of the population the basis for representation in Congress, our Founding Fathers made a social science activity the ultimate basis of political power.1 In fact, the gathering, analysis, and dissemination of social and economic statistics has continued to be one of the three major ways in which the Federal Government relates itself to the social sciences. The other two are: exploitation and utilization of the findings and results of social research; and direct support of social sciences through the intramural conduct of social science re-search in the Federal Government's own research laboratories and units or through contracts and grants for extramural social science studies at colleges and universities, other nonprofit organizations, and business and commercial establishments.

PRE-WORLD WAR II STATUS

Up to World War II, the role of the Federal Government in the social sciences consisted largely of the first two of these functions, namely, producing mass statistical series and exploiting social science findings produced outside of the Government. During the 19th century, the social sciences played a modest but effective role in the development of Government powers and programs. Don K. Price has called attention to the contribution of economic and statistical series in the growing development of the regulation of business, as well as to the impact of John R. Commons' institutional economics on labor legislation and of Charles Francis Adams' studies on the regulation of railroads.

Even as late as 1940, the Government's direct activities in the social sciences were still predominantly confined to the collection and analysis of statistical information. However, the roots of later developments in the Government's social science programs were discernible in the 1920's. The appointment by President Hoover of a research committee on recent social trends provided significant White House endorsement of a major social science enterprise. Further impotus for governmental support of the social sciences came in the thirties from the practical programs of the New Deal. outstanding example was the Department of Agriculture's Division of Program Surveys which assumed the leadership in introducing the sample interview survey as a basic social science tool and as an instrument of governmental policy.

IMPACT OF WORLD WAR II

But the defense mobilization period and World War II itself were undoubtedly the major catalytic events leading to the expansion of the Federal Government's programs of social science research. The events of the war on both the military and civilian fronts and the problems of postwar adjustment as they affected the nation and the individual provided the social sciences with dramatic opportunities to demonstrate their practical value and essential role in modern society. A brief review of illustrative uses of social science during World War II lists eight ex-

amples of problem areas in which important social science research accomplishments were achieved: soldier orientation and morale; analysis of command problems, particularly among Negro troops; more efficient use of psychiatry; venereal disease control; analysis of the American soldier's problems of adjustment, combat performance, and response to mass communications; evaluation of Japanese morale; estimation of war production requirements; and regulation of prices and rationing.4 To this list may be added the media analysis activities of the Office of War Information and the Foreign Broadcast Intelligence Service; the propaganda studies of the Library of Congress, Department of Justice, and various intelligence agencies; the surveys of war bond purchases and other evaluations of the effectiveness of drives; the testing of the public comprehension of governmental information materials; and research on national character and other problems related to a better understanding of the behavioral characteristics of foreign peoples.

The immediate postwar period of demobilization witnessed the dismantling and disappearance of many of these wartime programs. Dissatisfaction with the limited accomplishments of some of these social science activities was expressed, largely as the result of the disillusionment which set in when excessive promises of achievement were unfulfilled. Social scientists became their own worst enemies by promising too much, too fast and accepting funds in excess of what could be effectively expended. Moreover, the social sciences have suffered from their minority group status among the scientific disciplines. Like minority groups on the labor market, they are subject to the rule of "last hired, first fired." Thus, many social science programs were speedily demobilized because of their relatively low priority and because of a failure to appreciate their long-range implications and future contributions.

Nevertheless, significant efforts were made to continue programs which had demonstrated their effectiveness during the war. The Office of Naval Research, created shortly after World War II, supported research on manpower problems, personnel and training, group morale, organizational structure, and related social psychological areas. The Army continued, in abbreviated form, its studies of opinions and attitudes of American soldiers. The new Department of the Air Force. proud of the accomplishments of the Aviation Psychology Program, organized units in to undertake and support research in problems of selection and training, manpower, leadership, human relations and morale, and psychological warfare. When the Re-search and Development Board was established in the Department of Defense it included a Committee on Human Resources.

However, the skepticism and disenchantment which many of these programs engendered did not provide a favorable environment for their persistent growth and development. There set in, consequently, a period of recurring ups and downs, of "acute, and sometimes critical fluctuations," as Leonard S. Cottrell, Jr., has described it.⁵ A and sometimes critical fluctuations," "starts and fits" pattern became evident: An activity got started and then was curtailed or discontinued when some Congressman or general threw a fit. The Division of Research of the Housing and Home Finance Agency, the excellent survey research unit of the Veterans' Administration, the Air Force's Human Resources Research Institute at Maxwell Field and its Personnel and Training Center at Lackland Air Force Base were but a few of the research units which experienced difficulty.

Despite the on again, off again character

Despite the on again, off again character of some of these programs, the long-term trend was toward increasing appreciation of the social sciences as valuable national assets. As the postwar pattern of extramural support developed, the social sciences, too, received encouragement, although not at the same rate and magnitude as the physical and life sciences.

THE "MARCH" DECADE

The "March" decade, 1950-60, will perhaps be viewed historically as the turning point in Federal Government recognition of the social sciences. The full measure of the change from the "lion" to the "lamb" phase of this decade may be observed in comparing the National Science Foundation Act of 1950 with the National Defense Education Act of 1958. In the former legislation, the social sciences are included only on a permissive basis and are referred to only as other sciences. In the 1958 act, the section deal-ing with graduate fellowships mentions no limitations whatsoever with respect to dis-ciplines. Moreover, a separate title provides for research and experimentation in more effective utilization of television, radio, motion pictures, and related media for educational purposes. This act also recognizes the importance of improving statistical series in the field of education.

Note must be taken, also, of other evi-

Note must be taken, also, of other evidences of changing attitudes toward the social sciences, such as the establishment, in December 1958, of an Office of Social Sciences within the National Science Foundation; the appointment, in the spring of 1959, of a sociologist, President Logan Wilson of the University of Texas, as a member of the National Science Board; and the expansion of the social science research activities of the Department of Health, Education, and Welfare.

In the vernacular of the boxing ring, it may be said that the social sciences were, for several years definitely "rocky and punch drunk," but were still on their feet when the fight was over. They have survived Cox committee and Reese committee investigations. They have endured parlah status and innumerable reorganizations. They have weathered appropriation storms which threatened to cut off funds for studies of child-rearing practices, mother-love among lambs, population dynamics, message diffusion, and other projects which became the pet peeves of individual legislators.

MAJOR DYNAMIC FACTORS

In attempting to assess the major factors that account for the more favorable position in which the social sciences find themselves at the end of this decade, I am able to identify five important considerations: (1) Changing congressional attitudes; (2) acceptance of the social sciences at the White House level; (3) inclusion of the social sciences as part of broad umbrella definitions of scientific disciplines; (4) the general post-sputnik interest in American education; and (5) the concern with redressing the imbalances in education which stemmed from the earlier, almost exclusive, emphasis on natural science and mathematics. Brief comments on each of these five factors follow:

CHANGING CONGRESSIONAL ATTITUDES

In his report on the crucial Senate debate in 1946 which preceded the vote to exclude from the then pending bill to establish a National Science Foundation the specific provision which created a Division of Social Sciences, George A. Lundberg concluded that the Senate thought of the social sciences as at best "a propagandist, reformist, evangelical sort of cult." The unfortunate phonetic confusion of social science with socialism reinforced such viewpoints. Just a few years later, however, more positive attitudes were being expressed. In 1953, the Cox committee, in its final report, noted the special importance of the social sciences in the contemporary world. It stated:

"It is entirely possible that in a time when man's mastery over the physical sciences threatens him with possible extermination the eventual reward from the pursuit

of the social sciences may prove even more important than the accomplishments in the physical sciences.*

Other important turning points in congressional expressions toward the social sciences were the vigorous statements by Senator Estes Kefauver's Subcommittee on Juvenile Delinquency in 1955, 1956, and 1957; the 1955 recommendations of Representative RICHARD BOLLING'S Subcommittee on Economic Statistics of the Joint Committee on the Economic Report; Senator HUBERT HUM-PHREY'S report to the Senate in 1957 of his experiences in the Middle East; and speeches by Senator Wayne Morse, Representative Charles O. Porter, and others." This year neither House of Congress raised any objections to the National Science Foundation's request for \$2 million for support of basic research in the social sciences in fiscal year 1960, even though this represented a considerable increase over the \$850,000 appro-priated for this purpose for fiscal year 1959. (The actual budgetary allowance for social science research in the National Science Foundation for fiscal year 1960 is \$1,600,-000.1

This is an encouraging picture, indeed. But congressional confusion regarding social science has by no means been completely eliminated. Negative attitudes still persist and need to be reckoned with.²⁰

WHITE HOUSE INTEREST

The White House, too, has shown increasing interest in the support of the social sciences. In his state of the Union message delivered on January 9, 1959, President Elsenhower expressed his desire to undertake a systematic study of American values, goals, and social trends, comparable to the earlier Hoover committee study.

The objective, President Elsenhower said, would be "the establishment of national goals that would not only spur us on to our finest efforts but would meet the stern test of practicality." He hoped that this new study would be concerned, among other things, "with the acceleration of our economy's growth and the living standards of our people, their health and education, their better assurance of life and liberty and their greater opportunities." He noted that the report of Hoover's Recent Social Trends Committee "has stood the test of time and has had a beneficial influence on national development." Here, indeed, is a significant compliment to social science.

And in its report on "Strengthening American Science," issued December 27, 1958, the President's Science Advisory Committee included social psychology among the scientific disciplines for which a strong case could be made for intensifying the Nation's scientific effort. The committee stated, "And advances in social psychology might help to reduce tension and conflict at every level of human intercourse—in our communities, in business and industry, in Government, and even among nations." If Furthermore, as previously noted, President Eisenhower has appointed a social scientist to the National Science Board. This policy-determining body for government science on January 23, 1959, adopted the following statement:

The National Science Board recognized the importance, as well as the complexity and difficulty, of research in the social sciences. It is clear that the intellectual, economic, and social strength of our Nation requires a vigorous approach to social problems, with scientific techniques of study making their maximum contribution.¹²

PROTECTIVE UMBRELLAS

The social sciences have prospered best in the Federal Government where they have

Footnotes at end of speech.

been included under broad umbrella classifications of the scientific discipline such as agricultural sciences, military sciences, medical sciences, and health sciences. Under such umbrellas and in close company with scientific areas which enjoy the prestige and status of biological or physical sciences, the social sciences have enjoyed a protection and nourishment which they normally do not have when they are identified as such and stand exposed, naked and alone.

Agricultural research has been heavily supported by the Federal Government from its very inception. Quite early the concept of agricultural sciences was broadened to include not only biological research but agricultural economics and rural sociology as well. In fact, for many years the Depart-ment of Agriculture's Bureau of Agricultural Economics was internationally famous for its leadership in significant areas of social and economic research. Although from time to time specific social science projects of the Department of Agriculture have suffered congressional attack, there has been little question of the legitimacy of the inclusion of social research in the scientific program of the Department. In fact, one appropriation committee, with remarkable indifference to the distinction between biological and social science research, once included, in a list of fields for which research funds were not to be expended, the orchids of Guatemala, the flora of Dominica, child-rearing practices, research methodology, and population dynamics.

The medical sciences and health sciences rubrics have also provided generous hospitality to the social sciences. Social science research projects are given careful and sympathetic consideration by at least five study sections of the National Institutes of Health; Behavioral sciences, hospital facilities research, mental health, nursing research, and public health research. Social scientists serve as members of these study sections as well as on several other committees of the National Institutes of Health. The National Institute of Mental Health's Laboratory of Socio-Environmental Studies is outstanding in the quality of its research program.

Research undertaken by the Military Establishment in relation to the defense needs of the Nation develops strong immunities to congressional or other attacks if military authorities certify its importance to the mission of the Department of Defense. Despite the ups and downs previously referred to, the Army, Navy, and Air Force have arrived at a realization of the importance of basic research in the social sciences. The Office of Naval Research includes a Psychological Science Division. The Air Force has established a behavioral sciences program in its the testimony of an Army general presented recently before an appropriations committee:

"We can never afford to neglect basic research and the Army wants to do more of it whenever we find applicable projects to further this increase of scientific knowledge. Such research is not confined to the physical sciences. Investigation of the social sciences to help us to utilize more effectively our manpower and insure man-machine compatibility with complex engines of war being developed is vital. Should we neglect these important considerations we only aggravate the trend in which the physical sciences are outstripping the social sciences and may, in time, reach a point where the machine may destroy its maker." ¹²

These are the words of Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army.

Another important umbrella for the social sciences is Operations Research. The various operations research units supported by the Federal Government have invariably included a social science component.

IMPACT OF SPUTNIKS

The social sciences have not been indifferent to the whir of the Russian sputniks and have directly felt the impact of these successes in space technology. It was recognized that Soviet Russia's accomplishment was not only the result of advances in science and engineering but also the consequence of a social system that was capable of making and carrying out significant decisions. Interest developed in studies of the social, economic, and political implications of the space age. It became imperative that we keep ahead of the Russians in the social science fields. For this reason, Vice President RICHARD M. NIXON encouraged the formation of a committee on national support for behavioral science which reported social science needs to the President's Scientific Advisory Committee. Substantially increased appropriations were made available to the National Science Foundation, and in the National Defense Education Act of 1958. Congress officially declared as national policy the doctrine that the defense of this Nation depends upon the mastery of modern techniques developed from complex scientific principles, and, as well, upon "the discovery and development of new principles, new techniques, and new knowledge."14

REDRESSING IMBALANCES

For a time, it looked as if only the natural sciences and mathematics would be the beneficiaries of the increased responsibilities of the Federal Government toward research and education. Programs were quickly organized to improve the quality of science teaching, to train more scientists and engineers, and to intensify the pace of research in the physical, mathematical, and biological sciences. It became evident, however, that the neglect of other areas of scholarship and learning would spell national disaster. The Government's difficulties in international relations led to intensified interest in language study. Soon voices were heard calling attention to the need to redress the imbalances in American education which a predominant concern with the natural sciences and engineering was creating. Cognizance of this requirement is found in the newly released report of the President's Science Advisory Committee on "Education for the Age of Science." This report stresses the fact that, "Today in America we need a very wide variety of human talents." It goes on to urge that "a proper balance be maintained in our educational offerings." # To achieve such a balance we must encourage intellectual leadership in the humanities and social sciences as well as in the natural sciences and mathematics.

HEALTHY PROGNOSIS

The social sciences thus face the 1960's in an atmosphere of encouragement and with the active support of influential well-wishers. Research funds are becoming more plentiful. The Federal Government alone will soon be spending in the neighborhood of \$60 million a year in support of the social sciences. This estimate does not include the \$100 million or so that the decennial census of 1960 will cost.

MORE FELLOWSHIPS NEEDED

A major problem, however, remains. The most urgent need of the social sciences is expansion of the pool of available trained, specialized manpower. Recent studies have indicated that the length of time required to obtain the Ph. D. degree is strongly influenced by the availability of financial support to graduate students in the form of assistantships and fellowships. It is here that the social sciences, and humanities, too, are most seriously disadvantaged vis-a-vis the natural sciences. The major bottleneck in the advancement of the social sciences is not research funds, but fellowship and scholarship opportunities for basic and ad-

vanced training. If the social sciences are to fulfill the general public's expectations of them, they must double, at least, the number of trained practitioners. To make the trainof trained practitioners. To make the training process more productive and more effective, however, additional fellowships and other types of financial support for training are an imperious and critical necessity. Title IV of the National Defense Education Act has been extremely helpful in this regard. Almost a fourth (23 percent) of the first 1,000 graduate fellowships were awarded in the social sciences. The various training programs of the National Institutes of Health also provide valuable opportunities for social science education. But more needs to be done. The National Science Foundation, for example, has the basic legislation to include the social sciences within its education in the science program. It also has reasonably adequate funds for training and education. It has broadened its conception of the social sciences in its research support program. Only administrasearch support program. Only administrative nearsightedness prevents it from giving the social sciences, broadly conceived, their deserved place within the various program activities of its Division of Scientific Personnel and Education.

COMPLACENCY TO BE AVOIDED

We can be proud of the achievements of the social sciences in government, but we cannot afford to be complacent. Certain past mistakes must be avoided: premature promises, excessive expectations, hasty growth, disastrous indifference to the political process, unwarranted impatience with the administrative processes of justification and review, and lack of concern with the Public image of the social sciences. By careful planning and effective operations a solid basis can be established for future growth.

Advance in the social sciences will depend most immediately on what in fact social scientists do: how well they teach at the undergraduate level, how well they communicate with the general public, how effectively they respond to calls from industry and government for help in resolving practical problems, and how much they devote to fundamental research. It depends also on their willingness to cultivate patience and humility.18 Charles Dollard has well defined the problem: "The long-term contract of the social scientist with society is not to perform miracles but to bring to the study of man and his problems the same objectivity and the same passion for truth which have in the past given us some understanding and control of the physical world." 19

Survey of Democratic Voters in West Virginia

EXTENSION OF REMARKS

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, May 5, 1960

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the results of a poll conducted by Mr. Charles D. Gatson of Big Chimney, W. Va. I also ask unanimous consent to include the covering letter which I received from Mr. Gatson, together with his comments on the poll.

There being no objection, the survey and letter were ordered to be printed in the RECORD, as follows:

BIG CHIMNEY, W. VA., May 2, 1960.

Hon. ROBERT C. BYRD,

U.S. Senator, State of West Virginia, House of Senate, Washington, D.C.

DEAR SENATOR: The enclosed survey was my own idea and I thought it would be of some value in looking at it as a pulse-beat indication from this area.

The résumé is fairly well explanatory. As you will notice, the majority of the contacts were made in person. I did not pick out acquaintances or friends, necessarily, for the purpose of question. The responses, in general, indicate that a majority do want a Democrat in the White House next year.

It is my firm hope that Mr. Johnson is the Democratic nominee because he represents, in my opinion, the fullest and best qualified candidate we could have for the general election. I feel further that the State of West Virginia would give him a great majority.

While in Washington last Saturday, I had this with me but since you were not in the office, decided to bring it back and mail it today.

If there are any questions which I might answer not answered in the résumé, please let me know and I'll try to answer them. Best regards.

CHARLES D. GATSON.

APRIL 25 THROUGH APRIL 29, CHARLESTON (KANAWHA COUNTY), W. VA. Résumé of survey

Total people contacted	_ 474
DemocratsOther (90 percent Republican)	- 269 - 205
Phone call contact Personal contact Percent in favor of Johnson (Demo	_ 392
crat) Percent against Johnson (Republican) Percent undecided	_ 34
"Yes" count. "No" count. "Undecided" count. Communities surveyed. (all in Ka	_ 270 _ 161 _ 43
nawha County) Chesapeake Charleston Clendenin So, Charleston	- 31 - 317 - 29
Dunbar Nitro St. Albans	_ 20 _ 16
Unsolicited responses on question:	

- 1. Don't know enough about him,
- 2. Why doesn't he announce?
- If he's a Democrat, he's OK.
- 4. I like Stevenson better right now. 5. I'm in favor of Symington today.
- 6. Is he serious?
- 7. Does he consider West Virginia as a part of the South? I hope so.
- 8. If Nixon is his opponent, Johnson will win.
- 9. After 7 years of stagnation, we need him badly.

Comment: This "pulse-beat" survey indicates to me that Mr. Johnson could very reasonably get sufficient votes in this area for a substantial majority. On about half the contacts made, the person approached would bring up other questions which I did would bring up other questions which I did not attempt to answer, only acknowledge. People are dissatisfied with the local Gover-nor and usually had negative remarks to make about the President's administration. I would say the trend is decidedly more Democrats to vote this year than in 1956 or

General note: Neither KENNEDY nor HUM-PHREY has made too much impression for the general election. More expressed themselves in favor of Humphrey than Kennedy. Best estimate-5 to 3.

Point 4 Program for American Indians

EXTENSION OF REMARKS OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. McGOVERN. Mr. Speaker, during my first term in the Congress I sponsored legislation calling upon the

Federal Government to establish the kind of economic, technical, and educational assistance for American Indians that is made possible for underdeveloped countries under the terms of the point 4 program. I have continued to push for legislation of this type.

Recently a respected fellow South Dakotan, Mr. Henry Black Elk, Jr., of Pine Ridge, S. Dak., has written me regarding this proposed legislation. Because of the excellence of Mr. Black Elk's letter, under unanimous consent I include it at this point in the RECORD:

PINE RINGE, S. DAK., March 13, 1960.

DEAR CONGRESSMAN McGOVERN: Thank you for your letter and your desire to have my views on your bill. I have been busy moving back to Pine Ridge from Rosebud and have not had time to take care of my correspondence until just now.

Your bill for an Indian point 4 program certainly is what we need on the Pine Ridge Reservation and quite conceivably on most other reservations. I am urging serious consideration of the bill in the meetings that I attend on the reservation.

Recently a survey of the reservation economy was completed by representatives of MIT. Another similar survey is being contemplated by the Rural Sociology Department of South Dakota State College. I am hopeful that the findings of these surveys will provide basis for your bill.

In my talks with community and other leaders the sentiment that they express most is a Federal program that is designed to help us help ourselves. This, of course, means money and technical guidance and goes so far as to include the bringing about of industry. Many leaders feel, and rightly so, that present day Federal regulations governing Indian lands are more detrimental than good. The unit lease system plus recent policies of the BIA in tribal member land purchase are the flies in the milk.

In other words, termination is still the object of the BIA. It is my firm belief that termination should not and cannot be a unilateral thing in Indian affairs. First, there should be an all-around rehabilitation of the Indian people on a long-range basis. If the job is done slowly and thoroughly, there would be no need for a unilateral termination policy because then the Indians will be ready to fit into the pattern of American life.

Your bill, if it becomes law, will certainly contribute to this objective of the Oglala Sloux. Of immediate value of your idea lies in community and resources development. Apathy is one of the geratest ills of the Sioux and is the end result of lack of opportunity in the communities. Were there a means or tool such as you propose, the Indians will then begin to take interest in their lives, their communities, because they would have something to work with, something to work for.

It is my hope and that of many others that you do everything possible to get your bill enacted into law. If there is any way in which I can help, please let me know.

Very truly yours,

HENRY BLACK ELK, Jr.

A Case for Scuttling Regulatory Agencies

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. ULLMAN. Mr. Speaker, my colleagues will be interested in the following searching commentary on the regulatory agencies. It appeared in Sunday's Washington Post and clearly states the case for considering this technique of implementing public policy as a failure: [From the Washington Post, May 1, 1960] A Case for Scuttling Regulatory Agencies (By Peter H. Odegard, professor of political science, University of California)

Under pressure from civil service reformers, city managers, zealots, and political technocrats, we have for many years been engaged in a crusade to separate politics from administration. For a variety of reasons, we seem to believe that political sterility in administration is a sign of civic virtue and scientific management.

We ought, by now, to know that such notions are illusory if not mischievous. Administration is not something apart from politics but an integral part of a unified, if complex, political process.

Unless politics is recognized as essential and ineradicable in the total administrative process, we run the risk of creating a politically sterile bureaucracy responsible not to the President and the people but to special interests which know what they want and how to get it.

THE FOURTH BRANCH

A good example of all this can be seen in the so-called independent regulatory commissions. In establishing these agencies, Congress has sought to immunize them from politics.

This it has done by placing them outside the executive establishment, limiting the number of commissioners who may be appointed from any one party, giving them overlapping terms longer than the 4-year term of the President and by limiting the President's power to remove them for any reason other than "inefficiency, neglect of duty, or malfeasance in office." The result has been to create a politically irresponsible "headless fourth branch of Government."

Theoretically, this attempt at political immunization is justified on the ground that the commissions have not only administrative or executive duties but also legislative and judicial responsibilities as well. But this, it seems to me, should argue for more, not less, political responsibility.

In any case, the commissions are by no means unique in this respect. Literally thousands of administrative officers decide cases or controversies and hence exercise judicial or quasi-judicial power. They issue rules or regulations to which penalties for violation are attached and hence exercise legislative power.

Mean is the official and humble indeed is his station who does not in some measure combine these powers in the performance of his duties. If the argument for independence were extended to all officials who exercise quasi-judicial or quasi-legislative powers, the result would be to undermine the democratic principle that administrative officials, including bureaucrats called commissioners, must be politically responsible to the President, who as our elected Chief Executive represents the people.

AN AMAZING DOCTRINE

Yet the Supreme Court in the Humphrey decision announced the amazing doctrine that the Federal Trade Commission, and presumably other independent commissions, were not to be "subject to anybody in the Covernment but only to the people of the United States." Just how a body of appointive officials can be responsible to the "people of the United States" except through the elected officials who appoint them, the Court did not say.

It did, however, say that the Commission was to be not only nonpartisan but non-political, "charged with the enforcement of no policy except the policy of the law."

Unfortunately, the independent commis-

sions are called upon to enforce laws which are as vague and ambiguous as can be found. They are called upon to suppress "unfair methods of competition," "unfair or deceptive acts or practices in commerce," "misbranding" and "false and misleading advertising," and to promote the "public interest, convenience, and necessity."

These are political terms of clearest hue. In carrying out policies of this kind, the commissions are up to their ears in politics. Yet, according to the Court, the duties of the FTC "are neither political nor executive, but predominantly quasi-legislative," and, "like the ICC, its members are called upon to exercise the trained judgment of a body of experts 'appointed by law and enforced by experience."

EXPERTS FOR PUBLIC

What kind of experts the commissioners are expected to be is not made clear. Presumably, they should be experts in how business, the communications, transportation, and power industries, the stock market and so on can best promote the general welfare.

More specifically, they are required to promote free and fair competition, help to prevent monopoly and restraint of trade, protect investors from palpable fraud and misrepresentation in the securities markets, regulate rates and enforce regulations to insure safe and efficient transportation, license radio and television stations in the "public interest, convenience and necessity" and license and regulate power developments subject to Federal jurisdiction.

In their pursuit of these vital objectives, the commissions are endowed with a large measure of discretion. But it is a discretion to be exercised at all times toward affirmative goals.

The commissions were not established primarily as quasi-judicial bodies, to decide such cases or controversies as might come before them. "Regulatory agencies," says Clifford Durr, a former Federal Communications Commissioner, "are not judicial bodies, quasi or otherwise, and the sooner the judicial labels with which they are constantly plastered * * are soaked away, the better the chances are that they will get back to doing the job they are supposed to do.

"The very purposes for which they were created to serve make them partisans. They were brought into being not to adjudicate the conflicting rights of adversary parties but to promote the public interest, convenience and necessity."

Nor were they created to protect American business enterprise from the rigors of competition. On the contrary, it is their responsibility to promote competition, to foster and encourage more efficient and equitable policies and practices and to seek out, expose and, where possible, penalize those who between the provided representations.

out, expose and, where possible, penalize those who betray the public interest.

In practice, however, the independent commissions have not been bold champions of the public interest. Instead of militant and creative policies to stimulate competition, raise standards, reduce prices and promote economy and efficiency, they defend the status quo, discourage competition, initiative and enterprise and provide only indifferent leadership in protecting the public from extortion, deception and even fraud.

Too often the so-called independent commissions appear to be agencies, not of the public but of the powerful interest groups they are appointed to regulate. In its solicitude for the railroads, the Interstate Commerce Commission has for many years sought to discourage competition in interstate transportation. Its members, attorneys, economists, and technicians have "developed such a close and continuous association with representatives of the carriers as virtually to form a single functional group," says Walter Hamilton in "The Politics of Industry."

"Free-for-all competition," said Joseph Eastmen, for many years the guiding spirit of the ICC, "has never worked successfully. It has been tried and found wanting." Is it any wonder that Richard Olney, Cleve-land's attorney general, should have de-scribed the ICC as "a barrier between the railroad corporations and the people"? The Commission, he said, in a letter to a railroad president, "satisfies the public clamor for Government supervision of railroads at the same time that that supervision is almost entirely nominal."

Despite the ICC's solicitude, however, the condition of the railroads has steadily deteri-

Orated.

"Except for highly specialized pipelines, the railroads are still far and away the most efficient of our land-transport systems. their share of the business has dropped from 65 percent to 48 percent in the last decade, is still dropping. This trend, fatal to an industry with such high fixed costs, is mainly the result of Government regulation," said Life magazine, March 3, 1958.

The Civil Aeronautics Board has sought not so much to promote safe and economical air transportation as to protect the established airlines and "to guard against the entrance of newcomers into the industry. The so-called nonscheduled lines, to which, incidentally, we owe coach service with its lower fares, have been systematically

smothered.

The recent radio and television scandals have served to highlight not only the incompetence but the inadequacy of the FCC in helping to develop an efficient, economical, and respectable communications industry. Except for brief periods, the FCC has re garded itself as a quasi-judicial licensing body with little or no responsibility for an affirmative program or policy to serve the

"public interest, convenience, and necessity." The 1946 Blue Book on "Public Service Responsibilities of Broadcast Licensees" and the Mayflower decision of 1948, which called for an increase in the volume and quality of programs of local origin, live music, and public service, caused consternation in the radio industry. A small army of professional hucksters stumped the coun try and swamped Congress with protests. In the face of this assault, the FCO beat a retreat and since World War II has again become the captive of the communications, ad-Vertising, and entertainment industries.

Notwithstanding a Supreme Court decision

that it has power to do so, the Federal Power Commission, out of its solicitude for the natural gas industry, has for years de-clined to regulate the prices charged by producers of natural gas sold in interstate commerce. Moreover, members of the Commis-sion have joined with paid lobbyists of the gas industry in actually urging Congress to exempt these "producers and gatherers"

from provisions of the 1938 law.

In August, 1955, the FPC licensed the Idaho Power Co. to construct a three-dam Power system in Hells Canyon on the Snake River. This license, plainly revealing the po-litical bias of the Commission against public power development, was issued not only in disregard of more efficient alternative plans, but also in disregard of the recommendations of its own official examiner.

Illustrations could be multiplied to show that the image of the independent commissions as nonpartisan, nonpolitical, quasijudicial bodies exercising "the trained (and unbiased) judgment of a body of experts" is, to say the least, idealized. Nor is this sur-Prising. It is foolish to assume that we can Insulate from politics administrative agencles upon whose decisions powerful economic and political interests depend.

Literally billions of dollars often hang on the decisions of the so-called "Big Six" Commissions—the FTC, FCC, ICC, FPC, SEC, and CAB. With so much at stake, it would be surprising if the interest groups most immediately concerned should not seek to influence these decisions.

Pressure politics is as much a part of the administrative process as it is of the legislative process. Such pressures can be minimized if not wholly eliminated from courts of law by strict limitations on jurisdiction and by formal rules of evidence and procedure. But the independent commissions are not courts of law.

At best, they are but quasi-judicial bodies and hence cannot hope for the immunity from political pressures enjoyed by the courts. As quasi-legislative or administrative agencies, they inevitably invite the pressures which are endemic in a democratic

political system.

With some notable exceptions, the men appointed to the commissions have not been distinguished for their independence of mind or their public service. "By long established practice," says Prof. Louis W. Koenig, "a large percentage of their membership is dedicated to patronage. They are a favorite refuge for the workhorse Congressman who suffered defeat . . . and is badly in need of a job. They are the currency by which a large miscellany of political debts are paid."

Even more distinguished and redoubtable men than these might find it hard to resist the none-too-subtle influence of the powerful interest groups whose able spokesmen appear before them. And this influence is in no wise diminished when commissions and members of their staff either come with built-in biases in favor of these interests or look forward to lucrative employment with them after leaving the public service.

The built-in biases with which commis-sioners approach their tasks have their source not only in ideological commitments but also, and not infrequently, in previous close association with or employment by the interest groups subject to regulation. notion that commissioners should qualify as technical experts often leads to the appointment of former officers or employees of business, financial, or industrial concerns which have a direct stake in the decisions which commissioners make.

Another even more common source of bias an ideological commitment that may interfere with a commissioner's capacity for unbiased judgment. In the case of William Humphrey, for example, who was appointed to the FTC by President Coolidge in 1925, these ideological commitments gave the commission such a militant probusiness bias that its effectiveness as a regulatory body was seriously impaired.

In alliance with conservative colleagues on the Commission and in Congress, Humphrey sought to stifle major investigations proposed by the technical staff and to transform the Commission into a compliant

servant not of the public interest, but of the business interests over which it was created to maintain a crucial surveillance.

This posture of the FTC was, I realize, quite compatible with the political atmosphere of the time and the orientation of the Republican administrations under which Humphrey and his colleagues served. But it was in flagrant conflict with the posture and policies of the New Deal, which came to power in 1933.

Yet when President Franklin Roosevelt, having failed to induce Humphrey to resign, sought to remove him, the Supreme Court held the removal order to be illegal on the ground, among others, that the FTC was not only nonpartisan but nonpolitical.

However much the Court may have believed in the political sterility of the independent commission, Congress has been under no such illusion. When the Senate is called upon to approve nominations for appointment to these agencies, political considerations exert a major influence. was dramatically demonstrated in the hearings on the reappointment of Leland Olds to the Federal Power Commission in 1949.

During his 10 years on the Commission, Olds had been a stanch advocate of public power and of strict regulation of private power interests. Indeed, it was because of these ideological commitments that he had been appointed and reappointed by Presidents Roosevelt and Truman. Political opposition had developed at the time of his earlier appointments but had been overcome by the massive support of Democratic New Deal forces in and out of Congress.

His reappointment in 1949, however, came in the midst of a bitter struggle over the so-called Kerr bill to exempt from Federal regulation the production of natural gas for transportation in interstate commerce a bill to which Olds was strongly opposed but which was supported by powerful Democrats in Congress. It was these Democrats, aided and abetted by conservative Republican Members, who organized and carried through the campaign against Olds.

"All the witnesses testifying against the appointment of Olds," says Prof. J. P. Harris, were directly or indirectly connected with the oil and gas industry * * * The members of Congress from both Houses who had spearheaded drives to pass the Kerr * now led the opposition to Leland Olds . . .

Personal favors, gifts, gratuities, inside tips on investment opportunities and implied future rewards are common in all relations between private interests and governmental agencies-and the so-called independent commissions are no exception. Informal, "off the record" ex parte conversations with parties interested in pending decisions, or with influential politicians seeking to influence those decisions on behalf of powerful friends or constituents, are not uncommon.

In August 1959, serious charges were made of such extramural influences on the Interstate Commerce Commission. It was said that because of "undue and improper influences," the Commission had failed to take jurisdiction of the contest in which the Alleghany Corp. acquired control of the New York Central,

Sherman Adams, Assistant to the Presi-Sherman Adams, Assistant dent, it was alleged, "made it clear to one (the White House) did not want an investigation of Alleghany." It was also said that a former Senator, as counsel for Al-leghany, had held "off the record" commu-nications with four Commissioners "during the course of which these Commissioners approved, prior to public adjudication, Young's (Alleghany Corp.) plans to take control of the New York Central without investigation thereof."

These allegations were characterized by high Administration officials and the chairman of the ICC as a "tissue of lies." true or false, they serve to illustrate how the oldest and most prestigious of the independent commissions can be embroiled in politics.

In November 1958, the Justice Department recommended that three applicants for a television channel in Miami qualified for having tried "to use improper influence on the FCC." Specifically, it was said that two Commissioners, including the chairman, had had "extensive off-the-record contacts" with persons whose applications were then pending before the Commission and with Members of Congress speaking on their behalf.

On another occasion, it was reported, the Chairman of the FCC "had solicited \$50,000 for his vote in the Pittsburgh Channel 4 case." Another Commissioner resigned under indictment by a Federal grand jury for having accepted financial "favors" from persons seeking to influence FCC decisions. John C. Doerfer resigned following public disclosure of his intimate, informal, off-therecord relations with various interests in the communications industry.

But private interests are not the only forces to exert political pressure on the so-called independent commissions. Congressmen, too, join in the all but universal game of pressure politics in administration. The Federal Trade Commission learned this lessent contractions.

son early and painfully.

In 1917, at the request of President Wilson, the Commission embarked upon an investigation of the meatpacking industry. "What happened to the Trade Commission when it interfered with the meatpackers," says E. P. Herring, "provides a concrete illustration of the political and administrative problems involved in attempting to regulate a powerful industry."

powerful industry."

Lobbyists for the industry moved to Washington en masse; and when in August, 1919, the Commission's report was sent to Congress, a storm broke.

The report "indicated unlawful combination and restraint of trade by the five largest meatpackers * * (and) recommended changes in the organization of the meatpacking industry and public ownership of some branches." An avalanche of pressure and propaganda from the packers greeted this report and Congressmen divided in attacking and detending the FIC.

and defending the FTC.

"I think," said Senator Smoot, "the report of the Trade Commission is not only sensational but the conclusions in many respects are absolutely false." Senator Watson called for a congressional investigation not of the packers but of the FTC, to expose its radical and socialistic propensities.

When the Justice Department moved against the packers, they immediately began negotiations for a consent decree on terms much more favorable than the FTC was disposed to allow. The Court adopted the more lenient attitude of the Justice Department and "peremptorily forbade spokesmen for the Commission to present their case."

The controversy came close to destroying the FTC, and in the Packers and Stockyards Act of 1921, the packers succeeded in having jurisdiction over their industry transferred from the Commission to the Agriculture Department. In the midst of this battle, the Supreme Court further crippled the Commission by insisting upon judicial review of both the scope of the Commission's jurisdiction and the reasonableness and legality of its decisions.

The Federal Trade Commission never fully recovered from this assault, and since 1925, it has for all practical purposes given up any serious effort to combat monopolistic trends or practices in American business. Only in the field of policing false advertising and misbranding has it had even modest success.

Most of the problems discussed here are, of course, not peculiar to the independent regulatory commissions but apply in varying degree to other administrative agencies as well. But the other agencies, subject to direct control of the President, do not function under the fiction of independence.

The fact is, of course, that the commissions have not been independent. Indeed, as James W. Fesler has said of State commissions, "full independence is * * more myth than reality. And like many other myths, it has a sinister effect, for it lulls the public into a false confidence in the Olympian judgments of the independent agencies and diverts attention from the influences that are constantly at work."

In 1950, after an extensive study of the problem, the Budget Bureau was even more emphatic in its criticism of Federal independent commissions. The myth of independence, the Bureau said, instead of being

a source of strength is actually a major source of weakness and goes far to explain the ineffectiveness of the commissions.

Most serious students of the problem now agree that it is useless to pretend that we can preserve democracy and still vest economic power in a governmental agency that is not clearly subject to officials who in turn are responsible to the people. By making the commissions independent, we make it virtually impossible for any administration, Republican or Democratic, to develop and administer a coherent and consistent economic policy.

Independence, too, like job security, tends to produce inertia lethargy and stagnation, and, in the case of the Federal commissions, an excessive preoccupation with formalistic procedures that stifle creative imagination and initiative.

The basic theory of the independent commissions, according to William Carey, is to free them "from the insidious influences of politics. Even assuming this freedom to have been achieved, these are effects which are extremely serious. Cut loose from presidential leadership and protection, the agencies must formulate policy in a political vacuum. Into this vacuum may move the regulated interests themselves, and by infiltration overcome the weak regulatory defenses to become the strongest influences upon the regulators."

From the President's Committee on Administrative Management in 1937 to the First Hoover Commission in 1950, efforts have been made to reform the independent commissions. It has been proposed to separate their executive functions from their legislative and judicial functions. Other reforms of internal organization have been suggested without touching the core of the problem, which is the deep involvment of these agencies in politics. It is probably just as well, therefore, that little or nothing has come of these reforms, because more radical remedies are required.

In September 1959, Louis Hector, in a letter to President Eisenhower resigning from the CAB, recommended its abolition as an independent agency. In summary, he proposed that its functions be reallocated as follows: "(1) Transfer policymaking, planning, and administration from the CAB to an executive agency, such as the Department of Commerce, the FAA, or a new Department of Transportation. (2) Transfer the judicial and appellate duties of the CAB to a true administrative court. (3) Transfer the duties of investigation and prosecution to an executive agency such as the Department of Justice."

Why should not President Eisenhower, or the new President who takes office in 1961, order a searching investigation of the feasibility of reorganizing or abolishing most of the independent commissions? Their present functions could be transferred to appropriate executive departments and to one or more central administrative courts of broad jurisdiction.

Where no existing department can appropriately and effectively assume these added responsibilities, one or more new executive departments should be created. In all likelihood, this would call for new Departments of Transportation and Communication to absorb the present functions of the ICC, the FCC, and the CAB. The work now done by the FPC, the SEC, and the FTC should be distributed among existing executive agencies and the new administrative courts.

Only along some such lines can we end the evils of the present system and restore some measure of political leadership and responsibility to this headless fourth branch of government.

Our Summit Peril

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. DOUGLAS. Mr. President, although published some weeks ago, the column on "Our Summit Peril" by that able speaker and writer John C. Metcalfe in the Montgomery County Record is still such a timely warning against our Government's making any retreat in the face of Communist demands at the summit that I ask unanimous consent to have it printed for the information of Members in the Appendix of the Record.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE WORLD AROUND US-OUR SUMMIT PERIL

(By John C. Metcalfe)

Washington.—There is growing concern among diplomatic observers over the outcome of the summit meeting scheduled for May 16 in Paris. A noticeable fear is setting in that the position of the Western Powers is steadily getting weaker while that of the Soviet Union is becoming stronger. If this trend continues the conference could end in a staggering diplomatic defeat for the entire free world.

The stakes in the forthcoming summit meeting will be very high and any agreements coming out of it are destined to have farfung effect. They will not be confined only to those powers directly involved in the issues on the agenda. Whatever the decisions, they are bound to have profound effect on the future will of the free world to withstand the threat of communism.

DETERIORATING POSITION

The position of the Western Powers, which once embodied considerable unity, determination, and strength, has been deteriorating in several aspects.

When Premier Khrushchev originally created the Berlin crisis in 1958 his threats were met head on with a strong rebuff by the United States, Great Britain, France, and Germany to fight, if necessary, to defend their rights in that city. It was a position which also won the quick support of their NATO partners.

NATO partners.

Faced with this determination to meet force with force, Premier Khrushchev backed down, dropped a demand for a summit meeting by Thanksgiving Day, and ultimately settled for a foreign minister conference in Geneva last summit.

Geneva last summer.

White that conference ended without agreement, it revealed two frightening developments. On one hand it produced a series of offers by the Western Powers as concessions to the Soviet Union to lessen tension over Berlin and, on the other, the stubborn refusal of Premier Khrushchev to give 1 inch on his demands which would open wide the gates to a complete takcover of West Berlin.

HAS GONE DOWN HILL

In that same time and particularly since then the position of the Western Powers has

become steadily weaker.

Far more so than any of the other major allies, Great Britain has sought to accommodate Premier Khrushchev. It continues to press the allies, especially the United States, to this end.

It has clearly been responsible, in part, for the effort to downgrade the importance of West Berlin and reunification of Germany.

It wants again "peace in our time" and is playing this diplomatic tune in the United States for the benefit of a Republican administration which is hoping shortly to conduct a presidential election campaign on a platform of "peace, prosperity, and progress." In the face of an extremely critical inter-

In the face of an extremely critical internal political situation, France is finding it increasingly difficult to hold a tough external policy. French Government leaders are quite cognizant of the old adage that "to be strong in the world you must be strong at home."

THEY INVITED

They are also not unmindful of the fact they invited Premier Khrushchev to visit Paris this spring and that President de Gaulle promised to visit Washington in that time. These arrangements were made at a moment when the current Algerian crisis was unexpected.

With President de Gaulle in unquestioned control and riding a wave of national popularity, the Federal Republic of Germany had a staunch supporter against any appeasement of Premier Khrushchev on the issues of West Berlin and reunification.

In the present weakened condition of France, however, Chancellor Adenauer is justifiably uneasy over continued French support for a strong stand at the summit against Soviet demands.

ADENAUER IS CURIOUS

Thus, now Chancellor Adenauer is scheduled to confer with President Eisenhower in Washington in mid-March. There can be no doubt as to the reason and need for this meeting. Chancellor Adenauer is anxious to know exactly where the United States stands in light of these developments.

There are a lot of Americans who would also like to have the answer to that question.

Is the U.S. Government wavering against the pressure to accommodate Premier Khrushchev? Is Prime Minister Macmillan going to take over the leadership of the Western Powers at the summit meeting? Does our Government expect France to also soften her stand because of her internal troubles?

Or is President Elsenhower going to toss aside any and all internal political considerations and assure Chancellor Adenauer that regardless of Britain or France the United States will not give one inch on Premier Khrushchev's outrageous demands on West Berlin and German reunification?

SENTIMENT FOR STRENGTH

This writer has been from one end of the country to the other in recent weeks and found in unmistakable terms the American People want their Government to make a tough and determined stand on these issues. They are as strongly opposed to appeasement of Premier Khrushchev now as they were when he originated the Berlin crisis.

Therefore, it is crystal clear that any appeasement of Premier Khrushchev at the summit in order to be able to boast of "peace in our time" would result in disaster at the Polls next November for that political party.

The alternative to a refusal by Premier Khrushchev to budge an inch is status quo—a stalemate at the summit. That alternative is acceptable to the American people because the nuclear stalemate is ample assurance of peace.

Until President Eisenhower makes his present position clear, however, the fear of appeasement will continue to grow worse, especially with the evident weakening in the West.

It is high time for President Eisenhower to give the free world a shot in the arm with forthright American reassurance to defend our rights. It is also high time to warn Premier Khrushchev against wasting our time at the summit.

Administration's Medicare Program

EXTENSION OF REMARKS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. BROOMFIELD. Mr. Speaker, the administration's medicare program for the aged was presented yesterday before the House Committee on Ways and Means by a member of President Eisenhower's Cabinet.

The statement of Secretary Arthur S. Flemming, of the Department of Health, Education, and Welfare is reprinted below and is worthy of very careful study: STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE HOUSE WAYS AND MEANS COMMITTEE OF THE U.S. HOUSE OF REPRESENTATIVES, MAY 4, 1960

Mr. Chairman and members of the committee, I am glad to appear this morning to present the administration's plan to provide health and medical care for the aged.

The executive branch of the Government fully recognizes and accepts the fact that the Federal Government should act in this field. A careful consideration of facts such as the following can lead to no other conclusion:

1. There are 16 million persons aged 65 and over. Four million pay income taxes. Of the 12 million who do not pay income taxes, 2.4 million are recipients of public assistance.

2. A 1958 study identified 60 percent, or 9.6 million, of the aged as having incomes of \$1,000 or less, and 80 percent, or 12.8 million, as having incomes of \$2,000 or less. These figures should be discounted, because they include situations where a wife has an income of less than \$1,000 and the husband has a substantial income, and because they include situations where other members of the family have substantial resources. Nevertheless, we are dealing with a group in our population which contains an unusually large percentage of persons with very limited resources.

3. A 1957-58 study shows that the average annual expenditures of this group for health and medical expenses was \$177, not including nursing home care, as compared with \$84 for the rest of the population. But it is important to note that 15 percent of the persons 65 and over, or 2.25 million, had total medical expenditures, on the average, of \$700 per year, not including nursing home care. The expenditures for this group represented 60 percent of the total medical care expenditures of the aged. Since 1957, costs for medical care have increased at least 20 percent. Also, it should be noted that the high average expenditure for the aged is attributable to the fact that \$6,000 is a conservative estimate of total medical expenditures incurred by persons who are continuously ill for an entire year.

4. According to the Health Insurance Association of America, approximately 49 percent of the persons in this age group have some kind of health and medical insurance. But, only a comparatively small percentage of this group have policies that protect true of those who are covered by group policies, as well as those who are covered by individual policies. There is a trend in the direction of extending beyond the retirement age provisions in group policies that cover major medical expenses. There is also a trend in the direction of making individual policies that cover major medical expenses available to persons 65 and over. These policies call for payment of premiums ranging from \$60 to \$130 a year per individual. They include deductible provisions ranging from \$250 to \$500. They ordinarily establish annual or lifetime dollar ceilings on benefits. Most contain coinsurance provisions of 20 to 25 percent.

It follows, therefore, that a large percentage of persons aged 65 and over do not have protection against long-term illnesses, and either cannot obtain protection at rates they can afford to pay, or cannot obtain adequate

protection.

In the light of these facts we have developed a program that is designed to achieve just one objective; namely, to provide approximately 12 million persons 65 and over who have limited resources with the opportunity of taking steps which, if taken, will enable them to cope with the heavy economic burden of long-term or other expensive illnesses.

We have developed this proposal in the belief that any program undertaken by the Federal Government in this area should meet the following tests:

the following tests:

1. It should provide the individual with
the opportunity of deciding for himself
whether or not he desires to be a participant
in the program.

 It should make available a system of comprehensive health and medical benefits which provide adequate protection against the costs of long-term and other expensive illnesses.

3. It should make available all the benefits of the program to public assistance recipients at public expense.

4. It should provide for some financial

4. It should provide for some financial contribution on the part of those participants who are not on public assistance.

 It should provide private insurers with the opportunity of expanding their programs of extending health protection to the over-65 age group.

6. It should provide for a Federal-State partnership in dealing with the problem.

We have developed a program that is consistent with these guidelines. We believe that if it is put into operation, it will provide the aged with the type of assistance they most need. We want to make it clear, however, that we will be glad to discuss any suggestions for improvements that are consistent with the basic guidelines that I have just outlined.

Specifically, we recommend that the Federal Government assist the States in establishing a medicare program for the aged in accordance with the following specifications:

1. ELIGIBILITY FOR PARTICIPATION IN PROGRAM

The program would be open to all persons aged 65 and over who did not pay an income tax in the preceding year and to taxpayers 65 and over whose adjusted gross income, plus Social Security, Railroad Retirement benefits, and veterans pensions, in the preceding year did not exceed \$2,500 (\$3,800 for a couple).

2. ELGIBILITY FOR BENEFITS

Persons eligible for participation in the program would be entitled to the benefits of the program if they had paid an enrollment fee each year of \$24 and after they had incurred health and medical expenses of \$250 (\$400 for a couple).

Public assistance recipients would be entitled to the benefits of the program without paying the enrollment fee and with the States paying the initial \$250 of expenses under the regular public assistance program.

3. BENEFITS

The medicare program for the aged would pay 80 percent (100 percent for public assistance recipients) of the costs of the following comprehensive health and medical services for all participants who had established their eligibility, and where such services have been determined to be medically necessary:

(a) Hospital care-180 days.

- (b) Skilled nursing home care—365 days.(c) Organized home care services—365 days.
 - (d) Surgical procedures.
 (e) Laboratory and X-ra
- (e) Laboratory and X-ray services—up to \$200.
 - (f) Physicians' services.
 - (g) Dental services.
 - (h) Prescribed drugs-up to \$350.
 - (i) Private duty nurses.
 - (j) Physical restoration services.

4. OPTIONAL BENEFITS

Each State would provide that an aged person eligible for participation in the program could elect to purchase from a private group a major medical expense insurance policy with the understanding that 50 percent of the cost would be paid for him from Federal-State matching funds up to a maximum of \$60. The States would be responsible for establishing the minimum specifications for such policies.

5. CONTINUATION OF ELIGIBILITY

Once a person has qualified for participation in the medicare program for the aged, he can maintain his eligibility by the payment of the annual fee. If his income rises above the figure specified for eligibility, his fee would be raised on a graduated basis for each \$500 of increase in income until the fee covered the full per capita cost of the benefits made available to him.

6. ADMINISTRATION

The medicare program for the aged would be administered by the States, under a State plan approved by the Department of Health, Education, and Welfare. The State would be authorized to use appropriate private organizations as agents.

7. FINANCING

The governmental cost of the program would be financed by the Federal Government and the States on a matching basis. Federal matching would be 50 percent on the average with an equalization formula ranging from 33 1/3 to 66 1/2 percent for the Federal share.

8. COSTS

Assuming that all States participate and that 80 percent of those who are eligible enroll for the program, it is estimated that the annual Federal-State cost of this plan would be \$1.2 billion with the Federal share being estimated at \$600 million. There would be some reduction to the extent that persons eligible for participation in the plan elected to purchase insurance policies providing for the optional benefits, It is impossible to estimate the number of persons who would elect the optional benefits.

On the other hand, however, it should be noted that increases in costs and increased utilization of facilities over and above that included in the cost estimates could lead to an increase in these estimates. Also, there would be some increase in Federal payments for public assistance. This increase might reach \$100 million per year.

The make-ready cost during fiscal year 1960-61—including grants to States to help them develop their programs—would be about \$5 million. The fiscal year 1961-62 cost would depend on many factors. We estimate that this would run in the neighborhood of \$400 million—of which \$200 million would be the Federal share.

We believe that the plan which I have just described would achieve the following

- 1. It would permit the individual to decide for himself whether or not he will participate in the program.
- It would preserve the opportunity for private insurors to continue to demonstrate their ability to develop major medical expense programs for the aged.
- 3. It would divide the cost equitably among the entire population by providing

for financing the Federal share out of general revenues, contrasted with a payroll tax that places the entire burden on earnings of less than \$4,800.

4. It would provide a wide range of benefits without placing a premium on institutional care as opposed to alternative lower cost services. Thus, it would facilitate the most effective and economical use of available medical facilities and services.

5. It would provide a built-in incentive for judicious use of health facilities and services by requiring the individual (other than public assistance recipients) to share in the cost above the deductible of \$250.

Most important, however, the program is designed in such a manner as to pinpoint the area of greatest need; namely, the large number of persons over 65 who do not have the resources or the opportunity to obtain adequate protection against the staggering financial burdens of long-term illness. This is the most serious problem in the financing of health care for the aged.

This plan guarantees comprehensive health and medical services to all aged public assistance recipients in States that become part of the program. It is available to all persons in the lower income brackets, regardless of whether they happen to be covered by social security. It identifies persons who may benefit by the program on the basis of a simple and easily determined eligibility requirement, without subjecting the individual to a detailed and involved income or means test.

In summary, we believe that the medicare program for the aged will concentrate governmental assistance in such a manner as to provide the most effective and most responsible use of Federal and State funds. We believe this program represents a practical solution to a pressing human problem.

Opposes North Cascades National Park

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. WESTLAND. Mr. Speaker, an article by John A. Biggs, director of the State of Washington Department of Game, appeared in the April 1960 issue of the Game Bulletin. I believe this article will interest all Members of Congress.

The article is titled "North Cascades National Park?" and presents a number of convincing arguments why the present administration of the area by the Forest Service is in the best interest of the State of Washington and the Nation. I am particularly interested because the bulk of the North Cascades area is in my district.

The article follows:

NORTH CASCADES NATIONAL PARK?

(By John A. Biggs, director, the Department of Game, State of Washington)

Should the State of Washington be the first State to have within its borders three large national parks?

Pointing a finger at the rugged and scenic North Cascades section of the State, small but extremely vocal groups of ultraconservationists residing both within and outside of the State very vigorously say that the State of Washington should enjoy this distinction, and that the place for the park is in the

North Cascades. Other equally vigorous groups of forest users and practical conservationists, also pointing at the North Cascades, say with certainty that this State should not lock up and remove from public use this great economically and recreationally important area. There are two large national parks now in the State, they add, and we simply cannot afford a third.

The proponents of the park are principally dedicated individuals and groups whose lead ership is drawn from the Sierra Club. This club, in the words of its executive director, David Brower, "is composed of some 10,500 members, most of whom reside in the State of California." Under this leadership, support for their proposal has been engendered from a number of western outdoor groups and organizations of ultraconservationists residing in the Eastern States. Such people firmly and devoutly believe that unless such areas as the North Cascades are embraced within the national park system their future is uncertain and their value as great primitive areas will almost certainly be lost as a result of inroads by logging mining, grazing, excessive water use, and hunting.

The idea of a system of national parks was conceived more than a century ago, re-sulting in our present parks which occur throughout the United States and most abundantly in the Western States. Their operation is based upon the philosophy that large land areas which embrace natural wonders and great scenic beauty should be retained and managed in their primitive state to the greatest extent possible. Limited fishing is permitted in the parks, hunting is prohibited, construction of roads is held to a minimum, and logging, grazing, and mining are prohibited. Undeniably, this system of parks constitutes a great national heritage. and their scenic beauties and natural wonders are annually enjoyed by many millions of people.

Equally undeniable, there are located within the park boundaries tremendously valuable natural resources going completely unused at a time when the value and wise use of natural resources has never been more apparent to the people of the Nation.

Generally, the argument over the establishment of new parks resolves itself into this: One side contends that the present system of national parks serves a very valuable purpose but is adequate for the country's needs, and in some cases far more than adequate; the other side argues that the interest of present and future generations demands an expansion of the present system of parks, and that only in this manner can these natural resources be positively and permanently maintained.

A look at our group of States is interesting. Washington contains 68,192 square miles—it is the smallest State west of Iowa. Our neighbor, Oregon, is approximately haif again as large as the State of Washington and has one national park. The State of Idaho has one park, Montana has one. Wyoming has two. California, with 158,693 square miles, has nine; Nevada contains 110,540 square miles and has no national parks. It is well known that each of the Western States possesses unique areas of great natural beauty. Considering this, one wonders why, if national parks are needed, they might not more properly be placed in some of the largest Western States which are either completely devoid of them or have only one or two such areas.

It is estimated that there are close to 24 million acres of forest land in the State of Washington. A very considerable portion of this acreage is already on an extremely limited public-use basis. The Olympic National Park contains 868,558 acres, and Rainier National Park contains 241,571. Various proposals advanced for the north

Cascades park range from 500,000 to 2,000,000 acres—the figure most generally talked about is slightly over 1,500,000 acres. Were the north Cascades park to be created, there would thus be over 2,600,000 acres of land in the State devoted to national park use

exclusively.

These national park lands, undeniably unique in their scenic beauty and topography, equally undeniably are possessed of unique hunting and fishing opportunitiesessentially all of which have been lost in the Olympic and Rainier Parks. The loss would be even greater in a north Cascades park.

The ordinary concept is that national parks are areas which teem with wildlife, yet the facts contrast this. The Olympic National Park, in years past, provided one of the State's best elk hunting areas. herds in what is now the park area had been built up under a system of sound State management and yearly provided pleasurable elk hunting for many people. But since the creation of the park, elk herds have dwindled and the park elk are enjoyed only by an

insignificant number of people.

No less an authority than Mrs. Lena Fietcher, a longtime resident of the Hoh River country, and herself a descendant of pioneers of that area, has declared that the Olympic Park has never achieved, or brought with it, the great values which it was said to possess at the time of its creation. Mrs. Fletcher has stated that 95 percent of the people who are counted as visitors to the park view less than 5 percent of the park area, and that in actuality the economy of the developing Olympic Peninsula has deteriorated rather than progressed since the creation of the park.

In fact, as a result of the zeal of park enthusiasts, the very fine hunting formerly enjoyed by several thousand people has been irrevocably denied to the people of the State; and the other great resources of the park area are being utilized by relatively few

people.

Contrast this with the situation existing in the foothills and Cascade area of Yakima and Kittitas Counties where is located the Yakima-Kittitas elk herd. This herd was established a little over 30 years ago with the stocking of less than 200 animals. Since that time, under a system of conservative and well determined wildlife management, an extensive herd of elk has been developed Which now is maintained at a population of approximately 8,000 animals. More striking, however, is the fact that during the past 20 years, open seasons have been annually held for elk hunting and more than 30,000 elk have been harvested from this herd by the hunters of the State.

Elk hunting in the Yakima area is anhually enjoyed by more than 10,000 Washington hunters-a striking demonstration of What can be done under a modern system of Wildlife management which combines proper and well applied conservation and a system

of orderly harvest.

One might ask what application this might have to the north Cascades area, and the answer is that it is the State's most scenic and attractive deer hunting area. Biologists estimate that over 4,000 deer are harvested annually from areas within the proposed park boundary. Bear in excess of 1,000 animals and 80 mountain goats are also provided every year. The hunting of these animals provides an unparalleled recreational opportunity for several thousand residents of the State-an estimated 81,000 man-days of hunting.

Of late years, this recreational opportunity has been enhanced by a high mountain deer season, occurring during the month of September and limited to the area of the high Cascade Mountains. This hunt gives a chance to camp out in the alpine beauty of the high Cascades at a time of year when scenery is at its best, and, at the same time, to wholesomely engage in the sport of deer hunting. This privilege would be denied with the creation of a park, and use of the area would be restricted to the relatively few people who care to view the country as hikers or campers.

There is an even more potent and farreaching reason why the creation of a north Cascades park would strike a severe blow to fishing and hunting in the State. The State now has more than its share of lands which are denied the use of the general public for fishing and hunting. In Yakima and Ben-ton Counties, nearly 400,000 acres of land belongs to the Atomic Energy Commissionoff limits to the public. The Indian reservations of the State closed to big game hunting exceed 1,115,000 acres. The city of Seattle alone has made unavailable for use more than 130,000 acres of forest land as a result of its system of watershed protection. And there are nearly 55,000 acres of State park land upon which no hunting is allowed. Add all these together, and con-sider the north Cascades park established, and you see that over 5,500,000 acres would be withdrawn from hunting lands.

It would appear undeniable that from the standpoint of maintaining and developing the State's recreationally and economically important wildlife program, one participated in and enjoyed by more than 600,000 people of the State, we cannot afford the creation of a North Cascades National Park. In effect of a North Cascades National Park. In effect the park would constitute a permanent, severe and costly blow to good fishing and hunting in the State of Washington.

Multiple use of the State's natural re-sources is of great importance to every man,

woman and child residing in Washington. It is the foundation of the State's economy. Equally, it is the foundation of the State's great recreational industry and opportunities. Our unparalleled resources of this type have served as a magnet which presently attracts the interest and attention of hundreds of thousands of people and will in-creasingly attract them in the future.

Can it, therefore, be said that it is logical or even good thinking for the future to lock up the great north Cascades region in third national park in the State of Washington?

The scenic beauties of the area can, and undoubtedly will, be retained under present or proposed systems of wilderness preserva-And the record shows that its tremendous wildlife values have been capably managed in the past, and can be equally well managed in the future.

It is for these reasons that it can be flatly stated that, considering full and wise use of the State's wildlife resources, the people of the State of Washington cannot afford the creation of a third national park in the north Cascades region.

How Russian Schools Are Organized

EXTENSION OF REMARKS OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. DIXON. Mr. Speaker, one of the very finest school administrators in the United States is Dr. J. C. Moffitt, superintendent of the Provo City, Utah, schools. He is known as a man of great judgment, conservatism and integrity. Upon returning from a trip to Russia recently he gave an excellent account of "How Russian Schools Are Organized." which appeared in the Utah Educational Review. I am privileged to place this article in the Appendix of the RECORD.

How Russian Schools Are Organized (By J. C. Moffitt)

"The law sets forth the task of giving a full secondary education not only to the young people, as it has been decided by the 19th and 20th Congresses of the Communist Party, but also to all workers and kolkhozians."1

The tremendous effort of the Union of the Soviet Socialist Republic to provide educa-tion for all of the people in the 15 republics has necessarily created schools and educational programs of many kinds.

Two distinctive characteristics universally found in this federation of republics are:

First, the apparent singleness of purpose tightly controlled and directed by those dedicated to the ideals and purposes of the Communist Party.

Second, the apparent faith people in all the republics possess in education is the un-failing guarantee leading to their notion of

the "abundant life."

In such a highly centralized control of a total society with so brief a history of education, it becomes relatively easy to shift from one plan or pattern of organization to another as experience or change indicates a need for such change. Moreover, under such autocratic control where change is consuch autocratic control where change is con-tinuously needed to attain the promises made by the governing authority, schools may well differ in organization and purpose and likewise may at times be experimental so long as progress is assumed to be apparent in the attainment of established objectives.

SCHOOLS PERPETUATE ONE IDEAL

Schools are of many kinds in the U.S.S.R. but they are all organized and administered to perpetuate and extend one ideal. Children may enter nurseries at a very young age. When 3 years old they go to kinder-gartens; at 7, the beginning of compulsory attendance, they are in grade I. Some (mostly in rural areas) go through a 7- or 8-grade school and others through a 10or 11-year secondary school. (The 11-year school was established by statute in De-cember 1958.) Boarding schools are rapidly expanding and are extending regular fulltime education to all underprivileged children or children whose parents may not be regularly available for normal family living. In this gigantic effort to encompass all people in the circles of organized education no segment of the schools is more conspicuous than the evening (adult) schools and the correspondence school programs that are part of the higher schools ranging from the technicums to the universities. It is not unusual for the universities to have thousands of correspondence students-often appoaching 50 percent of their institution enrollments.

In keeping with the promise for the development of an increased technological economy that will excell the production of the United States, education has become inseparable from their socialistic business, industry, and agriculture. This tremendous dedication and unswerving devotion to education and the application of learning and research to the improvement of the life of the worker is a motivation for school attendance, probably unexcelled heretofore in history.

PATTERNS OF ORGANIZATION

The new pattern of organization changing the secondary school from 10 to 11 years is to enable children in their latter school

Anton Chernikov, Minister of Education, Russian Republic, Moscow, U.S.S.R. From Public Education in the Soviet Union.

grades to spend 2 days each week in industry or agriculture, thereby making transition from school to work an easy adjustment with needed training already accomplished for all workers. The State owns the land, the industry, and the schools and hence can transfer the individual from one assignment to the other at will or can readily make business, industry, or agriculture available to the schools in order to facilitate the education of the workers.

In its diverse and changing patterns of organization of education all of the republics that compose the U.S.R. maintain universities, research academies, pedagogical schools, and technical institutes of many kinds. The universities are largely directed under the single agency of the Ministry of Higher Education. Likewise, the research institutes have less widely diffused control than is the case of the technicums, the secondary schools, the special schools (such as ballet or dance schools), or the schools for younger children that are commonly directed by the individual Ministry of Education within each republic.

"CONTROL" OF EDUCATION

From first impressions one may assume that the "control" of education is widely diffused. There are various agencies such as the supreme Soviet gosplan, the Ministries of Education in the different republics, the teacher union organizations, regional and district boards of education with differing authority, and others, that have responsibilities in administering the schools. However, all of these agencies are essentially "operational" and all function to carry out the established (communistic) party policy. No such agency has administrative power to deviate from this policy.

LINE OF AUTHORITY

Most commonly, the Ministry of Education in the 15 republics, in cooperation with the republic gosplan (which does most of the school expansion planning, much of the financing including the establishing of salaries for all school employees) provides "close-up" supervision of the majority of the schools. This ministry operates through a number of regional boards of education, thence through district boards of education to the individual schools. These boards and school agencies are composed of former teachers and school administrators. Typically, then, the line of authority within each of the republics (shared by the gosplan and the Ministry of Education) is from the chief of the ministry to the regional board (the chairman in each case is the executive of the board), then to the district board, and from there to the school director or principal.

FINANCING THE SCHOOLS

While schools in all of the U.S.S.R. are very rapidly expanding, they appear to be adequately financed. Employees pay a graduated income tax that provides financial aid to education. For example, a teacher pays an income tax that is deducted at the source of payment. A very substantial proportion of school revenue is derived from the profits of business (all of which is owned by the state). When additional revenue is needed it becomes a simple device through hidden taxation to raise prices and thereby procure more money for the schools.

Finance planning may begin with the district board of education, but it possesses an element of cooperation because all the above-mentioned boards and the ministry and the republic gosplan do have a voice in making school plans. However, all budgets are subject to the approval of the U.S.S.R. gosplan.

Available school revenue differs in amount and needs from republic to republic; hence those less well able to finance schools receive added revenue from those of greater wealth. In addition to this regular fiscal policy, the schools receive a great amount of aid and equipment from factories that closely cooperate with the schools and from other sources. One such striking example is the contribution made to out-of-classroom education by the Komsomol (young Communist league).

The plans for a continuous expansion of this very rapidly growing scheme of education in the U.S.R. are such that vast sums of new revenue must be made available in the years to come. The increasing trend to greatly added production through technological advancement and the universal commitment to education in this union of socialistic communistic republics dedicated to a single purpose and guided by a one-source control gives evidence that education over there will be well financed.

Education Is Our First Line of Defense

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. CURTIS of Missouri. Mr. Speaker, our colleague Frank Becker delivered a very thoughtful speech recently in which he called attention to some of the basic values and problems in the field of education.

Certain of the points Mr. Becker makes have not received the attention they should receive. I trust that educators, legislators, parents, and other laymen will read this speech:

ADDRESS BY CONGRESSMAN FRANK J. BECKER AT THE DEDICATION CEREMONIES OF THE NEW BETHPAGE HIGH SCHOOL, BETHPAGE, N.Y., ON MAY 1, 1960

Thank you for inviting me to participate in the dedication of this beautiful, new Bethpage High School. This building is a tribute to the people of this school district and their awareness of the importance of education today in the life and death struggle with our Communist counterpart. However, I consider the physical monuments built by men to be less important than those corresponding monuments built in the hearts and minds of men. Thus, I intend to direct my remarks today to the processes which make up the ingredients of that education necessary for a stronger America.

I consider one of the most important ingredients in the formula for a sound education to be the attitude of our community toward education. Our attitude must be that an education is a privilege, not a right. I speak now of our philosophical and not our political attitude toward education. If we truly believe that a better world both spiritually and temporally can be shaped through education, then we must divest ourselves of those attitudes which promote the position that as taxpayers we own the schools and the teachers, and thereby have the right to abuse them when we see fit. This attitude has manifested itself throughout the country. The result has been twofold. Firstly, the value and meaning of a grammar and high school diploma have greatly diminished. They merely mean generally that the child has sat in a school for 8 or 12 years. The diploma does not approach the significance attached to their counterparts in Western Europe. Secondly, I submit that this general attitude toward education has discouraged many from entering the field of education, preferring to pursue professions better appreciated and more financially rewarding. I strongly believe that one of the greatest influences causing this condition is the attitude of the American people. Remember, just as the Church is the temple of the spirit, so the school is the temple of the mind. Let us treat it with corresponding respect.

Another vital ingredient in the formula for a sound education is the teacher. The descendants of Socrates, Plato, and Aristotle. It seems a shame that some of the reverence shown the memory of these ancient teachers cannot rub off on our present-day pedagogs. We find that, very often the teacher status is directly related to the achievement level of the child. If the child is doing well, the teacher is a genius, but if the child is doing poorly, the teacher is incompetent. I strongly urge that we return the academic functions within the schools to those professionally trained, to carry them out. Let the parents do their part by creating the proper atmosphere in the home. It has been ascertained, after considerable research, that how children do in school, not only here, but in Russia, is based on the influence of the home

If the home is a place where there are simply pleasant surroundings, where the child simply gets good clothes and lots of entertainment, and there is no emphasis on high moral and intellectual attainment, the effect on the child will be obvious. will find many studies show that parents are the greatest influence on how well their children do. Until and unless parents recognize this fact and start placing more attention and emphasis on the home environment. the school cannot achieve the goals we have set for it. Parents and teachers educating, each in his own domain, with the proper coordination and cooperation, possess the combination to make the realization of these educational goals a reality.

Further, I believe, we parents owe it to ourselves and our children to assist in creating an atmosphere whereby the teaching profession is raised to a par with the other professions, medicine, law, engineering, etc. I think this can be done simply by placing the value of the child's intellectual health on the same plane with his physical health; by considering the teaching of justice within the school, as important as the defense of it in the courtroom; by giving at least equal appreciation to the construction of the child's intellect with the construction of & bridge. If we do this, we will be going 8 long way toward improving the effectiveness of our schools.

I think the Federal Government can play a role in aiding the schools of our Nation attain their goals. Not in the terms of financing, because this is basically a State and local matter. However, I favor the Federal Government setting up voluntary minimum standards. These standards could be used by the States to measure the level of attainment of the child after grammar school and during high school and at the completion of the secondary school education. The Federal Government has the facilities for research and development and this can provide the States with attainment levels necessary to meet the demands of our rapidly advancing society. After all, if we have minimum standards for the food that goes into the child's stomach, why not, at least, have minimum standards for the "academic food" that goes into his head?

One of the effects of these minimum standards would be to equalize the opportunities of our students all over the country to attend a college of their choice. Students, graduating from high schools in many parts of our country today, cannot meet the standards for entering a great number of colleges. Also, it would relieve

the shortage of qualified manpower available to the armed services.

This is a problem we are continually confronted with in hearings before the Armed Services Committee of the House of Representatives, of which I am a member. The leaders of our military decry the fact that there are not enough qualified young men coming out of our schools today. For the past several years, the military services have had to lower their standards in order to admit a sufficient number of young men to admit a sufficient number of young men to admit a sufficient number of young men to wheet their needs. This is a critical situation and I firmly believe that a program of voluntary minimum national standards, set up under the Department of Health, Education, and Welfare, could solve this problem.

Finally, in the area of financing, I would like to suggest an idea to you that bears some thought. Presently with the squeeze of high school taxes in our Long Island communities, our senior citizens seem to be hit the hardest. The reduced, fixed income they must live on, just does not provide room for further taxation. As a matter of fact, many of them have had to sell their homes of many years and move elsewhere in order to avoid further hardship. In this connection, I would like to suggest a freeze on school taxes when a person retires at the age of 65 or should be forced to retire because of disability.

Now, how will this benefit the community? First, the senior families place no burden on the schools, since they have no children using them. Therefore, this cuts down the school census and in turn, the cost of operating the school district. However, if we drive out the senior citizens from the community, because of increased school taxes, generally they are replaced with young families with school age children. Again, this would increase costs for more school facilities.

If we can stabilize enough of our school districts by stopping the exodus of our senior citizens, we would more than make up for the loss of revenue by the correspondence decrease in school enrollment. Under the present conditions, no retired family can afford to move into areas where the school costs continue to spiral upwards.

The second effect of this proposal would be to remove a great deal of the friction Within our school communities today. Very often, our older citizens have felt it incumbent upon themselves to go to school meetings and fight any proposal, regardless of the merits, calling for increased spending, simply for self-survival. This proposal would eliminate this negative influence affecting educational planning. It also would eliminate the frustrations felt by those conscientious citizens whose only motives are better education. It also places a greater responsibility on these same people, knowing that the increased cost will be divided amongst a smaller group of people whose children will be the direct beneficiaries of this spending.

In closing, let me say that I hope I have left you with some things to think about. Further, I would hope you will take some of these thoughts home with you and discuss them with your friends, improve upon them, and perhaps find a way some of them can be incorporated into your educational program. I say this, because I firmly believe that education in the long run is more important than military defense. Military developments are transitory, constantly changing, but education is permanent. Adm. Hyman Rickover has said, and I believe it, "Unless we have a thoroughly educated citizenry, we will not be able to solve either our military or the many other problems facing this country today."

This is why education must be called our first line of defense.

"I Speak for Democracy"—Essay by Betsy Hoffman

EXTENSION OF REMARKS

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. JOHNSTON of South Carolina. Mr. President, an essay entitled "I Speak for Democracy," presented by Miss Betsy Hoffman, of Camden, S.C., won the 1959 George Washington honor medal given by the Freedoms Foundation at Valley Forge, Pa.

This is one of the most outstanding papers I have ever read prepared by a young lady. I wish to bring this essay to the attention of the entire Nation, for it is one that all Americans should read.

As a member of the Judiciary Committee of the Senate I have studied at first hand problems dealing with our young people, particularly in the fields of subversion and juvenile delinquency. When I see an essay such as the one written by Miss Hoffman my confidence in the youth of our Nation and in the very future of our free society is restored. I am proud that Miss Hoffman is from South Carolina. I must say, too, that she typifies the spirit of the youth of my State and I hope of our entire Nation.

I ask that this essay by Miss Hoffman be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY (By Betsy Hoffman)

"I was born an American: I live an American; I shall die an American." Thus said Daniel Webster, brilliant orator and great statesman of 19th century America, and thus say I, humble, yet proud citizen of the 20th century. Perhaps these words, spoken from my lips, do not ring with all the passion and power as once they rang from the majestic voice of Daniel Webster; for I am certain that he proclaimed them with every emotion his heart had ever felt for America. I cannot express such feelings, because I have not, as this great man, contributed so much to my country. Nevertheless I am as-sured that being born an American makes me equally as thankful as it did Daniel Webster; and living here, enjoying many of the same freedoms, and even more freedoms than he, has helped me to understand, a little more each day, the resolute meaning of being "created equal." When I die an American, I shall die firmly believing that the principles of popular sovereignty and limited government, upon which America stands, "shall not perish from the earth." Let us consider, for a moment, the mean-

Let us consider, for a moment, the meaningful word "freedom." What a glorious word. It vibrates with all that man values in his world in which he lives. Embodied in it are all the basic elements that give life purpose, and meaning. With it and if properly used, man can achieve new heights—prove his worth. Without it, man loses his individuality. Truthfully, freedom is something man does not fully appreciate until it is lost. Then, having lost it, he will sacrifice his very life to once again achieve it.

We who live in the United States of America have been given the priceless heritage of freedom. Because of the concern, convictions, and determination of our fore-fathers, we have been endowed with a way of life that enables us to be freemen in a free society, a goal toward which many nations of people strive but few attain.

Consider, however, the kind of nation and kind of people we would be if we were deprived of the freedoms we are privileged to enjoy. What if those in high office took from us the rights of freedom of assemblege, worship, speech, press, the ballot, fair trial, and pursuit of happiness? If we were deprived of such freedoms overnight, then, undoubtedly, this Nation would quickly enter into civil war. Yet those who would seek to destroy such liberties within our country would be foolish to endeavor to take from us such cherished possessions. Rather, their strategy would be to constantly remove small privileges from us, striving continuously to achieve complete domination. Such procedures would achieve selfish motives without being conspictuous.

The time has come in our Nation's history when every thinking individual needs to look about him to see what is happening in this matter of freedom. Slowly, but surely, many of our basic freedoms are being taken from us. At the present time they seem to be only petty restrictions; however, an analysis will show that embodied in these deprived rights are the very taproots that can ultimately take from us all our basic freedoms. If one doubts the truth of this statement let him look into the matter of what is happening here in our own country concerning freedom of the press, freedom of speech, and freedom of worship, all of which are involved in the matter of separation of church and state. If one will honestly seek to analyze the meaning behind some of the events that have come to pass in these areas of freedom, he will become alarmed because of what has been done, and what can be the ultimate end if such a pattern is not checked

immediately.

I am not an alarmist. Rather, I am a realist. I feel that we should take a deep look at our freedoms as they exist today, and then silently, but determinedly, resolve under God, that we are going to preserve those basic freedoms for which our forefathers fought, bled, and died, and pass on to our posterity this glorious heritage of being a freeman in a free society.

I am an American; I was born an American; I shall die an American.

Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1960

Mr. CARROLL. Mr. President, Craig Grant, a student at South High School in my home city of Denver, Colo., recently won fourth place honors in a national essay competition sponsored by the President's Committee on Employment of the Physically Handicapped. Prizes and honors for all the winners will be presented tomorrow at a luncheon at the Willard Hotel here in Washington, as the highlight of the Committee's annual meeting.

Young Mr. Grant, who is only 17 years of age, has written a brilliant summary

of the reasons why this Nation cannot thrive without making the fullest possible use of the talents and services of its handicapped citizens. He has achieved some remarkable insights into the whole matter of handicaps and how they can spur a person to true greatness.

His prose is so excellent and his ideas so well thought out that I now ask unanimous consent to have his essay printed in the Appendix to the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

FOURTH PRIZE: JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Craig Grant, South High School, Denver, Colo.)

American is a land of plenty. It is a land of bountiful resources. What are these resources? Any schoolchild can recite the many, varied natural resources of the United States, and very likely the region in which these treasures are to be found. The mammoth coal deposits of Pennsylvania, West Virginia, Kentucky, and Illinois come immediately to mind. The iron of Minnesota; the great forests of both seacoasts; the varied mineral deposits of the Rockies, the Appalachians, the Sierra Nevadas; the oil laden earth of Texas and Oklahoma—all are well known to nearly every American.

Are these the resources that have combined to create and build in the United States the highest standard of living in the world, the freest and most dynamic experiment in living the world has ever known? Thoughtful Americans must answer with an emphatic no. The greatest of all resources is the human resource. It has provided the imagination, the courage, the know-how, and that everlasting quest for betterment that have turned a wilderness into a leading nation of the world.

Without this resource the iron could never have taken shape in buildings, bridges, automobiles, surgical instruments, or plano strings. Trees, in the hands of men, become houses, pleces of furniture, newspapers, violins, and yes—crutches. Strong hands of men turn the rich, black furrows, tend livestock, feed a hungry nation, nurture a hungry world. Man, then, is the doer, the builder, the provide, the protector the brother's keeper.

How, then, is this resource to be measured? What yardstick is long enough, what caliper wide enough to gather in this mass of flesh and blood and bones and spirit called man? Unlike iron and coal it is not measurable in tons. Linear measure, all right for lumber and land, scarely suits in any attempt to apply it to man. How absurd it would be to state that thus and so many feet of people live in the United States, or that the cumulative weight of the population is this or that many tons, or that reduced to ashes, the chemical value would be worth a specific number of dollars. It is equally meaning-less to assert that the 175 million people comprising the population of the United States represents twice this number of eyes, arms, and legs. It would not be true; it would be even less important. A man without an arm is no less a man. absence of eyesight is by no means a lack of The loss of a limb can cause the determined man to walk more upright than

"There is nothing more stuttering and stammering—let us admit it—than the plans we make for a better world. But those who despise this broken utterance and deride this faltering effort have nothing to offer but defeat. We must go on—on until in all things we see clearly and speak plainly,

goaded by our handicaps, our insufficiencies." 1

Man has always been handicapped. Yet he has conquered the world's resources and subdued all other creatures. Handicaps and insufficiencies have stimulated man onward in search of greater, more significant achievements. Genius is often produced by a handicap. Demosthenes, though a stutterer from birth, was proclaimed the greatest of all orators by his fellow Athenians. Beethoven, when he wrote his greatest works, was deaf. Was Julius Caesar less a general and statesman for being an epileptic? Was Franklin Delano Roosevelt's contribution to his country diminished by his inability to walk alone, as a result of infantile paralysis? Helen Keller is loved and admired the world over, though she is both blind and deaf. Were these people any less for their handicaps, or rather were they uplifted to greater heights of intellectual and spiritual understanding in overcoming them?

All these people have proved themselves great. Naturally not all of the handicapped can rise to such heights. But everyone, regardless of race, creed, age, sex, or disability, has a sense of personal pride, of personal

"The only goal of man should be the attainment of human dignity with all its implications. * * * Our intellectual endeavors, our whole science will be of no avail if they do not lead man to a better comprehension of himself, of the meaning of his life, and of the resources buried in his inner self." ²

It is this sense of dignity that puts man above beast and makes the human resource indispensable. The measurement of human resources is in the total contribution of man to man, of community to community, of nation to nation. Any man who withdraws from his opportunity to contribute deprives himself and all others. He reduces the total measure more than is his right, for in withholding, he inhibits the contribution of others.

America cannot afford waste of any resource. Least of all can it afford not to take full advantage of the human resource. America owes no man a living; it does owe itself every ounce of energy and every spark of "wit power" available. This country's work is scarcely begun—the world's work yet undone staggers the imagination. This is not a time for men with physical limitations to bemoan their plight—nor will they. Neither is it a time for men of strength and leadership to default in their responsibilities to the community of men. This, too, is unlikely.

Surely it is understood on all sides that the standards of moral, spiritual, and material wealth of any person in any community cannot be established by less than the community as a whole. No single member of a community can do it alone. If he tries, he will immediately become aware of his weaknesses, his handicaps. Even a strong man's muscles become flabby and weak unless there is work to test them. The wisest man's ideas grow dull and out of proportion unless kept polished by rubbing against ideas of others. Keen eyes would grow dim were familiar and friendly faces to disappear from the scene. Every man standing alone is handicapped. But men, acting in concert with each other, have found in their handicaps the challenge to conquer, to go beyond their immediate reach. This thought is beautifully expressed by A. Powell Davies.

"It is what we do not have and reach forwhat we do not have and reach beyondthat turns our shuddering into boldness and audacity, and kindles our earthiness to flame. It is out of our weakness that we learn what to do with strength; it is because, when we most desire to speak, our speech is faltering, that what begins as broken utterance ends as prayer.²

By men's combined strength every major peril has been overcome, and mankind has prospered. This will never change if the community, the Nation, the world avail themselves of every man's strength.

The dignity and worth of any man depends upon the contribution he makes, within his true capability, to the lives of others. The way must be kept clear. This is life's highway. The strong, the weak, the lame, the blind travel it—together.

The Crisis of the American Merchant Marine

EXTENSION OF REMARKS

HON, MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. GLENN. Mr. Speaker, as a member of the Merchant Marine and Fisheries Committee, I have heard all departments of our Government, including the executive, state time after time that we need a strong merchant marine—that it is a vital branch of our defense structure—that it is a very important segment of our economy. Yet, we stand by and watch it slowly lose ground in its fight with foreign competitors for the passenger, cargo, and tanker business on which its ultimate readiness as a defense weapon, as well as our national prosperity, is dependent.

Here are some facts that clearly show what is happening to the American mer-

In 1939 there were 123 Americanowned passenger vessels in service with a simultaneous lift capacity of 37,741 people. Today's active American-owned passenger fleet could lift about 15,000 people simultaneously in a total of 41 ships. This is less than 50 percent of the lift capacity of our 1939 fleet. Our posi-tion in the world's passenger trade has slipped from second place in 1939 to about fifth in 1959. Although there is a commercial demand for more ships by U.S. companies, they cannot afford the expense of constructing them without Government subsidy, and although Congress 2 years ago approved a Government subsidy for constructing two additional passenger ships, the money as yet has not been appropriated.

In 1947 American-owned ships carried 54 percent of our foreign commerce. In 1959 American-owned ships carried 20 percent of our trade with foreign nations. It is true that about another 27 percent of our foreign commerce is carried in shipping indirectly owned by U.S. companies, but registered in Honduras, Liberia, and Panama under a so-called flag

A. Powell Davies, "The Faith of an Unrepentant Liberal," the Beacon Press, 1946,

p. 88.

*Lecompte Du Noüy, "Human Destiny,"
Longmans, Green & Co., 1947, pp. 244, 255.

² Davies, op. cit., p. 89.

of convenience or flag of necessity. This is to avoid manning the vessels with U.S. labor union-controlled manpower and to alleviate the high costs involved. Although the U.S. Government has agreements with the companies concerned that the ships registered under this cost dodge will be available to Uncle Sam in case of war, there is doubt in the minds of many that the crews would continue to man the ships under the threat of war. A good percentage of the ships, therefore, might get stranded overseas under these circumstances. Further, American labor unions and foreign shipping interests are applying political pressure to force these ships to register under the American flag and to be manned by American labor union members which, of course, would at least double the operating costs and probably make it impossible for the companies concerned to continue their operation. Even accepting the argument that 47 percent of our foreign commerce today is hauled in U.S. controlled shipping, this represents a significant reduction, considering other factors involved, such as the impending block obsolescence of our privately owned dry cargo and passenger fleet and the ridiculously low percentage of replacement shipping now scheduled for construction.

American firms have ordered only 3.6 percent of the world's new shipping construction, a puny figure for the wealthiest Nation in the world, particularly when compared to the percentages of the new world's new construction shipping of some other nations: Norway 15.6, England 19 percent. It is to be noted that ships under construction for British registry are sufficient to replace one-third of her merchant fleet. It also is significant to note that our private fleet represents only 10 percent of the world's shipping, whereas Great Britain has almost 20 percent of the world's merchant fleet.

The entire American merchant marine fleet is faced with a block obsolescence of astronomical proportions. Over 75 percent of our privately owned merchant fleet was built during the World War II shipbuilding emergency and by 1965 will be noncompetitive in the world's shipping trade.

Approximately 50 percent of our national defense reserve fleet, provided for under the Merchant Marine Act of 1936, is obsolete and is being sold for scrap this year. The balance is not being maintained in an acceptable state of preservation due to lack of funds. Last year over 80 of the dry-cargo ships in the reserve fleet were sold for scrap. Only 19 new ships were ordered. This year 1,000 Liberty ships from the reserve fleet are being sold for scrap due to their age, slow speed, and inadequacy for present day operations. The remaining 300 Liberty ships in the reserve fleet are not likely to see service again for the same reasons.

What are we going to do? Are we going to let our merchant marine disappear from the oceans of the world, or are we going to enable it to win back its once greatness and give it an ability to compete with foreign merchant marines, so that the American flag will again be seen on ships in every port of the world?

This should be one of the first questions to be answered by the new administration in 1961. A policy and a program should be immediately fixed and commenced without delay, otherwise the American merchant marine, as we have known it in the past, will be relegated to the history books, and it will be as dead as the dodo bird.

Limitations on a Congressman's Right To Travel

> EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, April 28, 1960

Mr. PORTER. Mr. Speaker, several colleagues of mine have indicated an interest in my suit against the Secretary of State with regard to my being allowed to go to China. By the way, Mr. Speaker, when I say China I mean China, not Taiwan, regardless of fictions employed by the Department of State on the passports to the contrary. China is China.

Under unanimous consent previously granted I am appending to these remarks a copy of the opinion by the U.S. Court of Appeals for the District of Columbia Circuit where the case was decided April 14, 1960. Mr. Joseph L. Rauh, Jr., appeared on my behalf and Mr. John Silard, also of the Washington, D.C., bar, was on the brief. The appeal was heard by Mr. Justice Burton, retired, and Circuit Judges Danaher and Bastian.

The court says that they do not have before them a conflict between the legislative and executive branches because I have no authorization from Congress or any of its committees to travel in Communist China. The opinion strongly suggests that the Executive would not have the right to tell a Member of Congress he could not go to China if that Member of Congress was authorized to go by Congress or by one of its committees.

While I respectfully disagree with the opinion of the court with regard to the need for such authorization, I point out that this is a far more liberal doctrine than that espoused by the Department of State.

It is my opinion that a Member of Congress should be allowed to go anywhere in the world in order to gather facts which will help him discharge his legislative duties more responsibly. The Constitution specifically provides that Congress shall declare war and that Congress shall regulate interstate and foreign commerce. Each Member of Congress has one vote on these important matters. Surely he should not be denied any opportunity for informing himself and his colleagues by firsthand experience.

Thirty newsmen have been given permission to go to China. I do not believe that a Congressman is any better than a newsman. I also do not believe that he should be treated worse than a news-

Quite apart from what happens in my case I hope that the administration will see fit to arrange for the exchange of newsmen with China in the near future, The administration now relies on technicalities which it could waive.

We cannot hope to embark on the road to disarmament or to diminish, as far as possible, the chances of a rash act which could lead to world war III, unless we increase our communication with China in accordance with the excellent recommendations of the Conlon report which was submitted last November to the Senate Foreign Relations Committee at their request.

The decision of the Court of Appeals is being appealed to the U.S. Supreme Court. The U.S. Court of Appeals' opinion is as follows:

U.S. COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT-No. 15394-CHARLES O. PORTER, APPELLANT, v. CHRISTIAN A. HERTER, INDIVIDUALLY AND AS SECRETARY OF STATE, APPELLEE

APPEAL FROM THE U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

(Decided April 14, 1960)

Mr. Joseph L. Rauh, Jr., with whom Mr. John Silard was on the brief, for appellant. Mr. Kevin T. Maroney, attorney, Depart-ment of Justice, for appellee. Mr. George B. Searls, attorney, Department of Justice, also entered an appearance for appellee.

Before Mr. Justice Burton, retired,1 and Danaher and Bastian, circuit judges.

Per curiam: Appellant is a Member of Congress representing the Fourth Congressional District of the State of Oregon. On August 7, 1958, a passport was issued to him upon which appeared the following: passport is not valid for travel to the following areas under control of authorities with which the United States does not have diplomatic relations: Albania, Bulgaria, and those portions of China, Korea, and Vietnam under Communist control." On June 10, 1959, he applied to the Department of State for permission to visit Red China, asserting "A Member of Congress has a right to go anywhere in the world to do his duty as a U.S. legislator as he sees it, except in time of war or emergency. Any other policy would seem to be an unconstitutional breach of the separation of powers." Appellant's application was denied.

Appellant then instituted his suit in the district court asserting that the Secretary's action was in violation of appellant's rights under the Passport Act of 1926 and the Constitution of the United States. He asked for an injunction to restrain the Secretary from withholding passport facilities and for other relief, and for an order compelling the Secretary to remove the limitation upon appellant's use of the passport for travel to China. He sought summary judgment, but the district court granted the Secretary's cross motion for summary judgment and dismissed the complaint. This appeal followed.

The record before us demonstrates that appellant as a member of the Committee on Post Office and Civil Service in the House of Representatives had been authorized to travel in behalf of the committee and in an official capacity to Okinawa and Japan to

¹ Sitting by designation pursuant to 28 U.S.C. sec. 294(a).

*Act of July 3, 1926, 44 Stat. 887, 22 U.S.C.

sec, 211(a) (1958).

employees.

He had no comparable authorization from Congress or from any of its committees to travel in Communist China. Although he is a Member of Congress, that status alone does not entitle him to be exempted from regulations or orders of the executive department in matters within the latter's constitutional competence. We do not have before us a conflict between the legislative and executive branches of the Government in the course of which the respective branches assert and seek to apply opposing constitutional claims. The issue here is merely between a claim of an inherent right asserted in his individual capacity by a member of the legislative branch, and the plenary power of the executive branch asserted by it in relation to and in its conduct of the Nation's foreign affairs. Under such circumstances the individual Congressman must conform to the regulations pertaining to passports which apply to all citizens and which have been authorized by the branch of the Government having jurisdiction over the subject.

Viewed in this light, appellant's rights are subject to the considerations discussed in Worthy v. Herter, — U.S. App. D.C. —, 270 F. 2d 905, cert. denied, 361 U.S. 918 (1959), and Frank v. Herter, - U.S. App. -, 269 F. 2d 245, cert. denied, 361 U.S. 918 (1959). We deem the principles announced in those cases to be controlling

Accordingly, the judgment of the district court is affirmed.

Oregon's Tucker Snocat Scores Again

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. PORTER. Mr. Speaker, millions of Americans who thrilled at the spectacle of the winter Olympics brought to them in their homes through the medium of television also noticed a tracked vehicle showing up with frequency in the background. This vehicle was the famous Tucker Snocat which is manufactured at Medford, Oreg., in my district. There were several of these Snocats in use at Squaw Valley during the 1960 winter Olympics.

This is not the first time, by any means, that the public has seen the Snocat in the course of watching great events on their television screen. quent reports from the Antarctic have included shots of the Snocats used by our Navy and the scientists who have engaged in "Operation Deep Freeze."

The Pacific Telephone & Telegraph Co. has long used the versatile Snocats in their operations in the mountains of the Northwest where winter once made snow-heaped areas inacessible. An interesting article in their company publication, Pacific Telephone Northwest, February 1960, explains how this vehicle

investigate personnel problems of oversea built in Oregon by Oregonians now looks upon the whole wide world as an area to be served.

> Under leave to extend my remarks in the RECORD, I will include the following article from the Pacific Telephone Northwest. In May I will have some firsthand information on the prowess of the mighty Snocat. I plan to ride the Snocat with other persons into the snow areas of the Cascade Mountains in Oregon near Crater Lake.

> > HOME OF THE SNOCAT (By Phil McLennan)

"First to cross the last continent." is the way Queen Elizabeth II of England described the accomplishment of Sir Vivian Fuchs on completion of the transantarctic expedition in 1958.

With Dr. Fuchs from start to finish were Tucker Snocats, the only vehicles to complete the historic trek across the earth's "bottom continent."

And about 9,000 miles from Antarctica, our own men use Snocats to reach mountaintop microwave sites in all weather.

The Tucker Snocat Corp., with offices and plant in Medford, is a family business. Emmitt Tucker, Sr., inventor and developer of the Snocat, is president and chief engineer. Working with him are his sons, Emmitt, Jr., Morris and Jasper or "Jim" as he's called.

"Dad first thought of an over-the-snow vehicle when he was a kid," says Morris. "He lived at Rogue-Elk in the Cascades. snowed a lot and Dad had to get to school and back on foot. He decided there should be a better method of traveling across snow. The Snocat is the result."

In the early 1920's Emmitt Tucker tested his first Snocat on midwinter trips to Crater Lake, using a Ford model-T engine.

During World War II the Tucker business received the financial backing of John Lowser of Grass Valley, Calif., and was started on its way to success.

"Today, Snocats are used on every conti-nent except Africa," Morris says proudly. "And we expect to make sales there, too."

During the International Geophysical Year, the U.S. Navy was asked to supply the National Science Foundation with transportation in the Antarctic. Snocats were chosen to meet the demands of this "Operation Deep Freeze III."

The Tucker Corp. was awarded a certificate of merit for meeting sharply advanced delivery schedules with no additional expense to the Navy.

During the winter Olympic games in Squaw Valley, 13 SnoCat will be on hand. Tucker technicians will service the snow transports.

The world is a "shopping center" for the Tucker SnoCat Corp.

Motors, transmissions, and gears, as well as many other specialty items, are purchased from firms all over the world. The bodies. frames, suspension systems, and dozens of other parts are handcrafted in Medford. Final assembly and finishing is also done

"Twenty or thirty dollars of long-distance or oversea telephone calls often save us the cost of long trips to cinch a sale or find the parts we need to build SnoCats," says Morris.

The firm maintains a large inventory of spare parts at its Medford plant, and encourages customers to phone for prompt replacements.

Today, there is also a "SnoKitten," light, compact, and capable of carrying two men. The company also recently delivered two giant SnoCats for use in continuing studies of the Antarctic. These monsters weigh 23,000 pounds and carry three-room apart-ments as living quarters for scientists.

When Tucker tested his first SnoCat at Crater Lake his confidence in his invention was so strong he never bothered to carry snowshoes in case he had to walk out.

Confidence in their product is one of the earmarks of the Tucker firm. No matter where its drivers go to demonstrate SnoCats, they still never carry snowshoes.

Here's One Who Doesn't

EXTENSION OF REMARKS OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. MUMMA. Mr. Speaker, there are "those that do" and then there are "those that don't," and apparently Mr. Clifford A. Kirk from whom I received a letter of inquiry which I quote at the end of my remarks, is one of those who doesn't, since he writes that his land is not yet included in the Federal soil bank plan but asks how one may apply for placement of real estate under the Government soil bank program. As he states, the land involved consists of small areas of about 15 by 40 feet each.

Of course, our farmers would apply through their county agricultural committees but I don't believe the Soil Bank Act is as ridiculous as to include everyone's backyard.

We have heard so much that there is no typical farmer and I think Mr. Kirk's letter, if anything, in a humorous way tends to point this out. From what I gather, however, our Pennsylvania farmers ask no handouts from the Federal Government-just to be left alone to farm as efficiently as they know how-without artificial competition. After all, whenever economic aid is given to one segment, the chickens come home to roost in the way of an imbalance in the rest of that related economy. Our surplus farm products continue to pile up and, instead of solving the dilemma, there seemingly is opened up a Pandora's box of additional problems.

If there is any moral to be gained from Mr. Kirk's letter, I believe it is that there is a bottom to the Treasury of the United States, an unlikelihood apparently still in the minds of those who propose Uncle Sam do everything.

Mr. Kirk's letter follows and I hope that other Members as they read it may find in it the humor that I did:

MIFFLIN, PA., May 3, 1960.

Hon, WALTER M. MUMMA. U.S. House of Representatives, Washington, D.C.

DEAR CONGRESSMAN: I am writing to you for information on how one may apply for placement of real estate under the Government soil bank program.

The land involved consists of three areas of about 15 by 40 feet each. I have been using same for a vegetable garden during the past few years. However, the soil needs fertilizer and does not seem to do too good-In addition, while tilling it, I am under constant harassment from neighboring children and dogs.

Now I realize that this is a rather small acreage in comparison with some of the

See Exec. Order No. 7856, 3 Fed. Reg. See Exec. Order No. 7806, 3 Fed. Reg. 681, 687 (1938), as codified in 22 C.F.R. sec. 51.75 (1958); cf. 8 U.S.C. sec. 1185 (1958), Proclamation No. 3004, 18 Fed. Reg. 489 (1953) and 22 C.F.R. secs. 53.1-.7 (1958).

farms in the West. However, this is the first time I have been able to come close to any of the Government giveaway programs that are being sponsored. I'd like to make the most of it.

Please reply with your suggestions at your earliest convenience.

Sincerely,

CLIPPORD A. KIRK.

P.S.—You may feel that the above is a bit ridiculous and perhaps it is. I wonder, though, if it is much more so than some of the Government spending we read about today. This being an election year for many officials, there may be a large amount of bills proposed that the vast majority of Americans neither want nor can afford. May we count on you to vote for only those things which are actually required and needed by the people.

Rule of Law

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. ULLMAN. Mr. Speaker, May 1 was proclaimed as "Law Day" by the President. In connection with the commemoration of that occasion, an essay contest was held in Klamath Falls, Oreg., and the following well-expressed statement was written by a high school senior there, Miss Ann Anderson, and published in the Herald and News of that city. Under leave to extend my remarks, I wish to insert this brief statement in the Record.

[From the Klamath Falls (Oreg.) Herald and

News, Apr. 22, 1960] Rule of Law (By Ann Anderson)

"The rule of law in the settlement of international disputes would greatly enhance the cause of a just and enduring peace." These were the words of President Elsenhower on his proclamation of "Law Day" May 1, 1958.

And what simpler answer could there be to world peace than the creation of an international law enforcing agency? Our world has become too small a sphere for each nation to continue to act independently of its neighbors. The time has come when each state must be brought to observe and obey certain laws and codes for the happiness and well-being of all the nations.

Law is a system of rational, peaceful and agreed procedures for settling disputes. With some nations possessing enough atomic warfare to threaten the population of the world, it is evident that physical wars are an obsolete method of settling disagreements. The only remaining answer, therefore, is an international system of law.

Such a system has never before been conceived of or reckoned with—but then neither has the guided missile. New methods of warfare must be combated with new and better methods of maintaining peace. The principles of justice and the best interests of all the nations can only be upheld when their grievances can be brought to a common court for arbitration. Man has the power of annihilation all too close at hand. His only chance for peaceful existence in an international society is to initiate the mark of all civilized societies—uniform law, only on an international scale.

"An army of principles will penetrate where an army of soldiers cannot." (Tom Paine.) The time has come for man to

doff his uniform of war and don his cloak of ethics—his very existence is at stake.

J. Edgar Hoover

EXTENSION OF REMARKS

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. HESS. Mr. Speaker, under permission granted me to extend my remarks, I want to point up the outstanding record of one man, J. Edgar Hoover, who celebrates 36 years as Director of the Federal Bureau of Investigation on May 10, 1960.

In 1924 he accepted a challenge. Applying devotion to ideals, dedication to principle, belief in democratic processes, and faith in God Almighty, he converted the investigative arm of the Department of Justice from a political menagerie to the highly efficient, most respected law enforcement agency in the world—to-day's FBI.

With the blessing of then Attorney General Harlan Fiske Stone, he accepted the responsibility as Director of the Federal Bureau of Investigation and installed the merit system for promotion, rigid requirements for appointment, high physical standards, careful selection of all personnel, complete training of employees, a chain of command competently supervising every facet of operation, and an internal inspection system that developed the FBI as the world's greatest collector and reporter of evidence and fact.

Unselfishly and believing fervently in the basis of the American system of law enforcement, with mutual cooperation on all levels, Mr. Hoover established the FBI Laboratory. For 28 years this division has been a service arm of the FBI—a service freely available to and widely used by other law-enforcement officers in all branches of the law-enforcement profession.

For 25 years the FBI National Academy has been training police executives and instructors following Mr. Hoover's basic belief in the importance of law enforcement as a career and his ideal of law enforcement as a profession. Pounding home the importance of training, Mr. Hoover, with the FBI, has seen that thousands of police schools each year are conducted for law enforcement throughout the country.

Regimenting his own life to the highest standards of personal conduct, he has instilled in his own FBI team an unquenchable spirit of dedication and loyalty. The long years of service by many employees attest to his example and what he expects each fellow worker to be as a representative of the FBI. In Cincinnati I am well acquainted with the FBI. Speaking for the people in my area in Ohio, I have found these men and women to mirror the ideals of this extraordinary executive.

Were it not for Mr. Hoover's foresightedness in recognizing the menace of totalitarianism, his straightforward battle against communism, I strongly submit that we would not today be enjoying the American way of life as we now have

With the advent of Mr. Hoover's 36th anniversary as Director of the FBI on May 10, 1960, I, with great pride, offer this salute to America's most potent weapon in the war on crime and subversion.

What Is an American?

EXTENSION OF REMARKS

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. CUNNINGHAM. Mr. Speaker, I include an interesting editorial from the Omaha Daily Journal-Stockman. It speaks for itself and needs no introductory remarks from me:

WHAT IS AN AMERICAN?

American disappointment over being misunderstood by so many other peoples in the world today would be more justified perhaps if we have a better understanding of ourselves and what makes us tick. We are a curious combination of many things, you know, including contradictions; though this may be one source of our power and strength. What riles others most about us perhaps is that we don't exactly fit the usual categories into which nations and nationalities are placed.

Yes, Americans are different, and just how different we are was emphasized quite effectively in these writings of an editor that came to our attention the other day:

"The American yells for the Government to balance the budget and then takes the last dime he has to make the down payment on his car. He whips the enemy nations and then gives them the shirt off his back. He yells for speed laws that will stop fast driving and then won't buy a car if it won't make 100 miles an hour.

"An American gets scared to death if we vote a billion dollars for education, but he is cool as a cucumber when he finds out we are spending \$3 billion a year for smoking tobacco. He gripes about the high prices of things he has to buy, but gripes still more about the low prices of things he has to sell. He knows the lineup of every baseball team in the major leagues, yet doesn't know half the words in "The Star-Spangled Ban-per."

"An American will get mad at his wife for not running their home with the efficiency of a hotel, and then he'll get mad at the hotel for not operating like a home. He'll spend half a day looking for vitamin pills to make him live longer, then drive 90 miles an hour on slick pavement to make up for the time he lost.

"An American is a man who will fall out with his wife over her cooking and then go on a fishing trip and swallow half-fried potatoes, burnt fish and gritty creek-water coffee made in a rusty bucket—and think it is good. An American will work hard on a farm so he can move into town where he can make more money so he can move back to the farm. When an American is in his office he talks about baseball, football, or fishing—when he is out at the game or on the creek bank, he talks about business. He is the only fellow in the world who will pay 50 cents to park his car while he eats a 25-cent sandwich.

"An American likes to cuss his Government but gets fighting mad if a foreigner does it. We're the country that has more food to eat than any other country in the

world, and more diets to keep us from eating it. We're the most ambitious people on earth, and we run from morning until night trying to keep our earning power up with

our yearning power.

"We're supposed to be the most civilized, Christian Nation on earth, but we still can't deliver payrolls without an armored car. In America we have more experts on marriage than any other country—and more divorces. But we're still pretty nice folks. Calling a person a 'real American' is the best compliment we can pay him. Most of the world is itching for what we have—but they'll never have it until they start scratching for it the way we did."

Amen.

Senator Keating Calls for Bold New National Anticrime Program

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. ROBISON. Mr. Speaker, on April 30 the distinguished Senator from New York, Kenneth B. Keating, presented the annual Robert S. Stevens lecture at my alma mater, the Cornell Law School, in Ithaca, N.Y. This lecture series has become one of the highlights of the Cornell year. Those who attended this year were particularly fortunate in hearing an address on one of the most challenging subjects of our time—the fight against organized crime.

Senator Keating says in his speech that the Nation has thus far failed to provide our law-enforcement agencies with the tools they need to combat 20th century criminal operations. He calls for immediate enactment of an interstate crime bill to enable the Federal Government to play a larger role in fighting organized crime which spills over State boundaries. He also recommends creation of a National Citizens' Crime Commission and other measures needed to cope with the crime menace.

Mr. Speaker, it is apparent that there are a great many thought-provoking suggestions in this important speech. It contains the outlines of a bold new national anticrime policy. I commend it to the attention of all Members and include it here under leave to extend my remarks:

THE FEDERAL GOVERNMENT'S ROLE IN COM-BATING ORGANIZED CRIME

(Remarks of Senator Kenneth B. Keating, Republican of New York, on the occasion of the fifth Robert S. Stevens lecture, at the Cornell Law School in Ithaca, N.Y.)

Crime is one of the most costly social diseases in our country. The director of the FBI has estimated its cost at \$22 billion. This is \$128 for every man, woman, and child in America. This is \$506 for every average family. It is more than is spent for education by all public and private schools in this country. It is nine times more than we contribute to every church and temple in our land. Actually, it adds up to almost one-third of the cost of running the entire Federal Government for a year.

This is a staggering sum. But even more terrible is the cost in personal security, the

stain on public morality, the evil, debilitating, corrupting influence on our national existence, which this disease spreads. Crime is a blight upon the land, a running sore of evil.

The crime rate has increased almost four times faster than the population of the country since 1950. Crime in the United States today is at the highest point in its history. In 1958, the last year for which complete figures are available, more than 1,500,000 major crimes were committed. This was a 7 percent increase in 1 year. There were more convictions for extortion, fraud, bank robbery, and gambling offenses that year than ever before in the life of the Republic. This is not a very impressive image of the leader of the civilized world. This is America with a scar on its face.

I suppose that crime could be totally ellminated only in a utopia. The lure of a quick dollar spurs the unscrupulous to step over the line. And crime finds easy confederates in the weak people who will yield to any temptation or fall prey to the slightest intimidation. Our population is tainted, too, by the many depraved people for whom a jungle existence is the only way of life. These people will never discipline themselves to live in accordance with the requirements of a social order. They are the natural enemies of society. Our primary protection against them is more policemen, more prisons, better processes of rehabilitation—in short, better enforcement of the law.

I do not want to understate in any way the seriousness of crime from this source. Nor are the problems created by these weak and depraved elements in our midst being ignored. The courts in the District of Columbia, for example, have devised a revolutionary new test for determining the criminal responsibility of mentally abnormal defendants. Various commissions in England in recent years have taken a new look at such age-old crimes as prostitution. famous Kinsey report provided us with an incredible commentary on the laws dealing with sex. The Anglican Church of England, according to a recent report, has just recommended a reexamination of the common law view of suicide and attempted suicide as a felony.

There are many, many other problems worthy of the most thorough study in this area of crime such as uniform sentencing procedures, more realistic arrest and arraignment provisions, better vocational and rehabilitative training in our prisons, and more constructive parole methods. And, of course, there is the ever-present task of combating the fundamental conditions in our environment which foster crime: slums, inadequate education, a lack of opportunity for good employment, and civic indifference. We could talk about these problems many hours. But, basically, these are problems of local law enforcement. Tonight, I want to center attention on a different level of crime, the type of crime which I believe must have the attention of the Federal Government. refer to crime which is planned, organized, and executed on an interstate basis.

There is no doubt that nationwide crime syndicates are in existence in the United States today, that these syndicates are plundering the Nation of many billions of dollars each year, and that these syndicates cannot be successfully dealt with under existing law. The report of the Senate Crime Committee in 1951, based on voluminous hearings and thousands of hours of investigation, is still the best evidence for these conclusions.

These syndicates are not controlled by the weak and depraved men who are responsible for the bulk of our petty crimes. They are in the hands of a new criminal type—suave, impeccable figures, masterminds, who hide behind a screen of respectability, who utilize

every modern tool in their operations, who carry out their schemes with the efficiency and planning suitable to the running of modern industrial enterprise. The Frank Costellos and Joe Adonis' of today are a different breed from the Baby Face Nelsons and Dillingers of past decades. The new criminal of this type comes equipped with the best legal adviser, highly trained accountants, the best connections, and influence which sometimes reaches into high levels of government. These men are cunning, resourceful, and powerful. They have made their powers evident many times. In New York City, for example, Frank Costello once was reported as promising to obtain a New York State Supreme Court judgeship for someone he knew-and that promise came true. I shudder at the thought of such influence in the appointments of members of the judiciary. The operations of this invisible government in America jeopardize the lives and futures of all of us.

The changing face of crime was recently the theme of a lead article in Life magazine. It was depicted in the illuminating hearings of the McClellan committee which brilliantly supplemented the work done by the Crime Committee in 1951. Almost everyone is aware of the magnitude of the problem, but woefully little has been done to solve it. The Assistant Attorney General in charge of the Criminal Division of the Department of Justice, within the past few months, was forced to conclude that "some thugs and hoodlums have risen to a position of dominance over important aspects of our social and economic life."

We have been losing the fight against organized crime because we have been attempting to cope with modern criminal techniques with the backward methods and obsolete laws of yesteryear. The traditional approach just won't work against this untraditional strategy of plunder and vice by the high command of crime.

In my opinion, it is of first importance that we enact anticrime legislation that will permit a combined Federal, State, and local offensive against organized crime in its entire area of operation.

One of the major obstacles to effective law enforcement at present is the advance of any statutory authority (with few exceptions) for the Federal Government to deal directly with organized interstate criminal activities. The contention that crime is strictly a local problem has been used to defeat efforts to fill this gap in the Federal legal arsenal. Most crimes, of course, are strictly matters for local law enforcement. But a local enforcement agency, no matter how effective, just cannot deal with crimes that spill over into other jurisdictions. Interstate criminal operations are purportedly organized to escape the authority of any one local law-enforcement agency.

The typical national gambling syndicate is a perfect example of this evasion. All that is needed to spread this crime is a battery of telephones reaching coast to coast. A lack of jurisdiction makes the points of impact incapable of dealing with the source of the menace. Since the Federal Government also lacks the authority to step into such a situation, the criminals have it made. This seems so apparent that it is incredible that it has been allowed to persist. Criminality doesn't end at State borders: Why should law enforcement? We're not chasing speeders here. We're chasing the enemies of society.

The Federal Government has not been so hesitant in dealing with any other national problems. It has told farmers how much corn they can grow for consumption by the animals on their own farms, and this has been sustained by the courts. It has left no segment of national transportation and communications unregulated. It super-

vises labor relations and working conditions in interstate commerce. While many questions are raised about the particular policies in effect at various times, hardly anyone any longer questions the fact that the Federal Government has a part to play in all of these areas.

Only one interstate activity has managed so far to escape such Federal legal scrutiny and that activity, of all things, is interstate crime. I am as concerned about preserving States rights as anyone. But it is obvious that there is at least concurrent responsibility and an absolute necessity for both the State and Federal Governments to deal with interstate criminal activities.

One objection frequently raised to expanding the Federal Government's role in law enforcement, is that it would lead to creation of a national police force. In my view, there is no danger of such a development. present time, there are some 347,000 citizens engaged in some kind of law-enforcement work. This includes uniformed policemen, law-enforcement agents, and clerical, administrative, and custodial personnel concerned with police protection activities. Of these 347,000 law-enforcement employees, 326,000 are employed by State and local governments. On the other hand, only 21,000 are employed by all the Federal law-enforcement agencies combined, including the FBI, Immigration and Naturalization Service, Bureau of Narcotics, and Secret Service. give one direct comparison, the FBI employs only 6,000 special agents compared to the 24,817 policemen employed by the city of New York alone.

It is apparent that we would have to go a very long way before there was any substance to the specter of a national police force. This phrase has become almost an epithet in some circles and has served to impede a closer study of the subject. But, if we examine the facts, it is plain that we have been grappling with a slogan, not an argument.

An interstate crime bill certainly would require expansion of the FBI, but not in a manner which would give cause for reasonable concern to any person. The FBI still would be limited to investigative activities. Direction of its activities would remain under the Attorney General and decisions as to whether to prosecute would remain with the local U.S. attorneys and other Department of Justice officials. The FBI, under the outstanding leadership of J. Edgar Hoover, has never sought expansion of its jurisdiction or an increase in its powers. The tradition developed during Mr. Hoover's long and brilliant career has established guidelines for the functioning of the agency, which would in no way be altered by increasing its personnel.

In its simplest terms, an interstate crime bill would make it a Federal offense to use the facilities of interstate commerce to break certain specified State laws. The laws specified relate to the types of crimes to which these interstate syndicates are particularly prone, such as narcotics trafficking, fraud, murder, and gambling.

The bill is far reaching, but I do not believe it can be called drastic—although even some drastic measures to deal with the present menace would be justified. In many ways, my proposal is simply an extension of a trend started more than 60 years ago when Congress enacted the Lottery Act to cope with nationally organized lottery activities. Later, there were similar acts dealing with such previously local offenses as train robbery, cattle stealing, white slavery, and kidnappings. In every one of these fields the same thing happened: Local criminals outgrew local law enforcement controls. The intervention of the Federal Government in these cases has been very effective. The train robber, the white slaver, and the kidnapper have now virtually vanished from the scene. It is time we moved with equal vigor

against the new colossus of organized crime that confronts us today.

The practical operation of such a bill is easy to illustrate. Let us suppose, for example, that we wanted to move in on a big gambling syndicate operating out of New York with outposts in Chicago, Tampa and San Francisco. All you would have to prove is one overt act by a member of the conspiracy involving interstate commerce such as a telephone call or an interstate shipment, or the use of the mails. You could then close in. In one case, with a single conspiracy indictment, you could bag the rich overlords at the heart of the operation in New York and the lieutenants who were running things in Chicago, Tampa, and San Francisco, and as many of the other small fry as you found wriggling in the bottom of the net. And that is not all. If the chiefs of police or sheriffs in certain towns and counties were mixed up in the mess, they would become defendants also.

This procedure in no way interferes with States rights, since under the terms of the law, State policies would control the definition of offenses. Nor would it throw an undue burden on our Federal law-enforcement officers. A man can always do a better job with less trouble if he has the right tools. This is the right tool for breaking up these syndicates.

This is only one of a number of reforms I believe are necessary to fully mobilize our anticrime forces. There must be a greater public awareness of the menace of crime. A great deal more has to be done to develop information about crime. I fully endorse the proposal for a nationwide crime census, which would for the first time, give us an accurate measure of the dimensions of the problem.

We have to do something about the growing tendency to countenance lawbreaking and obstruct law enforcement at every turn. This is particularly true in the case of organized gambling, which today provides the major source of revenue for the activities of the Nation's criminal syndicates.

I shall never subscribe to the theory that all we need do to remove the evils from gambling is to legalize it. It is obvious to me, as concluded by the Senate Crime Committee several years ago, that it is "not the illegality, but the huge profits that make gambling attractive to gangsters and hood-lums"

Nevada is often pointed to as proof of the assertion that legalizing gambling transforms it into a legitimate business. assertion should have been refuted for all time by the revelations of the Crime Committee after it turned its spotlight on gambling operations in Nevada. The spotlight exposed the fact that professional hoodlums were in charge of some of Nevada's leading gambling casinos; that Neveda gamblers have connections with New York, New Jersey, Michigan, Texas, and Ohio mobs; that gang warfare leading even to murder for hire was not uncommon among Reno and Las Vegas overlords. The racketeers in charge of gambling operations are in business, all right, but their methods and goals are not those of honest entrepreneurs. thing legalized gambling accomplishes is to give these criminal activities an aura of respectability, official tolerance, and public acceptance. This does not remove the evils of gambling; it simply conceals them, making the potential threat even greater and playing right into the hands of graduates of the murder-for-hire schools.

Our officials should spend more time on measures to curb crime and less time trying to dress up criminals in the garb of the respected businessman. No matter what the consequences, I want to make my own unyielding opposition to the legalized gambling absolutely clear.

There is another thing I have never been able to understand and that is the special

protection we appear to be willing to give to crimes plotted by telephone. This great scientific invention is fast becoming the privileged tool of the criminal. Recent court decisions have virtually succeeded in transforming the telephone into a private channel for organized crime.

I believe that we urgently need a Federal eavesdropping statute applicable to wiretapping and all other forms of electronic interception of conversations. Such a statute should permit Federal law-enforcement agents to utilize these devices for obtaining evidence of crime, but only under the safeguards of a court order. At the same time, as a protection against abuse, severe penalties should be provided for any electronic snooping not authorized by court order. And these penalties should be invoked against policemen, as well as ununiformed steuth who ignore the limitations of the law. There is no criminal worse than a man who breaks the law he is sworn to uphold.

Congress should also make it clear that the States may adopt the same type of eavesdropping regulation.

In the recent decision by the U.S. Court of Appeals in New York in the Pugach case, a majority of the court refused to enjoin the introduction of wiretap evidence in two State court prosecutions. At the same time, every judge on the court agreed that Federal law makes it a criminal offense to present such evidence in a State court. One judge went so far as to invite the U.S. attorney to institute criminal proceedings against the New York district attorneys if they attempted to introduce any wiretap evidence.

This decision emphasizes the incredible legal situation which now prevails. New York has the most well-balanced, carefully safeguarded, up-to-date laws on the subject of wiretapping and other forms of eavesdropping of any State in the Nation. Nevertheless, a New York district attorney, who acts in full compliance with the requirements of the New York law, now must face the risk of Federal prosecution. I cannot conceive of anything more illogical and indefensible.

If crime were not such a serious problem, the present situation would be ludicrous. I cannot believe that anyone in Congress intended, when the Federal Communications Act was passed, to make criminals out of district attorneys who obtain State court orders permitting wiretapping. We must act promptly to restore some sense and sanity in our handling of this subject.

This is another instance in which the fight against crime has been hampered by a slogan rather than an argument. The classic phrase "wiretapping is a dirty busi-ness," has served to confuse thinking on this subject and to confine analysis to emotional outbursts in support of one preconceived point of view or another. There is no logic whatever in giving to a telephone greater sanctity than we give even to a man's home or, for that matter, to his pants pockets. These can be searched under a court approved warrant and any evidence of crime disclosed thereby can be seized and used in the prosecution of the defendant. There is nothing in the Constitution which would preclude analogous treatment of evidence of crime obtained by eavesdropping. I have introduced bills along these lines, and I hope that they will be approved before Congress adjourns.

There are many, many other problems in this field which we could discuss tonight. We are dealing with one of the neglected areas of governmental policy—a neglect which has served to spur a constantly more foreboding crime menace.

We recently spent more than 2 months discussing a civil rights bill in Congress. As you may know, I took an active part in that discussion and, I can assure all of you that I shall never cease working for equality under the law for all Americans.

But, let us not forget that the Bill of Rights also guarantees to all Americans the right "to be secure in their persons." I can think of no more drastic deprivation of civil rights than that suffered by the victim of a murder, a rape, or a mugging. I can think of no greater governmental failing than the inability to apprehend and punish extor-tionists, labor racketeers, and the other members of gangdom in our midst.

Crime is at war with America. It is about time America declared war against crime.

Congress must not delay any longer com-ing to grips with this challenge to our security. Immediate action is needed on the measures I have outlined. Comprehensive study is needed also to devise other solutions to this scourge. A National Crime Commission should be appointed to probe deeply into all the ramifications of this problem. This should be a citizen's commission divorced from Congress, politics, or any existing law enforcement agencies. Such a commission is imperative to adjust our operations against crime to the needs of today and the future. Many people shrink from such tasks—they display a certain disdain toward the whole subject of crime. But no one with the public welfare truly at heart can afford to shirk the duty to attack this evil.

This is the eve of Law Day 1960-the day on which we pay homage to the law as the custodian of our liberties and our rights. The rule of law is our most hallowed inheritance as Americans. No sacrifice is too

great for its preservation.

In bringing these remarks to a close, therefore, it is well to be reminded that even in our fight against crime, no compromise can be condoned in according to every defendant his full constitutional rights. would not stand for any departure from the requirements of due process no matter how heinous and outrageous the offense involved or how serious the problem to be dealt with.

At the same time, I do not equate a proper concern for the rights of an accused with a mawkish, sentimental, dedication to safeguarding his every interest or convenience at the expense of the community. Lawabiding citizens have rights too. T have tried to describe tonight some of the ways the Federal Government can protect those rights more effectively, but consistently with our traditions and principles.

Eighth Grade Students at Baker Junior High School, Baker, Oreg., Believe Electoral College Should Be Abolished

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. ULLMAN. Mr. Speaker, I recently received a petition from the members of the eighth grade social studies class at Baker Junior High School, in my hometown of Baker, Oreg. Not only does this petition relate to a matter of importance to all of us-the question of wether or not the electoral college should be retained as a part of our election process-but I feel that the interest of these young people in national affairs deserves recognition. Under leave to extend my remarks, I want to insert this brief petition, together with the names of its signers and the letter which accompanied it, in the RECORD:

BAKER JUNIOR HIGH. Baker, Oreg., April 26, 1960.

HOD AL HILLMAN Representative, Oregon District, Washington, D.C.

Hon, Mr. ULLMAN: Our eighth grade social studies class has made the study of our Federal Government.

We believe that the electoral college is unfair and should be abolished.

The enclosed petition is to abolish the electoral college, by a 23d amendment.

Respectively yours,

SUSAN SMITH, Care of Mrs. Maden, Baker Junior High, Baker, Oreg.

PETITION

The undersigned believe the electoral col-

lege should be abolished:

Janis McCord, Robin Bauge, Jonnie Elllott, Judy Buttke, Richard Carner, John Vaughan, Mardean Peck, Susan Proebstel, Susan Smith, Linda House, Linden Curtis, Mary Ellen Jones, Danny Moore, Tim Fergersons, Keith Rogers, Dennis Spur, Roger Levinger, Harvey Harrington, James Brian Evans, George Goodman, Danny Bell, Bill Miller, Phillip McMillen, Teddy White, Miller, Phillip McMillen, Teddy White, Steven Comstock, Lois Salomon, An-nette George, Betty Hutton, Ron Yeakley, Carroll J. Small, Bruce Schaf-er, Dick Emele, Sandra Oliver, Carol Davis, Sandra Bailey, Susie Cherry, Nancy Painter, Alan Heilner, Lynda Best, Doreen Horan, Neva Hixson, Carolyn Crowson, Marilyn Schmalz, Margaret Kingman, Marilyn Haynes, Kay Tucker, Sherry Neiger, Rocky Hardwick, Marilyn Lee, David Peterson, Audriann Howerton, Joe Bowman, Donald Darrow, Judy Carter, Christinia Tarvin, Rachel Rodabaugh, Peggie Weathermoss, Ray Balderston, Barbara Jackson, Fred Still, Jr., Lee Ann Schlager, Jenny Smith, Scott Maliwauki, Janis Grabner, Geraldine Johnson, Nancy Scott, Tom Winn, James See, Eric Larson, Mike Gardner, Mike Dugan, Larry Hite, Cass Vanderwiele, Emil Young, Edward Sherrieb, Karl Stoner, Carmen Dougherty, Carol Ann Christopher, Carol Ann Eengle, Charles Paxton, James Billings, Ray-mond Morfitt, Michael Russ Lynch, Shelley Hayse, Marilyn Shaklee, Joyce Love, Patricia Reeves, Janie Boyer, Georgann Swiger, Lorna Hall, Fran Mc-Cord, Leslie Hubbard, Paul York, William L. Falich, Elizabeth May, Donna Kendall, Vona Huff, Shirley Calloway, Bonnie Gilliland, Carol Dougherty, Donna Bauder, Judy Kay Corley, Caron Byron, John Mathson, Dennis Bales, Darl Flagey, Buzz Lew, Zane Hud-dleston, Karen Miner, Eula Parker, Mike Baker, John Gekar, Billy Witham, Mike Ellis, Richard Mattes, John Wyatt, Pamela Osborne, Nancy Taylor, Sandy VanCleave, Linda Bacon, Arma Brock, Sandie Smith.

Poland Constitution Day

SPEECH

HON. EMILIO O. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DADDARIO. Mr. Speaker, we Americans should feel a deep shame because of our ignorance of Poland's his-

tory, especially since Poles like Pulaski and Kosciuszko were so instrumental in framing our own. Although we are fa-miliar with names like Chopin and dates like September 1, 1939, we fail to realize that Poland's history spans 10 centuries of national existence. It began when the Western Slavic tribes of the Wartha and Oder Valleys were consolidated into and duchy of Poland. Soon after, with the acceptance of Christianity, Poland took her place alongside the other nations of Europe and strived to secure her place in the balance of powers. Historians can give us many reasons why Poland's history was punctuated by invasions, but the one that stands out is her geographic situation at the junction of East and West. For 10 centuries Poland has had to live in constant fear of German expansion from the west and barbaric conquests from the east. That final Germany aggression of September 1939 shocked the world into realization of Poland's importance. From Hitler's nazism Poland was delivered into Stalin's communism and she was once again a pitifully tragic nation.

As her history shows, however, oppression never survives for long within her borders. Even under the overwhelming might of Soviet Russia, the Poles dared to stage open revolts at Poznan. The Poles have the inspiration and the courage to overthrow their

Communist foes.

Poland has always been a respected contributor to the arts and sciences. Her Constitution of 1791 is an example of her philosophy that freedom must be based on Christian standards. 'As we commemorate the anniversary of this document let us join with the millions of Polish-Americans in expressing sympathy with the plight of the Poles and pledging to work toward the restoration of freedom and independence.

Medical Care for the Elderly

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. DEROUNIAN. Mr. Speaker, the following editorial in today's issue of the Washington Daily News is most timely:

MEDICAL CARE FOR THE ELDERLY

After the Eisenhower administration unveiled its sweeping voluntary medical-care program for the elderly yesterday, a leading Democrat commented:

"The administration has 'outfinessed us'

in election-year maneuvering."

That comment tells the story of what is going on here in Washington concerning medical care for persons over 65.

Democratic presidential hopefuls are trumpeting for the Forand bill or some varia-tion of it—a program which would incor-porate medical care for the elderly in the social security system. The Republicans, with a tough election battle ahead, felt this was an issue they could not afford to ignore. Welfare Secretary Arthur Flemming was given a rush job of coming up with a plan

to which party orators could point with pride but which still would meet limitations im-

posed by President Eisenhower.

Mr. Flemming's plan is better than the Forand bill in that it would help provide medical care for the elderly who are not covered by social security, it would be vol-untary, in essence it would provide Government help only for major illness since persons joining would have to pay the first \$250 of hospital-medical costs and 20 percent of remaining costs until benefits were exhausted.

But the administration's plan, by Secretary Flemming's estimate, would cost \$1.2 billion a year when going full tilt, with the States to pay half of this. This money would come out of Federal and State treasuries, requiring more taxes in most instances or, if provided by deficit financing, increasing inflationary pressures.

The Forand plan on the other hand would be financed by higher social security taxes. The problem of providing medical care for the elderly with low incomes is most important. But it also is most complex.

It is too important and too complex to be dealt with by an election-minded Congress in a rush job just before Congress is to quit for the national party conventions.

In every State of the Union, commissions have been gathering data on the problems of the aged for submission and discussion at the White House Conference on Aging

scheduled for January.

Congress should wait until it sees what the experts have to say. On a matter this important and this expensive, Congress owes it to the country to take plenty of time and study so that we'll all know where we're going and what's involved.

Landrum-Griffin Results

EXTENSION OF REMARKS OF

HON, ROBERT P. GRIFFIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. GRIFFIN. Mr. Speaker, my colleagues in the Congress who voted last year for meaningful labor legislation will find interesting the following article Which appeared in the Mining Journal, Marquette, Mich., on Wednesday, April 27, 1960:

LANDRUM-GRIFFIN RESULTS

After the Landrum-Griffin labor reform bill was enacted last year, sundry labor leaders vowed to annex the political scalps of Congressmen who voted for it. This implied that they expected to be able to persuade their unions' members to vote against Landrum-Griffin friends.

But union members can't be delivered on election day in a bloc, as canny labor leaders have been known to admit. And now that the results of Landrum-Griffin are beginning to be felt we wonder whether support of that bill won't actually win the votes of many union members for these Congress-

For instance, the International Union of Operating Engineers has been forced to adopt a new constitution. It doesn't weaken the union's bargaining position at all. But it does permit all of the union's 300,000 members to vote in union elections—where only about half were allowed any voice before.

It also deprives international officers of the privilege of seizing control of locals through trusteeships solely upon the basis of whim and prescribes the conditions under which locals may be taken over by the international.

Observers say that the new constitution has awakened new interest in the union among rank-and-file members, and who can doubt that it will be a better union because

The Labor Department reports that since Landrum-Griffin members of other unions have become more active in union affairs, that other union constitutions are being revised, that a number of ex-convicts have been tossed out of union positions and that 103 trusteeships have been ended.

Union members now have on file 523 complaints against corruption in their unions and at last can have some hope that some-

thing will be done about it. We suspect that union members aren't going to vote against men whose stand made possible the cleanup of organizations so important to them—a cleanup which they were helpless to bring about themselves while dictators and hoods were unchallenged

in the saddle.

The Contribution of Chief Justice John B. Fournet to the State and the Bench and Bar of Louisiana

> EXTENSION OF REMARKS OF

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, on today the Louisiana State Bar Association at its annual meeting was to have honored the Honorable John B. Fournet, chief justice of the Supreme Court of Louisiana, on the occasion of his 25th anniversary as a member of that body. Selected to express the felicitations of the group was my good friend and most able colleague, the Honorable E. E. WILLIS of Louisiana.

As willed by providence, however, my good friend, the Chief Justice, was hospitalized and, of course, unable to attend the planned function in his honor. have been able, however, to avail myself of the expressions that Congressman WILLIS was to have made on this occasion. The dissertation is one of great accuracy, phrased in most exceptionally well chosen words. Although I have personally known of the inspiring career of this famous jurist, whose residence is located in my congressional district, at Jennings, I was so impressed by the documentation so ably made by Congress Willis that I am constrained to commend it to the attention of the membership of this body.

Certainly, the accomplishments and dedication to duty of my good friend, the chief justice, should be an inspiration to all who endeavor to further and uphold our great system of courts and high respect for those who dedicate their lives to public service. I join with his other friends in wishing him speedy recovery and, also, in expressing sincere congratulations to Chief Justice Fournet and his lovely wife on the occasion of his silver anniversary as a member of the Supreme Court of Louisiana. The dissertation follows:

THE CONTRIBUTION OF CHIEF JUSTICE JOHN B. FOURNET TO THE STATE AND THE BENCH AND BAR OF LOUISTANA

The esteemed fellow citizen we honor this evening has been a devoted public servant for 32 years. During that long span of time he has held high positions and served with great distinction in the three branches of the State government. This is no ordinary achievement, and that is the theme of my address:

our guest of honor is no ordinary man.

John B. Fournet was born in the town of St. Martinville on July 27, 1895. He was the first-born of the 10 children of Louis Michel Fournet and Marcelite Gauthier Fournet. From his good and Christian deceased mother he was bequeathed an attribute of humanitarianism toward, and compassion for the masses of the people, and from his strongminded father, who is hale and hearty as an elder citizen of Louisiana he derives his fearless physical and moral courage. He is a worthy descendant of a long line of noble sires, who helped to shape the destiny and the way of life of the proud people of southwest Louisiana.

His fine heritage is easily traced to Alsace-Lorraine. His great-great-grandfather, Pierre Paul Briant, was sheriff of St. Martin Parish in 1810. Later he became parish judge and served as a member of the constitutional convention in 1845. His great-grandfather, Valsin Fournet, was a pre-Civil War cotton broker and civic and political leader in the area. His granduncles, Gabriel and Alexandre Fournet, answered the call of the Southland in the Civil War and played important roles during the trying Reconstruction period that followed that terrifying conflict. Gabriel became a district judge and was later elected as State treasurer. Alexandre was elected successively as assessor and clerk of court of his native parish and lived to see our honoree make his early mark in the civic and political affairs of our great State of Louisiana.

Young John Fournet received his early education in the public schools of St. Martin Parish. Upon his graduation from Louisiana State Normal College (now Northwestern State College) in 1915, he used his tenacity and determination never to be second best if he could help it. Thus after a short tenure as an ordinary schoolteacher in the Parishes of Vernon and Jefferson Davis, he became a high school principal in the Parish of Pointe Coupee, at the age of 21.

Hungry for a higher education, the young man, John Fournet, attended a summer session at Tulane University in 1917, and entered the Louisiana State University Law School in the fall of that year. True to his capacity for leadership, he became president of his class and played on the first string of the splendid LSU football squad. Following a tour of duty in the Armed Forces of the United States during World War I, he re-turned to LSU and obtained his LLB. degree from that institution in 1920.

The lawyer, John B. Fournet, hung his shingle in his native town of St. Martinville for a short while. And as an aside, I might say that he found time, without charge, to assist in coaching the high school football players while I attended school there. He practiced his chosen profession in Baton Rouge for a year and then moved to Jefferson Davis Parish, where he had previously made a host of friends as a schoolteacher. It was there he enjoyed a lucrative law practice, and it was from there that he entered the political arena.

John B. Fournet served in the Louisiana State Legislature as a representative from the Parish of Jefferson Davis from 1928 un-til 1932, and was speaker of the house during that time.

He was elected Lieutenant Governor of Louisiana in 1932 and as such presided over the sessions of the State senate.

Teacher, soldier, lawyer, lawmaker, Lieutenant Governor, presiding officer of the house, presiding officer of the senate, presiding officer of our judicial system for 11 years thus far, with many useful years ahead. No ordinary person, this man John B. Fournet; and no one to be pushed around or intimidated either. I am very sure that everyone here this evening will agree with that statement, as a matter of fact. Ever attentive to the will of the people, yet he always reserves the right to make his own judgment on all issues presented, and well he might because of his long experience in practical politics and the administration of public affairs. And if there are those here or elsewhere who disagree with this attitude as a matter of policy, I commend to them the views in this respect of that great Member of the House of Commons, Edmund Burke of England. Speaking to his own constituents with the same forthrightness that our guest of honor would employ on a similar occasion he said:

"Certainly, gentlemen, it ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinion high respect; their business unremitted attention. It is his duty to sacrifice his repose, his pleasures, his satisfactions, to theirs; and above all, ever, and in all cases, to prefer their interest to his own. But, his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to you, to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your

The friend of the people was elected to the Supreme Court of Louisiana and assumed his duties as an associate justice on January 2, 1935. He became chief justice of the court on September 7, 1949, upon the retirement of the then chief justice, Charles A. O'Niell. Mr. Chief Justice, we salute you on the 25th anniversary of your elevation to the highest court of your beloved State.

Judge Fournet would be the last person to push issues under the rug or to evade the fact that he has been the subject of criticism as well as praise. As a human being I suppose he is sensitive to both, but As a human whereas a lesser person might have faltered under similar circumstances, let it be acknowledged by all that he has not carped about unduly harsh judgment, nor swooned over pure adulation. For example, he once described his feeling about entering the judicial branch of the government with his usual candor. He said: "The judiciary was not originally my ambition in life. The advocacy of the cause of others and the political arena were more to my liking. But a man is not the architect of his own destiny, and with the donning of the judicial robes on January 2, 1935, I turned from advocacy and politics and have made the law and the improvement of the administration of justice my life's work."

Under our State constitution the appellate and supervisory jurisdiction of the supreme court is so broad, it is quite natural that Judge Fournet has had occasion to express himself on almost every phase of law governing our society over the last quarter of a century. He has had to rule on delicate issues affecting the life and liberty, the property and the pursuit of happiness of all the people. His opinions of necessity form part of our general jurisprudence and judging from their wide acceptance thus far, it

is safe to say, I think, that they will stand the test of time.

This is not the time or place to cite specific cases, but it was refreshing for me to read a fair sampling lately, to which reference will be made in a footnote. Since I have chosen pioneering decisions, one does not have to agree with all of them. But I will say this: They are mighty convincing.

His opinions on freedom of speech and the privilege against self-incrimination reflect his strong belief in the Bill of Rights.¹

I personally believe he excels in the field of statutory construction, properly speaking, and construction of statutes vis-a-vis the State and Federal Constitution. His long and practical experience in the legislative and executive branches of our Government enables him, as a member of the judicial branch, to understand, explain and apply the broad plan and purpose of the law. This is exemplified in his decision sustaining the constitutionality of the Louisiana Criminal Code.²

His rulings in workmen's compensation cases, with respect to the scope of employment, compromises, and related matters, have given meaning to the broad purpose of that law.³

His decisions on the law of registry and notice from public recordation; what sustains a plea of res judicata, or the continuity of jurisprudence, and proceedings in executory process have been praised by professors and in legal journals.

He has written landmark opinions on the supremely important subject of the conservation of natural resources.³

Judge Fournet's decisions have had a marked effect on the mineral law of this State, under our Civil Code. In fact, opinion after opinion demonstrates that he is a great advocate of the civil law. He places paramount reliance on it over common law concepts. His devotion to the civil law is, in my opinion, his greatest contribution to our State, the bench and bar. And a recent experience confirms that opinion.

Coming back from Geneva, where I attended the International Conference on the Law of the Sea as a congressional observer, I stopped over in Paris. By previous arrangement, I visited the Palace of Justice and conferred with outstanding French scholars and jurists. It was natural that the topic of conversation was the Code Napoleon, after which our own Louisiana Civil Code is patterned. The conversation, as a matter of course, was in French. The highest Court of France, the Court of Cassation, was not in session, but as a member of the Judiciary Committee of the Congress, I was privileged to sit with a court composed of three judges.

The prosecuting attorney, all dressed up in a robe, explained that the defendant had gone into bankruptcy and that, in the name of France, the rascal should go to jail, and at the same time that the court should enter a civil judgment in favor of the person who had been filched. All of this sounded very strange to my French ears, and the prosecuting attorney later came to the bench and said. "You seem to be confused?" I replied, "Vous l'avez bien dit", which with proper emphasis means, "Confused? Brother, you can say that again. The right to go into bankruptcy is embedded in our Constitu-tion itself. And I don't understand this civil judgment business." The robed gentleman snickered audibly, to the irritation of the court, and said that the French word "banqueroute", bankruptcy, has a double meaning, one of which refers to any banking or other unlawful financial manipulation. He explained that, in his country, if "le delit", the offense, involves also a violation of trust or misplaced confidence, the court should do total justice. He proudly pointed

out, "The facts to be proven are the same, aren't they? C'est bien simple."

I am afraid I was not too well impressed with French criminal procedures, and on reflection I think Edward Livingston, Moreau Lislet, and others were wise in rejecting it in the formulation of our basic laws. But I was profoundly impressed with the fact that the code Napoleon is still held and will continue to be held in such high legal reverence in France.

I mention this experience to express my pride in Judge Fournet's devotion to the preservation and perpetuation of the purity of our civil law. And in this I am not alone.

On the occasion of his citation to honorary membership in the Order of the Coif, Prof. Harriet S. Daggett had this to say:

"During his long service on the supreme court, Justice Fournet has made a scholarly contribution to all fields of law. His knowledge of French, his keen interest in the history and evolution of the civil law, his understanding of the people of the state and their needs have peculiarly fitted him for his important position. Together with scholarship, Justice Fournet has a penetrating awareness of economic and social change, highly necessary to a constructive jurist. Creative jurisprudence is indeed an art, possessed, unfortunately, by few. During Justice Fournet's term of office the law of mineral rights, of paramount importance to Louisiana, had to be molded by the courts. Justice Fournet's contribution in this field has been unusual and invaluable. This service, alone, even without his work in many other fields, puts this judge in the foremost ranks of those who have taken the places of honor in the historic line of distinguished lawyers of which our profession is justly proud.

And in further recognition of his ability, integrity, and great contribution to law and order, Judge Fournet was made honorary member of the Louisiana State University Chapter of the Gamma Eta Legal Fraternity. He was made honorary member of the Tulane chapter of the Phi Alpha Delta Legal Fraternity. He was made honorary member of two scholastic fraternities of Southwestern Louisiana Institute, and on November 16, 1956, his alma mater conferred upon him an honorary degree of doctor of laws.

an honorary degree of doctor of laws.

Well, as Al Smith used to say, Let's take a look at the total record. The chief justice, during his 25 years on this bench, has written 1,053 opinions, these appearing in our Louisiana reports beginning with volume 181. Of this number 904 were majority opinions of the court, 32 were per curiams, 84 were dissenting opinions, 21 were concurring opinions, and 12 were opinions concurring in part and dissenting in part. Of the 904 majority opinions written by him, no rehearing was sought in 469. Of the 443 rehearings that were sought, only 17 were granted. Of this number nine were affirmed on rehearing, six were reversed, and two were reversed in part and affirmed in part.

Of the 904 majority opinions written by the chief justice, writs were sought to the U.S. Supreme Court in only 19. Only six of these were granted and of these six he was affirmed in five and reversed in one. This means that of all the 904 majority opinions written by the judge he has only been reversed on 7 occasions, and on 2 occasions he has been affirmed in part and reversed in part—9 opinions out of 904.

No ordinary judge this Jurist Chief Justice John B. Fournet.

As a subcommittee chairman of the Committee on the Judiciary in the United States House of Representatives, I have been constantly faced with the problem of the delay of justice in our Federal judicial system. Moreover, I am cognizant that this unhealthy situation is all too common throughout the judicial systems of our States. Fortunately, however, and proudly as a Louisianian, I can point with pride to the eminent position

which the judicial system of the State of Louisiana occupies in the United States. The carpings and criticisms of the public on court congestion do not apply to our State. The adage, "justice delayed is justice de-nied," has no application in Louisiana. For. here, there are no congested dockets. The enviable position which Louisiana occupies today throughout the Nation in the field of judicial administration is no accident. That position has been well earned and merited primarily through the efforts of our chief justice as the administrative officer of the Louisiana Supreme Court.

And finally, Judge Fournet is due the outstanding credit for the recently enacted constitutional amendment, whereby the larger part of the appellate jurisdiction of the supreme court will be transferred to the expanded and enlarged intermediate appellate courts. This did not happen over night but had to be sold to the bench and bar and to the people. I predict with confidence that under this plan not only the speed but the quality of our justice will be the highest.

No ordinary administrator this man and Judge who is our guest of honor this evening.

In conclusion, I have tried to be objective in my appraised of the honoree. I have tried to avoid the pitfall of overstating or understating his qualitles.

Now, what is his appraisal of himself? In Alexandria, La., 5 years ago, Judge Fournet, with complete honesty and humility, paraphrased the description of his great friend Huey Long of Judge Fournet. He said, "I am far from being a genius. In fact, I am not what you might call smart. My accomplishments, such as they are, are due to no fault of mine but rather to inherited traits and characteristics." Here is a man with consuming loyalty to his friends, fierce pride in ancestry, and with not an ounce of false Pride in his towering and strong body. It is this quality that Polonius in his advice to his young son placed above all also. He said, This above all: To thine own self be true, and it must follow, as the night the day, thou canst not then be false to any man."

Mr. Chief Justice, as your fellow townsman and lifelong friend, my wish for you on this occasion, in which I am sure all here gathered and your legion of friends elsewhere who would like to be present join, is that your great mission in life will continue to be blessed with successful accomplishment. And for that, I am sure you have the fervent prayers of your good wife, Sylvia.

Eighty-eight Years Young

EXTENSION OF REMARKS

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1950

Mr. McINTIRE. Mr. Speaker, Gus Barton of Columbia Falls, Maine, has the distinction of being 88 years young. acting as he does to operate a mail delivery route and manage a small business establishment besides.

Mr. Barton is living proof that industry does not, as some persons might believe, act as an emery wheel that grinds away the human substance, but, instead, serves as a tonic that promotes good health over long years of life.

Here, truly, is a solid citizen whose conduct in community life and vocational pursuits is exemplary and remarkable. The precise detail of Mr. Barton's activities and background are presented in the following article of the Bangor Daily News, the unique nature of which is deserving of the attention of my colleagues:

[From the Bangor Daily News, Apr. 22, 1960] MAIL ROUTE, NEWSSTAND KEEP COLUMBIA FALLS MAN, 88, YOUNG

(By Velton Peabody)

COLUMBIA FALLS, April 21 .- "I sometimes wonder how a man my age can enjoy such good health," 88-year-old H. A. "Gus" Baron of Columbia Falls pondered as he neared the end of another day's mail run Wednesday morning.

But actually, there is little need for this bachelor to wonder concerning his health, if a life filled with activity induces good health.

Now well past the usual retirement age, Gus still manages to operate his combined bust station and newsstand and in addition, is still working on a mail delivery contract he obtained more than 60 years ago.

Six days a week he loads up his car with sacks containing mail for the 14 families living in the town of Centerville and strikes out, delivering mall to a dozen other families along the way on his 5-mile trip to the Centerville Post Office.

At the Centerville Post Office, located in the residence of Mr. and Mrs. Frank Flaherty, he pauses briefly while Mrs. Flaherty, the postmaster, sorts the mail and reloads the sacks with outgoing mail, which Gus takes back to Columbia Falls.

Although he has held the contract for the Centerville mail delivery for more than 60 years, Barton took the route over actively only 13 years ago, following the death of his brother, Milton J. Barton, in 1947. The brother had carried the mail until about that time and also had transported the mail between the Columbia Falls Post Office and the railroad depot. The latter contract was dropped at the time of Milton's death.

Gus does recall, however, many of those early trips to Centerville when he first got the contract. He said Milton's horse got so acquainted with the road between Columbia Falls and Centerville that even during the winter months with loads of snow on the ground there was no need for the driver of the wagon to steer. The horse would plow through the snow, picking his own best path to Centerville and return, stopping at just the right mail boxes along the route.

Sometimes, in order to deliver the mail to the patrons in that outlying area, it was necessary to walk most of the distance on snowshoe, Barton said, adding that his brother hardly missed a day and that he himself missed only 4 trips in the last 13

His interests over the years have been many and varied. He was born in Columbia Falls, son of a butcher and meat peddler, and has lived in Columbia Falls most of his life. The sole exception was a 4-year stay in Boston where he was employed in a print shop.

Locally, his early employment recollections go back to the old Coffin and Knowles saw and lumber mill, which used to be located between the present town hall and Pleasant River, a stone's throw from the combined bus station and newsstand now operated by Barton. He worked there about 3 years.

He tried his hand at raising potatoes, but

gave that up after 3 years.

With his half-sister, Miss Florence Plante, he operated the Columbia Falls House for several years. This now is the residence of Graydon Hartford, located almost directly across the Main Street from the famed Ruggles House.

For a time he operated a store between the Ruggles House and the Methodist parsonage. Fire struck and wiped out the store and

parsonage in 1945.

Barton then moved into the store now known as Driscoll's Town Market. He found this too great an undertaking for a man of 63, so he obtained space in the George Drisko Building, where he is now located.

His station is a favorite gathering place for the town's elder citizens, who assemble daily to relive some of the area's most memorable events. And many of these events, undoubtedly, were influenced in some way by the life of Gus Barton.

Answers to Questionnaires-They Provide Cross Section of Public Opinion

EXTENSION OF REMARKS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. FISHER. Mr. Speaker, 69 percent of the people in my congressional district are opposed to compulsory health and hospital insurance, as has been proposed in Congress, according to the results of a questionnaire which I recently submitted to my constituents. That approaches a ratio of 3 to 1.

By the same percentage-69 percentthe people oppose Federal aid for increased teacher pay. And 64 percent oppose Federal aid for school construction.

This questionnaire went to practically every home in my district. The response was most gratifying. I take pride in this demonstration of interest on the part of the people whom I represent-interest in their Government and in the manner in which it is being carried on.

I have read each of the returns, with the many timely comments that were included. This enables me to know fairly accurately what the prevailing views of my constituents are.

The results of the tabulation follow:

[Percent]

	Yes	No	No opin- ion		Yes	No	No opin- ion
Foreign affairs:	-			Fiscal affairs:	No.		7016
Should we continue foreign economic aid? Should we continue foreign military aid? Do you favor gifts of surplus farm commodities to under-	46 60	43 30	11 10	Would you rather balance the budget and reduce the national debt than cut taxes? President Eisenhower has urged Congress to raise the	78	18	1
privileged countries? 4. Do you favor a firm stand on Berlin? 5. It is contended we should buy substantially of foreign goods if we expect to sell our products abroad. On the	80 84	13	7 7	postal rate enough to reduce the present \$554 million annual deficit in that Department. Do you favor this?. 3. Do you favor a pay-as-you-go basis for interstate highway construction even if it requires a raise in Federal gasoline	50	44	
other hand, it is argued that imports from low-labor-cost countries now at such levels as to require higher tariffs and import quotas to protect certain domestic industries. Do you favor such restrictions on imports?	59	26	15	fax? Social security: A bill in Congress would provide hospital, nursing home, and surgical benefits for persons receiving social-security payments. An immediate increase in the social-	. 58	34	8
Labor: 1. Do you agree with those people who say that organized labor is becoming too powerful? 2. Do you favor legislation requiring labor unions to conform	88	10	2	security tax of ¼ percent of wages on both employees and em- ployers, and ¾ percent of the earnings of self-employed persons subject to social security taxes is called for by the bill; but eventual costs of the proposed new benefits have been esti-			
to antitrust laws now applicable to private corporations and other business enterprises? 3. Industrywide bargaining and industrywide strike by labor	86	7	7	mated to require nearly double these increases in tax. Do you favor this bill? Agriculture:	24	69	
unions would be prohibited under a bill before Congress. Unions would be required so bargain with management, make strike decisions, on a company-by-company basis, with industries to do the same. Do you favor this bill?	84	8	8	Do you think the soil bank conservation reserve program should be continued? Do you favor a reduction of agriculture price supports? Education:	18 68	72 23	10
4. Do you think the Federal minimum wage, which is now \$1 an hour, should be raised to \$1.25 and coverage of the law extended to employees of service establishments and	150	300	3	Do you favor Federal aid to needy States for school construction? Do you favor Federal aid to needy States for increased	31	64	1
retail stores?	35	56	9	teacher pay?	26	69	2111

Incidentally, it is of interest to note that of the 229 in the teaching profession who returned questionnaires, 38 percent were for and 56 were against Federal aid to States for school construction. And 32 percent were for and 60 percent were registered against Federal aid for increased teacher pay.

MANY ANSWERS ARE QUALIFIED

I should point out that many of the answers are qualified. That is particularly true with regard to foreign aid. In answers to those questions many who answered expressed the belief that this program should be more efficiently administered and that it should be reduced.

Another example of qualified answer relates to the question of increasing postal rates. Many who answered in the affirmative called for an increase in rates of so-called "junk" mail, with no increase on first-class rates.

That conforms with my views on that subject. Revenue deficiencies total \$280 million in second-class mail and about \$189 million in third-class mail. Second class is the mail service used by most magazines and newspapers. Third class consists primarily of advertising circulars, other printed matter, and small parcels.

The Postmaster General has pointed out that with the rapid growth of third class, direct mail has become the second largest advertising medium in the United States, based on volume of advertising expenditures.

Against this background of a thriving direct-mail industry, an average of more than 1 cent per piece must be contributed by the Treasury to the Post Office Department to pay for revenue deficiencies in third-class mail.

It is only fair that direct-mail advertisers should pay the costs of maintaining the medium they choose to use. Parcel post is now on a self-supporting basis, and first-class mail just about pays its own way.

MCONOMY, SELF-HELP, URGED

An analysis of these returned questionnaires and a reading of the many comments reveal to me a vast reservoir of interest in a return to the fundamentals; in opposition to nonessential spending; in more of the Government being handled by the people themselves on a local and State level as opposed to the ever-increasing concentration of more authority and control in Washington.

I am convinced that the people are getting more government than they want, more than they want to pay for. Many feel that Federal aid in most forms is a delusion. They want their Government to be operated on a business basis, with balanced budgets, reduction of the public debt, and tax reduction and reform. They want less government in business, less socialism, more self-help rather than Government help. They strongly support an adequate national defense. They want outlays for welfare to be confined to sound programs. They want Federal activities to be confined to those things that local people cannot handle themselves.

Although this is but the cross section of the opinion of the people of one congressional district, it represents the voice of the people who believe that two and two make four and that you simply cannot have something for nothing.

THE PEOPLE SPEAK

Mr. Speaker, I should like to qoute from a few of the comments to which I have referred.

A Sonora pharmacist writes:

We would appreciate anything that can be done to reduce Federal controls on our everyday living, schools, farms, etc., and return as speedily as possible to States rights.

A Winters merchant comments:

School costs should be raised at home, for if it is raised here and sent to Washington there is too much loss between here and Washington and back.

A Blanket farmer writes:

There is no use taking tax money to Washington and sending back aid. The State could use its own money for school construction and increased teachers pay.

A San Angelo merchant comments:

The greatest threat to national security is not Russia but high taxation. No new taxes should be voted and every effort made to reduce taxes, both apparent and hidden.

A Mason farmer questions the soil bank:

Soil bank conservation reserve is not being handled right; too much land that wasn't used for farming is in the soil bank. Something is wrong if a man can buy land, put it in soil bank, Government pays for land.

A Bangs housewife comments:

We have got to stop these creeping, crawling tentacles from Washington from choking out the life of freedom.

A Medina tourist court operator is right when he says:

Whenever the people can get it through their heads that they should not rely on our Government for everything—the sooner we'll have a better world. Our form of government is the finest in the world, but we are abusing it.

A San Angelo salesman expresses the views of many regarding Fidel Castro, with this comment:

I think the anti-U.S. campaign put on by Cuba should be gently and firmly squeezed out by economic pressure. We won't make any friends by letting this radical slap us around.

A Menard stock-farmer writes:

Let the world know that Santa Claus is not living in Washington, D.C. any more.

A Sonora banker comments:

I don't see how the American people can continue to pay the high taxes and yet Congress is looking for ways to increase them.

A San Saba ranchman states:

I think we should have no more government than is absolutely necessary. I prefer to save my own money rather than pay the Government with the waste and duplication often found in Government. I once quit a Government job because I was bored doing nothing. We need dedicated, Christian statesmen who regard the spending of other people's money as a sacred trust. You'd be surprised how many of us would like to have lower taxes and less Government help.

A San Angelo lumber dealer likes the idea of the questionnaire:

I appreciate the opportunity to express my opinion. Otherwise I would not take the time to sit down and write you a letter. Let's continue this. It gives me-and I believe, the people in your district—the feeling of belonging.

A Uvalde TV technician writes:

I feel that foreign economic and military aid should be reviewed and possibly reduced in many cases. I am particularly in favor of labor legislation in regard to curbing mismanagement by labor leaders.

These comments taken at random are but a few from hundreds that have been received. They are all timely and contain a lot of food for thought. I should like to quote from a comment by a Winters clergyman, as a concluding thought:

I am chagrined at the way the Federal Government is slowly becoming a socialized welfare state, spoon feeding the individual instead of making him live up to his responsibility to stand on his own feet. Instead of Christian stewards we are creating Government peons waiting at every turn for a handout.

Problems Confronting the American Farmer

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. BOGGS. Mr. Speaker, by unanimous consent I include herewith in the RECORD the thoughtful address made in New Orleans a few days ago by Mr. Herman S. Kohlmeyer, former president of the New Orleans Cotton Exchange.

Mr. Kohlmeyer has spent many years studying the problems confronting the American farmer. He, of course, realizes the fundamental difficulties of legislating for the farmer and points out many of these problems in the following address which I commend to the members of both bodies:

The most important domestic issue in the country today is the farm problem. Tremendous costs and mounting surpluses indicate that the present method of giving assistance to the farmer by nonrecourse loans is a failure. It has been criticized so severely in the press that it is certain to break down. Unless some radical change can be developed, the farmer will get no help at all.

To discuss the problem it is necessary to point out first why this system has failed, so I want to give you certain basic facts. Since I am better acquainted with cotton, I shall confine most of my remarks to that commodity. As a matter of fact, the wheat farmer and the cotton farmer are the ones in the most trouble.

Of foremost importance is that 40 percent of the farms produce 90 percent of the crops. Ninety percent of the cotton farmers produce less than 25 bales, which means that they have a gross annual income of less than \$5,000. They probably average \$2,500 apiece. How on earth can anyone figure out a problem that encompasses a solution for people like that, and at the same time treats with fairness their larger competitors, some of whom produce a crop of 10,000 bales, or \$1,600,000 gross production a year at present

prices? It is exactly the same as trying to pass a law that would treat fairly both the Regardcorner grocery and the chainstore. less of any other figures, or any other set of statistics, this is primarily the reason why we have an almost insoluble farm problem.

Since the basic idea of rigid price supports for farmers was inaugurated by the Roosevelt administration, planting of cotton in the United States has been reduced from 271/2 million acres to 15 million acres. While this decrease in acreage has been going on, and it amounts to a decrease of 45 percent, the size of the harvested crop has increased.

In the period between 1935 and 1939 the average crop was 13,150,000 bales, and last year it was 14,500,000 bales. This illustrates the second most important reason as to why no solution has been found to our problem. To bring it out more strikingly, let me say than in 1927, 42 million acres of cotton were planted and produced a smaller crop than last year's, which was harvested from 14,500,000 acres.

Since 1950 there has been a technical reakthrough in agriculture. You have breakthrough in agriculture. heard about complete mechanization of farms, about fertilizers, insecticides. But now even these methods have been improved upon. For example, trace materials are on the market to replace the iron, copper, manganese, etc., in the soil which have been mined out through years of planting. University of California followed the Japanese in working on a thing called Gibberellin, which makes plants grow to giant size, and could in the future produce crops that today would be undreamed of.

I can dramatize this by explaining that certain weedkillers like 24-D literally make broadleaf plants grow themselves to ex-haustion and death. By accident it was discovered that 24-D applied in minute quantities increased enormously the growth and production of a cotton stalk.

The farmers have learned how to take advantage of restricted acreage. Among other things, they have adopted a system of skipping every four rows. If a man had a 100-acre field and his acreage allotment was cut in half, instead of planting only half of his field and leaving the remainder fallow, he plants a full field by planting four rows, skipping four rows, planting four rows, skip-ping four rows, etc. This is in compliance with the law. What our smart farmers have found out is that the outside rows produce three times as much as the inside rows on account of the increased sunlight and air that reaches them, and yields have been increased additionally in this manner.

The third reason for the failure of the program is its cost to the Treasury. Our Government owns today \$10 billion worth of surplus commodities, which cost the taxpayers \$1 billion a year for storage, bookkeeping, and handling charges. If only half a crop of cotton were planted next year, and the Government's surplus were added to it, it would be enough to go round,

As far as wheat is concerned, the fantastic amount held in Government storage is, according to Secretary Benson, enough to make flour to bake 500 loaves of bread for every man, woman, and child in the United States.

No one could carefully examine the facts that I have given you, and think that it would be proper to continue the present policies in agriculture. There must be some other way to help the farmer. Surely this program, entered into during national crisis, is completely obsolete. If it were helping the farmer as it was designed to do, why, then, has our farm population dwindled from 30 percent of the people to 12 percent? Is that not proof of inadequacy? Secretary Benson, after over 7 years, has

come up with no solution. He says price supports must be lowered and those who cannot exist under lowered prices must stop farming. This, of course, implies that if they cannot find a job they should starve to death.

There will be no different ideas to come from the Republican Party, and it remains for our party to come up with some answers,

This system, under which crops are produced for the Government loan instead of for the market, creates situations for which no answers can be found. The farmers and processors are not careful about quality, because they will never have to satisfy a buyer. They just turn their stuff over to the Commodity Credit Corporation. The marketing system has been destroyed, and will have to be built anew if the happy day ever comes when our farmers are again on solid footing.

Some question the necessity of helping the farmer at all, but they plead their cause through ignorance. We live in a paper, or rigged, economy. Steamship companies and airlines receive subsidies from the Government. Manufacturers are protected by tariffs. Labor is protected by laws requiring payment of minimum wages, and even the banks can get help from the Government by borrowing the cost of all the Government bonds in their portfolio from the Federal Reserve System regardless of the price the bonds are bringing on the market. If it is neces-sary to have laws to make for healthy transportation systems, healthy manufacturing companies, healthy banks, and to protect the laboring man, is it fair to say that the farmer must buy in a protected market and sell in a free market?

Time will cure the problem. The ineffi-cient farmer will not be forever willing to scratch out a bare existence on a poor piece of land, when he can move to the nearest town, and make a living working at a gasoline station, or as a laborer in a factory, or even move to the big city where other job opportunities are available. But until that time comes, the Government has an obligation not to make this particular group the

stepchildren of our economy.

There is but one thing for sure. We must understand that the present system has failed. Some of our most respected people in Congress continue to introduce legislation asking for high loan levels. They point to the fact that this farm program did not cost a lot of money until the Republicans took office. Such a position overlooks the two wars-World War II and the Korean war-which created such enormous demands for all commodities that the program was bailed out on two separate occasions. It also overlooks the technological revolution that has taken place on the farm since 1950. Bear in mind that in the last 10 years output per man-hour an industry has increased 2 percent, while an agriculture it has increased 7 percent. Also, I think it is evil to hold our most inefficient people on the farm with false hopes. If a living can-not be scratched out of Mr. Brown's farm, and his wife is scrubbing clothes on the washboard, would he not be better off to take a job in the nearest town where he could earn enough money to buy her an electric washing machine?

Then from where do we get the solution? All kinds of answers crop up. An interesting and futile one appears in the poultry business. Big sellers of feed constantly finance chicken farmers, whom they expect to go bankrupt. The profit they make on this feed is enough to take care of the loss from the busted poultry farmer. It is all part of a great big operation. Surely that is no answer. Are we willing to admit that we have gone into an era of bigness where the litle man cannot make a living as an individual, but will have to become part of some corporate enterprise? Is the little farmer going to be forced to retire from the farm, much as the corner grocery store gave up to the A. & P., or the corner druggist had to turn his business over to Walgreen? This is a really terrible and frightening thought to

face. While our press and periodicals scream about communism and socialism, they fail to discuss with the public the serious implications of socialism surrounded in corporate living. There is no more loss of individuality, or, for that matter no more redtape, in the Army, or in any Government office, then exists in the management of the largest corporate affairs.

So we are still looking for the solution. Unfortunately, it has to come in a lowered price. This need not mean a lowered income to the farmer, which is what we are worried about in the last analysis. However, it has been proven in the export markets, even to the worst diehard, that price will sell, and if price is allowed to decline in this country, surpluses will disappear. When, through an export subsidy, our Government broke the price of American cotton in the world market this year to 23 cents a pound, it increased the export of American cotton to almost 7 million bales as compared with 2 million bales the previous year. At these prices, cotton, in export, competes with synthetics and other substitutes, such as paper and plastics. The price must come down in this country,

Maybe you may ask how that would work with wheat, because regardless of the price, you would not be able to eat the 500 loaves of bread that we have said the Government has in storage for you. But a cheaper price for wheat will bring it down to the range where it can be used as feed, and will bring it within the reach of foreign consumers who

need it so desperately.

In an effort to bring about this cheaper price, the most discussed program has been called the compensatory payment plan. This envisions the payment to the farmer of the difference between what he receives in a free marketplace for his product, and parity, which is what is considered to be a fair price. There is no doubt but that this compensatory payment is one solution to the farm prob lem. Unfortunately, it has a serious drawback, and that is that it would cost so much money even our own Government could not finance it. Recognizing this, certain bills have been introduced into the Congress for limiting the amount of payment that any grower can receive. This is an un-American idea. While it is true that an injustice has been done to the taxpayers by paying certain corporate farmers over \$1 million apiece under the present farm program, an equal injustice would be done by paying the small, or inefficient farmer, to continue in his un-healthy capacity and set him up, and protect him, to forever compete with the unprotected efficient man.

I come to the inevitable conclusion that the family farm is a political myth. I also believe that there is no way in the world to give every farmer equal protection with industry and labor. Mr. Benson's program for a disaster loan, in which he has the support of one of the largest farm organizations, is unsound. He knows it. Increased production is going to make today's disaster price tomorrow's fair market price, and the trouble in which we now find ourselves will be compounded for the future.

We must set up a program, within the limits of the Treasury, to make payments to the farmers on an acresge basis rather than a bale or bushel basis. These payment should be unlimited. They should be tied to a comparative base with a manufacturer's tariff, For the first year I would suggest \$20 per acre; \$15 per acre for the second year; and \$10 per acre thereafter, as long as protection

is given to any group or industry.

This will allow price to decline while at the same time it will maintain income, and give notice that if he chooses to remain on his farm, the farmer will have to look to advanced technological ideas in order to be able to produce at a profit, and at a price that will allow his product to compete in the marketplace. In order to accomplish this I believe the Congress would appropriate sufficient money, recognizing that the solution will eventually be attained.

Funds for these payments could be raised by a manufacturer's tax on all fibers and substitutes; when used to replace cotton. Although such a tax was at one time declared unconstitutional, we know now that it could

properly be enacted into law. This method would not only maintain fair net income on the farm, but would gradually eliminate the surpluses that have piled up. envision that these surplus stocks would be used to make payments in kind. In other words, if a farmer were entitled to receive \$2,000 in equity payments he would get a certificate for \$2,000 worth of any surplus commodity from the Commodity Credit Corporation instead of cash. This certificate would be negotiable and salable, and would, in a few years, liquidate CCC holdings of all surplus commodities.

I believe that the farmers will learn to increase their yield per acre and earn a living out of 23-cent cotton, a price that would destroy them all today, but still is the world

market price that they must meet.

The Republican Party has failed to give forthright and honest answers to the farm problem during its two terms in office. First, it promised 100 percent of parity. This was palpably so false and impossible that no effort was ever made to accomplish it-even though it was promised by the President in his campaign speeches. Then it took the position that loans on commodities should be placed on a sliding scale. Each loan that was announced was at the minimum price allowed under the law. The hypocrisy in the legislation was evident. A possibility of a high price was always held out like a carrot in front of a mule, but in the final analysis there was always the lowest price.

No compromise has ever been possible. It has always been a matter of play it my way

or there will be no game.

It is my hope that our party will have the courage to tell the people the truth, and present them with a solution that will stand on its feet. In keeping with our principles, this solution must have a heart, and not a coldblooded approach. But please remember that it is more heartless to hold a man in an untenable position than it is to lead him to a better way of life.

Salt and the Red River

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROOKS of Louisiana. Speaker, under leave to extend my remarks, I wish to present for the reading of the Congress a very able editorial taken from the Shreveport Times, of Shreveport, La., which is in the heart of the Red River Valley. This editorial presents a matter of much importance to us today, especially to those of us who have to meet the problem of water pollution by salt and other minerals in the Red River Valley:

SALT AND THE RED RIVER

Counting its tributaries, Red River is almost 2,000 miles long. But of all the towns along its length, only Bossier City dips into the countless million cubic feet of water that it carries daily to the Mississippi.

The Red is one of the least used of American rivers, either for drinking or commercial use, and the reason is salt-salt that makes most of the upper river unfit to drink and useless for industry.

Over a billion dollars have been spent in

recent years on flood control, bank stabilization, and navigation studies on the river.

This money is well spent, but next to taming the Red the valley towns are vitally interested in turning its tawny current into several million foot-acres of high-quality The only way to do that is to take out the salt or stop it from entering the

The Red could just as easily have been named Salt River. Every day about 10,000 tons of chlorides (salts) enter its current. About 20 percent of this inflow is oilfield brine, but the bulk of it comes from artesian salt springs.

Several of these springs produce each a million pounds of salt daily-any one enough to supply the needs of half the population of the United States. Washings from salt flats and drainoff over outcroppings of salty rocks account for the rest.

The Red River Valley has been booming since 1940 and has much to offer industry and agriculture-fertile soil, raw materials, manpower, and transportation. But its supplies of good water are slowly being over-drawn. Water use has risen rapidly in the past few years, but the Red in its upper course is untapped.

Since 1957 the U.S. Public Health Service, in cooperation with Federal and State and county agencies and the regional Red River Valley Association, has carried on a search for the source of the salt pollution. The agencies want to find main sources of pollu-

tion and put a stop to it.

The final report won't be ready until 1962 and the administration annually budgets an amount to keep it going. But, meanwhile, the RRVA and the river towns this year are seeking a further \$150,000 in Federal funds to let the U.S. Army Engineers start studying means of controlling the pollution. For already the source of the salt inflow has been pretty well determined.

The proportion of salts per million parts of water is 2,000 units at such towns as Gainsville and Wichita Falls. The U.S. Public Health Service has established 250 parts per million as the desirable maximum.

Shreveport abandoned the Red in 1926 and began to get its water out of Cross Lake. The count in the river that year reached

1,160 parts per million.

Denison Dam, put in after World War II to form Lake Texoma, has made the lower Red a better river. Inflow into the huge lake is 100,000 cubic feet of water per second. The salty waters entering it are greatly diluted and when the river flows out the east end of the lake the count is much lower.

Bossler's average count for its first year of use of Red River waters (just ended) 163, with high counts of from 800 to 1,250 parts per million for about a month last fall when the river was up. But, with treatment, it is tolerable drinking water.

Below Shreveport and Bossler, the salt count diminishes further, but the raw sewage dumped into the river from the two cities leaves downriver people disinclined to

turn to the Red as a drinking source.
But above the dam, things are as bad as they ever were. Every time there's a heavy rain upvalley, the salts wash in and the count rises. Usually, the same thing happens below the dam when the water level of the lake is lowered through the floodgates. raising the river.

Drought-stricken Dallas a few years ago went 100 miles north to the lake for drinking water, but found it, even with a lowered salt content, nearly unpotable. Another pollutant, gypsum, made the water much like chalk.

Gypsum is a soft white mineral that is washed into the river and dissolved. Bossier adds soda lime and ash to the Red to coagulate and precipitate it. The acid turns it back to a solid and it settles.

The salts can't be got rid of this way. Soda ash simply turns one kind of chloride

into another.

The Army Engineers have already hit on several preliminary ideas for keeping the salt out of the river. One idea is a 12-inch pipeline to collect salt from main inflow points and pipe it to the gulf. Another idea is to seal off the salt springs from the river. Yet another is to drain them into diked ponds and let the water evaporate. Since the salt springs are artesian and flow by pressure, another scheme is to put in ponds above the springs and equalize pressures.

The final idea so far brought forward is

to divert floodflows around the salt areas.

As for oilfield pollution, the engineers look on reinjection of the brine as a waterflood to increase oil production both as a cure to the pollution problem and a means of helping the industry.

Meanwhile, in spite of its prosperity, population along the valley is falling behind the national increase and the towns are blaming the short water supply and its poor quality. They look to the pollution study and the recommendations that grow out of it to transform one of America's major rivers from a drainage canal into an unending source of the quality water they need for growth.

May Is "Rural Electrification Month" in Wisconsin

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, on April 27 a group of pioneers in Wisconsin's rural electrification movement met at the State capitol to watch Gov. Gaylord Nelson sign a proclamation designating May as "Rural Electrifica-tion Month." Naturally, the silver jubilee of the REA program will be celebrated May 9-14, but it is significant that the Wisconsin observance will last the entire month, for my home State was one of the leaders in this quiet rev-Olution which changed Fural America from a dark to a lighted land.

In May of 1936 the Columbus Rural Electric Co-op at Columbus, Wis., received the first Wisconsin REA loan, At that time only 19.6 percent of the farms in the State had central station electric Power. Today 31 rural electric co-ops are serving 87,338 consumer-members on 30,710 miles of line, and 97.9 percent of Wisconsin's farms are electrified.

Of the \$118,912,492 in REA loans advanced to these electric cooperatives, \$21,740,945 has been repaid on the principal and \$14,267,982 has been paid in interest. In addition, advance payments on principal have been made to the tune of \$3,458,718.

Under leave to extend my remarks, I would like to include in the RECORD an article from the April 27, 1960, Capital Times in Madison, Wis., which tells about

the ceremony at which Governor Nelson designated May as "Rural Electrification Month":

TWENTY-FIFTH ANNIVERSARY HAILED-PHIL LA FOLLETTE, MELBY JOIN NELSON IN REA

(By Herb Jacobs)

May has been officially designated "Rural Electrification Month" in Wisconsin in ceremonies at which former Gov. Philip La Follette urged the State not to be afraid of words like socialism, and to back projects which will grow.

La Follette was governor 25 years ago when President Franklin D. Roosevelt by executive order created the Rural Electrification Administration (REA) under which rural electric service took a great leap forward. La Follette set up the Rural Electrification Coordination Administration to speed the work in Wisconsin.

State leaders and pioneers in REA work were present in the executive officer Tuesday afternoon as Gov. Gaylord Nelson signed a proclamation marking the 25th anniversary of REA, and several joined LaFollette in comments on the occasion.

"The contributions of the REA have been unexcelled by any group at any time in the

State," Nelson said.

H. O. Melby, Westby, first president of the Wisconsin Electric Cooperative, who has served continuously except for a 4-year interval, said the REA "has been a tremendous thing for the whole Nation, not just farmers.

"We had a friendly administration to back us," Melby continued. "We believe Wisconsin has pulled ahead more than any other State, and REA has benefited everybody, not

just farmers."

A statement read by Attorney Floyd Wheeler, Madison, longtime counsel of Wisconsin electric cooperatives, praised REA as the finest program of benefits for farmers ever sponsored by State or Federal governments, and hailed La Follette for his vigorous action to place Wisconsin at the forefront in the development.

Twenty-five years, when you look at it in one aspect, is short, and in another it is long," LaFollette began, as he sat at the table between Nelson and Melby.

"I was thinking this morning in terms of the governorship. Gaylord, you were just about getting through the university when I was in your chair. Add another 25 years to your age, and you'd be older than I am.

"And Mr. Melby has the same sparkling Norwegian fire in his system, which helps

to make this a memorable occasion.

"The significant thing about a day like this, is that younger men like Gaylord and his associates, both those for and against him, should think in terms of what they will be celebrating 25 years from now. That's a pretty good yardstick to determine what is good and important.

"Years ago, when I was in your seat, there were many things that seemed terribly important, and over which I burned up a lot of energy and anxiety, but some of those things don't seem so important. On the other hand, take forest fires, which we don't have any more. Isn't it nice to be able to jump in your car and drive up north, and see it all green? I'm glad I had a small part in that. You're lucky if you can get connected with something that grows." Turning to the REA, LaFollette continued:

"Don't be afraid of words and shibboleths. Don't let people drive you away because of a name. Socialism used to be the big buga-boo. But the REA is just an adaptation of something very old—neighborliness, as in a barn raising. Times have changed, but they've only changed the machinery. Now barn raising. Times have changed, but they've only changed the machinery. Now you couldn't holler loud enough for all the neighbors to hear, so we started co-ops.

"Two things I think are important. The first is, try to associate yourself with something that will be living after you.

"And the other thing, don't be afraid because nobody ever did it before. Wiscon-sin has always been a pioneer. Don't be dependent on 'security,' that's not the way to a rich and full life."

Among others present at the proclamation signing ceremony were Circuit Judge Norris Maloney, who became chief counsel for the State Rural Electrification Coordination Administration in 1936, and was identified with legal phases of the program except for 8 years as district attorney and until his elec-tion as circuit judge in 1958, and William V. Thomas, who served on the coordination staff under the late Orland "Spike" Loomis, and general manager of Wisconsin Electric Cooperatives for 20 years.

Three early workers present were Amos J. Green, who joined the coordination staff in 1936, and for 20 years has specialized in the insurance needs of electric co-ops; Mrs. Jean Slightam, an early WEC worker who edited the first written history of rural electric co-ops, and Mrs. Blanche E. Brown, secretary of Loomis, and who has served continuously with the WEC since then.

Area Redevelopment Act

SPEECH OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. WALTER. Mr. Speaker, almost 2 years have elapsed since the President vetoed S. 3683, the area redevelopment bill enacted by the 85th Congress. For almost 2 years now we have been able to evaluate the arguments of the President as set forth in his pocket veto message of September 6, 1958. As a result of these evaluations, we now know that many of the reasons for the veto advanced by the President have not held up. The loans to State and local development companies under the Small Business Investment Act of 1958 have not met the needs of the chronic distressed areas.

By the same token the vast majority of the distressed areas have found their unemployment to be chronic and not temporary as the President suspected. Of the total of 116 labor markets which between July 1953 and March 1958 became chronically distressed, only 41 were not so classified in March 1958. Of the remaining 75 labor markets, 64 were continuously distressed from the time their economic difficulties began. They continue unrelieved in their condition of substantial labor surplus even to today. The remaining 11 experienced a temporary period of economic revival. However, today those areas enjoying a period of temporary revival are again chronically distressed.

Studies by organizations both within and without Government conclusively demonstrate that a labor market area that has permanently lost some of its industry will repeatedly experience temporary relief unless industries are found to replace those eliminated by our industrial progress. To consider the temporary revival of these areas as a disqualification for relief under area redevelopment legislation will seriously retard the objectives which the legislation seeks to accomplish.

The 1960 Economic Report of the Presdent declared that legislation was needed to supplement and strengthen efforts to help areas of persistent unemployment. S. 722 accomplishes this and should, therefore, be enacted by the Congress and signed by the President without further delay.

Elks National Youth Day

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. ZABLOCKI. Mr. Speaker, on May 1, 1960, the Elks Clubs throughout our Nation celebrated the Elks National Youth Day. Outstanding young students, selected in various competitions, were honored that day by the Elks, together with their parents, teachers, school administrators, and other community leaders. This celebration, in a way, was part of our answer to the Communist May Day observances in Soviet Russia, in Europe, and on other continents. It honored the achievements of our youth, explored some of the prospects and problems facing them, and compared the opportunities and freedoms enjoyed by the youths of the United States with the conditions experienced by young people living under the rule of communism.

The Milwaukee Lodge of Elks No. 46 participated in this nationwide observance with a banquet on the evening of May 3, sponsored in cooperation with the Wisconsin Elks Association and the Grand Lodge of the Benevolent and Protective Order of Elks. I was deeply honored to have been invited to be the guest speaker on that occasion. The banquet and the ceremonies were well attended and very impressive, attesting to the ability and hard work of the arrangements committee and active cooperation of the entire membership of lodge No. 46. This was, I may add, a most enjoyable and memorable evening for me. Not only did I have the pleasant opportunity to visit with my many good friends, but I was especially impressed by the achievements of our young men and women who were honored at the banquet. I should like to list the names of the principal award winners:

WINNERS OF THE 24TH ANNUAL ELRS' YOUTH ACTIVITIES PROGRAM

1. CONSTITUTION EXAMINATION

Thomas W. Hutchison, Pulaski High School, first prize (\$400 scholarship).

Marshall Berman, Washington High School, second prize (\$200 scholarship).

Diane Dumdey, Wauwatosa Senior High School, third prize (\$100 scholarship).

2. YOUTH LEADERSHIP

Wallis Jean Wilde, Wauwatosa High School, first prize (\$100). (Miss Wilde was also first place State winner.)

David H. Swanson, Wauwatosa High School, first prize (\$100). (Mr. Swanson was also second place State winner.)

Louise M. Noll, West Allis High School; Lynn M. Taussig, Washington High School, second prize (\$50).

Judith M. Hochstein, Riverside High School; Jack J. Burgess, Boys' Technical High School, third prize (\$25).

3. MOST VALUABLE STUDENT

Susan E. Steininger, Solomon Juneau High School; James E. Repnik, Rufus King High School, first prize (\$200 scholarship). (Mr. Repnik was also second place State winner.)

Beverly A. Ruzinski, West Milwaukee; Goetz W. Schaefer, Boys' Technical High School, second prize (\$100).

Roslyn B. Gill, Nicolet High School; Keith K. Hilbig, Washington High School, third prize (\$50).

I am happy to say that Miss Wallis Jean Wilde, who won the first prize both in the State competition and in the Milwaukee competition for the youth leadership award, is the granddaughter of our distinguished senior Senator from Wisconsin, the Honorable Alexander Wiley. She is an outstanding young lady, and I would like to include her brief but very elequent remarks, delivered at the May 3 banquet, in the Record:

REMARKS OF MISS WALLIS JEAN WILDE

Mr. Haberlein, officers of the Order of Elks, officials of Lodge No. 46, and Representative Zaelocki, I would like to express my deep appreciation to the Elks for this recognition which is not so much of me personally, as it is the recognition of the American ideals which are increasingly essential for survival in the world today. It would be well for other organizations to follow the fine example of the Elks in honoring and creating interest in those fundamental concepts which have kept America great.

I think it would be fair to say that there are literally untold thousands of young people in our State and across the Nation who are dedicated wholeheartedly to preserving our heritage through voluntary service, in school, in church, and in the community. Because the ultimate outlook of our world will be written by those of us in my generation, it is very significant that our is voluntary rather than the regimented, compulsory service of the Soviet youngsters. We are competing with controlled minds, with people who are compelled to travel on a party line treadmill, and thus the Russians are allowing one of their most valuable resources to be eroded—the unlimited irreplaceable resources of the unfettered mind. They are gradually eviscerating American words like ingenuity, imagination, choice, leadership.

Here in our country our duties and our rights are inherited simultaneously. And from the beginning we are taught that our rights were hard won and that they will be even harder to keep. And so we volunteer to maintain them. I believe that in the momentous years ahead, America will prove that her youth—her free youth—with the inherent right to choose, and amend, and reject; her youth, conscientiously fulfilling civic duties; her youth, carrying the bright torch of freedom, will win the ideological war.

Mr. Speaker, I want to take this opportunity to congratulate Miss Wallis Jean Wilde and the young men and women whose names I have placed in the Record upon winning the principal awards in their respective competitions; and to commend Exalted Ruler Eugene F. Haberlein, the officers, and members of Milwaukee Elks Lodge No. 46, as well as the entire membership of the Benevolent and Protective Order of Elks, for sponsoring the National Youth Day Program. I think that it is a wonderful and constructive undertaking, and I wish it every success in the future.

Honoring Poland and Her People

EXTENSION OF REMARKS

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mrs. DWYER. Mr. Speaker, for the past 20 years the Congress has taken time out each year to recognize the anniversary of the May 3 Polish Constitution of 1791.

Beginning shortly after the infamous Nazi-Soviet invasion of Poland, which led directly to World War II, this commemoration has become one of Congress' most important traditions. Not only does it provide us an opportunity to appreciate Poland's irreplaceable contribution to the development of Western civilization, but it has become for Congress its major annual occasion for restating American policy favoring the restoration of freedom and liberty for the people of Poland and the other Eastern European nations overwhelmed by the armies of the Soviet Union.

The celebration of this anniversary in 1960 is especially significant for several reasons. This year, for instance, marks the 100th anniversary of the birth of one of the world's greatest musicians, Ignace Jan Paderewski, beloved in America and Poland as a great patriot, statesman, and humanitarian as well as artist.

One hundred and fifty years ago, Frederic Chopin was born in Poland, and the world will never cease its gratitude for the glorious music of this gifted composer.

The year 1960 also inaugurates the preparation of plans by Americans of Polish descent, under the auspices of the Polish American Congress which represents over 7 million Americans of Polish origin, for the commemoration of Poland's millennium, the 1,000th anni-

versary of Poland's acceptance of Christianity in the year 966, which settled the destiny of that country as an integral part of Western civilization.

For more immediate reasons, however, this year's anniversary is particularly timely and important.

First of all, it occurs just the day after this House has approved a concurrent resolution dealing with the fundamental freedoms and human rights of the people of the captive nations.

This legislation, for which I was proud to vote, expressed the sense of Congress that respect must be accorded to these precious freedoms and rights. It reaffirms the belief of Congress in the inalienable right of the people of the captive nations to live under governments of their own choosing. And it expressed Congress' hope that the President will pursue energetically at the forthcoming summit conference the restoration of the fundamental freedoms and basic human rights of the people of the captive nations,

You will be interested to know that this measure was passed by the House of Representatives without a single dissenting vote. It reflects, I believe, the deep understanding of the Congress of the tragic situation in which Poland and her sister nations have been placed, and a continuing firm resolution to speed the day when freedom will return.

This resolve is especially meaningful, I believe, in the case of Poland. As we all know so well, the people of Poland have never accepted the dictatorial and foreign rule of communism. The Polish people's unyielding devotion to national freedom and personal liberty has been displayed over and over again for all the world to see and admire. Seldom, however, has Poland's resistance to Godless communism been so dramatically demonstrated as it was last week in the new city of Nowa Huta.

The story began with the decision of Poland's frantic Communist rulers to build at Nowa Huta a new city to be a symbol of the new Marxist Poland. Dedicated to the production of steel, the new city was—by official Communist flat—to be deprived of even a single church.

But, even while Nowa Huta was being built, the Polish workers wore around their necks a little string, carrying the cross of Czestochowa. When the city was completed, its people selected a site for a church, in defiance of their Communist rulers, and marked the site with a cross. Last week, the Communists removed that cross. But, in doing so, they brought upon their heads the wrath of the people of Nowa Huta, who rose up in rebellion in the mightiest demonstration since Poznan to protest the removal of their cross.

So once again the Communist bosses of Poland learned an unforgettable lesson—that nothing has changed the devotion of the great majority of the Polish people to the religion of their ancestors. At the site of Nowa Huta's cross last Wednesday the people of Po-

land showed that their devotion to their religion far exceeds the impact of Communist dogmas, even after 15 years of steady indoctrination.
